Landscape RAG Assessment 2021	Red
Landscape Comment 2021	This is large and complex site. The site is partially outside the district in East Cambridgeshire; only the element of the site in SCDC has been assessed. The proposal would have a significant adverse impact on the local and wider landscape character, views and visual amenity. Even with landscape mitigation works the development would have a permanent adverse effect on both the landscape as a resource in its own right and effects on views and visual amenity.

Biodiversity and Geodiversity RAG Assessment 2021	

Biodiversity and Geodiversity Officer Comments 2021	The northern extent (within East Cambs) of the site is approximately 0.5 km from Newmarket Heath SSSI and 2.5 km from the Devils Dyke SAC. All new housing developments will require assessment of increased visitor pressure on nearby SSSI/SAC. The southern boundary lies adjacent to the Old Cambridge Road Verge CWS, cited for frequent numbers of at least 6 strong calcareous grassland indicators. Priority habitats include broadleaved, young, mixed, deciduous, and coniferous woodland, and there is likely to be other priority habitats such as calcareous grassland given the underlying geology. Hedges and wooded boundaries are also found on site and likely to have ecological value.
Biodiversity and Geodiversity Guideline Comments 2021	Development of the site may have a detrimental impact on a designated site, or those with a regional or local protection but the impact could be reasonably mitigated or compensated.

Biodiversity and Geodiversity Officer Comments 2021	Application unlikely to require Natural England consultation. There are no apparent priority habitats within the site; however, there are buildings, grasslands, woodland areas, hedges, and wooded boundaries on site that are likely to have ecological value. Applications may find provision of a 10% net gain in biodiversity difficult within their redline boundaries and may need to find off-site compensation to comply with up-coming National legislation and developing local policies.

Landscape Comment 2021	Site A - Development upon this site would have a minor adverse impact. With a sensitive approach and landscape mitigation measures the site would be enhanced. Typical landscape principles would include the following: existing trees and hedgerows to be protected and retained, the PROW to be integrated within the development, landscape buffer planting to be included upon the northern boundary and a rural approach to be encouraged.  Site B - Removal of allotment would be contrary to policy SC/8. Development upon this site would remove a valuable landscape and have significant adverse impact to the settlement character, local views and visual amenity. Even with a reduction in units with landscape mitigation the harm would still be adverse and unacceptable.
