Introduction and purpose

1.1 This Consultation Statement sets out how Cambridge City Council and South Cambridgeshire District Council have undertaken consultation, and propose to undertake consultation, in preparing the Greater Cambridge Local Plan.

1.2 The Consultation Statement sets out how the Councils have involved residents and key stakeholders in preparing the Greater Cambridge Local Plan in accordance with Regulations 18 and Regulations 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012. This statement meets Regulation 22 (1)(c) and demonstrates that consultation on the preparation of the Local Plan has been undertaken in accordance with the relevant Regulations and the Councils' jointly adopted Statement of Community Involvement (SCI) 2024. The SCI document sets out how the Council will consult and involve the public and statutory consultees in planning matters. Full details of the current adopted SCI can be viewed here.

1.3 The Councils began preparing a new Local Plan for Greater Cambridge after adoption of the previously adopted local plans in 2018. The new Local Plan will set out the strategic vision, objectives and spatial strategy for the area, as well as the planning policies which will guide future development. The Plan will now look ahead to 2045, and identify the main areas for sustainable development growth to meet development needs. It establishes policies and guidance to ensure local development is built in accordance with the principles set out in the National Planning Policy Framework (NPPF). The Local Plan will replace the adopted South Cambridgeshire Local Plan 2018 and Cambridge Local Plan 2018 that currently form the development plan, as well as adopted Area Action Plans.

1.4 At each stage of the plan-making process we check to ensure that our consultation approach meets the standards set out in the Statement of Community Involvement. The Consultation Statement is updated and re published at each stage of plan-making, capturing feedback we received at previous stages and how it has been taken into account.

1.5 This Consultation Statement supports the Submission Local Plan (Regulation 19) 2026 stage. It sets out how consultation has been undertaken up to this point, and looks ahead to the Submission Local Plan 2026 consultation stage.

Note about Duty to Cooperate

1.6 The duty to cooperate is a legal test that requires cooperation between local planning authorities and other public bodies to maximise the effectiveness of policies for strategic matters in Local Plans. The Councils have published a separate Greater Cambridge Local Plan Duty to Cooperate Statement of Common Ground to set out the main areas of common and uncommon ground with relevant partners on strategic cross-boundary matters. This can be found on the Greater Cambridge Shared Planning Service website.

Overview of the Plan Making Process

Key Local Plan Stages Undertaken so Far

1.7 The preparation of a new Local Plan requires consultation and engagement, often across a number of stages. This is to enable early and ongoing engagement with the local community, businesses and organisations to develop a comprehensive plan, tailored to the needs of the area in terms of strategy and the policies required.

1.8 The following main stages of consultation have been carried out so far in the preparation and adoption of the Greater Cambridge Local Plan.

- Workshops and early stage stakeholder consultation (2019)
    - Engagement with key stakeholder to identify approaches to the start of the plan making process.
- First Conversation - Issues and Options Public Consultation - (January 2020)
    - Public consultation on issues the plan needs to address and options for addressing them.
- First Proposals - Preferred Option Consultation (Regulation 18) - Autumn 2021
    - Public consultation on direction of policy including the preferred option for policy direction for specific policy areas and sites.

- Regulation 18 Consultation (December 2027
    - Public consultation on an almost complete draft version of the Local Plan except a few areas of direction of policy.

Call for Sites

1.9 Alongside and as part of the consultation stages, there have been several opportunities for people to submit site suggestions for consideration though the plan making process.

1.10 A call for sites is a way for landowners, developers and individuals to suggest sites that might be available for development in the future, so they can be considered and tested by the Council. It is a normal part of plan making. Government planning guidance advises that, 'if the process to identify land is to be transparent and identify as many potential opportunities as possible, it is important to issue a call for sites and broad locations for development'.

1.11 There were opportunities to submit site suggestions at the following stages:

- An Initial 'Call for Sites' issued 2019
- A Call for Sites and Green Sites issues as part of the First Conversation in 2020
- A Call for Sites and Green Sites issues as part of the First Proposals consultation in 2021
- A Call for Sites and Green Sites as part of the Regulation 18 Consultation in 2025-26

1.12 All sites received were published on an interactive map on the Greater Cambridge Shared Planning Service website.

1.13 An additional 'Site Submissions Update' consultation was issued between February and March 2025, to ensure we had the most up to date information about available sites in the lead up to the draft plan consultation. The results of this call for sites has been published alongside the draft local plan.

1.14 Sites have been assessed using an agreed methodology through the Housing and Economic Land Availability Assessment, an evidence document published and updated at each stage of plan making.

Compliance with the Statement of Community Involvement

1.15 The Statement of Community Involvement (SCI) sets out how South Cambridgeshire District Council and Cambridge City Council will involve communities on a wide range of planning matters throughout the planning process. The SCI was adopted in March 2024. The SCI sets out how plan 6 making and development management processes will consult and engage with local stakeholders.

1.16 For the Local Plan process, the SCI sets out that for Local Plans at the Regulation 18 stage of plan making, which focuses on engagement and shaping the plan, there will one or more consultations undertaken for a 6 week period each. For Regulation 19, the stage where the plan the councils wish to adopt is published, there will be a pre-submission consultation for a 6 week period.

1.17 The main methods for consulting on the Local Plan include:

- Inviting representations through a notice on the Councils websites, and advertising through other methods such as social media, news releases, Council publications or press adverts.
- Consultations with specific consultation bodies and appropriate general consultation bodies and other relevant stakeholders.
- Making consultation documents viewable on the Councils websites and by request in different formats.
- Public consultation events of various kinds.

The Local Plan timetable

1.18 The Local Development Scheme (LDS) sets out agreed programme for the preparation of the Local Plan. Since plan making commenced it has been updated serval times to reflect the evolving programme and in response to events which have impacted on the programme. The latest Local Development Scheme can be found here.

1.19 During the First Proposals stage in 2021, the Councils made clear that the proposed strategy was contingent upon evidence being available that demonstrates that a sustainable water supply will be provided to support the preparation of the draft Local Plan. In addition, a number of other factors were also impacting on the programme such as planning for transport 7 infrastructure, and national reform of the planning system. The North East Cambridge Area Action Plan, being prepared ahead of the new local plan, was also delayed, awaiting the outcome of the Development Consent Order process regarding relocation of the CWWTP.

1.20 A Development Strategy update was reported to and agreed by members in 2023, but there remained uncertainty regarding the resolution of some of these issues.

1.21 When we published an update to our Local Plan timetable in March 2024 it was anticipated that changes to the national plan making system would be happening in autumn 2024 with the publication of new plan making regulations. We fully expected that the remainder of our plan making process would be carried out under a new system of plan making, and that we would need to know more about the specific regulation requirements in order to set a new timetable and move the plan forward.

1.22 In Summer/Autumn 2024, the new Government brought out a wide-ranging consultation on proposed amendments to the National Planning Policy Framework (NPPF). As a part of this consultation, the Government announced its aim of implementing a new plan-making system as set out in the Levelling-up and Regeneration Act. It identified that plans being prepared under the current plan making system would need to be submitted by December 2026. This date was confirmed when the new NPPF was published in November 2024. The government have yet to publish new regulations for the new plan making system. In January

2025 the Councils updated the Local Plan timetable to clarify our intentions to prepare to submit a Local Plan under the current plan making system by December 2026.

1.23 The current LDS was consulted on during the late 2025 Regulation 18 Local Plan consultation on a Draft Plan Local Plan.

1.24 The Proposed Submission Regulation 19 stage is taking place in Summer / Autumn 2026. This will involve consultation on the plan the councils propose to adopt.

1.25 Submission to Secretary of State for independent Examination (Regulation 22) is planned for December 2026, to meet the government's deadline for submission of plans under the current plan making system. There would then be an examination, held by an independent planning inspector into the soundness of the plan. This would include considering comments submitted at the regulation 19 stage. If the plan is found to be 'sound' the Councils would be able to proceed to adoption of the plan.

Summary of Regulation 18 Consultation

1.26 The Regulation 18 consultation on the Greater Cambridge Local Plan ran from 1st December 2025 to 30th January 2026. During this time 89 events were held to consult with residents, key stakeholders and statutory consultees from across Greater Cambridge. 8,415 representations were received from 8,415 individuals and organisations.

1.27 A summary of the events held during the consultation are set out in Appendix 1 including a summary of key discussion points. These events are plotted in Figure 1.

- 1.28 During the Draft Local Plan consultation we consulted using a range of methods, including:
    - **Standard methods including:** Email and letter notifications, promotion on our website and social media, provision of hard copies at offices, events and webinars. Other updates through public notices, press releases and e-bulletins. Printed material was distributed to homes and businesses through resident and business magazines.
    - **Innovative methods:** Youth Engagement sessions with children of schools in Greater Cambridge and encouraging their participation in the drawing competition. Appendix 1 sets out a Report, showing their engagement during this session. A Lego building competition was also held during the consultation with a range of submissions provided by children and young people in the area.

1.28 We promoted the consultation using the Greater Cambridge Shared Planning consultation platforms including our website, and through social media (Facebook, X, LinkedIn). A breakdown of the online and social media views is set out in the infographic below:

Figure 2: Infographic of breakdown of views on social media platforms

1.29 During the consultation, we also met with a number of stakeholders and groups and engaged through presentations held at the University of Cambridge and took the draft Local Plan policies to the Joint Design Review Panel (Cambridgeshire Quality Panel & Greater Cambridge Design Review Panel). A report of the findings of the Panel can be found in Appendix 2.

1.30 Overall, the consultation resulted in a significant amount of engagement with our local communities and stakeholders. As a result of the communications programme, we distributed over 3,000 leaflets, at 32 in-person public facing events, carried out 27 leaflet drops and hand out sessions, attended 15 markets including the Market and Mill Road Fair and held 15 non–public facing events, including with parishes, and a drop-in session with the Gypsy and Traveller community.

1.31 During the consultation we also hosted a series of online webinars that you are able to watch below:

- Tuesday 2 December: providing an introduction to the draft Local Plan consultation. You can watch back the recording on YouTube
- Wednesday 10 December: the Development Strategy and Site Allocations, you can watch back the recording on YouTube
- Wednesday 17 December, 6pm to 7:30pm: Our Themes. You can watch the recording back on YouTube
- Wednesday 7 January, 6pm to 7pm: Draft Greater Cambridge Local Plan: About our Plan - Refresher Session - You can watch the recording back on YouTube.

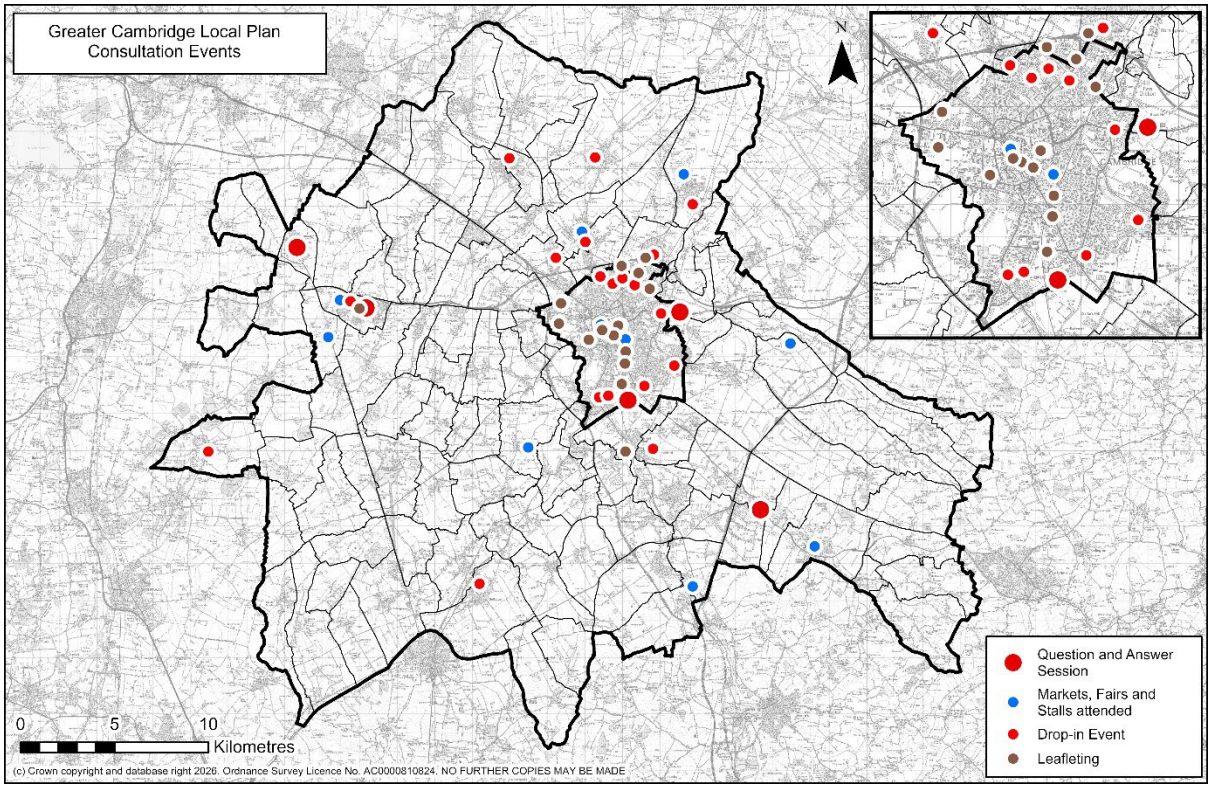

Figure 1 – Greater Cambridge Local Plan Consultation Events

1.31 As a result of the community engagement, we logged 639 new registrations to the consultation hub from 1 December 2025 to 30 January 2026. This was a positive reflection of the encouragement to use our digital platforms to submit comments on the Local Plan, whilst also still allowing representations to be submitted via email or post. 80% of the comments from the consultation were received by web, 19% from email and 1% from paper submissions.

Responses to Representations Received at the Regulation 18 Stage

1. For each policy, an executive summary of the comments received, a table summary of the representations received and he Councils' responses to these representations have been set out.
2. The Topic Paper for each chapter sets out the policy context, new or updated evidence, alternative options and the proposed approach which details the reasons for the edits to the policy.

3. These are all set out in the Appendices as follows:

- Appendix 4 – Summary of the Plan
- Appendix 5 – About the Plan
- Appendix 6 – Development strategy
- Appendix 7 – Site allocations

- Cambridge City
    - Strategic Sites in Cambridge City
    - Other Site Allocations in Cambridge City
    - Policy Areas in Cambridge City
- Edge of Cambridge
    - Strategic Sites in Edge of Cambridge

    - Policy Areas in the Edge of Cambridge

- New Settlements
    - Strategic Sites in New Settlements
    - Existing New Settlements

- Rural Southern Cluster
    - Strategic Sites in the Rural Southern Cluster
    - Other Site Allocations in the Rural Southern Cluster

- Rest of Rural Area
    - Strategic Sites in Rest of Rural Area
    - Other Site Allocations in the Rest of Rural Area
    - Policy Areas in the Rest of Rural Area

- Appendix 8 – Climate Change
- Appendix 9 – Biodiversity and Green Spaces
- Appendix 10 – Wellbeing and
- Appendix 11 – Great Places
- Appendix 12 – Jobs
- Appendix 13 – Homes
- Appendix 14 – Infrastructure
- Appendix 15 – Appendices
- Appendix 16 – SA/HRA

1.32 There were large amounts of comments that were received multiple times across different themes in the Plan. These issues that cross-cut between themes have been addressed in the overarching policy that the comment discusses. For example, comments submitted on the need for Cultural Infrastructure at Clifton Road, or at the Eastern Gate Public Realm Improvement Area that were submitted in response to multiple parts of the Plan, whilst noted in the policy representation summaries, are addressed in the relevant topic paper and consultation response.

1.33 A breakdown of the representations received by themes in the Plan are set out below: They are shown by chapter and policy, the number of respondents and number of representations (comments) received. We also list where these were in support for the element of the plan, or in objection, or whether the representations were neither and listed as a comment on the Plan.

1.33 To view the representations received during the consultation, please view our website: Draft Greater Cambridge Local Plan for consultation | Greater Cambridge Shared Planning. You are able to view responses to each chapter or policy of the Plan by clicking on the “View responses” box at the bottom of each page.

Viability

1.34 The Local Plan has also been subject to a whole plan Viability Assessment, to test that proposed policies are realistic and capable of being delivered by developers alongside the infrastructure they would need to deliver or fund. Following the Regulation 18 consultation on the Draft Plan, the assessment was revised to reflect recent proposed changes to policies, where these would have a direct impact on development viability, and test a different range of development typologies which more closely reflects the final proposed site allocations. The assessment demonstrates that developments are viable when the requirements of the Local Plan are considered, and will be able to contribute effectively to the delivery of infrastructure.

Appendices:

Appendix 1 - Events Log from consultation events at Regulation 18

December 2025

Saturday 6 December, 9am to 11am: Linton Farmers Fayres Market

Key discussion points from event records (issues discussed):

- Asked what the Plan will cover and what that means for Linton.
- Comments around the GP surgery and schools not being of sufficient capacity to meet needs of planned growth and the need for development to be appropriately phased with infrastructure. Keen to see the development of “communities” with services to support them, not just housing.
- Council and Landowner events should be located in accessible venues and in the village itself. Landowners have hosted events not in the village. Making sure that events are at times to allow as many locals as possible to attend.
- Questions around existing applications in Linton and more generally site allocations in the plan for the area.
- **Turnout:** Constant footfall through the two hours we were there. Estimate around 90-100.

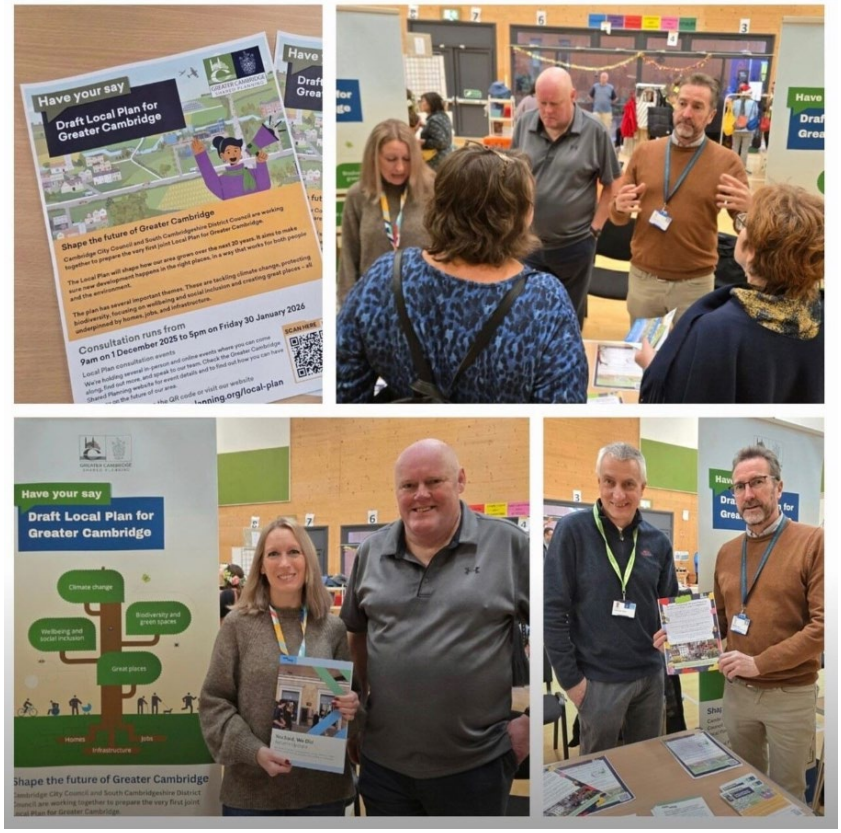
Image of event:

Saturday 6 December, 10:30am to 3pm: Mill Road Winter Fair – stall outside Ditchburn Place, Mill Road

Key discussion points from event records (issues discussed):

- Mill Road bus gate and other transport and access related questions
- Questions around process and what happens next for the Local Plan
- Engagement with a range of young people and students who were interested in what the Local Plan means longer-term for Greater Cambridge
- **Turnout:** Very high footfall, but most people who took a leaflet didn't want to stop to chat. 400 leaflets were handed out at the location.

Image of event:



Sunday 7 December, 11am to 3pm: South Cambridgeshire Christmas Market, Cambourne

Key discussion points from event records (issues discussed):

- Lots of interest in East West Rail and when the new station would be delivered. Questions around how it would be connected to the existing Cambourne village, whether there would be parking available. On the Cambourne development, when it would happen, how it would impact on Cambourne high street and where a new village centre with shops and services would be happening.
- A range of other non-Cambourne issues were discussed, including the level of development being planned for, and site specific issues in other areas.
- **Turnout:** Over 100 people visited the stall.

Image of event:

Tuesday 9 December, 3:30pm to 6:30pm: Drop-in session at The Cabin – Northstowe Temporary Community Centre, CB24 1FD

Key discussion points from event records (issues discussed):

- Northstowe allocation, particularly its boundary and the Conservation Area in Longstanton, and the green separation between Northstowe and surrounding villages (Longstanton and Oakington). Also, the difference between the green separation mentioned in the Northstowe policy and the Protected Open Spaces shown on the Policies Map, and how the different designations and allocations layer up on the Policies Map.
- HELAA site assessment and methodology in relation to a site in Fen Drayton.
- Policy area for Fen Drayton Former LSA Estate and its wording in relation to development on Cootes Lane / Middleton Way. Also, relationship between policy area, affordable housing exception site, and self and custom build homes.
- Discussion about housing requirement and how this had been calculated, plus how we are meeting this requirement, and seeking confirmation that we are going to deliver it all.
- Experiences from a very early Northstowe resident and lessons that could be learnt for other new settlements – importance of haul roads, timing of services/facilities including playgrounds and cycle ways, and being aware of how housebuilders use solar panels and therefore issues when adding more solar panels. Also, issues relating to communication with housebuilders

(rather than the overall developer), and being aware that when developments take time to be built out areas of habitat / biodiversity can form within the construction areas, that are then lost when those areas are built out.
- Impact of Local Government Review on the Local Plan, and discussion on who is providing the funding for the development proposed in the plan.
- Question around what secured means in the Infrastructure Delivery Plan, particularly in relation to swimming pool at Northstowe having been secured.
- **Turnout:** 7 people attended the event.

Image of event:

Thursday 11 December, 4:30pm to 7pm: Drop-in session at Meadows Community Centre, CB4 2JL

Key discussion points from event records (issues discussed):

- The loss of the Beehive and the Grafton Centre and the impact of the loss of retail on the ability of Cambridge to function in the future. The potential impact of the A14 sites development on biodiversity. The effectiveness of historical materials compared to modern ones.
- **Turnout:** 14 people attended the event.

Saturday 13 December, 9:30am to 11:30am: Wilbraham Farmers Market

Key discussion points from event records (issues discussed):

- The impact of restrictions on the number of homes that can be built in Group Villages will restrict the ability of these villages to have sufficient population to maintain local facilities such as schools and shops.
- The traffic jams at the Stow cum Quy junction and the need for mitigation and very particularly the need for a cycleway to link the villages to Cambridge. Moving the P&R won't help.
- Concerns over the Beehive redevelopment.
- The Guildhall event was very good last time.
- Very positive that we had come out to the Wilbrahams.
- Concern re: a nearby solar farm.
- Positive feedback from a former district & county councillor re: the Pampisford event with GCSP representatives.
- **Turnout:** 8 people asked questions, with over 45 leaflets distributed.

Saturday 13 December, 10am to 12pm: Drop-in session at St Johns Church Room, Waterbeach, CB25 9HT

Key discussion points from event records (issues discussed):

- Discussion regarding the approach to the policies for Waterbeach new town. A lot of detailed issues were mentioned around implementation of the new town.
- Concern about waste water provision, and whether the pipeline to the Cambridge waste water treatment works would be delivered on time, or who a new works wasn't being delivered at Waterbeach for the new town instead.
- Views expressed that the current village railway station should remain open in addition to the new station at the new town.
- Questions about why the local plan still identifies housing at north east Cambridge despite the government withdrawing funding for the relocation.
- Concerns about using high quality agricultural land to meet development needs.
- **Turnout:** 12 people attended the event.

Sunday 14 December, 9:30am to 12:30pm: Caxton Farmers Market

Key discussion points from event records (issues discussed):

- Lack of public transport to Cambourne and other areas like Granta Park
- Lack of facilities within Cambourne
- Design quality of new developments and the need to move away from volume house builders
- Lack of walking and cycling facilities to Cambourne
- **Turnout:** 60-80 attendees with 50 leaflets handed out

Monday 15 December, 12pm to 6pm: Drop-in session and exhibition space at The Cambridge Room, Unit 57, The Grafton Centre, CB1 1PS

Key discussion points from event records (issues discussed):

- Affordable housing and biodiversity net gain of 20% and how achievable it was
- Design codes: support for good design and high-quality buildings, and for the approach taken in the plan, but questioned whether the policy would translate to good outcomes on the ground through design / delivery by developers.
- Issues on where the water come from to support this growth and development?; do we need more housing?; how are we going to protect biodiversity and climate if we are proposing a growth in housing and jobs? Who is this housing for – immigration?
- Looking out for Coton Road and the new busway and how it is disturbing the residents and the existing biodiversity and businesses.
- **Turnout:** 25 people attended the event.

Image of event:

Wednesday 17 December, 9am to 11am: Great Shelford Country Market, Memorial Hall, CB22 5LZ

Key discussion points from event records (issues discussed):

- CSET was a big concern – the route and the options
- Mingle Lane – shocked not to see it in the plan even though there is a planning application – Hill did a presentation on it about a month ago.
- Landowner with site in Elsworth – directed to Call for Sites process and asked questions about Cambourne, SEA, width of gaps between settlements, responsibilities
- Potholes
- Neighbourhood Plan for Great Shelford and clarification re: relationship with the Local Plan.

- Questions about Grange Farm – in terms of CSET.
- Questions about strategy and where sites are going / scale of development.
- Questions about Grey Belt / greenbelt sites and release of land.
- Concern raised by parish council that some local residents had talked about pausing the local plan due to tilted balance
- Concern about lack of boundaries between Stapleford and Great Shelford and needing to keep character and identity of both. Especially in context of green belt.
- Need more map copies and consultation modes who are unable to access meeting – expecting to see more maps etc. – will need this at Stapleford meeting.
- Consultation period is too short
- **Turnout:** 20 conversations, 60 leaflets handed out.

Wednesday 17 December, 4:30pm to 6pm: Presentation and Q&A on Cambourne, Papworth Village Hall, CB23 3RD

Key discussion points from event records (issues discussed):

- Have we considered the impacts on SSSIs/Ancient Woodlands
- How would we stop development coming up to the villages / what reassurances are there? Equally, some people were pleased that it was away from Papworth so they could benefit from the separation but be close to the facilities that would come
- Questioned whether we had the right strategy, said some development in villages would be good to support schools, shops, etc.
- The proposal is much bigger than people were assuming it would be
- Unhappy about lack of awareness of the event or the consultation in general
- Have we spoken with landowners as part of this work?
- Have we spoken with farmers about what the impact would be for them and whether they could continue to farm the land in the SEA area?
- What would the forest include and when would it be delivered.
- For EWR:
- Will the Bourn Tunnel be financially feasible?
- Is a southern route still an option?
- **Turnout:** 22 people attended the event.

Friday 19 December, 11am to 2pm: Drop-in session at Clay Farm Community Centre, Hobson Avenue, CB2 9FN

Key discussion points from event records (issues discussed):

- Housing targets, development strategy and sites, specific topic based policies on Build to Rent, renewable energy, and sustainable transport.
- Also proposals for CBC immediately next to Nine Wells residential development, and suggestions of alternative ideas for green space.
- **Turnout:** 1 person attended the event.

Saturday 20 December, 11am to 1pm: All Saints Garden Market, Cambridge, CB2 1TQ

Key discussion points from event records (issues discussed):

- None
- **Turnout:** 60 leaflets were handed out.

Image of event:

Sunday 21 December, 10am to 12:30pm: Waterbeach Community Market, Old Barracks, CB25 9PA

Key discussion points from event records (issues discussed):

- Affordability and quality of new housing
- Relocation of Waterbeach Station (not supportive)
- Traffic/A10
- Garden sizes of new homes
- **Turnout:** Close to 200 people attended, 58 leaflets handed out.

January 2026

Tuesday 6 January, 10am to 1pm: Drop-in session at Arbury Community Centre, Campkin Road, CB4 2LD

Key discussion points from event records (issues discussed):

- The Arbury Court redevelopment should be added into the Local Plan.
- Concern over the potential loss of car parking spaces at Arbury Court, and more generally, particularly for older and disabled people and their carers. Redevelopments should ensure that car parking spaces are not taken away from existing residents.
- Need to assess what is going on in the entirety of neighbourhoods before preparing policies to assess where some people are being disproportionately affected.
- Concern over the impact that the expansion of Cambourne will have on the ability of existing residents to reach destinations via public transport. There is also a need to assess and address the existing needs which aren't being met at the moment and won't be met by East West Rail and the new busway.
- **Turnout:** Around 5 people, with leaflets left at the venue.

Tuesday 6 January, 5pm to 7pm: Presentation and Q&A on Cambourne, Cambourne Hub, CB23 6GW

Key discussion points from event records (issues discussed):

- Lack of local awareness of the Local Plan's consultation within the surrounding villages of the proposal for North Cambourne.
- Transport impacts and how/when the mitigation measures will be explored and resolved.
- Concerns about the relationship between the Local Plan and the Transport Strategy, in particular the delays to the publication of the Transport Strategy.

- Proximity of Cambourne North to the north villages and the potential impacts on designated heritage assets (particularly in Elsworth).
- Flooding impacts of the Cambourne North
- **Turnout:** 7 people attended the event.

Wednesday 7 January, 4:30pm to 7pm: Drop-in session at Main Hall, Trumpington Pavillion, CB2 9JT

Key discussion points from event records (issues discussed):

- Resident wanted to know why Grange Farm had been included as a new site at this stage of the LP and had not been included at the First Proposals stage.
- **Turnout:** 3 people attended the event.

Wednesday 7 January, 4:30pm to 7pm: Drop-in session at East Barnwell Community Centre, Newmarket Rd, CB5 8RS

Key discussion points from event records (issues discussed):

- Transport and connectivity; the consultation process and how the website works; specific site issues and why certain development was not going through; safety in the streets; the difference in understanding between dwellings and bedrooms.
- **Turnout:** 4 people attended the event.

Thursday 8 January, 4:30pm to 7pm: Drop-in session at The Hall, Campkin Road Community Centre, CB4 2ZH

Key discussion points from event records (issues discussed):

- None.
- **Turnout:** None.

Thursday 8 January, 4:30pm to 6pm: Presentation and Q&A on Cambridge East, Marleigh Community Centre, The Hangar Building, 2 Jubilee Square, CB5 8BX

Key discussion points from event records (issues discussed):

<u>Wider strategy</u>

- Some concerns raised about delivery of growth and need for it, if people in Cambridge even want growth even though the Strategy has set out its the most sustainable option. In the same vein, is demand that high for life science this seems a bit woolly with AstraZeneca pulling out and what if we are left with empty buildings for commercial uses.

- Water supply questions
- Future development in the east of Cambridge including but not limited to Cambridge East
- Retail centres location and impact on trip generation – larger items require cars, smaller items do not – make sure there is a good spread of small and medium retail space to not impact on congestion.

Water Efficiency

- Water storage issues – especially in Summer is an issue
- Water butts for individual units
- SUDs – smaller scale – need for onsite water collection per unit
- Water stress concerns

Transport

- Concern about delivery / transport connection / congestion
- Need to reduce car trips
- Trip journeys and car parking space reduction needs to work alongside improved public transport. Some concerns about banning private vehicles and impact on road network – can it still be used for servicing buildings etc.

Delivery

- Marshall's - if they aren't moving – is it actually going to happen the delivery of the site.

Transport

- Location of North East Cambridge Station – does not seem sensible for residents in Fulbourn or Cherry Hinton, and does not seem a need for it where there are now going to be north and south access at main Cambridge station. It is a large site Cambridge East and it feels like the station is too high up.
- Concerns that re-location of the Park and Ride may impact on frequency of the service
- Access into city centre from Marleigh is good – but making orbital journeys around the city is much harder.
- Want to improve cycling routes over and under A14

GI in and around Cambridge East

- Greenways need to be improved / access to greenways and
- GI connection between sites

- Wicken Fen access and connectivity
- Connections from city out into nature need to be improved – locked in by A11 and A14 – living in Milton and the plans with NEC to improve connectivity to nature have now fallen away.
- **Turnout:** 4 people attended the event.

Friday 9 January, 9am to 12pm: Histon Baptist Church, Station Road, CB23, 9LQ

Key discussion points from event records (issues discussed):

- Recent/ current developments in Histon being delivered with inadequate parking spaces or contributions to wider facilities (eg. GP practices)
- Should consider introducing a policy to control height of developments near to windmills (such a policy has been introduced in Histon & Impington Neighbourhood Plan).
- Support for Cambridge Science Park North proposal. This would provide an urban country park/ recreational facilities for Histon & Impington and provide parish council with greater control over undeveloped land around the parish.
- Histon & Impington has a need for more recreational facilities in general. Land adjacent the exiting recreation ground would be ideal but is only likely to be available if CSP North goes ahead.
- **Turnout:** 2 people attended the event.

Friday 9 January, 12pm to 2pm: Drop-in session at Norbury Room, Melbourn Community Hub, SG8 6DZ

Key discussion points from event records (issues discussed):

- Specific concern around boundary of Cambourne North strategic enhancement area – sought an understanding of what the effect of the policy would be.
- Linked to the above, rationale of Elsworth defined development extent
- Lack of ambition and concern about approach of Plan towards large cultural venues / concert halls (e.g. Junction redevelopment, lack of any allocation for major concert hall)
- Support for approach to other cultural and leisure facilities (smaller venues) e.g. cinemas and bowling alleys
- Query on why Plan doesn’t allocate more land around existing railway stations and reliance on planned infrastructure (with delivery risks) - objects to Grange Farm
- Query why specific allocations not made for C2 housing for older people

- Concern around CSET scheme and questioned why the scheme is progressing
- Support for more housing allocations in small villages to increase their sustainability and better cycling infrastructure between villages
- Plan should do more to require infrastructure to be delivered up front
- Question around how emergency services factored into infrastructure planning
- Need for A505 west of Royston to be upgraded to improve safety.
- **Turnout:** 20 people attended the event.

Monday 12 January, 5pm to 7pm: Drop-in session at Storey's Field Centre, Eddington, CB3 1AA

Key discussion points from event records (issues discussed):

- Water scarcity, transport congestion, not enough car parking.
- **Turnout:** 3 people attended the event.

Wednesday 14 January, 1pm to 4pm: Drop-in session at the Marketing Suite, Cambourne, Business Park (located nearby South Cambs Hall), CB23 6DP

Key discussion points from event records (issues discussed):

- Questioning the efficacy and efficiency of our planning system, how to plan new town. Using Northstowe as a case study of how not to do it.
- Is there any political or electoral follow up after the delivery of the local plan so that the developers deliver what is promised.
- The harsh divide between north and south Cambourne via the railway line. Is there any other possibilities to do go about it differently
- Improving the local character of Cambourne, the retail, town centre.
- Excitement about the east west rail – and how it can attract major investment in the area
- **Turnout:** 4 people attended the event.

Wednesday 14 January, 7pm: Presentation and Q&A on Grange Farm, Abington Village Institute, 66 High Street, CB21 6AE

Key discussion points from event records (issues discussed):

- Concerns for overall development of the area and impact on surrounding villages.
- Concern that there is lack of public transport, lack of infrastructure capacity to support the area.
- Concerns for loss of agricultural land, impact on nature, biodiversity, water and chalk streams, landscape and visual harm.
- Discussions in relation to Call for Sites / HELAA and how we have assessed sites. Comments raised that the site was previously rejected, inadequate evidence base to demonstrate benefits.
- Focus on completing the existing new settlements and at land at NEC, not at Grange Farm.
- **Turnout:** Over 150 people – the venue was full.

Thursday 15 January, 5pm to 7pm: Drop-in session at Jubilee Pavillion, Stapleford, CB22 5BQ

Key discussion points from event records (issues discussed):

- Conversations around the level of development proposed for Stapleford and Great Shelford – Mingle Lane allocation (now deleted), settlement policies referring to unlimited development, defined development extent boundary, and Green Belt.
- Conversation about there being no reference to rights of way, other than in the glossary. Rights of way are for leisure / horse riding rather than active travel routes. Comments to be submitted with suggested changes.
- Questions relating to the Local Nature Recovery Strategy and the designations shown in that and on the Local Plan Policies Map in relation to Gog Magog Downs and Wandlebury.
- Conversations to clarify Mingle Lane no longer proposed for allocation – local mailing has provided suggested response, and suggests email directly to Stephen. Asked for any responses to also be sent to local plan mailbox.
- Query about the route for CSETs, and why this is not shown on the Local Plan Policies Map.
- Discussions in relation to Call for Sites / HELAA and how we have assessed sites and issues relating to logging in to site submissions form.
- Conversation regarding progress on the Whittlesford Neighbourhood Plan.
- Query re model used for predicting sea level rise and discussions re water pipeline / reservoir.
- **Turnout:** 8 people.

Thursday 15 January, 5pm to 7pm: Presentation and Q&A on Cambridge Biomedical Campus, 1000 Discovery Drive, CB2 0AX

Key discussion points from event records (issues discussed):

- Can we plan for less than the government housing targets?
- What would happen if the government, through the Cambridge Growth Company, push for more development than the Local Plan?
- Cost/affordability issues for housing and concern about Build to Rent and Co-Living
- We already don't have enough housing to cope with the existing number of employees in the area.
- Does the withdrawal of the HIF for NEC mean more homes have to go elsewhere?
- Do we only consider sites that have been put forward by developers/landowners?
- What are our affordable and accessible home thresholds?
- Stalled sites are an issue, do we know how many sites are stalled, how they could deliver quicker and could more be done to improve the capacity of the construction industry?
- Like the concept of the Cambourne Forest for health and well being. It would be good if it had community ownership
- Very impressed with the CBC SPD
- Lots of people have spoken about food growing spaces at CBC
- Hotels would be good but way finding is important
- Skills and training for construction is important, we need a centre on the campus to train people up
- Lots of anti-social issues that are pushed into local neighbourhoods. This needs addressing by CUH and CBC Ltd – ripple out effect
- Is the campus still being promoted by the Campus as Vision 2050?
- Is a masterplan being prepared?
- **Turnout:** 8 people attended the event.

Friday 16 January, 4:45pm to 6:45pm: Drop-in session at the Nightingale Pavillion Community Room, off Nightingale Avenue, CB1 8SG

Key discussion points from event records (issues discussed):

- A few questions about where exactly development is allocated south of the Biomedical campus how much development will there be? Are community / sports facilities in the new development? Questions about whether there would be sufficient supporting infrastructure in terms of water supply – new sources of water supply won't be available until the 2030s so will that prevent developments taking place until then? Will residents be forced to have limited water credits for their home personal use each day? Will there be traffic congestion?
- The south west area of the city is becoming very congested (on Queen Ediths Way) and would like a new road built for car users. Another resident raised concerns about pedestrians using Lime Kiln Hill which is steep and narrow road with cars and bikes traveling fast down it. They were also concerned about the former quarry chalk pits next to the nature reserve – some high 'cliffs' pose a danger for visitors.
- Advise was provided to the LPA to attend more existing local groups at their meetings and events (churches, community café) for the next stage of consultations for the LP.
- Poor connectivity for the 3 larger settlements in the LP proposals (Cambourne, Northstowe, Waterbeach).
- Support for music venues proposed in east Cambridge. He is concerned about viability of the venue
- Central government will push for the area to the north of the Cambridge Science Park to be put forward for development, despite it being in the green belt.
- Recommendation to add a college at the Marshalls airport allocation, and a secondary school in the Abbey area as this area lacks one.
- LPA should consider what different types of infrastructure require ministerial approval.
- **Turnout:** 11 people attended the event.

Friday 16 January, 11:15am to 1:30pm: Drop-in session at The Small Hall, Milton Community Centre, Coles Road, CB24 6BL

Key discussion points from event records (issues discussed):

- Transport, North East Cambridge, availability of community halls and other infrastructure. Green Spaces, and the pressure on Milton Country Park and delivery of new green space. Green Belt development vs other options, and impact on the compactness of Cambridge. Building heights.
  Transport connections to Waterbeach and Ely, and investment in transport infrastructure. Lack of retail facilities in new developments.
- **Turnout:** 4 people attended the event.

Saturday 17 January, 9:30am to 12:30pm: Histon Farmers Fayre Market, Methodist Church, 22 High Street, CB24 9JD

Key discussion points from event records (issues discussed):

- Slow build out by developers of applications
- Need for affordable housing – building too much student accommodation.
- Congestion and potholes
- Impact of Darwin Green and students travelling to - Impington over the roundabout with no clear cycle friendly route.
- **Turnout:** Handed out 50 leaflets.

Saturday 17 January, 11am to 1pm: All Saints Garden Market, Cambridge, CB2 1TQ

Key discussion points from event records (issues discussed):

- Only a few people stopped to talk to us, and the conversations were about what the Local Plan is, how we are considering sustainability particularly transport implications of new developments, and where they can see actual copies of the Local Plan / attend events.
- **Turnout:** Handed out 100 leaflets

Tuesday 20 January, 4:30pm to 7pm: Drop-in session at Gamlingay Eco Hub, Stocks Lane, SG19 3JR

Key discussion points from event records (issues discussed):

- Discussion about growth in Cambourne – getting too big, and taking in the surrounding villages. Highlighted concern with the housing need – not convinced there is that much need.
- Discussion about sites of ecological value and protecting areas of importance in villages from development – highlighted the different open space / amenity designations. Need to protect the characteristics of villages. Suggested that we have reclassified villages.
- Highlighted that only designated County Wildlife Sites are shown on the Policies Map – there are other sites that meet the criteria that are not designated by the Wildlife Trust because unwilling landowner – we should be doing more to protect these sites, and make it clear that only designated sites are shown on the Policies Map.
- Discussed the Lordsbridge consultation areas, and query about whether wind turbines should be mentioned within the second area.
- Discussion re Green Infrastructure – can the brown blob (8, Western Gateway) be extended to cover the whole of the parish? Will help with consideration of green infrastructure when proposals like Tempsford station are considered.
- Highlighted that event not well publicised.
- **Turnout:** 3

Thursday 22 January, 4:30pm to 6pm: Drop-in session at Cherry Hinton Village Leisure Centre, Colville Rd, CB1 9EJ

Key discussion points from event records (issues discussed):

- Lengthy conversation on a number of issues beyond scope of the draft Local Plan- Draft MHCLG Design and Placemaking PPG draft consultation, impact of LGR, Cambridge Growth company and transparency of communication, Major Bristow's manifesto/light rail and concert hall for Cambridge, Neighbourhood plans within Cambridge and their value).
- Comment that the direction of the draft GCLP IDP reflects that of the 1974 regional growth plan, and that the IDP recommends significant infrastructure, GCSP confirmed that the councils are working on new study to address gaps in IDP for indoor/outdoor open space/sports provision and community facilities. Sports Study in progress now (delayed) but should be published to support the next IDP for Reg 19.
- Plan has a gap in facilities for womens'/girls' sports.

- Issues with access and accessibility of sports facilities in reality (low income, public transport connections given as examples).
- Policy I/SI Safeguarding important infrastructure- queried specific reference to Lord's Bridge Restricted Area and what the consultation area was?
- **Turnout:** 2 people attended the event.

Thursday 22 January, 5pm to 7pm: Drop-in session at The Wing, Brown's Field Community Centre, 31A Green End Rd, CB4 1RU

Key discussion points from event records (issues discussed):

- We covered the transport networks, roads, the new developments in NEC, housing.
- **Turnout:** 3 people attended the event.

Friday 23 January, 11:30am to 1pm: Lichfield Hall, Coleridge, CB1 3SJ

Key discussion points from event records (issues discussed):

- Strategic planning in England
- Green Belt and effect on the spatial strategy (i.e. directing growth to new settlements rather than edge of Cambridge sites)
- Lordsbridge Consultation Area
- Cambridge Biomedical Campus allocation
- **Turnout:** 2 people attended the event.

Sunday 25 January, 10am to 12pm: Haslingfield Village Market, Village Hall, High Street, Haslingfield CB23 1JN

Key discussion points from event records (issues discussed):

- Agree need for development (housing/jobs), concern matching level of infrastructure comes with it and at the same time.
- Pot-holes
- Suffolk boundary development (Forest 1) near Balsham - Forest City 1 | Britain's Next Great City
- **Turnout:** 60 people attended the event.

Tuesday 27 January, 2pm to 6pm: Drop-in session Cottenham Village Hall, Lambs Lane, CB24 8TA

Key discussion points from event records (issues discussed)

- Smithy Fen Gypsy Traveller site, the lack of enforcement, and the impact of its inclusion as a policy area in the Draft Plan.
- Moor Drove Gypsy Traveller site, the lack of enforcement, and the fact that there isn't anything in the plan to help resolve the issues on the site.
- The key issue on both sites was the current use of individual plots by non-gypsy travellers. If enforcement took place and the plots were used by Gypsy Travellers there wouldn't be a need for a policy area in the plan.
- Concerns about the wording for the Policy Area and, in particular, reference to 'intensification'.
- Concerns over the potential implications for infrastructure and facilities provision, particularly transport infrastructure, as a result of Cottenham becoming a Minor Rural Centre
- **Turnout:** 25 people attended the event.

Wednesday 28 January, Presentation and Q&A on Grange Farm, Abington Village Institute, 66 High Street, CB21 6AE

Key discussion points from event records (issues discussed):

- Concerns for rural character and importance of open countryside.
- Concern for overall development in this location, particularly 6,000 homes that would lead to impacts on surrounding villages and transport network including the already constrained roads at A11 and A1307.
- Concern around sustainability and HELAA scoring of the site and that NEC should be the preferred location.
- Worry for impacts on social infrastructure and that the site will not be appropriate location and would put pressure on existing infrastructure.
- Worry for landscape, character and heritage of the area.
- **Turnout:** Over 85 people attended.

Thursday 29 January, Exhibition at Form the Future exhibition - Hinxton Hall

Key discussion points from event records (issues discussed):

- Was asked to provide an update on the Local Plan and that current status of EWR.

- Discussion around the Affordable Housing policy and more specifically social rented homes.
- Discussed possible work with Cambridge Science Centre
  re Councils consultations engagement “real life” examples for research work.
  Researcher may contact us (gave out main LP email to contact us by).
- **Turnout:** 200 guests at the conference, over 30 leaflets handed out.

Executive Summary

The multi-award-winning Greater Cambridge Youth Engagement Service (YES) was commissioned by the Greater Cambridge Shared Planning Policy Team to ensure that young people had a meaningful voice in shaping the emerging Greater Cambridge Local Plan. The youth engagement workshops were designed to give both children and young people the opportunity to have a genuine input into the draft planning policies, ensuring alignment with national planning policy requirements for inclusive engagement.

Across workshops involving students from Monkfield Park Primary School and Comberton Village College, participants contributed their ideas through interactive presentations, prioritisation exercises, and creative drawing activities. The engagement process was structured around the seven key themes of the Greater Cambridge Local Plan: Climate Change, Biodiversity and Green Spaces, Wellbeing and Social Inclusion, Great Places, Homes, Jobs, and Infrastructure. Students were first introduced to the themes through a facilitated discussion and visual demonstrations, including a simple Lego illustration of how different elements of a community fit together. They were then invited to select the theme that mattered most to them through a voting exercise and subsequently represent their ideas through drawings that illustrated how their chosen priority could be reflected in real places.

Analysis of the qualitative and quantitative data from the workshops identified several key themes. First, students demonstrated a strong concern for climate change and environmental protection, frequently highlighting renewable energy and the protection of nature as important priorities. Second, housing emerged as a major issue, with many students emphasising the importance of safe, affordable homes and the need to address homelessness. Third, students expressed a clear desire for accessible green spaces and vibrant places that support recreation, community interaction, and well-being, including parks, sports areas, and spaces for relaxation and connection with nature.

These findings highlight the importance of planning for communities that balance environmental sustainability, housing provision, and high-quality public spaces. The insights gathered through the youth engagement workshops provide valuable evidence of the priorities and aspirations of younger residents, reinforcing the need for development that supports healthy environments, inclusive communities, and resilient infrastructure. The recommendations and observations presented in this report aim to ensure that the perspectives of young people are considered as the Greater Cambridge Local Plan continues to develop, helping to shape places that respond to the needs and expectations of future generations.

1.0 Introduction

This report presents the youth engagement activities delivered by the multi-award-winning Greater Cambridge Shared Planning Youth Engagement Service (YES) in support of the emerging Greater Cambridge Local Plan. The workshops were organised to provide children and young people with an opportunity to learn about planning and to share their views on the key themes shaping the future growth and development of Greater Cambridge. The sessions were delivered in collaboration with the Local Plan Policy Team and formed part of the wider engagement process to ensure that a diverse range of voices contribute to the development of planning policies. The primary aim of the workshops was to introduce students to the themes of the Local Plan and to create an accessible platform for them to express their ideas and priorities.

Recognising that children and young people are often underrepresented in traditional planning consultations, the workshops aimed to ensure that their perspectives are captured and considered within the Local Plan process. The activities provided students with an opportunity to think critically about issues such as climate change, housing, nature, infrastructure, and community wellbeing, while also encouraging creativity and discussion about the future of their local area.

This report presents the outcomes of the engagement activities undertaken with students at Monkfield Park Primary School and Comberton Village College. It summarises the approach used during the sessions and provides an overview of the insights generated through both the voting and drawing exercises. The findings offer valuable qualitative and quantitative perspectives on how young people understand the themes of the Local Plan and what they would like to see in their communities. These insights contribute to the broader evidence base supporting the preparation of the Greater Cambridge Local Plan and highlight the importance of incorporating the views of younger generations in shaping sustainable and inclusive places for the future.

1.1 An overview of the Youth Engagement Initiative

This table provides a brief overview of the YES workshops:

Project	Greater Cambridge Local Plan Consultation
Partner(s)	GCSP Policy Team
Schools	Monkfield Park Primary School & Comberton Village College
Date of Youth Engagement Workshops:	Monkfield Park Primary School - 26 January 2026 Comberton Village College - 27 January 2026

2.0 About the draft Greater Cambridge Local Plan

The draft Greater Cambridge Local Plan is a legal planning document that guides the use and development of land over time. It sets out planning policies that will shape growth and development in the Greater Cambridge region for the next 20 years. The Plan identifies the need for new homes, jobs, services, and infrastructure, and provides guidance on where development should take place and how it should be delivered. These policies are used when considering planning applications, alongside the National Planning Policy Framework (NPPF). Previously, Cambridge City Council and South Cambridgeshire District Council prepared separate Local Plans which shared a common development strategy. The current approach brings the two authorities together to produce a joint Local Plan for Greater Cambridge, ensuring a consistent and coordinated approach to planning.

The draft Local Plan is being developed through extensive engagement with communities, organisations, and stakeholders, supported by a wide range of evidence. Its overall aim is to promote sustainable development, protect and enhance the natural and built environment, support healthy and vibrant communities, and foster a strong and innovative economy. Through its policies and proposals, the plan will help shape how Greater Cambridge grows and develops in the future.

To support the Local Plan public consultation, the Greater Cambridge Youth Engagement Service (YES) was appointed to capture the perspectives of the local youth. The youth's input will be incorporated into the final version of the Local Plan, ensuring that the development reflects the needs of young people from the outset.

3.0 Relevant Planning Policies

Local and national planning policies emphasise the need for meaningful community involvement. Because children and young people will live with the effects of new developments for longer than older generations, and because public consultations often attract older adults with more available time, it is essential to actively engage groups that are typically harder to reach. Ensuring that children and young people are included helps guarantee that their perspectives genuinely shape the placemaking process.

3.1 Relevant National Planning Policies

The ‘National Planning Policy Framework’ (NPPF) (2024) sets out the central government’s expectations for community engagement in the planning and design process, to ensure local communities have meaningful input into the design of future developments that will affect them.

Paragraph 131 of the NPPF states that *“Good design is a key aspect of sustainable development, creates better places in which to live and work and helps make development acceptable to communities. Being clear about design expectations, and*

how these will be evaluated, is essential for achieving this. So too is effective engagement between applicants, communities, local planning authorities, and other interests throughout the process."

Paragraph 132 states that *"Plans should, at the most appropriate level, set out a clear design vision and expectations, so that applicants have as much certainty as possible about what is likely to be acceptable. Design policies should be developed with local communities, so they reflect local aspirations and are grounded in an understanding and evaluation of each area's defining characteristics. Neighbourhood planning groups can play a significant role in identifying the special qualities of each area and explaining how this should be reflected in development, both through their own plans and by engaging in the production of design policy, guidance and codes by local planning authorities and developers."*

3.2 Relevant Local Planning Policies & Guidance

Paragraph 3.36 of the 'Greater Cambridge Statement of Community Involvement SPD' (2024) states that: *"GCSP will meet the requirements of the Equality Act 2010, which aims to promote equality, eliminate discrimination and encourage good relations between different groups associated with age, disability, gender and gender reassignment, race, religion and other protected characteristics. It is recognised that some areas are under-represented young and older people, so it is important to include them in planning consultations. The Councils will work closely with relevant organisations that have experience in finding the best way to engage with these groups."*

Paragraph 3.37 of the 'Greater Cambridge Statement of Community Involvement SPD' (2024) states that: *"It is GCSP's aim to explore how innovative forms of public engagement can be further developed and refined in future consultations. In 2022 South Cambridgeshire District Council established the 'Young People Task & Finish Group' to explore how to improve youth engagement in South Cambridgeshire. A report set out the opportunities to create or develop effective youth engagement along with recommendations relating to the State Community Involvement that GCSP will use to improve planning consultation with young people.*

Paragraph 4.14 of the 'Greater Cambridge Statement of Community Involvement SPD' (2024) states that*: "There are many marginalized groups across Greater Cambridge that we aspire to engage with, including young people. Engagement with young people can ensure that the final design of developments considers the specific interests of children and young people who are often underrepresented in public consultations, particularly in relation to delivering play areas and public spaces that are child friendly and fit for purpose."*

Paragraph 4.15 and 4.16 of the 'Greater Cambridge Statement of Community Involvement' SPD (2024) states that: *"GCSP provides an award-winning youth engagement service. It aims to address the long-standing issue of young people being underrepresented in decision-making about the built environment. The service aims to enhance planning outcomes by giving young people opportunities to be involved in major planning applications our work whilst increasing diversity and inclusion."*

3.3 The Greater Cambridge Youth Engagement Service (YES) Social Value Statement

This Greater Cambridge Youth Engagement Service (YES) published its Social Value Statement in 2024. It encourages collaboration between developers and the YES team on development proposals to maximise social value and impact. As a result, the YES team, in collaboration with developers and other stakeholders, ensures that development decisions are informed by young people who are especially underrepresented in society.

3.4 The Greater Cambridge Youth Engagement Framework

The Greater Cambridge Youth Engagement Design Workshops were designed based upon a framework developed by the Council's Youth Engagement Service (YES) - *"Framework for Evaluating the Effectiveness of Youth Engagement."* This established framework, designed by Dr. Bonnie Kwok, an award-winning youth engagement researcher and practitioner, considers the following four key areas, which aim to benefit all those who take part in the workshops:

1) Impact on the plan and decision-making process
2) Process
3) Educational and social value
4) Practical factors

The activities held in both schools on the Greater Cambridge Local Plan Consultation Youth Engagement Project was designed based on the established 'Greater Cambridge Youth Engagement Evaluation Framework' and its 'Social Value Statement' to help ensure that the views of the local children and young people are adequately considered as part of the planning and design process, and the students benefit from the exercise from and education point of view. The activities also align with the adopted 4C's: 'Community', 'Connectivity', 'Climate' and 'Character'. The 4Cs is a design framework set out in the 'Cambridgeshire Quality Charter for Growth', which aims to promote sustainable and inclusive growth in the Greater Cambridge region. The main themes that were used to guide this engagement, as described in the Greater Cambridge Local Plan, include:

- Climate Change
- Biodiversity and Green Spaces
- Wellbeing and Social Inclusion

- Great Places
- Jobs
- Homes
- Infrastructure

4.0 The Youth Engagement Workshops Overview

The youth engagement initiative to support the Greater Cambridge Local Plan public consultation was led by the Youth Engagement Service (YES) team, with support from members of the policy team. The workshop took place on 26 January 2026 in Monkfield Park Primary School, and on 27 January 2026 in Comberton Village College. The sessions began with a welcome and the introduction of the facilitators, followed by a talk on the seven themes of the draft Greater Cambridge Local Plan. Through the discussion, students were encouraged to think about the role of planning in addressing important issues such as climate change, housing, infrastructure, jobs, wellbeing, biodiversity, and the creation of great places. They also had the opportunity to watch a short Lego-based demonstration to help explain planning concepts in a simple, visual way.

This was followed by writing and drawing exercises in which students were asked to select a theme that matters most to them and explain why they chose it. Afterwards, they were also asked to produce a drawing based on their chosen themes, which also formed entries of a wider drawing competition organised by the Planning Policy team. The sessions were to reinforce key learning outcomes and provide students with the opportunity to articulate these themes into future development. The workshops were carefully designed to integrate experiential learning, creativity, and reflection, ensuring that young people’s perspectives are meaningfully captured to inform the Local plan.

4.1 Details of Youth Engagement Workshops

The workshops with Monkfield Park Primary School and Comberton Village College were led by the Youth Engagement Service (YES) Lead Dr. Bonnie Kwok, and supported by Tom Davies, Maxine Ross and Lilian Boateng from the YES team. Also in attendance were partners from the Planning Policy team, including Alphie Gibbs (Policy Planner) and Alejandra Pinnacho (Planning Intern), who were co-facilitators.

The format of the workshops is as follows:

- Welcome and purpose of the workshop
- Facilitators' introduction
- Greater Cambridge Local Plan’s key themes and policy talk
- Voting and ‘Let’s Get Creative!’ drawing session/competition
- Reflection
- Feedback

1) Welcome and Purpose of Workshop

The workshops began with an introduction by the facilitators, followed by a presentation outlining the session's purpose and objectives. The presentations provided an overview of the draft Greater Cambridge Local Plan's purpose and key themes. The sessions also highlighted the importance of youth engagement in the development management and plan-making process and introduced the basic principles of good placemaking. Emphasis was placed on how these themes contribute to creating sustainable environments and supporting long-term development objectives. As part of the engagement activities, the young people also watched a short Lego-based video, illustrating how different elements of a community, such as homes, green spaces, roads, schools, and workplaces, fit together to form a well-planned place. By visualising development through the Lego video, the young people would be able to connect the themes, which would later support their thinking during the writing and drawing exercises.

2) Local Plan's Key Themes and Policy Talk

As part of the engagement activities, students were introduced to the 7 key themes of the draft Greater Cambridge Local Plan through an interactive policy talk. The sessions were led by Alfie Gibbs at Monkfield Park Primary School and by Alejandra Pinacho at Comberton Village College. They explained to the students the themes' focus (see below) and how they relate to the future of communities across Greater Cambridge.

a) Climate Change

The facilitators explained to students that the council sets policies to reduce the impact of new developments on climate change and to help communities adapt to its effects. Development should be in areas that limit carbon emissions and be designed to high energy and water efficiency standards. Students were informed that buildings and infrastructure must adapt to current and future climate risks, such as flooding, and contribute to a resilient and sustainable environment. The goal is to support Greater Cambridge's transition to net zero carbon by 2050. Young people were encouraged to think about how their communities can reduce emissions, protect nature, and remain safe as the climate changes.

b) Biodiversity and Green Spaces

The facilitators explained to students that planning policies aim to protect wildlife and improve green spaces across Greater Cambridge. These policies focus on ensuring that development does not harm the natural environment but instead leaves it better than before. Students were informed that biodiversity includes plants, animals, insects, and the habitats that support them. The facilitator highlighted the importance of creating and connecting parks, forests, rivers, and other natural areas so that wildlife can thrive and people can enjoy nature. Emphasis was also placed on ensuring that

communities have access to high-quality green spaces for recreation, relaxation, and well-being. Students were encouraged to consider how development can support nature by planting trees, protecting habitats, and creating new green spaces.

c) Wellbeing and Social Inclusion

Students were educated about the planning policies that aim to support healthy, safe, and inclusive communities where people's everyday needs can be met locally. They were told that such policies encourage development that helps create places where everyone feels welcome and able to participate in community life. The facilitators highlighted the importance of ensuring that development benefits all members of the community, including people of different ages, abilities, and backgrounds. Emphasis was also placed on improving equal access to opportunities, services, and facilities so that everyone can lead healthier and happier lives.

d) Great Places

The facilitators explained that creating great places involves protecting local landscapes and historic buildings, which help give Cambridge and South Cambridgeshire their unique identity. They also emphasised that good planning should create beautiful, safe, and interesting places where people enjoy spending time. This includes spaces for living, working, visiting, and recreation. Students were encouraged to consider how buildings, public spaces, and landscapes can work together to create attractive, welcoming environments that reflect the distinctive character of local communities.

e) Homes

The facilitators explained to students that housing policies are designed to guide how new housing developments are planned and approved in Greater Cambridge, with the aim of ensuring that enough homes are built to meet the needs of current and future residents. They were told that this includes providing a range of housing types suitable for different people, families, and life stages. It was also highlighted that delivering affordable homes, so that more people can rent or buy within the community, is important. Emphasis was placed on creating neighbourhoods where housing is well planned and supported by nearby services and facilities.

f) Jobs

Policies regarding where and how places for work and businesses are developed in Greater Cambridge are key elements of development to support a strong and diverse local economy that provides a wide range of employment opportunities for people. The facilitators highlighted that Greater Cambridge is known globally for its education, research, and innovation, and that planning helps maintain and strengthen this

reputation. The overall aim is to support a dynamic economy that benefits local communities while encouraging innovation and opportunity.

g) Infrastructure

The facilitator explained to students that infrastructure refers to the essential systems and facilities that support everyday life in communities. Planning policies ensure that when new development takes place, the necessary infrastructure is provided at the right time to support it. Students were informed that this includes transport networks, water and energy systems, digital connectivity, and public services such as schools and healthcare facilities. The facilitator highlighted that good infrastructure helps communities function effectively and improves access to services and opportunities. Students were encouraged to think about ways to easily connect people and places in their communities.

3) Voting and Let's Get Creative Drawing Session

The discussion with the Planning Policy team facilitators on the themes provided an important foundation for the activities that followed. It helped students understand the purpose of each theme and how their ideas and drawings could contribute to shaping future planning policies.

Following the talk, students were given voting exercise sheets and were asked to review all seven themes and select the one they considered most important from their perspective. This activity lasted approximately 15 minutes. After completing the writing exercise, students participated in a creative task to visually represent their chosen theme. Drawing sheets were distributed, allowing students to produce individual illustrations that showed how their priorities could be reflected in physical spaces or environments. Students were informed that their drawings will also be entered into a wider Drawing Competition organised by the Planning Policy Team. This activity lasted around 20 minutes. At the end of the session, the outputs from both exercises were collected by the YES team for further review and analysis.

4) Reflection

After the voting and creative sessions, the facilitators asked the students to share their drawings and voting responses. Many highlighted climate change as a major concern, explaining that protecting the planet through renewable energy and reducing pollution is important for their future. Others focused on homes, emphasising that everyone should have a safe and warm place to live and that homelessness should be reduced. Some students spoke about the importance of green spaces and biodiversity, describing parks, trees, and wildlife areas that support both nature and people's wellbeing. Several students also highlighted great places, suggesting more playgrounds, sports areas, and fun spaces where communities can gather. Their

reflections showed an understanding of how themes such as homes, nature, and climate are interconnected in creating healthy, liveable communities.

5) Feedback

The workshops concluded on a positive and engaging note, with students enthusiastic throughout both the voting and drawing exercises. Many participants were eager to share their ideas and explain the meaning behind their drawings. The combination of discussion, voting, and creative expression helped sustain students' interest and participation. Teachers and facilitators observed that the activities were accessible and effective in helping students understand planning concepts; they thanked the team for involving their students in such an educational and engaging workshop. The team also thanked the teachers and students for their support throughout the session.

5.0 Data Analysis

Building on the key undermining themes of the draft Greater Cambridge Local Plan, the YES team analyses students' drawings to derive both quantitative and qualitative data, producing research results. The frequency with which elements are depicted in the drawings suggests which elements matter most to the students. The analyses for both Monkfield Park Primary School and Comberton Village College were conducted separately to gain a clearer understanding of what students in Cambourne and Comberton would want to see in their neighbourhoods and the surrounding parishes.

Monkfield Park Primary School

A total of 127 responses from the 4 classes in Years 5 and 6 were analysed to identify the most important themes emerging from the voting and the 'Let's Get Creative' drawing competition. The findings indicate a clear prioritisation of issues related to housing, environmental sustainability, and place quality. Housing emerged as the most significant concern, accounting for 38 responses (29.9%). This suggests that participants place strong emphasis on the provision, quality, and suitability of homes within their community. Closely following this, climate change was identified in 27 responses (21.3%), highlighting a high level of awareness and concern regarding environmental challenges and the need for sustainable development. The theme of creating 'great places' was also prominent, with 24 responses (18.9%). This reflects the importance participants attach to the overall quality, character, and liveability of their local environment. In comparison, jobs accounted for 16 responses (12.6%), indicating a moderate level of concern for employment opportunities and local economic conditions.

Less frequently identified themes included biodiversity and green spaces, and wellbeing and social inclusion, each with 8 responses (6.3%). While these areas are recognised, they were less commonly viewed as the primary priority. Infrastructure received the fewest responses (6, 4.7%), which may suggest that it is either a less

immediate concern or implicitly considered within other themes, such as housing and place quality.

The results demonstrate that over half of the responses relate to the built environment, particularly housing and the quality of places, while environmental considerations, especially climate change, also feature strongly. Social and economic themes are present but comparatively less dominant. These findings point to the importance of delivering housing alongside high-quality, sustainable, and liveable environments in future planning and development.

Theme	**Frequency**	**Percentage**
Climate Change	27	21.30%
Biodiversity and Green Spaces	8	6.30%
Wellbeing and Social Inclusion	8	6.30%
Great Places	24	18.90%
Jobs	16	12.60%
Homes	38	29.90%
Infrastructure	6	4.70%
Total	**127**	**100%**

Thematic Results from Voting and ‘Let’s Get Creative’ Drawing Competition with Monkfield Park Primary School

Comberton Village College

A total of 32 responses were analysed to identify the most important themes from the voting and the ‘Let’s Get Creative’ drawing competition. The results indicate that environmental issues and infrastructure are key priorities among participants. Climate change emerged as the most frequently identified theme, with 8 responses (25%). This highlights a strong level of concern among participants about environmental sustainability and the long-term impacts of climate change. Infrastructure was the second most prominent theme, accounting for 6 responses (18.8%), suggesting that participants recognise the importance of supporting development with adequate transport, services, and physical systems.

Wellbeing and social inclusion were mentioned in 5 responses (15.6%), indicating a notable level of interest in ensuring that communities are inclusive, supportive, and conducive to residents’ overall quality of life. Biodiversity and green spaces received 4 responses (12.5%), reflecting recognition of their value and the need for ecological

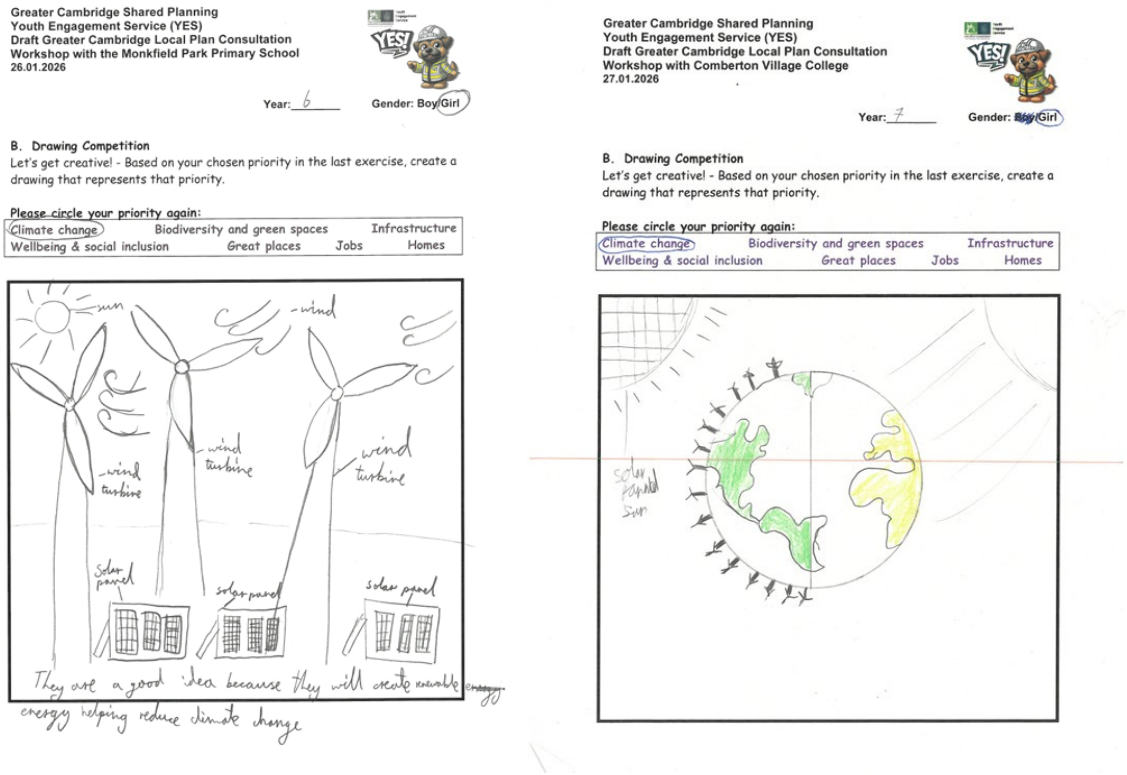
protection. Three themes, great places, jobs, and homes, each received 3 responses (9.4%). This suggests that, while these areas remain relevant, they were less frequently prioritised as the most important issue than environmental and infrastructure-related concerns.

Overall, the findings suggest that participants place particular emphasis on environmental sustainability and supporting infrastructure, with climate change emerging as the most significant issue. Social well-being and ecological considerations also feature in the responses, while housing, employment, and place quality appear to be secondary priorities for this group.

Theme	Frequency	Percentage
Climate Change	8	25%
Biodiversity and Green Spaces	4	12.5%
Wellbeing and Social Inclusion	5	15.6%
Great Places	3	9.4%
Jobs	3	9.4%
Homes	3	9.4%
Infrastructure	6	18.8%
Total	**32**	**100%**

Thematic Results from Voting and ‘Let’s Get Creative’ Drawing Competition with Comberton Village College

5.1 Thematic Analysis



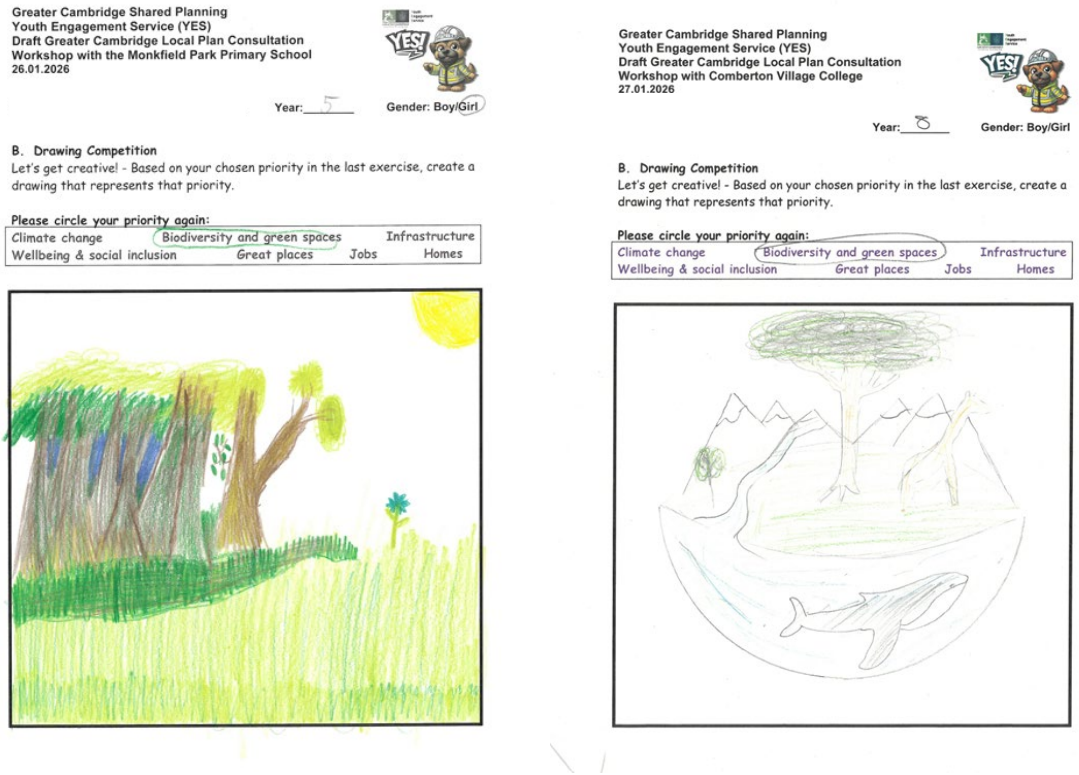
a) Climate Change

Climate change emerged as one of the most prominent themes across both schools. Many children expressed concern that it is already damaging the planet and could threaten the future if not addressed. Several responses highlighted the risks of rising temperatures and the destruction of ecosystems and wildlife. Some children emphasised that if climate change is not tackled, “the world could be destroyed” or “become difficult for future generations to live in”. The accompanying drawings often depicted contrasting scenarios: one showing a polluted or destroyed world caused by carbon emissions, and another showing a greener, healthier environment with reduced emissions. The children frequently proposed solutions centred on sustainability and renewable energy. Several children also highlighted the importance of climate action

as the foundation for all other themes, suggesting that if the planet becomes uninhabitable, other priorities such as housing and jobs would become meaningless.

Examples of ideas and solutions children proposed include:

- Introducing renewable energy sources such as solar panels, wind turbines, and geothermal systems
- Reducing pollution by using fewer fossil fuels and fewer cars
- Planting more trees and protecting forests to absorb carbon emissions
- Designing sustainable homes and infrastructure powered by renewable energy
- Protecting rivers, oceans, and wildlife habitats threatened by climate change.



Example of drawings based on the Climate Change theme

b) Biodiversity and Green Spaces

The children strongly emphasised the importance of protecting nature and maintaining access to green spaces. Many responses highlighted nature's role in supporting animals, plants, and ecosystems, as well as benefiting human well-being. Drawings frequently depicted forests, rivers, wildlife habitats, birds, and flowers, suggesting that children associate biodiversity with vibrant natural environments. Some children also recognised a potential tension between housing development and environmental protection, suggesting that future development should balance the provision of homes with the preservation of green spaces.

Examples of improvements children would like to see include:

- More parks, forests, and nature reserves
- Green spaces with trees, flowers, and wildlife habitats
- Protected ecosystems where animals can live safely
- Outdoor spaces with rivers, ponds, and aquatic life
- Community spaces that allow people to connect with nature while protecting biodiversity.

c) Wellbeing and Social Inclusion

Many responses emphasised the importance of creating communities where everyone feels safe, accepted, and supported. Children linked well-being to mental health, social connection, and opportunities for recreation and relaxation. Several drawings illustrated happy communities, peaceful environments, and inclusive spaces where people from different backgrounds come together. Others depicted people experiencing loneliness or distress in environments lacking supportive infrastructure. Some children also suggested that a strong sense of community and inclusion is essential to creating peaceful, cooperative societies.

Examples of what children would like to see include:

- Safe community spaces where everyone feels welcome
- Facilities supporting mental health and wellbeing

- Youth clubs and community centres where people can socialise
- Inclusive environments that support people with disabilities
- Public spaces that encourage friendship, cooperation, and community engagement.

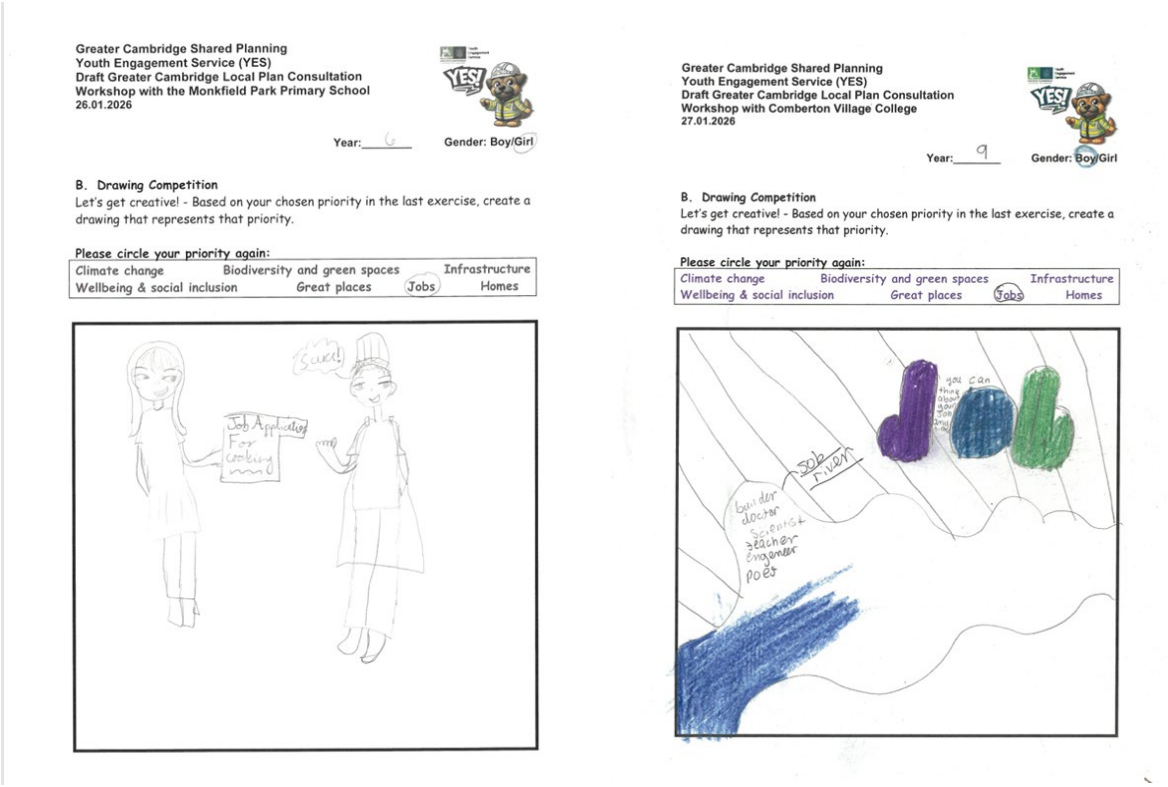
Example of drawings based on the Wellbeing & Social Inclusion theme

d) Great Places

Children frequently expressed a desire for vibrant and enjoyable environments with a variety of recreational and cultural activities. The concept of "great places" was often associated with spaces that encourage social interaction, history, exploration, and fun. Many drawings included parks, swimming pools, skateparks, museums, sports facilities, and cafés, suggesting that children want their communities to offer diverse opportunities for recreation and entertainment. Some children also expressed a desire for more activities within their vicinities, noting that many people currently travel to Cambridge for leisure and entertainment.

Examples of places children would like to see include:

- Skate parks and sports fields, including football pitches
- Swimming pools, water parks, and water-slide facilities
- Playgrounds and outdoor activity areas
- Museums, historic buildings, and cultural attractions
- Town centres with cafés, restaurants, and community gathering spaces.



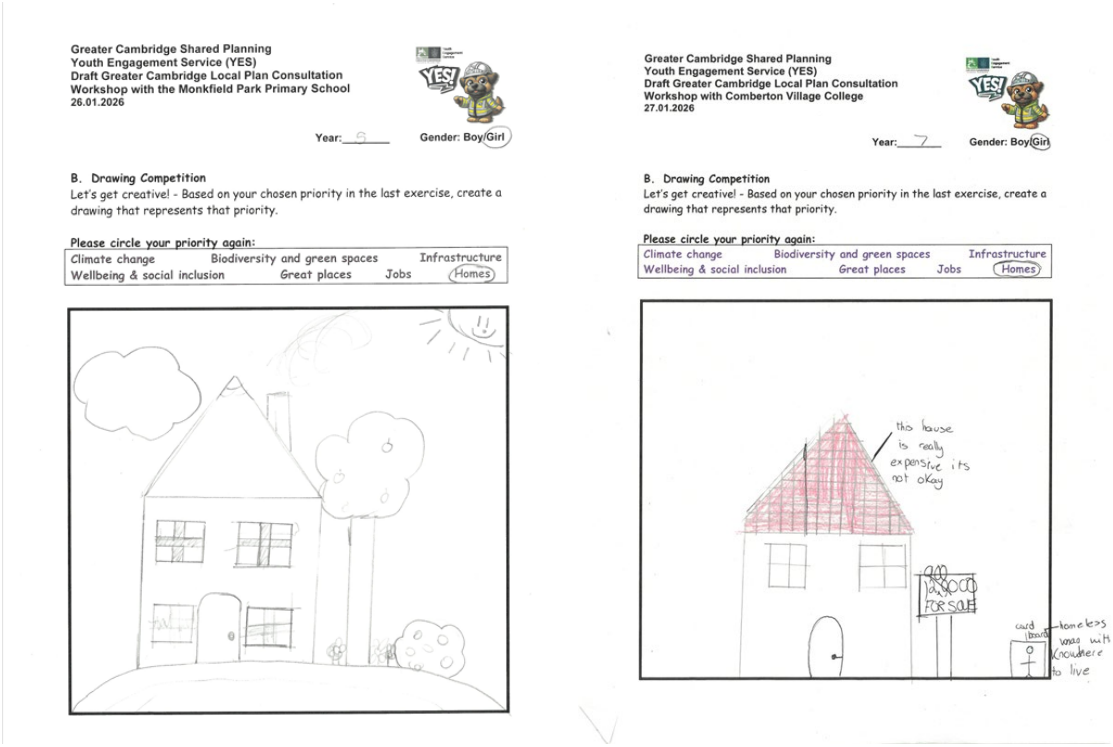
Example of drawings based on the Great Places theme

e) Jobs

Although not the most frequently prioritised theme, many children recognised the importance of employment in supporting stable and secure lives. Responses commonly linked jobs to the ability to earn money for essential needs such as housing, food, and daily expenses. Some children also expressed concerns about economic insecurity or future employment opportunities.

Examples of ideas related to jobs include:

- Providing diverse job opportunities in offices, restaurants, schools, and businesses
- Creating jobs through new businesses, construction, and community facilities
- Ensuring employment opportunities that allow people to afford housing and other necessities
- Supporting entrepreneurship and new types of work opportunities.



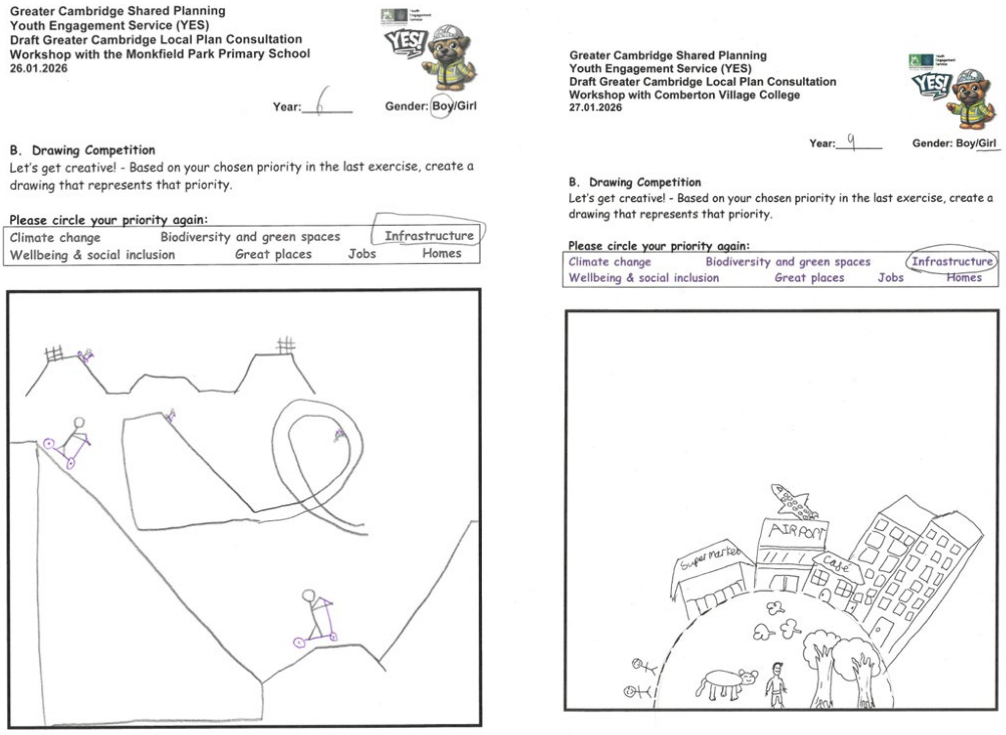
Example of drawings based on the Jobs theme

f) Homes

Housing emerged as one of the most prominent themes across the responses. Children consistently emphasised that homes are essential for safety, comfort, and well-being. Many responses highlighted the challenges of homelessness and the need to ensure everyone has a safe place to live. Some children also recognised that housing can be expensive and expressed concern that people may struggle to afford good-quality homes. Some drawings illustrated the contrast between overcrowded or deteriorating housing and well-designed, affordable homes supported by urban planning.

Examples of housing improvements children would like to see include:

- More homes to prevent homelessness
- Affordable housing so families can live comfortably
- Homes designed with gardens, green surroundings, and safe neighbourhoods
- Sustainable homes powered by renewable energy
- Housing that provides space for families, pets, and outdoor activities.



Example of drawings based on the Homes theme

g) Infrastructure

Children also demonstrated a clear understanding of how infrastructure supports communities and enables daily life. Many responses described infrastructure as the system that connects and supports other themes, such as housing, jobs, and services. Several children highlighted traffic congestion and the need for better transport systems. Others emphasised the importance of public facilities, such as schools and community services. Some drawings depicted well-planned cities with organised transport routes, buildings, and green spaces, reflecting children's interest in organised, functional urban environments.

Examples of infrastructure improvements suggested by children include:

- Better transport systems to reduce traffic congestion
- Well-designed roads and pathways for pedestrians and cyclists
- Schools, public facilities, and community buildings
- Infrastructure that integrates green spaces and tree-lined streets
- Urban environments with balanced development, including homes, shops, and public services.

Example of drawings based on the Infrastructure theme

6.0 Recommendations

The Planning Policy team is asked to have regard to the following elements as the Local Plan process further develops:

1. Strengthening Climate-Responsive Planning

The emerging Local Plan may take a stronger stance, requiring future developments to incorporate robust climate mitigation and adaptation measures. This includes integrating renewable energy technologies such as solar panels and wind power, promoting energy-efficient building design, and expanding tree planting and green infrastructure to reduce emissions and enhance environmental resilience.

2. Protecting and Enhancing Biodiversity and Green Spaces

The emerging Local Plan can be more explicit about protecting existing natural habitats while creating additional green spaces that support wildlife and biodiversity. This may include the provision of parks, community forests, tree-lined streets, and natural play areas, as well as the protection of rivers, ponds, and other ecological assets.

3. Providing Safe and Inclusive Community Spaces

Planning proposals should aim to create inclusive environments that promote wellbeing and social interaction. This could involve creating accessible public spaces,

community centres, youth clubs, and recreational areas where people of all ages and abilities feel safe, welcome, and connected.

4. Delivering Vibrant and Engaging Places

The emerging Local Plan can aim to support the creation of lively and attractive neighbourhood centres with a range of leisure and cultural opportunities. Facilities such as sports fields, skate parks, playgrounds, swimming pools, cafés, and community gathering spaces would help create places where residents can socialise, exercise, and spend time outdoors.

5. Supporting Local Employment Opportunities

Consideration should be given to creating opportunities for diverse employment within the area. This may include providing spaces for local businesses, offices, and retail activities, and community services, ensuring residents can access local jobs and support a thriving local economy.

6. Provision of Affordable and Sustainable Housing

The emerging Local Plan should ensure a sufficient supply of high-quality, affordable homes that meet the needs of current and future residents. Housing should be designed to provide safe, comfortable, and energy-efficient living environments, with access to green spaces and community facilities.

7. Planning Integrated and Sustainable Infrastructure

Infrastructure planning should support the effective functioning of communities by improving transport systems, public facilities, and connectivity. This includes designing safe walking and cycling routes, managing traffic congestion, and ensuring access to essential services, including schools, healthcare facilities, and public spaces.

8. Promoting Balanced and Sustainable Development

It is important to ensure that development achieves an appropriate balance among housing, infrastructure, employment, and environmental protection. Careful planning will be necessary to prevent the loss of green spaces while accommodating growth and maintaining high-quality living environments.

7.0 Conclusion

The youth engagement activities undertaken as part of the Greater Cambridge Local Plan consultation demonstrate the importance of involving children and young people in conversations about the future of their communities. As highlighted throughout this report, young people are rarely included in formal planning processes, despite being current and future users of the spaces being planned. The contributions gathered through the workshop activities were thoughtful, imaginative, and reflected a strong

awareness of environmental responsibility, community wellbeing, and the importance of safe and enjoyable places to live.

The sessions provided an interactive platform for students to learn about planning and the themes of the Local Plan while sharing their perspectives through writing and drawing exercises. Following an introduction to the seven themes climate change, biodiversity and green spaces, wellbeing and social inclusion, great places, homes, jobs, and infrastructure, students were encouraged to reflect on which issues mattered most to them. Their responses revealed a strong concern for climate change and environmental protection, as well as the importance of safe homes, accessible green spaces, and vibrant places where people can meet, play, and relax. Many students also recognised the connections among the themes, noting that infrastructure, jobs, housing, and environmental protection work together to create healthy and sustainable communities.

The outputs from the activities offer valuable insight into how younger residents perceive the challenges and opportunities facing Greater Cambridge. Their drawings and explanations frequently highlighted renewable energy, wildlife protection, recreational spaces, affordable housing, and community facilities. These perspectives reinforce the importance of planning for development that not only meets housing and economic needs but also prioritises environmental sustainability, inclusive communities, and high-quality public spaces. By considering the insights gathered from these engagement sessions, the Local Plan process can better reflect the aspirations of younger generations and support the creation of places that are resilient, inclusive, and environmentally responsible. Continued engagement with children and young people will be important as planning policies evolve, helping to ensure that Greater Cambridge's future development responds to the needs and ideas of all members of the community.

Joint Design Review

Draft Greater Cambridge Local Plan

Cambridgeshire Quality Panel & Greater Cambridge Design Review Panel

Consultation December 2025 – January 2026

30th January 2026

Confidential

Consultations closed on 30th January 2026. This note from the Joint Panel Review serves as an *event record* and will be used alongside formal public comments. All comments captured on the day would be considered.

The Cambridgeshire Quality Charter for Growth sets out the core principles for the level of quality to be expected in new development across Cambridgeshire.

The review was conducted in three sessions. The panel jointly reviewed session 1: the Local Plan Vision and Development Strategy. In session 2: Cambridgeshire Quality Panel reviewed selected sites identified as New Settlements and at the Edge of Cambridge, whilst Greater Cambridge Design Review Panel reviewed selected sites identified within the Cambridge Urban Area and Rest of the Rural area. The panel then jointly reviewed the Development Management policies during Session 3. The comments are set out in accordance with the sessions held. The panel was chaired by Robin Nicholson.

Attendees

Panel Members:

Robin Nicholson – Chair CQP: Chaired the joint panel

Cambridgeshire Quality Panel (CQP)

Robin Nicholson – Chair CQP
David Birkbeck - Chief Executive Design for Homes – Character
Simon Carne - Architect/Urban Designer – Character
Oliver Smith - Director 5th Studio - Climate
Luke Engleback - Owner Studio Engleback – Landscape
John Dales - Director Urban Movement – Connectivity

Greater Cambridge Design Review Panel (GCDRP)

Eleanor Fawcett – Chair of GCDRP
Ian Johnson - Manager for Heritage and Compliance Bedford Borough Council
Ben Coleman - Urban Planner (transport), Associate at PJA - Connectivity
Nopi Exizidou - British Antarctic Survey, Cambridge - Climate
Vanessa Ross - Director at Arc Landscape Design and Planning Ltd - Landscape
Tahmina Begum - Support and Advice Worker, Camsight - Access

LPA Officers:

Terry De Sousa – Policy Team Leader GCSPS
Jonathon Dixon – Policy Manager, GCSPS
Trovine Montiero – Built Environment Team Lead, GCSPS
Tom Davies – Senior Urban Design Officer / Greater Cambridge Design Review Panel Manager, GCSPS
Anna Jeffery – Principal Urban Design Officer / Greater Cambridge Design Review Panel Manager, GCSPS
Maxine Ross - Greater Cambridge Design Review Panel Administrator, GCSPS

Declarations of Interest

Oliver Smith advised that his practice is now involved in some of the greenway and active projects around Cambridge.

The combined CQP/GCDRP Panel views

Summary

While recognising the rapidly developing planning environment, the upcoming Local Government Reorganisation, and consultation on establishing a Development Corporation in Greater Cambridge, the Joint Panel were generally very supportive of the Draft Plan and hugely impressed by the amount and quality of the work put into it and the extent of the public consultation. The Joint Panel felt that it establishes an ambitious and robust basis for the next generation of development and growth across Greater Cambridge.

In reviewing the Vision, members praised the quality of work and extensive consultation, while questioning how the impact and representativeness of this engagement are being assessed. Positioning the current process within the longer history of strategic planning in the area, and initiatives such as Cambridge Futures was suggested. They highlighted persistent challenges around the jobs–homes imbalance and called for a clearer, more explicit vision; showing how climate, infrastructure, community policy, connectivity, inequality, and great places themes interrelate. The Panel also encouraged a stronger articulation of the relationship between landscape and character, including varied geology, historic land uses, and “in-between” areas, and suggested bolder thinking on density, recognition of the universities’ contribution, and the affordability pressures shaped by rising incomes rather than falling housing costs.

Character - Landscape

The Panel emphasised that the landscape needs to be treated as a central organising element of the Plan. While significant work has gone into selecting allocations, members felt the Plan should more clearly explain how these sites relate to the wider landscape - particularly in terms of connectivity, movement, and future change.

They noted that the existing 2021 Landscape Character Assessment must be complemented by a forward-looking approach to managing landscape change over

the plan period. This includes considering how interventions such as wind turbines, transport infrastructure, and climate adaptation will shape future landscape character, looking at approaches to managing landscape change over the plan period.

Members also stressed the importance of understanding the landscape as a product of historic land management and its geology and soil types. The loss of trees, field boundaries, and landscape over the past 50 years was highlighted as a major challenge. The Plan should address how to restore landscape functionality, supporting water systems, cooling, and ecological resilience, especially in the driest part of the country.

The Panel encouraged stepping back from traditional landscape planning approaches and reconsidering the fundamentals. In this context, major tree planting programmes could help cool the wider landscape – aim for 30% canopy cover on bigger developments, for example, while drainage strategies need to consider not only the quantity of water but also its temperature. Evidence from largescale runoff studies in the USA suggests that buffer zones are needed to allow water to cool before entering sensitive ecological systems. In this context, major tree-planting programmes could help cool the wider landscape-scale runoff. It was recommended to review planning approaches and reconsidering the fundamentals.

Soil erosion / soil health was raised by members of the panel and could be more explicitly governed by the Plan.

Concerns were raised about relying too heavily on Biodiversity Net Gain metrics, which can oversimplify landscape functions. The Panel encouraged a broader, people-centred approach, recognising the value of shade, cooling, and water temperature regulation.

They also called for better recognition of Cambridge’s varied and stressed geology, from fenland to upper clay lands, and for attention to “in-between” areas that lie outside major strategic projects.

Character – The impact of Planning

Several members encouraged the Plan to be bolder in articulating what planning is for. While the strategy is a strong start, they felt there is more to say about long-term vision, particularly given the rapid pace of change and the likelihood of further growth pressures arising from the NPPF.

There was support for the Local Authority taking a stronger role in setting early, overarching visions for major growth locations—developing, owning and guiding masterplans, especially where multiple landowners or developers were involved in a growth location and did not have an integrated masterplan in place. This would help align landowners, developers, and communities around a shared ambition and avoid piecemeal approaches. Members noted that clear visioning also helps bring residents on board by demonstrating how infrastructure needs will be met.

The Panel urged the team to celebrate Cambridge's substantial achievements, including housing delivery, design awards, and the city's national influence, which currently receive limited recognition in the document.

Members discussed the need for a clearer position on density. While "medium density" and midrise development are referenced, the Panel felt the Plan should set firmer foundations for how and where higher densities might be accommodated in the future, particularly in response to likely transport-led growth around railway stations.

They highlighted the importance of stating upfront what greater density enables (the "quid pro quo"), so that benefits can be built into land value and design expectations from the outset. This includes explaining where higher density may be suitable, the design quality required, and how it is required to support liveability, infrastructure delivery, and Great Places ambitions.

The Panel also noted persistent tensions between public perceptions of housing design (e.g., house sizes, parking, amenity space) and the high quality of recent

Cambridge developments as recognised through awards. Better use of evidence, such as comparative dwelling size data could help shift these perceptions.

Character – Heritage

The Panel supported the Plan's commitment to safeguarding local and distinctive heritage and felt the Great Places policies broadly respond well to this aim. They agreed that directing development towards brownfield locations make sense, and locations that generally reduce heritage impacts.

Members also reinforced the need to reference the role of the universities, not just the core University but also the colleges, given their central influence on Cambridge's economy, built form, and wider development patterns.

Generally, the panel thought the heritage element is very thorough and comprehensive.

Connectivity

The Panel noted that while the Plan aspires to be vision-led, the vision for transport and movement needs clearer articulation - particularly considering recent NPPF changes that strengthen the role of sustainable transport.

Members emphasised that development locations should be chosen because they are supported by sustainable transport infrastructure, rather than retrofitting transport solutions afterward.

They also highlighted the need for stronger integration between the Infrastructure and Great Places chapters. Earlier, more consistent language aligning these sections would help reinforce how movement, place-making, and infrastructure are intended to work together within the Plan.

Community

The Panel emphasised the need for the Plan to articulate how communities and infrastructure connect beyond individual site allocations, ensuring places function as part of a wider whole.

Members highlighted Cambridge's significant inequalities and stressed that the Local Plan should weave equity throughout: across housing, jobs, connectivity, and access to opportunities, so that growth benefits those who have not historically gained from the city's economic success.

They encouraged clear links to the evidence on the causes of the persistent inequality in Greater Cambridge, to demonstrate how responses to these causes have been meaningfully embedded within the Plan. They also encouraged a balanced approach to the opportunity of the high-end economic activity, which is bringing significant investment and economic growth, recognising that often it does not provide accessible entry-level employment, and therefore they supported policies which encourage a range of measures to address this issue.

Climate

The Panel welcomed the Plan's strong climate ambition, noting that many policies reflect long-standing CQP/GCDRP priorities now embedded within the Local Plan.

Members emphasised, however, that delivery will rely on adequate supporting infrastructure, particularly electricity, water, and transport, and that the climate policies need to be more clearly grounded in all the four Cs.

They highlighted the absence of an energy generation strategy, noting that although a county level Local Energy Plan is in progress, opportunities such as wind turbines are not yet addressed. The panel recommended setting out next steps to align with the Cambridgeshire Local Energy Plan and explore wind energy zones

It was also observed that the University does not currently take full responsibility for its local power generation.

Overall, the Panel felt the direction is positive but encouraged clearer links between climate ambition, infrastructure requirements, and energy generation to ensure the policies can be delivered effectively.

End Session 1.

Session 2: Site Allocations

Cambourne North

(See Appendix Figure 1)

Officer briefing

- Allocation includes existing Cambourne (Cambourne West, business park, High Street) plus a new strategic area in North Cambourne.
- Development north of the A42, previously resisted, is now enabled by the proposed EWR station and the Cambridge to Cambourne busway.
- Major challenge: overcoming the A428 barrier to create a coherent, connected place across existing and new Cambourne, with concerns around infrastructure delivery timing.
- Updated infrastructure work supports higher densities, including up to 70 dph around the station to build critical mass.
- A well-designed station is intended to anchor the town centre; full buildout would make Cambourne the third largest settlement in the plan area with strong rail links to major destinations.
- Economic analysis indicates potential for 6,000 new jobs, though constraints include space limitations, lack of a Cambridge postcode, and weak strategic road access.
- EWR could help Cambourne develop a more independent economic identity, though further growth requires institutional investment.
- Cambourne Forest concept provides a major new strategic green space, addressing pressure on existing open spaces while maintaining separation from nearby villages.
- The forest is envisioned as a mosaic of farmland, flood management and green infrastructure rather than continuous woodland, with potential links to national forest initiatives.

CQP Panel comments

Community

The panel broadly welcomed the ambition for North Cambourne but highlighted fundamental challenges around connectivity, landscape integration, settlement identity, and the long-term evolution of the place.

The panel encouraged a more visionary approach:

- Seeing the whole of Cambourne, including the existing centre as one place.
- Designing the station as a point of connection rather than division.
- Planning for a generous, multifunctional high-quality pedestrian and cycle bridge across the A428 to physically and symbolically stitch the settlement together.
- Using the station and bridge to create new public realm and high-quality movement routes.

The panel identified risks around:

- Ambiguity in the spatial framework and how different parties might interpret it.
- Lack of specificity regarding distances or spatial relationships.

There was also a suggestion that Cambourne existing and North Cambourne could be presented as a single, more coherent allocation in the Local Plan, reflecting their functional interdependence.

Concerns were raised about competition between the proposed station area centre and Cambourne's existing High Street. Some saw this as an opportunity to "go - again" and enhance existing Cambourne, while others warned of negative impacts resulting from over-provision of the area's centre and Cambourne's existing High Street.

Questions were raised about:

- What kind of community this will be during the day?
- Whether it can support employment uses that create independent vitality?

- How existing Cambourne might need retrofitting as part of a more holistic strategy?

The panel emphasised that villages in the area strongly value their identities, suggesting the need for engagement to understand how new development can enhance their quality of life by meeting their requirements locally, rather than erode local character.

Several members stressed the importance of the development journey, not just the end state. Long delivery timescales mean that interim phases will shape residents' lives for many years. The plan should therefore:

- Be clearer about phasing expectations and triggers.
- Avoid creating fragmented or disconnected conditions during early stages.
- Acknowledge the ongoing evolution of existing Cambourne and its relationship to the new northern extension.

Character – Landscape

The significant proposed green infrastructure, particularly the northern forest, was well-received as a key strength. However, concerns included:

- Ensuring meaningful ecological connectivity, rather than disconnected "dead end" woodland fingers.
- Avoiding narrow woodland buffers close to homes that could create biodiversity conflicts (e.g., with cats and dogs).
- Designing for 15–25minute walking circuits, recognising the importance of dog walking routes in everyday use.
- Better defining the type, function and management of the proposed forest, moving from the conceptual to the practical.
- Some questioned whether the site allocation should exclude the forest for clarity to protect it from development pressure at the edges.

Connectivity

A dominant theme was the poor connectivity of existing Cambourne, described as heavily bisected by infrastructure, creating sealed off areas and rigid boundaries.

The new railway station is a welcome asset but not sufficient on its own; how the wider development is structured around it will determine whether North Cambourne becomes integrated or remains disconnected.

Panel members stressed:

- The need to address east-west links and avoid the A428 acting as a permanent barrier.
- Learning from comparable station led places, such as Ebbsfleet and Beaulieu, to ensure the station supports walkable, vibrant neighbourhoods.
- A risk that reliance on road infrastructure could make car use the default unless walking/cycling routes and local destinations are built in from the outset.

Several contributors argued that the emerging allocation should also be considered at a more strategic/sub-regional scale and the approach to North Cambourne must be understood in relation to:

- Papworth and the surrounding villages.
- Bourn Airfield.
- The transformative potential of East West Rail and C2C.

Climate

Think of it as a single allocation and consider the transition from a car-based community to a more integrated one

Site Allocations - Grange Farm

(See Appendix Figure 2)

Officer briefing

- Located in an area of strong employment growth near Babraham and the Genome Campus; intended to provide homes that reduce commuting need.
- Positioned outside the Green Belt and close to the proposed Cambridge Southeast Travel Hub, with potential for a direct busway link to the Biomedical Campus.

- Delivery depends on coordinated work with the County Council to secure a dedicated connection between the site and the travel hub.
- Proposes around 6,000 new homes plus small-scale employment space, supported by substantial open space along the site edges.
- The eastern boundary follows the historic Roman Road (SSSI), requiring careful treatment due to landscape and ecological sensitivity.
- Further work needed to refine boundaries, clarify green space functions, and respond to wider landscape impacts.
- Presents an opportunity to align housing growth with nearby employment clusters and emerging transport links.
- Ongoing technical work and public engagement will shape refinements, particularly regarding landscape, ecology, and green-space roles.

CQP Panel comments

Character – Landscape

The panel encouraged a more integrated landscape-led approach for Grange Farm, noting that the opportunity is not to place landscape around a new settlement but to create a place where landscape and built form are fully interwoven. Examples were cited of village landscape models where green infrastructure permeates the whole site rather than appearing as peripheral buffers. Concerns were raised that the current form feels insufficiently rooted in local character.

Members highlighted the importance of avoiding an overengineered approach to water management. Rather than relying heavily on underground infrastructure, the site should incorporate visible blue green systems that support cooling, biodiversity, and climate resilience. A waterwise design approach, including references to “sponge city” principles, was seen as particularly relevant to reducing embodied carbon and improving everyday environmental performance.

There was a view that the developable area may need to be adjusted to allow more meaningful green space within the layout, and that the current configuration may not yet be appropriate for this context. Some questioned whether Grange Farm sits more

logically within the rural section of the Plan, given its landscape character and relationship to the surrounding area.

Connectivity

The panel raised significant concerns about transport and connectivity at Grange Farm, noting that, in its current form, the site is poorly positioned to support active travel. Existing routes between key destinations are weak, and from a transport perspective it was observed that development here would not ordinarily be recommended. A development of this scale will need to “change the game,” particularly given the number of businesses and proposed clusters of businesses and other destinations (e.g. Duxford IWM) already emerging around the site and the need for reliable, high quality busway connections to rail stations e.g. at Whittlesford, to underpin sustainable movement.

Panel Members emphasised the importance of strengthening the strategic context within the allocation, with a clearer articulation of the site’s role within the wider place to place connections and the quality of links that will be required to make it function. Infrastructure delivery was identified as a critical challenge, with the Plan seen as an opportunity to set out the coordinated, timely and phased interventions necessary to unlock the site. It was recognised that no individual developer can deliver this level of infrastructure alone; a joint, cross agency approach will be essential to securing the movement, employment, and servicing networks needed for successful long-term growth.

Community

The panel suggested that adequate consideration be given to the number of homes required to create a self-sustaining community to deliver timely community infrastructure, considering the difficulty of getting new settlements off the ground and creating comprehensive places.

Climate

The Panel was relieved to learn that the neo-classical John Simpson scheme with huge amounts of hard surfacing has been dropped.

A water-led, surface level approach is encouraged to support climate resilience and reduce embodied carbon.

References:
The Panel recommended reviewing the forthcoming Homes England Reports on Creating Centres and Parking Typologies when they are published later in the year.

Site Allocations – Biomedical Campus

(See Appendix Figure 3)

Officer briefing

- Reallocation proposes further expansion of the Biomedical Campus, justified by its nationally significant life sciences role combining clinical care, research and academia.
- Supports continued growth in healthcare facilities, keyworker housing, R&D space, and higher education uses, reinforcing its position as a world leading cluster.
- Despite being a 24hour environment, the Campus currently lacks activation outside working hours and suffers from siloed, disconnected spaces.
- Long-term evolution will require coordinated, phased development, including opportunities for meanwhile uses during interim stages.
- Transport challenges persist, including trip budgets, peak hour pressures, and reliance on offsite facilities, underscoring the need for better internal and external connectivity.
- The overarching ambition is to create a more integrated, connected campus that functions cohesively within its wider urban context.

CQP Panel comments

Connectivity

The panel noted that the Biomedical Campus lacks a coherent masterplan, resulting in weak structure, fragmented movement networks, and a place that is difficult to understand and navigate. Despite reasonable cycling provision, the area does not function effectively, and the absence of a legible walking network was seen as a fundamental barrier to creating a successful, connected place. Members observed that development to date has been shaped by opportunism rather than coordinated planning, with social infrastructure often displaced by more commercially attractive uses.

Transport integration was highlighted as a critical weakness, with poor connections between different transport modes and cycleways described as inadequate. A coherent street and movement framework is essential if the Campus is to operate as a functional district. Concerns were also raised about recent housing schemes coming forward in isolation, with limited provision for key worker homes and no clear centre to anchor the area or link it more effectively to the hospital.

While the draft allocation includes references to a high street and mobility hub, the panel felt the policy needs to be more specific and urgent in setting out what must be delivered. At this stage, these are no longer aspirations but essential components of creating a coherent, integrated, and genuinely world-class place.

It was observed that references to CSET are currently absent from this part of the Plan, despite its critical role in making the allocation viable. The panel suggested that each site allocation would benefit from a clear list of infrastructure requirements to improve consistency and transparency. More broadly, there was a call to strengthen the strategic context, ensuring the Local Plan articulates how individual sites relate to the wider area and to one another, rather than reading as isolated developments.

Community

The panel noted several cross-cutting issues that apply across the allocation. Members highlighted the need for far greater coordination of movement networks, with concerns that the current approach lacks a clear structure for primary routes, transition points, and future connections. Accessibility challenges were also raised, with comments that the site remains difficult to navigate for all users.

Climate

Energy infrastructure emerged as another essential consideration, with a view that the site will require substantial onsite generation to support long term resilience and reduce dependence on external networks.

Character – Landscape

Managing landscape character on the Biomedical Campus presents challenges, especially given the fast paced and reactive nature of clinical care environments. The panel stressed the need for clearer policy wording and defined triggers, such as when an LVIA should be required, to avoid ambiguity in delivery expectations.

Concerns were raised about the scale and placement of substantial Phase 4 buildings, with a call for the allocation to be explicit about how large structures meet the sensitive landscape edge. Members questioned whether the abrupt interface between tall buildings and diminishing landscape should be more confidently addressed rather than softened.

The panel highlighted the need to consider light, shade, and microclimate impacts arising from clusters of taller buildings, noting that these effects may not be fully reflected in the current BNG work. The need for large canopy trees was identified as providing far greater benefit than smaller species.

The panel welcomed the policy's ambition for *world-class* buildings and spaces but noted that the Campus still feels like an emerging place rather than a fully realised environment. Terms such as *"carefully landscaped edge"* were considered too open

to interpretation, and members stressed the need for clearer, more directive language to avoid inconsistent outcomes.

A stronger blue green infrastructure vision was encouraged, with the panel emphasising that landscape should operate at multiple scales across the site. This includes setting prescriptive minimum standards, such as woodland belts of at least 20 metres, and combining different landscape elements so they are mutually supportive. Establishing a critical mass of interconnected green infrastructure was seen as essential for long term ecological resilience and to create a landscape framework capable of supporting future phases of development.

Site Allocations – Cambridge East

(See Appendix Figure 4)

Officer briefing

- Opportunity to integrate Springstead Village and Marleigh into a single, strategic site allocation.
- Area forms part of a key Green Belt corridor; important countryside transition into Cambridge should be retained and strengthened.
- Potential relocation of the Newmarket Road Park & Ride, with options currently being explored by the GCP.
- Opportunity for a dedicated busway route to run through the site, improving sustainable transport connections.
- Scope for one larger, centrally located district centre serving the wider allocation.
- Capacity to deliver a 15-minute walkable neighbourhood supported by local services and facilities.
- East West Rail has confirmed it is exploring the potential for a new station within this area, enhancing long-term connectivity.

CQP Panel Comments

Community

The panel highlighted the excellent quality of Springstead Village including a positive example of how two adjoining houses were combined to provide an early temporary community space.

Connectivity

The panel noted the importance of understanding what is planned to the north-west of the site and emphasised the need for stronger connections in that direction, particularly to the river and Cambridge North. Without consideration of these links, the site would remain significantly constrained.

Character

The panel highlighted the opportunity to balance natural wildness with recreation, drawing on examples such as Trumpington Meadows to illustrate the potential for varied landscape spaces. LNCH was commended for its strong community engagement and spatial permeability, with a view that benefits for Teversham should be clearly articulated.

Members noted that Green Belt corridors can remain accessible while retaining a rural character and encouraged clarity on the site's identity - whether as a rural-urban transition or a 'welcome to Cambridge' arrival. They also suggested exploring a gateway experience from the railway rather than the road network.

Overall, the approach was viewed as logical and well-considered, with support for continued progress. The potential East West Rail station was seen as a promising opportunity, alongside the importance of wider connections and how the Green Belt corridor links and functions.

Site Allocations – Cambridge Junction and Clifton Road

(See Appendix Figure 5)

Officer summary

Cambridge Junction and Clifton Road.

- For the first time, the area will be allocated rather than covered solely by policy areas.
- Two allocations are proposed, even though it is one area, to keep policies more legible.
- Noted that the area should be considered comprehensively as one framework plan.
- The Council aspires to redevelop the Junction, increasing the cultural offer to enhance what's there and explore what else could create a livelier area.
- Explore how to increase employment uses and leisure uses.
- 'Competitive socialising' to remain, but reimagined.
- Adopt an all-day approach to activity and uses.
- Northern parcel at Clifton Road Industrial Estate performs well; aim not to lose those uses. Consider opportunities for intensification alongside other uses.
- East West Rail is proposing a station entrance on the west side; working closely with them to understand how it could function.
- Explore how the area can become an integrated part of the city.
- Consider the relationship to the CB1 development on the other side of the station and how this area could be brought up to a similar standard, including thinking about density, mix of uses, and potential for residential.
- Opportunity to introduce open green space.
- Royal Mail site is not currently proposing to relocate; 24-hour daily movements are a constraint.
- The Chisholm Trail presents opportunities for connections and extensions.
- From a strategic point of view, there is a need to juggle the wider needs of the city.
- Employment evidence highlights that the city has lost a lot of its industrial spaces, so there is a strong need to protect the site.
- The area also accommodates leisure uses, so the challenge is finding the best use of the site without losing functions the city still needs.
- Desire to see more homes in the area; however, landowners have indicated it is more financially viable to provide non-residential uses.
- The plan sets out a higher level of housing than landowners are currently aspiring to deliver.

GCDRP Panel comments

Character

There is a strong view that the site should be taken forward as a single allocation rather than two. The policy messages relate to the distribution of uses across the whole area and dividing the site risks creating unnecessary fragmentation. The area is not so large that it requires separate allocations, and a single designation would support a clearer, more coherent framework for change.

At present, what is described in both the text and the diagram is not substantially different from the existing situation. Much of the narrative focuses on retaining the current mix of uses, and the diagrams show a similar layout to the existing, with the only notable change being the addition of 300 homes. This does not convincingly articulate a transformational vision which would justify the comprehensive redevelopment recommended. The site today is introverted and generally unsuccessful from an urban design perspective, however the business and uses appear to be thriving with little vacancy, therefore the policy should articulate a far stronger rationale for why this is a site allocation, and how development proposals should address this, and articulate the objectives and meaningful improvements sought.

Given its exceptional accessibility, the site offers significant opportunities to intensify and diversify uses. There is clear potential for a greater residential component, balanced with the need to retain key non-residential and industrial activities. However, car-based uses in such a sustainable location seem counterintuitive, and consideration should be given to relocating them to areas more suited to vehicle-dependent activities. The Junction, bowling alley and cinema provide destination uses, but the plan could better articulate what the wider spectrum of everyday community uses should be, particularly spaces for young people.

The policy should say more about the surrounding streets. Considerable effort has been made on adjacent schemes to secure active frontages along Hills Road and Cherry Hinton Road, yet this site turns its back on these important edges. Cherry Hinton Road is identified as a local centre, and there is a strong opportunity for new

development to face it, support it, and generate knock-on benefits for adjacent businesses. This should be a key driver of the strategy.

Movement through and within the site also needs clearer resolution. In particular, the Royal Mail operation introduces complexity, and the diagram does not yet show how competing movement networks: pedestrian, cycle, service, public transport, are to be reconciled. There is also a broader strategic question: if the Royal Mail use were removed and additional rail connections introduced, parts of the site might begin to function more like an extension of CB1. That could deliver benefits but also risks losing important activities that serve the city.

The area should not be seen as an industrial place, even though some industrial uses which serve local communities are important to retain. Proposals for significant change must demonstrate how what replaces the current environment will be clearly better. This may include exploring whether other allocations could accommodate relocated uses if that supports a more coherent vision here.

Due to the complexity of detailed work required to develop comprehensive masterplan/s for the overall site, for the purposes of this Local Plan it is recommended that the site allocation proposals diagram is removed, and the focus in the text is on articulating the objectives instead of describing proposals. The council is encouraged by the panel to take a pro-active role in developing more detailed guidance and a high-level masterplan/spatial principles for this combined site allocation to explore potentially conflicting objectives/uses further and enable the disparate landowners to successfully deliver a comprehensive approach to regeneration here. This would potentially form a follow-on piece of work, in collaboration with key landowners if appropriate.

Community

The Junction area, while relatively new, does not feel particularly successful today, and there is an opportunity to improve it. The policy could be more explicit about aiming for a world-class cultural hub and high-quality public open space, a place for the people of Cambridge. The concept of a green link is strong, and there is real potential for a well-used green space at the heart of the development.

This is undoubtedly a challenging site, with many interdependencies, including the railway and Royal Mail operations, but it offers one of the most significant opportunities for central Cambridge. The policy should communicate this ambition more assertively and set out a clearer approach to the place this could become.

Climate

Some panel members noted that the long-term trajectory of the area suggests that many of the existing industrial uses will eventually need to relocate, given that their business activities are rooted in car-dependent patterns that are no longer appropriate for such a central, highly accessible location.

It is important to distinguish between the existing uses within the industrial units such as garages which are purely vehicle based, and others such as DIY trade counters, food and leisure businesses which provide everyday services and are less suitable for relocation as this could create unsustainable travel patterns, forcing residents and businesses to drive farther to access essential functions.

Connectivity

It was clarified that the Post Office is likely to remain in place for now. The new station entrance is still being developed, with the active travel hub considered essential; this should not become a secondary or back-of-house entrance to Cambridge. There is an opportunity to consider what additional facilities a new entrance could provide, ensuring it complements rather than duplicates what exists on the opposite side of the station. An unpaid pedestrian link through the site is critical. Given the massive impact that a new station entrance within the site would have on movement patterns and the overall masterplanning approach including the approach to the Post Office Depot, the panel recommended an approach which avoids establishing firm proposals until the status of the station entrance is known. This could potentially be achieved by developing alternative approaches with/without the station entrance to understand its impact.

Given the high number of school children moving through the area, the plan should articulate a clear movement hierarchy that opens the site and supports safe, direct navigation. The level difference to Hills Road is an important challenge, and there is an opportunity to open the site up and make it feel more connected to the

surrounding streetscape. Reorienting buildings and shared spaces could significantly improve wayfinding, as the current layout is difficult to navigate independently and safely.

Universal design principles should underpin the approach to ensure the site is genuinely easy to use for all. While some existing uses are essential and should remain, there is scope to “stack” and co-locate some functions more efficiently. There is some precedent for this in London, where commercial uses have been successfully layered and integrated within mixed environments. Every city needs some degree of back-of-house activity, but the policy should ensure this is handled in a way that supports, rather than compromises, the overall ambition for the area.

Site Allocations – Slate Hall Farm

(See Appendix Figure 6)

Officer briefing

- Identified need to accommodate industrial uses within the area.
- Strategic road corridor includes several sites coming forward through the Local Plan.
- Two sites are allocated, with this one considered the strongest due to its proximity advantages and ability to incorporate green infrastructure.
- A more open approach is proposed for the southern end of the site.
- Allocation focused on meeting local needs.
- Site promoter is likely seeking larger units than those envisaged by policy.

GCDRP Panel Comments

Character

The emphasis on a landscape-led masterplan is excellent and should be strongly supported.

This could include thinking about campus-style environments with communal parking, with greater ambition on sustainability. This approach ought to be embedded across all comparable allocations. Given the multi-phased nature of the development, it is important that the masterplan is intended to guide and be

implemented throughout the duration of the scheme. The policy should also give clearer guidance on building heights, massing and orientation, noting that B2/B8 uses will require large, bulky buildings.

Biodiversity Net Gain offers a valuable mechanism to secure this approach and can serve as a strong hook for delivering a coherent landscape structure. Attention should be given to the south-west edge of the site, where the relationship between built form and the road will be critical; more of the infrastructure may need to address the road directly rather than relying on a landscape buffer, enabling more of a landscape buffer to the surrounding fields/open spaces.

A policy requirement for a design code would reinforce this and help ensure consistency across different phases. Care must also be taken with building placement: if large buildings are positioned too close together, the opportunity to provide meaningful green infrastructure is lost, undermining both the landscape-led intent and overall site quality.

The value of the current diagram should be reconsidered, as its ambiguity risks misinterpretation. The Panel suggest it is removed; diagrams should illustrate context, constraints and opportunities rather than imply fixed layouts.

Connectivity

Where clusters of sites sit in proximity, a simple cluster key plan would be valuable to illustrate relationships and strengthen cross-references between policies.

Ensuring strong transport links is essential to making the site genuinely accessible, supported by a clear approach to how parking is organised - particularly on multi-tenant sites where shared-space rules are needed to maintain clarity, safety, and a coherent sense of place.

The policy should also be clear about the specific outcomes sought from active travel improvements. There are opportunities to connect into Northstowe, which already benefits from good cycle links, although public transport connections remain more limited.

Strong, legible connections to surrounding residential areas are essential, supported by clearer expectations of what “good growth” and high-quality industrial design should look like for this type of development.

End Session 2.

Session 3 – Development Management Policies
Joint Panel Comments

Climate Change

Officer summary

- A major theme emerging strongly through consultation responses.
- Includes a catch-all policy outlining the overall expectations for climate-related design and performance.
- Cooling of buildings and net-zero requirements will be particularly interesting considering the new NPPF.
- The updated NPPF still enables the authority to push ambitious water-efficiency standards.
- Recent building regulations have improved standards but still fall short of what is needed in the Cambridge context.
- Strong best-practice policies included on flood risk and drainage.
- Background work on renewables provides useful guidance on scale and location opportunities.
- Circular economy principles are being advanced, including a presumption in favour of retaining and reusing existing buildings.
- Emphasis on making the best use of resources throughout the development lifecycle.
- Heat Map work provides an important evidence base for future energy planning.

Joint Panel's comments

The panel questioned whether the policies fully support a robust climate response and genuinely enable future-proofed design. They reflected on how effectively the plan promotes low-carbon construction, long-term adaptability, and the balance between design quality and viability. While they welcomed the ambition to exceed national standards, they felt there was still room to strengthen the narrative around climate emergency, particularly given both councils' 2019 declarations.

They suggested the Local Plan might go further than the 2050 net-zero target, as current science indicates the need for earlier action.

In response, officers clarified that net-zero operational standards would apply from adoption of the plan, supported by extensive carbon-budget work underpinning the spatial strategy, which steers toward the lowest-carbon development pattern. Council climate strategies also already aim to deliver net-zero earlier than 2050.

The panel noted that while the policies focus strongly on new development, they give limited attention to the existing and heritage building stock, where performance gaps remain significant. They felt the plan could more explicitly address embodied carbon, particularly opportunities to require material reuse where demolition occurs.

They also observed some inconsistency in references to heating and net-zero standards, encouraging clearer signposting to future-proof benchmarks such as the Net Zero Carbon Building Standard.

On deconstruction and circularity, they believed the plan could be more ambitious about material recovery and reuse. They also raised questions about developer responsibilities around grey-water systems and suggested the inclusion of strong practical examples to illustrate expectations.

The panel highlighted gaps in renewable-energy infrastructure planning, including the absence of references to wind power, and suggested raising ambitions for solar installations, for example, requiring solar car-ports above certain thresholds, following international precedents.

They noted potential competition between rooftop renewables and green roofs, urging a clear prioritisation framework.

The panel praised the strength of the climate-related policies but expressed concern about the practical challenges of delivery, both in relation to the constraints of the NPPF and the tendency for some housebuilders to exploit loopholes in the system.

They highlighted the persistent performance gap in achieving UK Net Zero, noting that post-occupancy monitoring often lags by 12 months, which makes enforcement difficult. From their perspective, net zero must be treated as an absolute requirement rather than an aspirational target, and strong standards will only be effective if accompanied by mechanisms that secure compliance.

They also observed that public opinion on renewables is often underestimated, citing local examples, such as Grantchester, where communities have supported wind turbines over PVs. This suggested that the plan could be more assertive about renewable-energy measures.

The panel stressed the importance of ensuring the long-term sustainability of historic buildings. Even where these buildings cannot fully meet retrofit standards, they noted that viable ongoing use is critical to preserving their value and avoiding deterioration over time.

The panel noted that the policies say little about transport, despite it being one of the largest contributors to carbon emissions. They felt the plan should include stronger, clearer messaging on decarbonising transport. They also highlighted the importance of ensuring that SuDS strategies respond directly to the character of the landscape and encouraged a more ambitious approach to carbon sequestration by linking landscape, water, and soil, recognising that hydrated soils store significantly more carbon.

They observed instances of siloed thinking across the themes and recommended a more integrated approach. On sustainable transport, the panel cautioned against over-reliance on electric vehicles, stressing that EVs should not inadvertently promote higher levels of private car use.

They also emphasised the role of large industrial or “big shed” sites, noting these sites should be selected for their connectivity to the national grid so they can function as energy generators.

Finally, they pointed out that the local authority has a responsibility to manage storage and logistics for circular-economy materials, following emerging examples such as the GLA's approach.

Biodiversity and Green Spaces

Officer briefing

- Clear GI standards are set out, though implementation of the Natural England toolkit remains challenging and ongoing.
- The plan supports a full range of Green Infrastructure, from pocket parks to wider urban-greening initiatives.
- Policies address the need to balance different uses along river corridors.
- Approaches to protecting open space have been aligned across the two previous plans.
- Open-space provision is strengthened to ensure consistency and clarity.

Joint Panel comments

The panel welcomed the ambition of the policies but emphasised that long-term management, maintenance and stewardship remain significant gaps. They felt that while the document is strong, it pays too little attention to how open spaces, biodiversity features and soils will be managed over time, noting that BNG cannot be separated from maintenance and should be linked more explicitly with open-space obligations.

Soil emerged as a major concern: current policies do not clearly address how soil should be protected, managed, or retained, despite its crucial roles in supporting planting, sustaining biodiversity, regulating hydrology and storing carbon. The panel highlighted that urban soils are often damaged yet hold substantial potential for carbon sequestration and suggested requiring soil-management strategies and exploring approaches such as mineralisation techniques used elsewhere (ref Newcastle University experiments) and the incorporation of biochar. Wet soils allow carbon sequestration.

They also noted significant overlap between SuDS and GI policies and called for stronger cross-referencing and more consistent language.

The tree-canopy policy was praised, though the panel observed tensions between canopy expansion and BNG metrics on constrained urban sites. They suggested that a broader Environmental Net Gain approach could resolve some of these conflicts.

While supportive of the direction of biodiversity and open-space policies, they felt the links between them need to be stated more clearly, including recognition of the role of non-native species and the importance of urban gardens.

The panel also encouraged more innovative thinking in relation to health and urban design, noting the benefits of diverse planting for urban microbiomes, and called for stronger integration of rain gardens and water-sensitive design in streets in support of probiotic urbanism.

Overall, they advised that policies would be stronger and more integrated rather than treated in silos, with each project required to prepare a holistic strategy combining SuDS, BNG and GI. They concluded by noting the challenge of defining policy around “protecting” versus “providing and enhancing” urban spaces, which require different levels of prescription.

Wellbeing and Social Inclusion

Officer briefing

- New developments should provide access to the full range of services and opportunities residents need.
- Health principles are embedded throughout new development to support wellbeing.
- Standards for provision are based on population needs.
- Policies address opportunities for meanwhile uses, particularly on larger strategic sites with long build-out times.

- Guidance is included on improving the quality and functionality of employment and business areas across the region.
- Policies set out how to protect health and general wellbeing, including addressing pollution.
- Consideration is given to how pubs can be protected as important community assets.

Joint Panel comments

The panel raised concerns about how accessibility issues are being picked up in the development process, noting that examples at Eddington and Darwin Green show a misalignment between approved designs and the lived experience of accessibility.

They highlighted features such as level surfaces that lack visual contrast and tapered steps that can create challenges, questioning where in the policy framework such issues should be addressed and how expectations can be more clearly defined.

They felt that while Health Impact Assessments touch on accessibility, this area needs stronger emphasis, particularly in relation to public spaces and non-residential buildings. The panel encouraged further consideration of how accessibility can be more deeply embedded in Great Places policies and suggested that this could also provide an opportunity to reflect wider equity and equality objectives.

Finally, they queried whether the Local Plan could more explicitly reference relevant design guidance to ensure that accessibility standards are consistently applied and understood across projects.

Great Places

Officer briefing

- Overarching design policy setting expectations for high-quality development.
- Framework for how high-quality development should be created and assessed.
- Housing-density policy based on clear criteria.

- Future work identified to explore areas of Cambridge where densification may be appropriate, as referenced in the draft plan.
- Tall buildings and skyline policy, building on existing Cambridge guidance.
- Policies on landscape and the public realm.
- Protection of landscape character.
- Stand-alone historic environment policy.
- Stand-alone archaeology policy.
- Policy on shopfronts.

Joint Panel comments

The panel found the heritage and design policies to be comprehensive and robust, noting that the requirement for Heritage Impact Assessments is particularly valuable for development-management purposes. They welcomed the future-proofed approach of the heritage policy, which avoids relying on terms such as “substantial” or “less than substantial harm” that may shift in future versions of the NPPF. Instead, the policy is anchored in the enduring principle that any harm must be clearly justified and assessed in line with national tests. The panel also noted the tacit but appropriate reference to statutory duties by requiring the preservation of significance and careful consideration of setting, with detailed matters varying depending on the type of proposal.

For non-designated heritage assets, the panel felt the policy could be strengthened. They recommended setting out explicit assessment criteria within the plan, rather than solely in supporting text, and clarify how many criteria must be met for an asset to qualify. Including these criteria as an appendix would, in their view, improve transparency for applicants and lead to more robust decisions at appeal, particularly given past cases where inspectors rejected asset status where evidence was limited to a Historic Environment Record (HER) entry.

The conservation policy was considered sensible and aligned with national policy direction. Regarding archaeology, the panel suggested additional guidance on when pre-determination evaluation should be required on major applications. This is a frequent point of contention between LPAs and developers, and clearer direction

could help avoid situations where decisions must be made without sufficient archaeological understanding. They also agreed that the shopfronts policy provides good protection for historic shopfronts while ensuring high-quality design for new proposals.

Turning to the wider design and placemaking elements, the panel highlighted that the skyline policy sets no minimum or maximum heights. They noted that while existing patterns will often guide appropriate scale, there are cases where breaking local norms can be justified by exceptional design quality. In these instances, the panel recommended guidance on the criteria to demonstrate this e.g. successful review from DRP, applications for tall elements must be detailed and not in outline. Where higher density developments are encouraged, the policy should strengthen the requirements to support this e.g. specific walking/cycling distances from public transport and local amenities/centres, and the requirement for a masterplan. The panel is supportive of the additional work which the council is undertaking on accommodating higher densities and would be happy to review this in due course.

They also urged stronger wording on landscape and public realm, including ensuring sufficient below-ground space for trees and fully coordinated service layouts. They recommended requiring Landscape and Visual Impact Assessments directly within policy and strengthening the integration of blue-green infrastructure and SuDS.

The panel felt that the document under-represents streets and should frame them as a foundational component of “great places,” with clearer emphasis on climate-resilient streetscapes and active travel. On density, they encouraged more explicit links between higher density and public-transport accessibility, as well as stronger expectations for site access and movement. They also advised that higher-density and tall-building proposals should be required to produce masterplans, and that schemes above certain height thresholds may merit mandatory consideration by the Design Review Panel. For such proposals, they suggested requiring detailed rather than outline applications to ensure design quality is secured upfront.

Finally, the panel welcomed the inclusion of a pedestrian-led movement hierarchy within the Great Places policies and encouraged more consistent terminology and wider embedding of this approach throughout The Plan. The panel suggested that this section should also reference the importance of schemes being subject to Design Review Panel scrutiny, and that Post Occupancy Evaluation should be undertaken on completed schemes.

Jobs

Officer briefing

- Sets out what types of jobs should be in which areas.
- Includes an affordable-workspace policy to support a diverse economy.
- Highlights the example of the Cambridge Biomedical Campus and the need for employment sites to engage more fully with surrounding communities.
- Identifies a growing need for additional hotel accommodation.
- Notes concern about the impact of Airbnb on the local housing market.
- Considers the University's significant work on student-accommodation needs.

Joint Panel comments

The panel suggested that this section could go further by incorporating design guidance specific to employment developments, ensuring clearer expectations for quality and functionality.

They noted that the affordable-workspace policy allows significant flexibility through off-site provision and emphasised the need for strong delivery mechanisms within the Council to secure meaningful outcomes. They also felt that auxiliary uses within employment parks should be actively encouraged rather than merely supported, and that policies could say more about the wider benefits employers are expected to bring, including whether applicants should provide statements on training or skills development.

The panel raised the question of whether policies should address data centres more explicitly, building on work already referenced in the energy masterplanning.
They also highlighted the need for design guidance tailored to employment schemes, particularly life-science buildings, noting concerns about long-term demand, adaptability, and modularity.

Finally, the panel queried whether the plan sufficiently discourages car-based employment parks. They recognised the value of the trip-budget model in addressing this but felt the underlying message may not yet be coming through strongly in policy.

Homes

Officer briefing

- Significant need identified for increasing the supply of affordable housing.
- Policies include space-standards requirements and expectations for private outdoor space such as backyards.
- Co-living policy set out, with further clarification work ongoing.
- Additional work is planned to strengthen policy on HMOs.
- Approach to student accommodation is considered broadly balanced.
- Traveller sites: strategic sites should meet the needs of all communities, which may include providing allocated space for Travellers.

Joint Panel comments

The panel expressed strong reservations about co-living, questioning its long-term relevance and noting that schemes delivered to date have performed poorly. They felt Cambridge should either resist co-living altogether or set standards so demanding, such as prohibiting single-aspect units, that only genuinely high-quality proposals could progress.

They also raised concerns about developments being fixed to outdated regulations at outline stage and emphasised the need for mechanisms to ensure reserved-matters schemes reflect evolving best practice.

They encouraged greater emphasis on HAPPI principles, Extra-Care and Later-Living housing, stressing that these should occupy the best locations within new developments.

The panel also supported promoting emerging approaches such as commonhold.

They highlighted the importance of cross-ventilation given increasing overheating risks, citing Great Kneighton as a positive example, and reflected on whether inspectors would support more prescriptive ventilation requirements.

They noted recent shifts in national policy language, moving from “context” to “liveability”, and encouraged policies that reflect successful local exemplars and require generous communal green space.

Further recommendations included strengthening affordable-housing wording to make tenure-blindness a clear first principle, supporting inset and semi-inset balconies, and discouraging full-height glazing in bedrooms.

The Panel supported the idea of family homes being on the ground floor of larger blocks.

The panel also noted a lack of reference to home working and discussed the difficulty of distinguishing dedicated workspaces from additional bedrooms in policy terms.

They welcomed the idea of requiring 5% of homes on larger sites for custom and self-build and explored whether links could be made to affordability, ensuring this is not limited to higher-income groups.

They also encouraged clearer support for community-led housing, potentially within the Great Places section, noting that such schemes may require more tailored criteria and policies which align with the requirements of these schemes e.g. approach to communal spaces, which are otherwise not appropriately reflected in the policies for other housing models.

On student housing, the panel suggested policies should ensure that new college accommodation releases general housing back to the wider market, drawing on Oxford's model. They also recommended that expectations for architectural quality be sharpened, including removing superfluous wording to align better with the NPPF, and queried whether design-criteria thresholds should trigger mandatory review by the DRP/CQP.

Infrastructure

Officer summary

- Sought a clearer policy on travel hubs, including whether these sites are being used to their full potential.
- Further work is required on parking standards, ensuring they are aligned with emerging density studies.
- Energy-infrastructure master planning should be addressed upfront to support coordinated delivery.
- Policies include provisions for ensuring good digital access.
- Construction-management considerations may also provide opportunities to address soil-related issues highlighted earlier.

Joint Panel comments

The panel felt that the wording around active travel and car use could be clearer and more consistent, with a stronger and more explicit hierarchy that prioritises walking, cycling and public transport.

They suggested referencing the emerging transport strategy, which could provide helpful context, and called for greater specificity on acceptable walking and cycling distances.

While they considered the travel-hub policy to be strong, they questioned what "travel hub" means in the Cambridge context and whether the policy should instead focus on park-and-ride as the core principle. They saw potential for a more strategic network of mobility hubs across site allocations, including mixed-use park-and-ride sites, and encouraged clearer support for shared mobility, noting that smaller parcels often dismiss car-club provision in isolation.

Parking policies for cars and cycles were described as confusing, and the panel advised further work to align standards with emerging density studies and the transport strategy.

They felt EV requirements may now be largely addressed through building regulations and questioned whether the Local Plan needed to duplicate them.

The panel also noted the absence of a high-quality integrated transport system and stressed the importance of establishing a clear vision, observing that past delivery has been treated as an engineering exercise rather than a public realm led process.

Additional points included the potential need for policy on drones, opportunities for construction management plans to support whole life carbon reduction (reference to PAS 2080), and the value of emerging national guidance on "streets as places" in the draft PPG, which could strengthen the plan's approach to street design.

Summary – Eleanor Fawcett, Chair

- The panel emphasised that the detailed feedback provided was only possible because the draft document is of exceptionally high quality, reflecting Cambridge's strong track record in design and planning.

- They identified four key themes. First, both panels encouraged the team to be more confident in being prescriptive on issues that truly matter, using the area's ability to attract investment to secure the best outcomes.
- Second, in a shifting governance context, it is more important than ever to set out with clarity what must happen, being explicit about when to reject proposals, defining landscape functionality, raising expectations for employment sites, and clearly identifying the infrastructure required to unlock new settlements, including water bus/cycle corridors, water and sewage.
- Third, on density and height, there is a need to articulate the specific benefits that justify greater scale in particular locations, including what "good" looks like in those cases.
- Fourth, for site allocations, the steer is to focus on clear objectives and constraints rather than indicative layouts, which risk being under-developed. Some sites, such as the Biomedical Campus, require more specificity, while others, like the Junction site, should be approached with care and held back until the specific opportunity is clearer and more detailed thinking is possible.
- Finally, despite the reduced appetite for AAPs and SPDs, the panel stressed the continued importance of the LPA leading further work to develop detailed objectives and spatial principles/masterplans for complex or strategic sites, especially where multiple landowners/stakeholders require support to secure an integrated approach.

Summary – Robin Nicholson, Chair

- The panel recommends strengthening the site allocations by providing clearer context, including relationships beyond site boundaries and cross-border connections.
- Landscape should be integrated holistically moving away from disconnected green elements toward fully coordinated landscape-led thinking.
- They commended the strong prioritisation of climate within the policies and encouraged an exemplar approach for key schemes to demonstrate best practice. The panel also advised taking a more proactive master planning role to shape outcomes effectively.

- Successes from previous projects and award-winning work should be celebrated to reinforce what “good” looks like. The plan should also include ways to measure the impact of consultation to understand how effectively feedback is being incorporated.
- Finally, while acknowledging current uncertainties, the panel emphasised that this is an excellent programme with significant potential; the team should move forward confidently and articulate a clear, ambitious vision for the future.

Joint Design Review
Cambridgeshire Quality Panel & Greater Cambridge Design Review Panel

Draft Greater Cambridge Local Plan
Consultation Dec 2025 – Jan 2026

Meeting Agenda
Meeting Rm 1, First Floor, Mandela House
Friday 30 January 2026

Panel Members*:*

Robin Nicholson: Chair Cambridgeshire Quality Panel: Chair of the Session

Members of the Greater Cambridge Design Review Panel

Eleanor Fawcett – Chair GCDRP
Ian Johnson – Manager for Heritage and Compliance\Bedford Borough Council - Conservation
Ben Coleman – Urban Planner (transport), Associate at PJA - Connectivity
Nopi Exizidou – British Antarctic Survey, Cambridge - Climate
Vanessa Ross – Director at Arc Landscape Design and Planning Ltd - Landscape
Tahmina Begum – Support and Advice Worker, Camsight - Access

Members of the Cambridgeshire Quality Panel

Simon Carne, Architect/Urban Designer – Character
Oliver Smith, Director 5th Studio - Climate
Luke Engleback, Owner Studio Engleback – Landscape
John Dales, Director Urban Movement – Connectivity
David Birkbeck, Chief Executive Design for Homes – Character

LPA Officers from Greater Cambridge Shared Planning:

Lizzie Wood – Policy Team Leader
Jonathan Dixon - Policy Manager
Terry De Souza – Policy Team Leader

Trovine Monteiro – Built Environment Team Leader
Anna Jeffery – Principal Urban Designer / Design Review Panel Manager
Tom Davies – Senior Urban Designer / Design Review Panel Manager
Maxine Ross – DRP/Support Officer

Timetable*

9.30 – Arrival and Tea

Session 1: Local Plan Vision & Development Strategy
Summary of the Greater Cambridge Local Plan | Greater Cambridge Shared Planning
About the Plan | Greater Cambridge Shared Planning
Development strategy | Greater Cambridge Shared Planning

10.00 - 10.30: Briefing on Local Plan, Development and Spatial Strategy: Presentation by Policy + Questions

10.30 - 11.30: Panel Discussion (Joint) and Chairs Summary

11.30 – 12.00: Tea Break

Session 2: Site Allocations: Key Sites
Site allocations | Greater Cambridge Shared Planning

New Settlements Sites
- Cambourne North
- Land Adjacent to A11 and A1307 at Grange Farm

Edge of Cambridge Sites
- Cambridge Biomedical Campus
- Cambridge East

Cambridge Urban Area
- Cambridge Junction and Cambridge Leisure and
- Clifton Road Area

Rest of the Rural Area
- Land north of A1307, Bar Hill (Slate Hall Farm)

12.00 – 12.30: Briefing on Site Allocations: Presentation by Policy Officers + Questions

12.30 – 13.30: Panel's Discussion and Summary on New Settlements and Edge of Cambridge Sites – Led by
CQP Chair

13.30 – 14.00: Panel's Discussion and Summary on other sites on Cambridge Urban Area and Rest of the
Rural Area - Led by GCDRP Chair

14.00 – 14.30: Lunch Break

Session 3 Development Management Policies:

Draft Greater Cambridge Local Plan for consultation | Greater Cambridge Shared Planning
- Climate change

Greater Cambridge Local Plan

Published as part of the Proposed Submission Local Plan - Regulation 19 consultation (August 2026 - September 2026)

GREATER CAMBRIDGE
SHARED PLANNING

Summaries of Draft Plan Representations, and Response to Main Issues Raised

Summary of the Greater Cambridge Local Plan

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of Main Issues:

A number of comments offered broad support for the draft plan and its approach. Issues sited include approach to balancing support for the economy with environmental and social issues. The importance of ensuring that the policies and principes were effectively applied was mentioned in a number of the comments.

Some representors expressed concern about the level of growth that was proposed by the draft local plan. The impact of development on the area, that it was overly focused on economic development, and that government focus on Cambridge meant people had little say. Impacts of growth ion infrastructure, congestion and character of the area where mentioned, as well as concern about the impact on the heritage of the area. There was also concern that it wasn't addressing problems, such as a lack of affordable housing, and transport.

Other comments considered that the plan did not respond to the needs of the economy or to government aspirations. Some stated that plan was not delivering enough for villages, and considering how villages could be made more sustainable.

Some commentors considered the plan should have less focus on climate change and biodiversity, and more on meeting community needs. Others were concerned that the plan would not deliver its climate ambitions because of the scale of proposals.

Comments were made on the summary on particular sites. Concern was expressed about the impact of East West Rail and Cambourne North, including on wildlife, heritage, and the impact it would have on surrounding communities. Land adjacent to A11 and A1307 at Grange Farm raised a number of comments objecting to the proposal, similar to these made on the site policy itself, including questioning the choice of site, landscape, biodiversity and heritage impacts, transport access, and the impact on nearby communities. A number of other sites were referenced in comments, wither seeking their inclusion or supporting their omission from the plan.

On infrastructure, comments from emergency services bodies sought to ensure their areas were appropriately addressed by the plan. Other comments highlighted the importance of infrastructure being delivered when it is needed, and examples were sited of when this had not happened. Specific infrastructure issues were mentioned, including the need to support food growing.

Comments on cultural infrastructure stressed the importance of maintaining and funding provision, including if the Junction is redeveloped.

A wider variety of transport issues were raised. There was concern about the quality of bus services, and that they would need to be improved to accommodate growth. Light rail was suggested by some. More needed to be done to support active travel, and this should be a high priority when designing places. The quality of road infrastructure was raised, including concern about potholes.

Some representors raised concern about the format of the draft plan consultation. The level and technicality of the consultation material and the consultation platform may have discouraged participation. Some also question the difference consultation made, as the local plan hadn’t changed significantly form previous stages.

Other comments picked up a variety of issues.

Response to representations

Comments offering general support for the draft plan and the approach are noted.

The level of homes and jobs being planned for has been carefully considered, and is justified by the evidence being published alongside the Local Plan. National planning policy requires local plans to respond to the needs of the area. We

have considered the needs of the economy and likely growth in jobs, and the number of homes needed to support it. This also accords with the standard method of calculating the needs for homes set by government. We have tested a range of strategic development approaches, considering their impact on economic, social, and environmental issues, and have developed an appropriate spatial strategy to accommodate development needs whilst and protecting the environment.

The strategy for villages has allocated sites where it is sustainable to do so as part of the wider development strategy, but also included policies which would support appropriate windfall development and rural exception sites. Neighbourhood planning also remains a toll available to parishes if they wish to address local issue directly.

The development strategy proposed has been strongly driven by climate change considerations, along with a set of robust policies to ensure the form of development responds as well.

On specific sites, the issues raised on Cambourne North and Land adjacent to A11 and A1307 at Grange Farm have been carefully considered and addressed in the evidence related to site policies. They are considered to remain appropriate elements of the development strategy. Comments supporting the omission of specific sites are noted.

The plan has been informed by a significant evidence base related to infrastructure provision. This includes and Infrastructure Delivery Plan, and topic specific evidence such as related to water supply. Policies seek to ensure that the right infrastructure is provided when it is needed. This has included liaison with emergency services, healthcare and education providers. A study specifically exploring food growing was also commissioned to inform the plan. The plan has also been informed by a study exploring cultural infrastructure provision.

Cambridgeshire and Peterborough Combined Authority are producing a Greater Cambridge Transport Strategy. This identifies how transport measures will accommodate planned growth. A draft is being published alongside the Proposed Submission Local Plan. The development strategy has also been subject to transport modelling, used to identify the specific measures need to support development.

Comments on the consultation platform are noted. We endeavour to improve our consultations and learn lessons from each stage, so will take on board comments. We aim to make the consultation accessible, and offer help to anyone to make sure they can have their say. In terms of responding to the feedback, we cannot always change the plan in the way individual comments seek, but we carefully consider all comments received.

Table of representations:

Comments expressing general support for the plan

Summary of issues raised in comments	Comments highlighting this issue
Strongly support the Plan's: • Commitment to planning positively for innovation-led economic growth, informed by robust local data and an understanding of the clustered nature of the Cambridge economy. • Recognition of the need to plan for a diverse range of housing types and tenures, ensuring that housing delivery keeps pace with job growth and supports workforce retention at all stages of life. • Support for flexibility and headroom in employment space and housing provision, enabling the Plan to respond to higher-than-anticipated economic performance. • Emphasis on innovation infrastructure, including the intensification and evolution of existing clusters, campuses and science parks. • Integrated approach to infrastructure planning, including transport, utilities, digital connectivity and energy, and the recognition that delivery depends on strong system-wide alignment across multiple strategies and delivery bodies. • Support for appropriate densification to high design and environmental standards, particularly in locations well served by transport and services. • Balanced provision for "whole economy" needs, including mid-tech, industrial and logistics space.• Commitment to climate change mitigation, biodiversity net gain and high-quality placemaking, which are essential to long-term competitiveness. We also support the Plan's recognition of Greater Cambridge as the intellectual and innovation engine of the Corridor. The success of Greater Cambridge underpins growth across the wider Corridor, including in Stevenage, Harlow, London and Peterborough, supporting high-value jobs, skills pipelines and resilient supply chains.	208493 (UK Innovation Corridor)

Summary of issues raised in comments	Comments highlighting this issue
CA welcomes the vision of good growth, which balances support for the internationally significant innovation economy with improved quality of life for local communities. We support the use of robust local data and the recognition of the clustering nature of the economy, alongside flexibility to allow additional commercial space and housing where performance is strong and infrastructure constraints are addressed. The Plan's reliance on externally delivered infrastructure, particularly transport, highlights the need for system-wide alignment. Greater flexibility on high-quality densification and a more strategic approach to grey belt assessment would further support sustainability, housing delivery, and growth objectives.	203517 (Cambridge Ahead)
We are very supportive of the proposed themes and strongly support the high aspirations of this proposed local plan including the policies on Climate, biodiversity, water management, well being and social inclusion, green spaces, jobs, homes and infrastructure	202817 (Cambridge City Council Liberal Democrat Group)
Linton Parish Council (LPC) are broadly in favour of the principles included in the draft Local Plan. LPC are in favour of avoiding the spread of development throughout local villages as thus smaller scale development would fail to provide adequate infrastructure and services.	201672 (Linton PC)
Comments offering general support include: • I think this sounds good. • This sounds amazing, especially the boosted housing, public transport and access to green space in a currently enclosed Green Belt area. • Support your vision, development strategy and development specifics for the Local Plan. I understand that some of the specifics are dependent on adequate infrastructure including water, which is as it should be. • An incredibly large amount of work has clearly gone into the development of the Draft Greater Cambridge Local Plan, which residents really appreciate.	200990 (C Leach) 201000 (H Hale) 201004 (M Colville) 201161 (S Oliver) 201028 (A Harris)

Summary of issues raised in comments	Comments highlighting this issue
• The overall conclusions appear to be sensible and heading towards a valuable plan. I therefore agree with the majority of proposals, although, as ever, there is of course room for some improvements • Principles need to be adhered to - don't let developers wriggle out of provision of affordable housing, green space, contributions to infrastructure (e.g. schools, Addenbrooke's hospital, GPs); ensure developers build these things first not last. • All sounds very sensible, if can be delivered without compromising - especially around green spaces, provision of infrastructure, avoidance of reliance on cars and provision of water supplies. These are areas where corners are so often cut. • I support the goals of the plan. Wellbeing in communities is important to me. I have been active in campaigning for play spaces for children and teenagers. I see these squeezes out by the completing goals of land for housing and land for biodiversity and nature. I would like to see these specifically called out so they are not lost, and recognition that play is an appropriate activity within some green spaces. • The plan is largely broad principles/intentions, well evidenced and aligning with environmental, well-being and key planning concerns e.g. transport, housing, work and commercial. • Encourage you to find ways to discourage car use and eliminate parking on pavement. • Agree with the aims. Am concerned about university/town differences. • Congratulations to all involved for producing very good Local Plan. May the policies be implemented as clearly as stated. I particularly welcome the proposed balance of environmental and economic factors: GDP is an inadequate measure on its own. I support efforts for reduced climate change impact and development standards higher than national ones • I very much support the emphasis on environmental sustainability, especially recognising the need to ensure from the start the use of active and sustainable transport instead of reliance on cars. I support the net zero goals.	201422 (Residents Association of Old Newnham) 201817 (T McKeown) 202135 (H Lowe) 204351 (J Nelson) 203538 (P Blandford) 203861 (J Prince)

Comments on levels of development

Summary of issues raised in comments	Comments highlighting this issue
I believe the whole plan's premise about the growth of Cambridge is wrong. Being more than familiar with Silicon Valley, I shudder at the phrase Silicon Fen. I also wonder what happened to levelling-up. Why should we continue to grow at the expense of northern areas? Cambridge has neither the resources (i.e. water) nor the infrastructure to support the envisioned growth. The City is already overcrowded. It's unrealistic to believe that all these new developments won't add to the overcrowding.	200991 (R Engler)
I have very mixed feelings about this plan and feel a lot of what you are saying you would like to do is an empty promise and you are not thinking of local people. You do not have the local communities in your thoughts just profit.	201353 (D Wood)
The Government has made a great mistake in defining this area as a priority for 'sustainable economic growth'. Growth is not sustainable in this area.	201421 (S Page)
Central Government wants this development, and individuals have little say	202650 (K Leslie)
Object, I find it frustrating that the plan means even more homes for Cambridge. Having lived here for 18 years I don’t recognise the city and don’t even bother going in shopping at weekend as its too busy and cant move for people. It is sad Cambridge is over crowed and now covered on graffiti and it feels sad where the City is heading. it is a small market town and having 1000s more people means more impact on infrastructure. I think they need to really think about the amount of houses are being built. The city cannot cope with more people.	202423 (R Larkum)
Object, too many of the massive housing developments are occupied by people not from Cambridge, not conforming to Cambridge standards (in business, culture, motoring, lifestyle, tax compliance etc) which causes problem for native Cambridge residents, lowering the quality of life and creating congestion, crime, pollution, services shortages etc. Too much bland and characterless housing is	202542 (C Turner)

Summary of issues raised in comments	Comments highlighting this issue
being put forward simply to create extra council tax revenue without proper (genuine) consideration about the negative effects on life in Cambridge. Over development is also causing problems for wildlife.	
The plan is unreasonable, incomprehensible, utter madness and will create social dysfunction making a mockery of what community is about. The plan needs to be completely revised and placed where local infrastructure could accommodate such an idea. All that is happening on top of all comments above are the landowners reaping even more wealth to accommodate their utter greed and their complete indifference to what a community is about and which is so important in the very difficult world we are now living in.	204432 (S Barron)
Object as Vision is fundamentally not Sound, due to 3 major omissions: 1) It fails to recognise and protect Cambridge's world heritage significance; 2) It totally fails to recognise and manage current conflicts between current growth, let alone the proposed, and the finite physical and environmental constraints of Cambridge and its hinterland; and 3) no evidence, let alone adequate evidence, is provided to show that the proposed levels of growth are "sustainable", and the claimed vision is even remotely feasible. It is shocking that tall buildings proposals are made with no visualisations to show the potential impacts of what is proposed.	203347 (J Preston)
The draft plan is a pipe dream. New housing thus far is ugly. For example, The Marque is beyond hideous. If there no funding for a new sewage works then there is no hope for a new reservoir in the Fens. By 2045, our pot holed roads will have disintegrated and diesel pick up trucks will be needed to traverse them not EVs.	201524 (S Biggin)
You should be working on travel-to-work areas not tight bureaucratic local government boundaries. You do not seem to take into account the government's latest ambitious targets for growth. Without close collaboration with the Mayor and the Cambridge Growth Company your planning exercise is already redundant. Your reliance on the Greater Cambridge Partnership to find solutions is risible.	201267 (A Duff)

Summary of issues raised in comments	Comments highlighting this issue
Supports the Draft Greater Cambridge Local Plan, recognising the need for growth to maintain inclusivity, prosperity, and environmental responsibility. The proposed housing and employment growth is justified but advocate for a more ambitious approach to address the chronic housing shortage. Important to deliver urban regeneration, prioritising brownfield sites and high-density development near transport hubs to enhance sustainable housing delivery. Supports the plan's targeted approach to Green Belt release but suggest remaining open to further reviews to provide well-connected housing and green infrastructure.	201313 (E Munday)
Negative effects of ongoing housing development in village, including road closures and damage caused by heavy vehicles.	201932 (C Pillinger)
My main two failures of this plan are transportation and affordable (housing). Comments include public transport too expensive, developments like airport site will create gridlock. Putting labs in centre will exacerbate problems, with no decent transport proposal. Reopen Cherry Hinton station, upgrading rail links, and building manufacturing plants near railway lines to support future economic needs.	204505 (M Day)
Housing growth is too dispersed while employment remains concentrated around Cambridge.	203304 (J Day)
The plan does not achieve the government’s clearly set ambitions for Greater Cambridge, in which the Greater Cambridge area is foremost in plans for national economic growth. It also misses the specific national policy to support the expansion of the Cambridge Biomedical Campus with associated housing delivery. The Local Plan as currently drafted does not align with the ambitions set out in the Local Growth Plan which aims for a 15% increase in housing by 2035, increasing to a 54% increase by 2050. Government guidance on Local Growth Plans (July 2025) states that they should be the “guiding star” that provides direction for other relevant plans and strategies which should “align” with the Local Growth Plan.	208211 (Pigeon Land and LIH)

Summary of issues raised in comments	Comments highlighting this issue
City centre is too small and too crowded for this over expansion. Green transport is not encouraged by the state of the roads. New developments are not sympathetic in size and scale. The main arteries in and out of Cambridge are clogged already.	202560 (K Leslie)

Comments raising points around the strategy for villages

Summary of issues raised in comments	Comments highlighting this issue
Great Wilbraham Parish Council (GWPC) is concerned that the Local Plan disadvantages our residents and 60k residents in 'Group and Infill' villages in favour of those in new developments and larger, better-connected villages. SCDC is one of the most rural populations in the country, but when considering infrastructure to make communities viable and sustainable and fulfil key strategic themes we are being ignored. Great Wilbraham has close historic, social and geographic links with Little Wilbraham and Six Mile Bottom. The two Parish Councils would like to work together informally and with the Council to develop a strategy for sustainability.	203329 (Great Wilbraham PC)
Support your vision but I don't think the policies and spatial allocation that you have laid out in this Plan are strong enough to deliver on it. I'd like to see more homes near to the jobs (e.g. within the city), more homes around South Cambridgeshire villages with rail stations and more mixed-use development.	205231 (A Wiliams)
The plan clearly treats South Cambridgeshire's towns, villages, and parishes as an inconvenience. Designed and shaped exclusively by and for Cambridge and Cambridge University interests, it marginalises South Cambs. Among thousands of lines, only a brief paragraph acknowledges South Cambridgeshire, effectively dismissing it as inconvenient for delivering infrastructure you have failed to provide over the past decade. Once again, over 120,000 residents are ignored and used as cash cows to support the Cambridge economy. Many people who live and work in Cambridge actually reside in	201302 (I Koutoudis)

Summary of issues raised in comments	Comments highlighting this issue
South Cambs, yet their needs for infrastructure, healthcare, leisure, and wellbeing spaces are repeatedly overlooked.	
Much more must be done to encourage businesses to establish offices / factories / workshops (perhaps as satellites of their HQ) in the larger villages in South Cambs (e.g. Gamlingay) to give the people who live there (and the nearby smaller villages / hamlets) the opportunity to work locally. This will enable them to walk, cycle or drive a short distance to work rather than commute to London or wherever with all the benefits that will bring to the environment and their health – as well as enabling more use of local shops and other facilities sustaining the local economy. What was the village's main industrial area has been turned into a giant housing estate with, seemingly, no thought given to local employment opportunities.	201555 (P Mann)
The attention given to the rural settlement is as vital as it is for new areas. I am supportive of the goals and strategies in the main, but the tactics needed to make sure the existing grows in concert with the new cannot be overlooked. We need the same visioning exercise to take place in say Elsworth as we do Cambourne North. What is the typology of say Elsworth by 2050.	204705 (M West)
“We want our rural villages to continue to thrive and sustain their local services, but we don’t want to encourage lots of new homes in places where car travel is the easiest or only way to get around.” This approach fails to conform with Paragraph 83 of the NPPF. It also fails to recognise the changing work patterns since Covid-19, with recent ONS studies confirming that 28% of working adults in Great Britain hybrid worked between January and March 2025, representing a rise since March 2022.1 Further, the UK Government’s commitment to zero emission vehicles by 2035, which falls within the draft Plan period, promoting the change to electric vehicles.	211582 (Mr & Mrs Smith)

Comments focusing on Environment and Climate change

Summary of issues raised in comments	Comments highlighting this issue
• Object, should have less emphasis on climate change and biodiversity. • The plan has far too much on environmental issues and far too vague a commitment to providing the services needed for such an increase in the size of the community. • Object, Plan bends too much towards climate change, its theories, and its unpredictable and unproven solutions. the council has no business playing god or scientist on this issue and go back to its core duties.	205520 (P Zirngast) 202553 (S Pattinson) 202542 (C Turner)
• Object, Greenhouse gas emissions from constructing the planned 1.5m new homes will exceed interim targets for emissions, and future high emissions are built in which will break the 2050 net zero target without fixing the housing crisis as the distribution of property and its use short-term lets not homes are not dealt with. The Cambridge Plan is part of this. The vision and plan contain a lot of warm words about climate change and biodiversity, but actually in Cambridge isn't in line with these aspirations. Scale and nature of development does not support green building methods. Redeveloping Cambridge market not compatible with climate aspiration. Plan is out of line with national climate and biodiversity targets. • Summary doesn't mention the extreme water stress that Cambridge and the surrounding area suffers from. Climate change will make this worse. No development should be allowed that increases the area's need for water.	203642 (A Copping) 204762 (R Randall)
My confidence is not enhanced by a statement that a 'climate emergency' has been virtuously declared. My take-home from all this is that lots of homes are going to be built in various places whether existing residents like it or not.	201029 (C Pillinger)

Comments on specific sites

Summary of issues raised in comments	Comments highlighting this issue
Cambourne North • Question whether it will result in a genuinely well-planned town with appropriate infrastructure, services, and amenities, or whether it will simply extend an already vast housing estate with only a handful of shops and limited community facilities. • Proposed site for the EWR station and North Cambourne is located on valuable arable land, woodland, and hedgerows, could negate conservation efforts, such as those by the RSPB at Hope Farm • Tranquillity of our village, our home, will be shattered by the huge volume of traffic coursing through the narrow roads • Plans for a multi story car park and link from Cambourne adjacent to designated heritage assets are not enhancing and protecting the fragile barns and house. • Routes from Cambourne should be moved away from existing dwellings. All crossings should include NMU access (including equestrians) to link and extend the bridleway around Cambourne. A new perimeter bridleway should be made as has been in Cambourne.	203722 (G Chamberlain) 203922, 203926 (T Hegan) 201638 (C Doel)
Land adjacent to A11 and A1307 at Grange Farm Comments raising objections with points including: • A1307 is a dangerous road with a history of serious and fatal accidents, The road is severely congested so unless there is a serious transport solution this is not the right location. Access from A11 have been overlooked. • Before any additional development occurs in this area a serious review of schooling • GP practices and local services overburdened. Increased pressure on Addenbrookes and the NHS.	204947, 205621 (M Munns) 205676, 201925, 205677 (M Miles) 204109, 208515, 208516, 208517 (Z Luscombe) 203574 (J Graham) 202072 (M Barry)

Summary of issues raised in comments	Comments highlighting this issue
• Despite reassurances, indicated boundaries have been exceeded and sewage treatment plant is on opposite side of A1307 plus a transport link to the site is via Comfort Cafe land and adjoining field before crossing A1307. • On the flight path to Duxford so any housing could be at risk. • The original HELAA assessment, before the December 2025 update scored the site as RED on suitability grounds. • Damage to the Chalk Stream / aquifer, creation of flood risk • Adverse effects on the Roman Road Site of Special Scientific Interest, stopping irreparable damage. • Archaeological sites there require significant protection, • Impact on character and views, overwhelm nearby villages. • Loss of agricultural land • Other sites would be better.	203416 (D Barkataki) 207553 (C Tjen)
North East Cambridge No reliance should be placed on the council's ability to relocate the Cambridge Waste Water Treatment Plant (CWWTP) and the residential component of Hartree should not be included in prediction of housing numbers.	201314 (E Green)
Kingsway Solar and Forest City I am very concerned about the proposed Kingsway solar farm destroying the countryside. There is also the proposed Forest City how does this match with Cambridges expansion and policies? It appears here in south east Cambridgeshire we are under siege and no one is showing any concerns	201491 (S Jaques)
I strongly support withdrawal of West Fields as potential development site (a Trojan horse).	203538 (P Blandford)

Summary of issues raised in comments	Comments highlighting this issue
Sites are described as “proposed sites” when several developments are clearly already underway. Deeply concerning.	203722 (G Chamberlain)
Site reference 115524 Site would be a disaster for this community. Site 115524 was given an Overall Score of 'Red'. The exclusion of Site 115524 must be permanently enforced. That will protect our vital, extremely limited and increasingly pressurised local amenity space - noting St Matthew's Piece (Cambridge) as the only public park in North Petersfield.	201488 (E Guild)
Object, I am most worried about the traffic and Road capacity through Boxworth and the surrounding villages. There are no clear plans for additional road capacity. The character of the village setting will be completely spoilt. The access to any of the sites along the A14 should not be from Boxworth Road.	201729 (I Negus)
Walled Garden, Whittlesford Object, site should be put back in the plan.	204319 (C Forbes-Cable)
Sites ECC notes that the Plan seeks to help the Genome Campus “employment park evolve into a place, supporting delivery of local services and facilities and helping it to find its place in the network of towns and villages” (page 21). Furthermore at Granta Park the Local Plan is seeking to support its continued success. For both locations, given their proximity to Essex it is essential that the Local Planning Authorities works collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts within Essex in particular connectivity to similar businesses within Essex – Chesterford Research Park within Uttlesford and industries within Harlow; as well as connections to London Stansted Airport. Attention is also drawn to ECC’s role as a neighbouring infrastructure and service provider with statutory roles and responsibilities.	210460 (Essex County Council)

Comments on Infrastructure

Summary of issues raised in comments	Comments highlighting this issue
References to strategic infrastructure should include, "fire and rescue, police, ambulance".	207472 (Cambridgeshire Constabulary) 207505 (Cambridgeshire Fire and Rescue Service)
Highlights importance of adequate healthcare infrastructure for sustainable development and recommends ongoing engagement with the NHS, specifically the ICB, during the preparation of the Infrastructure Delivery Plan (IDP). Healthcare costs should be included in the Local Plan Viability Assessment for relevant development typologies to ensure developers are aware in advance of potential contributions towards healthcare infrastructure.	205178 (NHS Cambridgeshire and Peterborough Integrated Care Board)
ECC notes and welcomes that this section of the Greater Cambridge Local Plan states “development will only be allowed if it is accompanied by the right infrastructure that will deliver the range of supporting services, facilities and infrastructure that workers, visitors and residents need that deliver the goal of making it a world class campus (page 19 of summary for development strategy).	210459 (Essex County Council)
Section 106 must cover adult skills for career switchers	202356 (A Carpen)
Requests a transparent assessment of the costs associated with proposed changes and clarity on who will bear these costs.	201933 (C Pillinger)
Harston PC highlight the need for enhanced local services, such as healthcare and community spaces, to support future growth in the village. Sustainable Energy: The Parish Council supports the inclusion of local sustainable energy solutions but not at the expense of the surrounding farm land/amenity areas or the other policies in the Neighbourhood Plan.	201612 (Harston PC)

Summary of issues raised in comments	Comments highlighting this issue
Facilities provided in new developments have arrived too little too late. e.g. pupils in Darwin Green are having to go outside Cambridge and Northstowe is woeful. There is no sign that lessons have been learnt. There need to be integrated care centres that do more than just gp services. Too much development, e.g. Cambridge North area is bland, soulless, corporate and mediocre. There is no sign of this being addressed.	201722 (A Milbourn)
Build communities. Do not discriminate against one group because it isn't all of the groups. E.g., why can't my church hire the community centre regularly? Why isn't there space for a church building on site? Allow community building.	207152 (R Forder)
Food Growing • Young, passionate growers are dissuaded by the denial of access to good land; huge initial capital outlays; prohibitive planning procedures; logistical problems of parking and distribution opportunities. Missed a section on market gardening of fruit and vegetables for people to actually eat, I only saw one mention of environmentally friendly farming. • Cambridge cannot achieve its net zero ambition without a strategy to transition to a more sustainable food system. Resilience in the food supply chain also needs serious consideration. For these reasons I feel the Local Plan should do more to encourage and support a healthy and sustainable local food system.	205183 (Y Dignon) 205452 (The Cambridge Organic Food Company)

Comments on Cultural Infrastructure

Summary of issues raised in comments	Comments highlighting this issue
Support Cambridge Junction in asking that (supported by Theatres Trust): temporary provision for all cultural functions must be secured before any demolition or displacement reprovision is delivered as an early phase; no gap in provision any future Junction is at least equivalent in standard and capacity, including audience, back-of-house, technical capability, servicing long-term operational/financial viability assessed alongside spatial design delivery governed through a structured process (CJ/Council governance, RIBA stages, shared brief before developer engagement).	202799 (Cambridge Junction) 203841 (N Yeni) 204348 (J Capon) 205262 (N Oakley)
Support the recognition of the cultural and creative industries in driving employment and tourism, highlighting the role of local institutions like University Cambridge Museums, Kettle's Yard, The Junction and Cambridge Arts Theatre. They advocate for the inclusion of arts and culture in communities facilities in new settlements to help to establish and develop communities.	205037 (Arts Council England)
Wysing Arts Centre asks that Cultural Infrastructure is protected and enhanced, as a strategic civic asset; Create Cambridge is embedded in delivery, governance and phasing; artists are involved in masterplanning (RIBA Stage 2-3); Culture is treated as core infrastructure; genuinely affordable cultural production space is required (e.g. peppercorn, with rental charges well-below market rates and established based on evidence, ie Wysing Arts Centre's research on affordable artist studios); rehearsal, making and sole-use studios are prioritised over generic co-working, and that a minimum requirement (e.g., 10% in schemes over 1,000 sqm) is introduced.	204867 (Wysing Arts Centre)

Comments focused on transport

Summary of issues raised in comments	Comments highlighting this issue
Bus comments: • Concern about the lack of reliable public transport in Harston, especially to Cambridge and surrounding areas. We request that the Local Plan includes improvements to bus services. • As the population of the City grows not least with housing the role of the Bus is enhanced – some areas of the city have limited services. Bus infrastructure at Addenbrookes not suitable for disabled people. • Presently from north west Cambridge A14 corridor it takes up to TWO HOURS to get to the Biomedical Campus by bus. No direct links, you have to go into the city and change buses. If the Campus is earmarked as a location for jobs, and there is housing development planned for north west Cambridge, it is imperative that the bus service is vastly improved.	209972 (G Heathcook) 201612 (Harston PC) 201037 (P Spowart)
Light Rail comments: • The new towns need to be linked to Cambridge and each other by a new light-rail network Any light rail network needs to have light rail stops that have medium-high density housing *and* essential services/conveniences in the vicinity • Private vehicles belong the 20th Century and that public transport requires its own Vision to shape development in a strategic way with huge benefits to the quality of life which underpins true prosperity. I don't see such vision in the Plan. The answer is light rail. • There's no transit system in place once in Cambridge, we need metro, trams and other mass transit that is significantly faster and not congestion bound. • Civic welfare as well as economic growth depends on the installation of a mass rapid transit system based on light rail.	202356 (A Carpen) 204647 (P Pope) 201293 (T Roberts) 201267 (A Duff)
Active Travel comments:	202187 (R Forder)

Summary of issues raised in comments	Comments highlighting this issue
• Put it at the centre your treatment of active travel needs goals, metrics, and design intent. Give people better lives. Can they travel shorter distances? Can they travel more healthily, with less environmental impact? Can they leave the ICEV or EV at home? • "minimising...reliance on the private car" should be achieved with a focus on improving accessibility, functionality, availability, and affordability of other sustainable means of transport, rather than disincentivising private car use through financial penalties or absolute access restriction. • There are some good examples of cycle infrastructure, but there is a failure to understand that it has to be good for all journeys, not just parts of some. Despite the rhetoric there is too much car centricity in developments. The scale of development is going to add to the already massive congestion problems. • Transport is a major source of emissions and needs priority when planning and budgeting developments. Electric vehicles are not a helpful solution to congestion, and contribute to sprawling developments that put more pressure on existing road networks. Higher density development must come with much lower levels of car ownership, and parking should be an optional cost. Dense development needs strong walking, cycling and public transport to succeed. Walking and cycling connections should be required in all development designs. • Walkability, including for wheelchair and buggy users, should be a core spatial principle in the Greater Cambridge Local Plan. Supports the Plan's overall direction but walkability is not yet embedded strongly enough across the Vision, spatial strategy, design policies, transport policies, and health objectives	203558 (D Lever) 201722 (A Milbourn) 203304 (J Day) 201474 (M Reader)
Please stop making ordinary people lives difficult, stop creating congestion provide affordable housing. & don't/can't cycle 8+ miles all weathers & don't enjoy 1 1/2 hr bus journeys as opposed to 15 mins by car non peak, 25 mins peak times. leave Coton Orchard alone.	201027 (J Masterson)

Summary of issues raised in comments	Comments highlighting this issue
City centre is too small and too crowded for this over expansion. Green transport is not encouraged by the state of the roads. New developments are not sympathetic in size and scale. The main arteries in and out of Cambridge are clogged already.	202650 (K Leslie)
Current road infrastructure around Cambridge is inadequate for the existing traffic volume, leading to dangerous conditions. Public transport options have diminished, resulting in increased reliance on cars and further strain on the road network. The roads are poorly maintained, with deep potholes creating hazardous driving conditions, exemplified by the route from Elsworth to Dry Drayton. There is a pressing need to prioritise infrastructure improvements for residents before considering population growth in the area.	203919 (T Hegan)
As an east Cambridge resident I would like to emphasise attention to: Critical traffic management issues along Maids Causeway given the development of ARU. Critical need of improved cycle pathways and access.	202135 (H Lowe)
Fen Road Rail Crossing Traffic on Fen Road is heavily impacted by the extremely frequent closure of the level crossing, leading to dangerous speeding by vehicles. There are major safety concerns; someone may easily be killed by speeding traffic. To alleviate these traffic issues close the level crossing and either a) create an entry/exit to the A14 or b) build a road bridge across the railway.	202132 (R Meyer)

Comments on the Consultation

Summary of issues raised in comments	Comments highlighting this issue
Consultation format issues included: • Consultation platform is overly complicated and will put a lot of people off before they can comment suggesting that you do not really want feedback and are hiding behind IT to limit access/response. • The level of technical detail, volume of material, and time required create a significant barrier for ordinary residents. The average person will struggle to engage meaningfully, and many will simply give up. That is not inclusive engagement. • The relevance of field is not clear • The "Instructions" for the consultation on the GCSP website refer only to the use of the "OpusConsult" platform. This requires a registration process before any input. Although GCSP will accept input by post or by email, these options have been effectively concealed by failing to make this clear on the consultation website. Input from the public, particularly older people or other less "internet savvy", has been hindered and discouraged	201024 (P Zirngast) 208881 (D Smith) 201162 (D Quinn) 208634 (G Jones)
Consultation legitimacy points included: • Concern that housing developments will proceed regardless of local opposition, with insufficient attention given to the impact on existing residents and infrastructure. • Last Local Plan draft "consultation"--ZERO changes made despite 25'000+ researched comments received. Yet again, you are simply wasting taxpayers' money with this PRETENCE of democracy: yet another mere box-ticking exercise, with zero intention or legal obligation to implement changes based on public consultation. • Consultations are generally biased, on very limited predetermined options. They are generating apathy and disengagement with public affairs, they're a disgrace and waste of money.	201931 (C Pillinger) 203642 (A Copping) 202542 (C Turner) 203764 (A Wilson) 201030 (A Lindsey)

Summary of issues raised in comments	Comments highlighting this issue
• The plan is presented with deliberately obstructive questions and detours. For example, how is a citizen to know if the plan is legally correct? But the council blocks comments unless the citizen agrees with the council that it is • Process unduly prioritised those of set demographics. As a younger person in full time work I was obliged to miss work in order to attend local meetings.	

Other General Comments

Summary of issues raised in comments	Comments highlighting this issue
ECC acknowledges the national and international significance of the high tech industries, research and development and life sciences within the area. The economies of scale for such industries is also noted in their presence within West Essex, and in particular Uttlesford District and Harlow Town. In developing and shaping the existing and future economic clusters, ECC would welcome further engagement to ensure there is full consideration to the inter-relationship and importance of the industries and employment growth within western Essex. Furthermore in the identification of development needs, it is important to appreciate the role that London Stansted airport plays and will continue to play in supporting the growth and development within these key industries.	210458 (Essex County Council)
New research on neurodiversity & building facades *must* be incorporated e.g. requirement that Health Impact Assessments cover this Require post-occupancy evaluations on all large sites Poor contemporary design should not be used as a reason to repeat poor designs	202356 (A Carpen)

Summary of issues raised in comments	Comments highlighting this issue
Biodiversity and green spaces should be retitled Biodiversity, Geodiversity and Green spaces and reference should be included to geodiversity conservation and sites of geological importance.	203458 (Cambridgeshire Geological Society)
Conversion of “barns”, constructed on Green Belt, then converted to industrial buildings, should be expressly excluded.	205484 (P Meyer)
As an east Cambridge resident I would like to emphasise attention to: additional HMOs, hotels, expansion of retail eg Beehive, Newmarket Road/Elizabeth Way roundabout changes. Placing of additional HMOs to take account of other possible locations e.g. south /north Cambridge and HMO types to be reviewed.	202135 (H Lowe)
More council housing is needed, as is encouragement for downsizing. Water abstraction must be reduced. Tourism needs managing, as does the power of university colleges, to maintain the quality of Cambridge life.	203538 (P Blandford)
We are a very nature-deprived county and enhancing green spaces and biodiversity is very important, but wildlife benefits most in an area not shared with hordes of people so it is important to provide areas for outdoor recreation separately from areas supporting nature as well as places which aim to do both.	203861 (J Prince)
There are overlapping themes, such as Town Centres, Placemaking, combatting the Climate Crisis and economic applications that feature Traditional Architecture as a primary vehicle towards achieving the greatest possible positive outcomes for all of these themes.	201010 (Community Campaigner D Barton)

GREATER CAMBRIDGE
SHARED PLANNING

Summaries of Draft Plan Representations, and Response to Main Issues Raised

About the Plan

About the Plan Introduction

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of Main Issues:

Some representors raised concern about the format of the draft plan material.

A number of neighbouring councils, statutory bodies, and infrastructure provides commented on the importance of continued liaison with them.

A number of Parish Councils raised specific comments about their village to this section of the plan. Stapleford and Great Shelford request that their neighbourhood plan is taken into account, and a number of specific comments around the policies map. Elsworth

Parish Council raise concerns about the impact of proposals that have not been fully addressed. Girton Parish comments included the need to protect the gap between Girton and Cambridge. Horseheath parish support the emphasis on biodiversity and climate change, but raise a general question about the detail of plan implementation. Histon and Impington, and Whittlesford, both raise issues around the delivery of necessary infrastructure. Boxworth Parish Meeting highlighted the need to consider impacts on exiting communities. Great Wilbraham Parish Council said they were supportive of many aspects of the local plan.

Comments challenged the level of development proposed, and that it did not take account of environmental impacts. Others considered that development targets should be more ambitious, and the approach did not and are align with the Local Growth Plan and National ambitions for the area.

Some comments on the development strategy offered general support, but others questioned whether it would deliver the homes needed, was to focused on large sites and new settlements, or did not include enough small sites or sites in villages.
Two representors suggested alternative plan periods, extending the plan period. One comment said the plan did not adequately consider the draft NPPF, which is expected to be adopted in mid-2026, necessitating alignment to avoid future revisions.
General comments raised a wide variety of issues. This includes support for policy approaches but also concern about their effective implementation. The interdependence with infrastructure delivery and wider strategies was also highlighted. Issues included measures to support affordable housing, green infrastructure, rights of way, food growing, protection of heritage, supporting Cambridge’s economic clusters, and sustainable transport. Hobsons Conduit Trust highlighted the importance of protecting the water environment. The importance of places to be creative and social setting were highlighted by a pupil from Comberton.

Cambridge United Football Club see either redevelopment of the current site or potential relocation as critical to the Club's long term viability and sustainability at a time when its current capacity is constrained, the City will grow exponentially and the financial pressures for all football clubs at every level are growing.

Comments on specific sites included concerns regarding Land adjacent to A11 and A1307 (Grange Farm), and the Cambridge Biomedical Campus. East West Rail highlighted the relationship of site proposals with their scheme.

Response to Representations:

Comments on the consultation platform are noted. We endeavour to improve our consultations and learn lessons from each stage, so will take on board comments. We aim to make the consultation accessible, and offer help to anyone to make sure they can have their say. The plan is substantial document with a large amount of supporting evidence, so we did include a nontechnical summary of the plans proposals at the beginning of the document. Technical comments on format will be considered in preparation of the proposed submission version. The consultation includes a wide range of events. We can't go everywhere, but very much sought to deliver good coverage across Graeter Cambridge. We also continuously engage with our parishes and residents associations though regular planning forums.

Officers have continued liaison with neighbouring councils, statutory bodies, and infrastructure provides throughout the plan making process. We continued this process since the draft local plan stage. And have published a record of our engagement.

The great Shelford Neighbourhood plan was adopted in October 20205, making it a part of the development plan. Detailed comments on the defined development extend and other issues have been considered separately. Comments raise concerns

regarding on delivery and infrastructure, the Councils have sought to address these by further developing the evidence base since the draft plan stage. This includes further exploration of measures to address transport challenges by the Combined Authority.

The level of homes and jobs being planned for has been carefully considered, and is justified by the evidence being published alongside the Local Plan. National planning policy requires local plans to respond to the needs of the area. We have considered the needs of the economy and likely growth in jobs, and the number of homes needed to support it. This also accords with the standard method of calculating the needs for homes set by government. We have tested a range of strategic development approaches, considering their impact on economic, social, and environmental issues, and have developed an appropriate spatial strategy to accommodate development needs whilst and protecting the environment. The plan also sets out ambitious polices to guide the form of development responding to climate change.

The strategy for villages has allocated sites where it is sustainable to do so as part of the wider development strategy, but also included policies which would support appropriate windfall development and rural exception sites. Neighbourhood planning also remains a toll available to parishes if they wish to address local issue directly.

The plan period running to 2045 remains the Councils preferred approach. It provides an appropriate length of time after adoption. The plan also identifies a longer term vision, in particular for strategic sites. At time of writing the outcome of the government consultation regarding changes to the National Planning Policy is not yet known. It would not be appropriate amend policy to reflect draft policy approaches.

The wide variety of other issues raised are noted. Rights of Way and connectivity are important, and are addressed in Policy I/ST: Sustainable Transport and Connectivity. The interdependence with the delivery of infrastructure has been recognised in the plan

and the evidence base. It would not be appropriate to add rights of way to the policies map. The county council maintains the definitive map. The councils continue to liaise with infrastructure bodies to ensure the growth needs of the area are addressed. The vision and objectives for the plan recognises the importance of the Cambridgeshire economy, but also that this must be balanced with consideration of social and environmental issues.

On specific sites, the issues raised on Land adjacent to A11 and A1307 at Grange Farm and Cambridge Biomedical Campus have been carefully considered and addressed in the evidence related to site policies. They are considered to remain appropriate elements of the development strategy. Comments supporting the omission of specific sites are noted. Proposals for new or alternative allocations have been assessed through the Housing and Economic land availability assessment and Sustainability Appraisal process.

Table of representations:

Comments on the Consultation

Summary of issues raised in comments	**Comments highlighting this issue**
Comments on the format of the local plan included: • Online version of this draft plan is different from the PDF one. • Online document presents layered information in silos, making it difficult to compare policies. • Complex to make representations. • A single whole PDF of documents would be useful. • Page numbers need to be corrected.	201222 (S Williams) 202349 (A Hall) 203274 (J Palmer) 203507 (J Neal)

Summary of issues raised in comments	Comments highlighting this issue
• It would be easier for the reader if the policies were numbered as well as/instead of having lettered codes. • Website is hard to navigate and the language is not easy for casual users, which may limit residents' understanding of the process. • Maps should be redrawn to clearly differentiate heritage assets from green-separation areas, removing the confusing pink shading.	208328 (Gladman Developments) 208329 (Gladman Developments) 208460 (Longstanton Parish Council) 210643 (Transport 2000 and W Suffolk)
Lacks a plain English summary, designed to help and support people with poor reading and comprehension skills, or indeed those whose cultural and language backgrounds may be diverse. There is a daunting amount of documentation for residents to familiarise themselves with and limited time. Detailed and complex document.	201471 (P Newton) 201901 (C Deer) 202334 (P Deer) 202324 (A Hamill) 203274 (J Palmer) 203507 (J Neal)
More regular consultation with residents is needed for the new railway bridge and station access. We would like clarification on how the Local Plan will align with other consultations and plans.	205785 (Rustat Neighbourhood Association)
I attended the Greater Cambridge Local Plan - Residents' Associations presentation via Teams on 13 January. The Greater Cambridge Local Plan is a very detailed and complex document, which makes it difficult for residents who are not expert in the whole range of areas covered to make informed	202342 (A Hamill)

Summary of issues raised in comments	Comments highlighting this issue
comment on all those areas. That said, each resident who provides comments has a valid point of view and their opinion must be taken into account.	

Comments from Duty to Cooperate Bodies, and general cooperation issues

Summary of issues raised in comments	Comments highlighting this issue
As the immediate neighbouring authority to the south, UDC shares a significant functional geography, through the M11 Innovation corridor and a landscape feature to the Northern edge of the district. The two areas are intrinsically linked by critical infrastructure corridors—including the M11 and the West Anglia Mainline and by the shared chalk aquifer that feeds chalk streams in the sub-region. Uttlesford District Council remains committed to working collaboratively to support the Greater Cambridge emerging Local Plan to address these cross-boundary challenges. The alignment of our policies on water efficiency are critical for enabling the sustainable growth the region.	204968, 204981 (Uttlesford District Council)
The delivery of new healthcare infrastructure is resource intensive, and the NHS faces funding constraints that are exacerbated by population growth from new housing developments. New developments should contribute proportionately to the healthcare needs arising from increased population due to housing growth. Access to essential healthcare services is vital for promoting good health outcomes and supporting the social and economic wellbeing of an area.	205042 (NHS Cambridgeshire & Peterborough Integrated Care Board)

Summary of issues raised in comments	Comments highlighting this issue
Residential developments significantly impact the demand for additional primary healthcare provision for future residents. Healthcare infrastructure should be a priority for infrastructure delivery, given its strategic importance in supporting housing growth and sustainable development. The healthcare estate must be continually reviewed, optimised for land use, and modernised in line with integrated NHS strategies. Planning policies should facilitate the delivery of essential healthcare infrastructure and be developed in consultation with the NHS to aid in estate transformation.	
The ECC response supports the preparation of the Plan and provides broad support. ECC is committed to working with the respective Local Plan Authorities in seeking to develop the Greater Cambridge Local Plan and understand how our representations can be addressed through modifications. Given their proximity to Essex it is essential that the Local Planning Authorities works collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts within Essex, in particular highways and transportation, Early Years and Child Care, Education and Adult Community Learning.	207668 (Essex County Council)
Thank you for the opportunity to comment on your Regulation 18 Draft Local Plan. We have reviewed the Local Plan in conjunction with the associated supporting documents. We have provided comments and recommendations below which align with the various constraints within our remit.	207670 (Environment Agency)
Thank you for consulting the East of England Ambulance Service NHS Trust (EEAST) regarding Draft Greater Cambridge Local Plan. Detailed comments on individual policies provided.	207671 (East of England Ambulance Service NHS Trust)

Summary of issues raised in comments	Comments highlighting this issue
Both Bedford and Greater Cambridge are located within the Ox Cam corridor and this shared geography means numerous strategic matters have a cross-boundary dimension. These include housing, socioeconomic, infrastructure and water scarcity. It is noted that there are established governance arrangements for the combined CPCA and within this area a local government reorganisation process is ongoing. It is expected that Greater Cambridge will look to the Cambridgeshire and Peterborough geography for its strategic plan making context. There will however remain an important need to ensure that the Local Plan also responds to the drivers of growth originating in the sub region to the west particularly in relation to the following national projects: Universal Studios, the proposed Milton Keynes renewed new town, Tempsford new town and East West Rail.	208223 (Bedford Borough Council)
CBC are unclear at this stage if the statement of common ground statement that there are no areas of disagreement can be supported due to our concerns over the transport implications arising from the cumulative impacts of the allocations and proposed allocations at Cambourne.	208507 (Central Bedfordshire Council)
Historic England very much welcomes the emerging plan and the considerable work undertaken to date. We can see the incorporation of many of the comments we have made in previous consultations which is appreciated. We particularly welcome the substantial effort that has been made in preparing a comprehensive evidence base including both strategic and site-specific heritage impact assessments, topic papers, skyline and tall buildings strategy, townscape characterisation study, landscape sensitivity assessment including renewable energy assessment.	208918, 208919 (Historic England)

Summary of issues raised in comments	Comments highlighting this issue
We recognise the area faces intense pressure for growth, driven by both the economic success and the attractiveness of the area, in large part a consequence of its rich architectural and cultural heritage. We are keen to support sustainable growth in the right locations, but this growth must be carefully managed to ensure that the very things that contribute to the success of the City and surrounding area are not harmed in the process. Historic England is keen to ensure that the emerging plan gives full consideration to the historic environment, both in the choice of site allocations and policy criteria for sites, as well as through a robust and clear suite of historic environment and other policies that seek to both protect but also enhance the historic environment.	
It is important that in setting the portrait of Cambridge there is acknowledgement of the cross boundary and strategic matters that must also be clearly articulated. In particular for the economy, the for the emerging Local Plan to be effective, it must appreciate the opportunity provided by international and domestic connectivity by London Stansted airport, as well as the biotech and advanced manufacturing business clusters evident within Essex (e.g. at Chesterford Research Park and Harlow). Given the "international significance" of the employment clusters, it is essential that there is appreciation of the proximity to London Stansted airport, and also seeking to ensure that surface accessibility to improve connectivity with Greater Cambridge is fully explored when developing the emerging Local Plan.	210466 (Essex County Council)
ECC recommends that the regional planning context be amended to ensure there is clarity concerning ECC's role and relevant statutory plans/strategies. Furthermore it is important that reference is explicitly	210467 (Essex County Council)

Summary of issues raised in comments	Comments highlighting this issue
made to the following plans and strategies – Essex Local Transport Plan 4. It is also important to note that ECC, will be part of a new single strategic authority for Greater Essex. It will take the form of a mayoral combined county authority. It is expected that a new mayor for Greater Essex will be directly elected by the public in 2028.	
The LLFA are pleased with the holistic approach taken to promote surface water management, SuDS, water quality, biodiversity, and climate change. We highly advocate more emphasis on watercourse management and maintenance. Reference should be made to section 25 of the Land Drainage Act 1991 which requires riparian landowners to maintain ordinary watercourses. In addition, Cambridgeshire County Council's Flood Risk Team have published The Watercourse Reinstatement Guide (2022).	210506 (Cambridgeshire County Council)
Cambridgeshire County Council is referenced in several places, please ensure that the Council is referred to as Highway Authority where appropriate.	210524, (Cambridgeshire County Council)
While there are many areas of agreement, as far as we are aware, the Statement of Common Ground was not checked with Transport Strategy or wider CCC colleagues prior to publication. The Council would therefore welcome discussions regarding future iterations of the document Cambridgeshire County Council, was, along with a number of other organisations signatories to the North East Cambridge Area Action Plan Proposed Submission Dity to Cooperate Statement of Common Ground (November 2021). As the safeguarding of waste and minerals remains a strategic matter that	210520, 210545 (Cambridgeshire County Council)

Summary of issues raised in comments	Comments highlighting this issue
affects more than one authority, a reaffirming or update to that statement of common ground to support this draft plan is requested.	
Public health are pleased to see that the vision for Greater Cambridge is based on the seven strategic priorities. Public health welcome the 'Draft vision' for inclusive communities that aim to provide a high quality of life with housing and social infrastructure that meets people's needs through all stages of life; food security; and that the physical and mental health and happiness of people will be prioritised; and that open spaces will be easily accessible and that large scale natural spaces will be able to be reached by active travel modes	210547 (Cambridgeshire County Council)
The influence of Cambridge on western Suffolk is acknowledged in the Suffolk Local Growth Plan and by the fact that it is part of the Cambridge-Norwich Tech Corridor, and the Cambridge Housing Market Area. The County Council would welcome strong recognition of the role of South Cambridgeshire in the wider sub-regional economy as part of this strategy, as alluded to in paragraph 1.17.	210630 (Transport 2000 and W Suffolk)
As you will be aware the new plan-making system provided by the Levelling Up and Regeneration Act 2023, and the November 2025 Commence and Update Local Plan (CULP) guidance, does not include the Duty to Co-operate. It has been advised that LPAs should continue to collaborate across their boundaries, including on unmet development needs from neighbouring areas and Inspectors should continue to examine plans in line with the policies in the NPPF on 'maintaining effective co-operation'.	207669 (Transport 2000 Cambs and West Suffolk)

Summary of issues raised in comments	Comments highlighting this issue
National Highways welcomes the opportunity to comment on the Greater Cambridge Draft Local Plan Regulation 18 Preferred Options consultation. The emerging Local Plan aims to set out the required growth and development for the period of 2024 to 2045. National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.	210847 (National Highways)
Strongly recommends that the engagement referred to on page 5 of the Spatial Strategy is recorded via a Statement of Common Ground ('SoCG') to evidence effective joint working on cross boundary strategic matters (as per the NPPF at paragraph 36(c). The SoCG does not require agreement between the parties, but does require evidence of constructive, active, and ongoing engagement.	208669 (Guilden Morden Developments Ltd)
The Council has included in its evidence a Duty to Cooperate Statement of Compliance and Statement of Common Ground. In principle, it is supported that these interim documents have been prepared to support the current consultation. Whilst it is recognised that there is engagement between Cambridge City Council and South Cambridgeshire District Council as this reflects the geographical and functional relationship of the area, there are wide ranging cross boundary strategic issues which the Councils will need to demonstrate a written record of the progress to the point of submission with relevant key stakeholders, particularly in relation key infrastructure bodies and whether any requests to accommodate unmet housing needs of neighbouring authorities have been received.	208895 (Nightingale Land and Hill Residential Ltd)

General Comments from Parish Councils

Summary of issues raised in comments	Comments highlighting this issue
The Stapleford & Gt Shelford Neighbourhood Plan (adopted Oct 2025) has not been incorporated into the draft greater Cambridge Local Plan and that this will need doing before the next version of the Local Plan is produced. The draft Policies Map will also need updating to reflect this For example, there is a new Important Countryside Frontage between 41 Gog Magog Way and houses at Chalk Hill, Stapleford, which is not shown and the defined development extent of Stapleford is inaccurate, as is the mapped extent of the Gog Magog Hills in documents supporting the draft Plan. Open spaces, Local Green Spaces and Protected Village Amenity Areas from this Neighbourhood Plan need to be included in the Policies Map.	201526 (Stapleford Parish Council) 208087 (Great Shelford Parish Council) 202661 (S Berridge) 202182 (A Sykes)
The proposals in the Local Plan have some potential benefits but there are also a lot of concerns which the Plan does little to allay. Plan says little or is silent on a number of critical issues, such as travel, flooding, etc, and there has been little apparent consideration of the impact of significant new housing / logistical developments beyond the immediate Cambourne area. Dissatisfaction about commenting on the Plan when there is so much yet to be done. It is noted the plan provides a framework but it is for developers to come forward with proposals and deliver them. Speed of build out has implications for delivery of community services and facilities. Concerns about the involvement of unelected bodies with which parishes have no contact and no influence, and the possibility of the appointment of a Development Corporation.	202110, 202114 (Elsworth Parish Council)

Summary of issues raised in comments	Comments highlighting this issue
Policies Map for Girton is a great step forwards from the version in the Local Plan 2018.	202170 (Girton Neighbourhood Plan Team)
GPC seeks discussions on topics such as Girton Gap protection, alignment with national policy, development extents, active travel, grey belt methodology, and community enterprise space. GPC is committed to evidence-based planning that protects Girton's identity and ensures the Local Plan accommodates the realities of a Green Belt settlement.	202278 (Girton Parish Council)
Horseheath PC agree with the aim of having a vibrant economy that also significantly reduces impacts on the environment and climate. We would like to see a defined aim to increase biodiversity as we understand this is intimately linked with mitigating climate change and environmental degradation. We support a higher level of biodiversity gain to be required for new development than the current national requirement. Support an emphasis on active travel together with enhanced cultural opportunities.	203262, 203265 (Horseheath Parish Council)
Whittlesford Parish Council supports the overall ambition to plan for growth but considers that the scale and phasing of development proposed in Rural Southern Cluster area is not currently aligned with deliverable infrastructure, particularly transport, water supply and community facilities.	203549 (Whittlesford Parish Council)
In general we support the direction of travel, but it is very difficult to fully endorse this document when in so many areas there are few details about the process of implementation and particularly the measures that will be put in place to detect and deal with non-compliance.	210708 (Horseheath Parish Council)
A critique of the plan would be that major housing development sizes are north/ northwest of the city outside the green belt and a large amount of employment sites are south. The current public transport	204741 (Histon and Impington Parish Council)

Summary of issues raised in comments	Comments highlighting this issue
model is hub and spoke with a congested spoke/city centre. These are challenging problems but bearing in mind the relative flexibility of the jobs market vs the inflexibility of public transport options it arguably designs in continued reliance on cars for the majority of south cambs residents. Aspirations for public transport ring roads or some alternative solution feel necessary.	
Boxworth Parish Meeting supports the need for Greater Cambridge to continue to develop and there is a requirement for additional housing and employment in the area. It is vital that these developments are managed in such a way that they not only provide for the future needs of a growing population but do so in a way that does not adversely affect existing communities. We welcome the opportunity to comment on the Draft Local Plan and hope that our constructive engagement can add value.	202748 (Boxworth Parish Meeting)
We are supportive of many aspirations in the Local Plan and congratulate the planners on completing this major work.	206565 (Great Wilbraham PC)

Comments on Levels of Development

Summary of issues raised in comments	Comments highlighting this issue
Plan is based on outdated perceptions of the need for, "growth" not taking into consideration climate change or AI and assuming that the previous attractions of Cambridge as a place to live and work will hold good in a changing world..	202944 (C Hills)

Summary of issues raised in comments	Comments highlighting this issue
Cambridge Friends of the Earth, yet again, cannot and will not provide a veneer of democratic accountability by participating in yet another Consultation to, effectively, enable further environmental and social destruction of our region to placate the voracious appetttes of developers and landowners and the policies of an environmentally and socially ignorant administration, who can see no further than the next election.	210709 (Cambridge Friends of the Earth)
Given the blythe assumption of the 'need' for ever increasing 'economic growth' in the region, Cambridge Friends of the Earth refuses to respond in full to this 'consultation'. We feel that doing so would, potentially, provide credibility to the edicts driving the creation of this Local Plan. Given the continual push for growth in the region, far in excess of its ecological, environmental and social limits, do we have to assume that the Local Plan is being promoted by madmen, economists or, quite possibly, mad economists?	203251 (Cambridge Friends of the Earth)
The plan makes an assumption that there is such a thing as 'sustainable development'. The climate crisis and the need for immediate and steep reductions in emissions means that most development is not sustainable and that the expression 'sustainable development' has become a contradiction in terms. Rethink the focus on development and substitute a focus on steep emissions reduction and protection of the natural environment.	204860 (R Randall)
Does not plan for enough housing. In particular, government targets should be treated as a minimum, not a maximum.	204502 (Redrow South Midlands)

Summary of issues raised in comments	Comments highlighting this issue
Future proofing Cambridge to be successful by 2050 requires the food production system to be supported and invested in as a high priority. To achieve the wellbeing of our community will require investment and support to those producing our food. Any proposed development will reduce our ability to produce our own food in this country.	205175 (Y Dignon) 2098715 (J&C Collins)
Food Security does not appear to be considered as a Strategic Priority. Any proposed development will reduce our ability to produce our own food in this country. Whilst none of know what the future may hold, the farming of any arable land in this country should, in our opinion, be preserved for future generations. Whilst it could be argued that the arable land that is proposed to be developed upon is a relatively small proportion of the country's overall arable land, more and more land is being developed upon nationally.	208715 (J & C Collins)
The vision for Greater Cambridge is supported. However, to achieving this vision it is necessary for the Plan to be based on ambitious targets for growth. It requires amendments to ensure that the level of growth and housing allocations reflect the Vision and are aligned with the Local Growth Plan and National ambitions for the area.	208395 (Ceres Property on behalf of land owner at Friesland Farm, Swavesey)
The plans are a response to Government pressure and arbitrary targets: why should 73,000 jobs and people end up here? The present large settlements are too near Cambridge and are not self-sufficient: Waterbeach, Cambourne, Northstowe. That means traffic into Cambridge. Other planned developments threaten to link nearby villages into one large conurbation. The inevitable rise of traffic and pressure on water supply and sewage disposal cannot be satisfactorily accommodated by the scale of development	D Jones (208480)

Summary of issues raised in comments	Comments highlighting this issue
that is proposed. Some vested interests will profit from the economic development, but many ordinary people will see no benefit from the 'prosperity' that is promised.	
The preferred housing target, the development strategy and the selected allocations for the draft GCLP are unlikely to fully deliver the Vision for Greater Cambridge. The housing requirement is not aligned with jobs growth, which would lead to more people commuting into Cambridge to work mostly by car.	211605, 211606 (Bloor Homes)

Comments raising general issues related to the Development Strategy

Summary of issues raised in comments	Comments highlighting this issue
Supports the Vision for Greater Cambridge, emphasising the need for sustainable and prosperous growth in the area. Development Strategy is overly reliant on new settlements and major development sites dependent on significant infrastructure projects. Overly optimistic about delivery timescales for draft allocations, risking failure to meet housing needs within the plan period. Need a more balanced approach to growth distribution, recognising the potential of villages.	203025 (Cemex UK Properties Ltd)
I support the plans for protecting the environment while trying to accommodate growth. However I live in a village in South Cambridgeshire and do not support the idea that villages should not take their share of extra houses. Our village (Haslingfield) needs extra affordable houses so that it continues to be a place that normal families can live. It also needs footpaths and cycle paths connecting it to all the	203130 (R Hatfield)

Summary of issues raised in comments	Comments highlighting this issue
villages around, where vital services (doctors, dentist, hairdresser, shops, small industries) are based, so that people can access these without cars. Stopping it from growing is not a sustainable strategy.	
The introduction recognises South Cambridgeshire villages but largely frames growth around Cambridge and major transport corridors. Focuses strongly on Cambridge's growth and innovation economy, with less emphasis on the distinct needs of rural communities. The strategy prioritises locations with high public transport accessibility, which risks limiting opportunities for rural communities unless investment in rural services, digital connectivity and community infrastructure keeps pace. There is little evidence on rural housing need, employment patterns or service access challenges. Parish councils and rural community organisations are not clearly referenced in shaping infrastructure or growth decisions. Stronger rural proofing would include clearer rural evidence, safeguards for village services, support for rural-enterprise and firm commitments to transport and digital inclusion in smaller settlements. Stronger rural proofing would include clearer rural evidence, recognition of village infrastructure constraints and a stronger commitment to inclusive engagement and place based solutions for smaller settlements.	203137, 203139 (Cambridge ACRE)
I share the aspirations of the Local Plan expressed in the Introduction: reduced climate and environmental impacts, an increase in the quality of everyday life for local people, minimising carbon emissions and car-dependence, supporting the infrastructure we need, increasing nature, wildlife and green spaces, and safeguarding our distinct local heritage. I also support the ambition to make	203275 (J Palmer)

Summary of issues raised in comments	Comments highlighting this issue
Cambridge “a place where walking, cycling and public transport is the natural choice for travel”. Further, I support the stated intentions of only very limited infill development in rural villages with little or no public transport, where car travel is the only realistic option for most people.	
The Plan’s development strategy, which underpins the Plan as a whole and its requirement to meet identified local housing and employment needs in full, is flawed.	203313 (Wilson Bowden Developments)
The plan fails to allocate sufficient small sites (1-2.5 hectares) for housing, focusing too much on large urban developments, which does not meet the needs of the wider area.	203401 (ESCO Prospect)
Broadly support the ambition to plan positively for growth across Greater Cambridge; however, I have serious concerns regarding the soundness of elements of the draft Plan, particularly in relation to transport infrastructure, cumulative impacts on the villages I represent, omissions in the spatial strategy, and deficiencies in the supporting viability evidence. (submitted in my capacity as District Councillor for Whittlesford, Thriplow & Heathfield, and Newton)	204086 (Cllr R Williams)
Does not support equality of access and opportunities or ensure everyone can benefit from development of new homes and jobs. The current strategy seeks to concentrate development in large strategic sites, which does not account for rural housing and employment needs. The lack of allocations in villages means that any new development will inevitably be smaller sale and ad-hoc, will not provide affordable housing, and will not allow for transport and community facility upgrades that would make rural communities more sustainable.	204502 (Redrow South Midlands)

Summary of issues raised in comments	Comments highlighting this issue
Plan relies on strategic sites without placing reasonable level of growth towards sustainable settlements such as Great Shelford and Stapleford.	208914 (Nightingale Land and Hill Residential Ltd)
We support many of the Draft Local Plan's strategic objectives, including meeting housing need, addressing climate change and enhancing the environment. However, our representation focuses specifically on residential development delivered by SME developers on windfall sites, small brownfield sites and sensitive urban redevelopment within existing sustainable locations, which can often be delivered more quickly and sustainably than larger strategic sites.	209704 (NP Architects)
The plan is completely unsustainable with regards sustainable transport. Focus the proposed developments sites on being as close to Cambridge city centre, in locations that do not rely on car travel. Increase the density of the proposed sites in order to allow as many people as possible to access amenities within a short walk. Design around people without cars, for example teenagers, the disabled and the elderly.	203597 (H Thomas) 203744 (W Clements)
The plan is completely unsustainable with regards sustainable transport, which will lead to both lives blighted by massive congestion on the car journeys people are forced to make, and lives removed from the amenities and relationships people actually want. People are moving here in large numbers because of the city of Cambridge, why are we forcing them to lives a half hour drive from where they want to be? Focus the proposed developments sites on being as close to Cambridge city centre, in locations that do not rely on car travel. Increase the density of the proposed sites in order to allow as	203579 (H Thomas)

Summary of issues raised in comments	Comments highlighting this issue
many people as possible to access amenities within a short walk. Design around people without cars, for example teenagers, the disabled and the elderly.	
Advisory Board of Albion City Development Corporation Ltd strongly support the Draft Greater Cambridge Local Plan. The Forest City project is a proposed self-sufficient urban settlement of 45,000 acres, located east of Cambridge and broadly aligned between Newmarket in the north and Haverhill in the south. the Greater Cambridge ecosystem; one of the world's leading centres for science, technology and innovation, with strengths in life sciences, data and digital technologies, advanced manufacturing and research-intensive industries, is a national strategic asset. Strongly supports planning that recognises and enables the continued growth of this ecosystem.	208128 (Albion City Development Corporation Ltd)
Development strategy is too focussed on the delivery of large strategic sites including an expanded Cambourne, existing new settlements at Northstowe, Waterbeach and Bourn Airfield, and a proposed new settlement at Grange Farm. The delivery timetable for infrastructure to support an expanded Cambourne and at Grange Farm is uncertain. For all of the large strategic site allocations the predicted housing delivery rates are unrealistically high, and the delivery of policy compliant levels of affordable housing is often not achieved. The development strategy avoids directing development to the larger villages, including Papworth Everard regardless of their sustainability credentials, existing services and facilities, accessibility by sustainable modes of transport, or affordable housing needs.	211605, 211606 (Bloor Homes)

Summary of issues raised in comments	Comments highlighting this issue
Approach does not support the residents or services and facilities in those villages, and would not meet the great places, homes, connectivity and infrastructure strategic priorities. Will not deliver green infrastructure.	

Comments on the Plan Period

Summary of issues raised in comments	Comments highlighting this issue
The minimum end date of the plan should be 15 years from adoption, as per paragraph 22 of the Framework. The draft plan seeks to cover the period 2024-2045, i.e. 21 years. Gladman supports this approach as it gives additional years should there be any delays in the plan-making process or during examination. However, in order to be consistent with national policy, Gladman would recommend that the plan period to starts in a more recent year – 2025, ending in 2045. The council may then want to amend the ending year to 2046 to maintain the 21-year plan period.	208330 (Gladman Developments)
The plan period should be extended to 2050. A longer plan period is considered to clearly be the most reasonable strategy, when considered against the alternatives.	208383 (NAIB Trust)
To align with the Cambridgeshire Local Plan and emerging Spatial Development Strategy, and accounting for the number of large strategic allocations in the plan, it is considered that the plan period should be extended to 2050. A longer plan period is considered to clearly be the most reasonable strategy, when considered against the alternatives	211595 (Places for People)

Comments on the relationship with National Planning Policy

Summary of issues raised in comments	Comments highlighting this issue
The plan does not adequately consider the draft NPPF, which is expected to be adopted in mid-2026, necessitating alignment to avoid future revisions. The draft NPPF aims to reduce development management policies that exceed national standards, which creates unnecessary burdens. Recommend council review local plan once new NPPF adopted deleting or amending any local plan policies that are inconsistent with the new NPPF to avoid lengthy discussions regarding their weight during application processes.	203401 (ESCO Prospect) 205096 (Home Builders Federation)
To ensure longevity of the emerging Plan, it is recommended that the Council is consistent, where possible, with the NPPF when published in its final form.	206943 (Henry Boot Developments)
We support the overall vision of creating well-designed, sustainable and resilient communities, and welcome the ambition shown in the draft policies. However, a number of the detailed requirements go beyond national standards or lack sufficient flexibility and therefore risk undermining deliverability or delaying the housing trajectory.	208958 (Persimmon Homes East Midlands)

Comments raising General Issues

Summary of issues raised in comments	Comments highlighting this issue
CPRE Cambridgeshire and Peterborough supports the ambition of the Greater Cambridge Local Plan to deliver sustainable growth. However, sustainability must include environmental protection, inclusive access, resilient infrastructure, digital connectivity, and safeguarding of water resources.	208957 (CPRE Cambs and Peterborough)
Support the principles of sustainable growth underpinning the Draft Local Plan.	211112 (Cam Valley Community Rail Partnership)
PfP supports the vision for Greater Cambridge to be a place where a big decrease in our climate and environmental impacts comes with the continued flourishing of the internationally significant innovation economy, and a big increase in the quality of everyday life for all our communities.	211596 (Places for People)
The Owners and Board see either redevelopment of the current site or potential relocation as critical to the Club's long term viability and sustainability at a time when its current capacity is constrained, the City will grow exponentially and the financial pressures for all football clubs at every level are growing given the flow of investment into all the English leagues. We hope the GCLP will prioritise the Club's needs, recognising its unique role in Cambridge	209103 (Cambridge United Football Club)
Newnham Labour ran an informal engagement event to allow the Newnham community to discuss the draft Local Plan with Cllr Katie Thornburrow. 45 people attended and their views are summarised in the report submitted below. Key points arising were 1) support for more Affordable Housing. 2) Support for the REJECTION of development on West Fields, Site ID 115681 3) Support for policies on Climate Change, Green and Open Space, and River Corridors. Widespread uncertainty about the aims of the	201344, 210676 (Newnham Labour)

Cambridge Growth Company, and whether it would comply with the democratically developed policies and plans in the Local Plan. Many were also concerned about power of the University Colleges.	
Fails to adequate address the interlinked nature of so many of the issues. The holistic vision is important. It also fails to clarify the relative costs and the difficulty of enforcing the provisions. There is a risk of imbalance in the responses and expenditure. Very little mention of how provisions affecting developers and other third parties are to be enforced.	205462 (D Stoughton)
CLAF supports the overall vision of the Draft Greater Cambridge Local Plan but urges stronger, more explicit policy commitments to protect, enhance and integrate public rights of way and access networks across Greater Cambridge. Clearer policy language and delivery mechanisms will help ensure that access infrastructure contributes fully to the Plan's objectives for sustainable development, healthy communities and green infrastructure.	210965 (Cambridgeshire Local Access Forum)
CSF CIC would welcome working with Greater Cambridge Shared Planning Service, public health and developers to help shape implementable guidance (for example, a short "Healthy and Sustainable Food in New Development" note or SPD module), building on the draft policy foundations already in the Plan.	210972 (Cambridgeshire Sustainable Food) 205609 (Y Dignon)
Use Traditional Architecture Design Codes for new construction and protect all historical buildings including officially listed and non-designated heritage assets from demolition with a ban on demolition of buildings constructed prior to 1950.	130661 (D Barton)
Comments offering general support: • All looks well thought-out, balancing residents needs plus wildlife and the planet.	203443 (G Pountain) 204365 (J Nelson)

Summary of issues raised in comments	Comments highlighting this issue
• Support, if it can be delivered without compromising in the face of finance/pressure from developers etc.	
The Local Plan is interdependent with wider strategies, infrastructure delivery, and enabling services such as water, energy, and social infrastructure. As these strategies and interventions progress, it is important they are informed by consistent evidence and aligned assumptions on spatial strategy, infrastructure provision and phasing, with greater clarity on the assumptions being made where delivery relies on decisions or investment beyond the planning system. Clear recognition of these interdependencies and stronger systems alignment will be critical to ensuring coherent land-use and investment decisions to strengthen the robustness of the Plan in unlocking future growth potential of the Cambridge city region.	203518 (Cambridge Ahead)
The Local Plan broadly is a comprehensive document inclusive of relative analysis detailing the Planning Authority's intentions over the over the next 5 years for Jobs, Housing, Business Environments etc. Perhaps I have missed this, I've seen no 'Impact Assessment' on the impact of extortionate business rates and other Government non-incentivising taxes, the authors of the plan should be complemented.	201571 (Turks Head Farm)
Highlights the rich heritage of small villages in South Cambs and expresses concern over the current housing developments, noting that many houses are being bought for rental purposes, which does not benefit local infrastructure. Concern about the affordability of housing for young couples and low-wage earners, as house prices are rising beyond their reach.	202358 (E Dean)

Summary of issues raised in comments	Comments highlighting this issue
While the vision and strategy are worthy of support, details matter. The Plan assumes the infrastructure problems (primarily water and transport) will magically be solved, but does nothing to provide those solutions. What is the alternative Plan if the local infrastructure needs the Plan relies on are not delivered?	202550 (P Tribble)
Cambridge Junction's future redevelopment and reprovision, and the detailed implications of the Draft Local Plan, have only become clear at Regulation 18 stage.	202802 (Cambridge Junction)
We are supportive of the processes detailed in this section.	202818 (Cambridge City Council Liberal Democrat Group)
We welcome the Plan and recognise the extensive work and stakeholder engagement underpinning its development. We support the Plan's ambition to balance climate and environmental objectives with the continued flourishing of Cambridge's globally significant innovation economy and improved quality of life for local communities. The Local Plan is a critical lever for sustaining international competitiveness, enabling company formation, retention and scale, and attracting global investment. We particularly welcome the emphasis on building on existing clusters and campuses and the recognition of the innovation infrastructure that underpins growth. We encourage the Plan to further strengthen this system-wide approach by explicitly supporting the intensification and expansion of established innovation clusters to maximise agglomeration benefits.	204900 (Innovate Cambridge)

Summary of issues raised in comments	Comments highlighting this issue
General comment to be consulted as the plan moves forward.	206953 (Cambridge Realty Ltd)
Railpen support the Councils' recognition throughout the draft Plan's preamble and supporting text that the region makes a substantial contribution to national economic health. However, we suggest that the growth of the Cambridgeshire economy should be specifically mentioned within the Council's 'Vision for Greater Cambridge'. We would encourage the Council to be bold, and to recognise that the region's continued growth – fuelled by both housing and jobs – is critical to delivering the environment in which future generations can flourish.	207454 (Pioneer Group Ltd Railpen)
Railfuture East Anglia welcome the plan's ambition to tackle climate change, health and create high-quality places with a strong focus on sustainability, wellbeing, good design, walking, cycling and public transport. Railfuture is a partner within the Cambridgeshire Sustainable Travel Alliance of CamCycle, Cambridge Bus Users and Cambridge Living Streets. We fully support their responses to this consultation.	208028 (Railfuture East Anglia)
The emphasis on high-quality placemaking, green infrastructure and biodiversity net gain is essential to maintaining quality of life, while the strong focus on climate change mitigation and adaptation appropriately aligns local growth with national net-zero objectives. We also welcome the integrated approach to transport, utilities and digital connectivity, which will be critical in supporting innovation-led growth at scale.	208132 (Albion City Development Corporation Ltd)

Summary of issues raised in comments	Comments highlighting this issue
Welcome the ambition of the Greater Cambridge Plan and understand the need to plan positively for the city's future. However, I am deeply concerned that, without stronger protections, rural communities like mine are being placed at risk to accommodate growth that primarily benefits the city rather than the wider area. Cambridge's future should not be built by sacrificing the countryside that gives it its character and identity. Planning for long-term success means working in partnership with rural communities, not placing a disproportionate burden on them. I hope this Plan will stand up for places like Weston Colville, so that young people like me can look forward to a future where growth is fair, sustainable and shared.	208483 (E Hepworth)
Support the strategic direction of the Draft Greater Cambridge Local Plan. However, to deliver a genuinely inclusive, safe and sustainable transport and access network, the Plan must explicitly and consistently include equestrian users across its sustainable transport, active travel, public realm, green infrastructure and Rights of Way policies. Without clear policy direction, equestrian access will continue to be excluded at the delivery stage, undermining the Plan's objectives for health, wellbeing, equality, safety and rural economic resilience.	208662 (British Horse Society)
The Cambridge Rights of Way Improvement Plan (ROWIP) does not appear to be explicitly referenced in the Draft GCLP. The ROWIP is a statutory document that set out priorities for the management, improvement and accessibility of the public rights of way network and is directly relevant to policies on green infrastructure, sustainable transport, active travel and open space provision. The Local Plan	208660 (British Horse Society)

Summary of issues raised in comments	Comments highlighting this issue
should formally reference the ROWIP within its evidence base and policy framework to ensure alignment, consistency and effective delivery of rights of way improvements through new development.	
Putting people, places and choice first. We support the ambition of the Local Plan to address climate change, improve health and deliver high-quality places. However, this must be achieved without prioritising one transport mode over others, without unnecessary destruction of green spaces and orchards, and without policies that reduce choice, resilience, or fairness for residents. the Local Plan should: Explicitly commit to transport neutrality, not transport hierarchy. Protect orchards, green spaces and historic landscapes as strategic assets. Treat cars as part of the transition, not the enemy. Support cycling and walking without coercion or exclusion. Ensure policies work for all ages, abilities and life circumstances. Avoid road closures and restrictions that worsen congestion and emissions. Require evidence of deliverability, not aspiration. Balance climate goals with social and economic reality	208834, 208880 (D Smith)
We suggest replacing the term “people with disabilities” with “people with care and support needs” throughout the document. This terminology is more inclusive, as it encompasses a broader range of needs, including those relating to mental health, physical health, and learning disabilities. A range of other detailed wording points are also provided.	210541, 210543 (Cambridgeshire County Council)
Polices Map shows protected open spaces and nature reserves. Public rights of way are an amenity as well as providing connectivity to key sites. As such could they be included on the policy mapping.	210626 (Cambridgeshire County Council)

Summary of issues raised in comments	Comments highlighting this issue
There are overlapping themes, such as Town Centres, Placemaking, combatting the Climate Crisis and economic applications that feature Traditional Architecture as a primary vehicle towards achieving the greatest possible positive outcomes for all of these themes.	201010 (Community Campaigner D Barton)
For four centuries the Trust and its precursors (known as the Feoffees) have been responsible for the protection and maintenance of Hobson's Brook and Conduit, with rights and obligations deriving initially from the 1610 Tripartite Indenture. The Local Plan needs to acknowledge and to state much more explicitly the extreme importance of the maintenance of water quality and the natural environment and habitats along the city's green corridors, including that from Nine Wells to the City centre formed around Hobson's Brook and Conduit.	211724 (Hobsons Conduit Trust)
I support the Local Plan as a whole. I respectfully ask that the missing information be made available for comment and that my comments are taken into account in order to make the Local Plan more robust and appropriate at a local level. These predominately concern issues about character, landscape, flooding, heights and the viability of infrastructure.	211933 (C Newell)
Note from Comberton Village college student Kids like more social settings and prefer fun activities to do with the Local Plan, with opportunities to stand and sit, less talking and more reading and doing things (drawing, making things, being creative) with multiple activities inside and outside. Interacting with different forms (joint classes) and exploring new subjects - music sounds relaxing. Allow kids to share ideas (talking or writing) and let the kids choose some ideas.	211975 (K Thornburrow)

Comments raising points on specific sites

Summary of issues raised in comments	Comments highlighting this issue
Without EWR Co's proposed amendments to policies and the policies map, development of land within the safeguarded area may conflict with, or prejudice the delivery of, EWR and be subject to an objection from EWR Co at the planning application stage or compulsory acquisition authorised as part of the EWR Development Consent Order (if granted), potentially making it undeliverable or undevelopable. EWR Co's proposed amendments would provide the necessary policy tests to ensure that all parties continue to work together to develop proposals which avoid this outcome, whilst also aligning with the safeguarding guidance.	211907 (East West Rail)
Land adjacent to A11 and A1307 (Grange Farm) • The A505 is a busy road with accident hotspots, particularly at the A1301/A505 junction, and warns that the area cannot handle more traffic without significant infrastructure improvements. The A1307 is a high traffic route, warning that increased traffic from the development will negatively affect surrounding villages. • Local services such as GPs, schools, and shops are already at capacity and cannot accommodate an influx of new residents. Opposes the proposed development on Roman Rd, citing its status as an area of local beauty. • Strong concerns about the proposed development, it should not proceed due to the availability of suitable brownfield sites, such as Cowley Road. • The scale and density of the proposed housing in a rural location are troubling, with concerns about disruption to the rural appeal and negative impacts on wellbeing due to construction noise.	202358 (E Dean) 204517, 207552, 207533, 207554 (C Tjen)

Development Strategy

Note that representations submitted to the overall Development Strategy chapter, Policy S/JH: New jobs and homes and Policy S/DS: Development Strategy have been presented below in a single set of tables addressing topics relevant to the jobs and homes requirements and development strategy, and this has informed the executive summary and response to representations.

Vision and Strategic Priorities

Abbreviations

PC= Parish Council DC= District Council TC= Town Council CA= Combined Authority GC= Growth Company

Summary of issues arising from Draft Local Plan representations:

A number of comments supported the vision and strategic priorities.

A limited number of respondents made recommendations for amendments to the vision and strategic priorities, including suggestions for increasing reference to meeting Government's agenda to accelerate employment and housing growth, adding emphasis on the area's heritage and landscapes, reflecting the importance of green spaces for wellbeing, and adding specific reference to emergency services.

A limited number of respondents raised concern that the housing target and development strategy do not align with the vision.

Response to main issues raised in representations

Support for the vision and strategic priorities is noted.

The Councils consider that the draft plan vision and strategic priorities remain appropriate and have not made amendments in response to representations made at draft plan stage, noting that amendments were made at draft plan stage to add greater emphasis on supporting the economy, that both the vision and strategic priorities already reference our locally distinctive heritage and landscapes and unique character and identities of Cambridge and South Cambridgeshire. Whilst we acknowledge the importance of greenspaces for wellbeing, green spaces provide cross cutting benefits relevant to a number of the strategic priorities. The strategic priorities should be understood collectively; the Councils consider that it would reduce the clarity of the priorities to make cross-references between them. Adding references to specific services such as emergency services is considered too detailed for these strategic level priorities.

Whilst choices made to inform the preferred development strategy inevitably require a balancing between issues included within the vision and strategic priorities, the vision and priorities have informed the development strategy principles and thereby the strategy itself. The Councils therefore consider that the development strategy is aligned with the vision and strategic priorities.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comments on Vision include: • Vision for Greater Cambridge will result in its continued urbanisation. • Vision for Greater Cambridge would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development on the edge of Cambridge and at the more sustainable villages (Willingham, Fulbourn, Sawston, Great Abington, Great Shelford, Fen Ditton, Swavesey) • Housing target and development strategy in the draft GCLP do not align with the Vision for Greater Cambridge, particularly regarding quality of life and carbon emissions. • Supports decrease in our climate and environmental impacts with a continued flourishing internationally significant innovation economy, and a big increase in the quality of everyday life for all our communities. • Need for Vision and the emerging Local Plan to be strengthened to refer to the importance of development delivery within Ox-Cam Arc and meeting Government's agenda to accelerate employment and housing growth within the arc. • Vision must recognise the internationally valued heritage and landscapes of Greater Cambridge. The vision should also recognise that there are potential conflicts	201902 (C Deer), 201940 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073 (J Francis), 202118 (Elsworth PC), 202336 (P Deer), 202433 (The CLC Trust), 202554 (Ely Diocesan Board of Finance), 202729 (Cambridge Past, Present and Future, 202897 (Cambridge Past, Present and Future), 205036 (North Barton Road Landowners Group), 203302 (J Manning), 203889 (Hill Residential (Fulbourn Site)), 203916 (Hill Residential (Sawston Site)), 204126 (Hill Residential (Hardwick Site)), 204340 (Hill Residential (Great Abington Site)), 204518 (Axis Land Partnership and Executors of Norman Winfrid Moore), 204525 (Axis Land Partnership and Executors of Norman

between economic growth and the climate, physical and environmental capacity of the area. The vision should be to explicitly manage and mitigate these conflicting aspirations. • why doesn't the Vision rely on the mix of development strategies outlined in the Spatial Strategy as a whole. There is no specific reference to the type of development or its location. Recommends the Plan Vision be updated to clarify the range of development locations to be utilised to meet demand for housing and other types of development.	Winfrid Moore), 208673 (Guilden Morden Developments Ltd)
The respondent supports the vision for Greater Cambridge, emphasising the need for a Local Plan that sets ambitious growth targets and aligns with national policy as per Paragraph 36 of the NPPF 2024.	204468 (Ceres Property)
Supports the vision and the seven strategic priorities that flow from it. Clarity would be improved if the order is changed, and the inter-relationships are explained.	203411 (Juniper)
The ordering of the development priorities contradicts the fundamental aim and purpose of the Green Belt legislation and the national planning policy framework that enshrines it. This inconsistency was noted during the planning appeal that led to the recently completed new retirement village on the Gog Magog hillside outside Stapleford. More detail is supplied in the attached document which addresses the relationship between the S/DS and S/GB policies and proposes refinements in the section starting on page 3.	203009 (M Foote)
Recommends modification of the Wellbeing and social inclusion priority to read, "Help improve equality of access and opportunities for people in Greater Cambridge to lead	201528 (Stapleford PC), 208088 (Great Shelford PC)

healthier and happier lives, ensuring that everyone benefits from the development of new homes, jobs AND ACCESS TO NATURE AND GREEN SPACES." Access to nature and green spaces is also vital to leading healthier and happier lives and will be increasingly important as housing density increases and where apartments are the major form of housing.	
Concern if developers will deliver on the plan's Well Being/Social Inclusion aspirations.	201902 (C Deer), 202118 (Elsworth PC)
Comment that the plan should make specific reference to the emergency services in Strategic Priority: Connectivity & Infrastructure, and para 2.26.	207473 (Cambridgeshire Constabulary), 207506 (Cambridge Fire and Rescue Service)
The current Plan is seen as not fully aligning with the Vision due to an over-reliance on strategic housing sites, which account for 93% of allocations, risking environmental impact and lack of housing variety. The Sustainability Appraisal 2025 raises concerns about development 'jumping' the green belt, leading to less accessibility to services and facilities, contradicting the Plan's Vision and NPPF sustainability principles.	204941 (Miller Homes)
Responder welcomes a Draft Local Plan that clearly acknowledges Greater Cambridge's national and global significance and plans positively for its continued success. The Plan sets out a strong and integrated approach to growth, recognising the need to align economic expansion with housing delivery, infrastructure provision and environmental stewardship.	208130 (Albion City Development Corporation)

Natural England welcomes the strategic priorities of the Local Plan and are pleased to note that the Vision for Greater Cambridge, includes the aspiration for a big decrease in climate and environmental impacts, and increase in the network of nature, wildlife and multi-functional green spaces.	207600 (Natural England)
Anglian Water is supportive of the seven strategic priorities set out in the Vision, particularly those that align with our long-term strategic ambitions. We support direct reference to higher achievable standards for water use to reduce environmental impacts. Anglian Water is directly engaged with the Cambridge Water Scarcity Group, as we jointly bring forward strategic supply options with Cambridge Water - including the Grafham to Cambridge strategic pipeline (Phase 1 of the 70km Grafham to Rede pipeline) and the Fens Reservoir.	209156 (Anglian Water Services Ltd)
Responder supports – • I. Cross Boundary Matters – matters where more discussion and consideration must be given, such as ensuring connectivity is considered to key employment and international connectivity to London Stansted Airport and Chesterford Research Park • II. Growth and Infrastructure Delivery – the Plan ensures development will be accompanied by the right infrastructure. • III. Strategic Priorities – inclusion of climate change as a strategic priority, welcomes that the Plan seeks to address water supply matters.	210457 (Essex County Council)

• IV. Economic Growth – welcomes that the fast-growing economy is driven by successful partnerships between academics, business, investors and local government, and the commitment to sustainable and inclusive growth.	
Responder supportive of Local Plan, key themes and strategic priorities, and strategy directing growth to the Cambridge Urban Area, the edge of Cambridge, and new settlements, recognising that that a range of sites will be required. However, ensure that an appropriate proportion of medium scale sites are allocated, such as site at Fen Ditton, to enable a broad mix of tenures and dwelling types, including affordable housing, providing flexibility ensuring housing requirements are met within the plan period.	210219 (Vistry Group)
Requests to avoid the Plan being of “very limited weight” upon adoption, Greater Cambridge should strive for a Local Plan that is in full alignment with the emerging national policies for decision taking and positively prepared in this regard.	208255 (Ashwell & Morden Landowner Consortium)
Concern growth is in the wrong direction of travel for our fen and Riverlands, soon to be subjected to sea level rises, not factored in? Would not leave 'Paradise' for the urban sprawl of Marleigh by Marshalls, densely-packed new-build, identikit passive units, the current City Council orchestrated - with questionable pride? The Cambridge Brand will have tarnished further by 2045. Build communities where there's a real need, not here in such a trumped-up and contrived fashion.	208872 (R Lambert)

Responder states Fulbourn wants more affordable houses. Notes land around Fulbourn that could be considered for development with no plans to build on it, other than Ida Darwin Site. Also need for green amenity land to the South of the village, noting an area to the North of Fulbourn train tracks that is not developed.	208728 (Cllr Matthew Morgan)
Responder highlights lack of identified sites around the Cambridge to Newmarket railway noting Dullingham and Six Mile Bottom, with double tracking and extra/enhanced stations as a project with potential to be funded if there is political support, noting the Cambridge Growth Company, and it is more likely if development is suggested there.	208729 (Cllr Matthew Morgan)
The scale of growth, and the density in proposed development sites is underwhelming. I think there is a lack of ambition for the growth of Cambridge. Mid Rise up to 10-15 Storeys might be considered near good transport links. We should make absolute most use of well-connected sites, otherwise valuable transport infrastructure is going to be underused.	208730 (Cllr Matthew Morgan)
Concern strategy does not cater for the needs of local communities across Greater Cambridge, such as Great Shelford. The vision sets out an appropriate aspiration, the policies do not facilitate the delivery of non-strategic sites that don’t require extensive infrastructure, which are required to provide the homes required in response to local communities housing needs. This will result in significant consequences on the ability of local communities accessing good quality housing and further perpetuates the existing affordability issues present in the area.	208898 (Nightingale Land and Hill Residential Ltd)
Land West of Beach Road, Cottenham: Objects to Development Strategy	208772 (Croudace Homes)

Ignores the sustainability benefits of homes in rural areas for community resilience and is flawed. Additional small sites should be allocated to ensure delivery rates early in the plan period in sustainable villages, including at Land West of Beach Road, Cottenham.	
Mingle Lane Site Regarding delays, local and national housing crisis and affordable housing need in Greater Cambridge, and connectivity to Shelford Train Station, apposes deletion of proposed allocation at Mingle Lane. Site development assists delivery of a number of benefits to the local community including market and affordable housing needs as identified in the recently made Stapleford and Great Shelford Neighbourhood Plan (SGSNP). The SGSNP was developed on the understanding that the Local Plan would allocate the site for development to meet the identified housing needs. Consequently, the site should be reallocated for development within the draft Local Plan.	208897 (Nightingale Land and Hill Residential Ltd)
Comments general Vision for Greater Cambridge and the seven Strategic Priorities are supported. Concern Development Strategy seen as misguided, reliance on new settlements and complex major development sites, reliant on infrastructure projects, overly optimistic delivery timescales of proposed draft allocations, and risk will fail to deliver the homes it needs within the plan period to support its economic ambitions. Suggest more balanced approach to spatial distribution needed recognising the role of	209964 (Granta Land Ltd)

established, sustainable settlements served by existing high-quality public transport infrastructure, and which reduces the reliance on the private car. Stapleford and Great Shelford highlighted as sustainable villages.	

Policy S/JH: New Jobs and Homes

Abbreviations

PC= Parish Council DC= District Council TC= Town Council CA= Combined Authority GC= Growth Company

Summary of issues arising from Draft Local Plan representations:

Support for the identified housing need noting it aligns with the National Planning Policy Framework's goal to boost housing supply. Support also for the aim to provide 73,300 jobs and a diverse range of local employment opportunities, and commitment to sustaining and expanding globally significant research, science and technology sectors and the innovation cluster.

Objections to identified housing and employment need or comments that they are too conservative and should be revised upwards to reflect the capacity of the Cambridge economy, proposed infrastructure developments, and to reflect the ambitions of the Local Growth Plan. Comment that the job figure will likely need to evolve to align with the Government's broader growth agenda whilst ensuring the vision can be achieved sustainably. Cambridge Growth Company would like to see the Plan more explicitly recognise the value of intensifying and expanding the identified innovation clusters to fully realise growth potential and agglomeration benefits.

Comments on employment include that the plan is predicated on the creation of 73,000 jobs and the major strand of this is the knowledge economy, that the evidence base underestimates the need for storage and distribution floorspace, and that forecast R&D office employment floorspace need is already met by supply.

Comments regarding the approach taken to jobs and homes forecasts including the lack of lack robust, up-to-date evidence on jobs, and support for the use of local data to best inform the modelling of jobs and housing growth, and particularly headroom for growth, and commitment to a diverse mix of housing types and tenures, including affordable housing. Comments that it does not reflect the evidence base, that there is increasing disparity between the jobs target and the housing target, and that the approach to commuting assumptions is not justified.

Suggestion that the figures should be treated as minimum employment space requirements and allow for appropriate flexibility, including to go beyond the High Growth scenario.

Comment that the plan should shift from a growth-led strategy to a resource constrained model, recognising the region's environmental limits, that planning for growth in workspaces that outpaces housing supply does not support the stated environmental and transport aspirations and more emphasis should be on limiting the number of workspaces so new homes have the intended effect of making homes more affordable. Comment that there needs to be stronger rural proofing to ensure neighbourhood targets, specialist housing and job growth are aligned with rural transport, digital connectivity and community infrastructure capacity.

Comments that the Statement of Common Ground is not clear how many houses will be built in neighbouring areas and whether there is any unmet need for neighbouring authorities to be considered. Comment from Huntingdonshire District Council that aligning housing figures with the government's standard method will avoid overburdening local infrastructure and resources, and potentially needing to seek assistance from neighbouring authorities to meet a portion of the enhanced housing figure. Comment from West Suffolk Council confirming it is not seeking to accommodate any housing need identified in Greater Cambridge. Essex County

Council comment that it is important there is acknowledgement of the cross boundary and strategic matters, in particular the opportunity provided for international connectivity by London Stansted airport, and to seek to improve connectivity.

Concern that new infrastructure may not be delivered in a timely manner given the speed of build out and to the extent that is required. Comment from Anglian Water that the scale of growth funded in their Business Plan does not sufficiently reflect the scale of growth pressures or the level of funding to address them. Comment there is a need for more housing and water for existing residents and that it cannot be met within climate targets.

Comments on housing include support for the focus on delivering a diverse mix of housing types and tenures, including affordable housing, comment that increasing supply should reduce house prices and make homes more affordable for people working in Cambridge but risks being undermined without legislation to prevent the purchase of accommodation for short term letting, and suggesting an appropriate mix of social, affordable and market housing. Objection that the policy is too prescriptive on the tenure for older person's housing and should support the full range of specialist housing across all tenures, and comments that there is insufficient provision for nursing and residential care spaces and that the necessary specialist housing will not be delivered within the plan period. Comment from Cambridgeshire County Council for further clarity regarding the relationship between the accommodation needs for older and disabled people included in the policy, and the County Council's demand profiles which include a much lower need. Request also for clarity between the overall housing requirement and the requirements for accommodation for specific groups and the source of the information for the accommodation needs of specific groups. Comment from Anglia Ruskin University that student accommodation need should reflect more up to date evidence.

Comments that the housing requirement for neighbourhood plans should be indicative and not a requirement, and comment from a developer suggesting an additional section should be added to include provision for housing in areas that are not neighbourhood

plan areas. Comment that there is no mechanism to be able to deliver the identified local affordable housing need. Comment that there is a discrepancy in the annual housing need between Policy S/JH and Appendix D.

Response to main issues raised in representations:

Iceni Projects for the Councils completed a Review of economic data, context and representations 2026 (REDCR 2026) to consider whether the most likely employment forecast identified in the Employment and Housing Need Update 2025 (EHNU 2025) for the draft plan remains robust for the Proposed Submission Plan. The focus of the Local Plan evidence has been. Having considered in detail datasets on sector by sector performance, Iceni's scenarios are considered realistic and embedded in past trends of known change, including periods of strong growth, but also taking into account periods of cyclical slow down – as being experienced at present. The Cambridgeshire and Peterborough Local Growth Plan and MCHLG Oxford Economics work cited by many respondents are noted. Their baseline outlooks provide useful reference points for the data review described above; their aspirational scenarios have been discounted for the purposes of Local Plan making evidence which is an exercise focused on wholly evidencable historical sector and economy wide data. In summary, the most likely forecast for jobs for the plan period identified at draft plan stage remains robust for the Proposed Submission Plan.

The REDCR 2026 also considered representations regarding industrial and warehousing land needs. The requirement for the industrial and warehousing space (317,000 sqm, rising from 200,000 sqm in previous work) has been developed considering a range of factors which are compliant with the Government's planning practice guidance and take a very positive approach to industrial needs. The finer grain interpretation of specific technical adjustments raised in a number of comments is a matter of professional judgement. In summary, the industrial and warehousing employment land need for the plan period identified at draft plan stage remains robust for the Proposed Submission Plan.

With regard to comments relating to the identification of the total housing need, the approach set out in the EHNU 2025 follows an approach to identifying housing need associated with jobs that has remained consistent throughout the plan-making process. In summary, the draft plan stage most likely scenario for employment remains robust; the June 2025 Standard Method calculation outcome would provide enough homes to support that most likely jobs outcome; and the up to date June 2026 Standard Method calculation outcome is very similar to the June 2025 calculation. Therefore, the Councils consider that the June 2026 Standard Method calculation represents Greater Cambridge's objectively assessed need for housing because it would support the most likely jobs outcome. Regarding commuting assumptions, the 2011 Census is used in the EHNU 2025, considering the issues at the time of the 2021 Census (pandemic enforced work from home). As a result, this means the Greater Cambridge modelling assumes a greater draw from other areas than the 2021 Census implies. This is the same approach taken as in previous iterations of the work. The Plan's Standard Method requirement already incorporates an uplift for affordability in its calculation, therefore further uplifts are not considered suitable.

The objectively assessed needs for jobs and homes identified in Policy S/JH are not maximum targets. Policy S/DS identifies sites for homes and employment land that provide significant headroom above our needs.

We note comments relating to taking a resource constrained approach. The Local Plan is required to identify and meet our objectively assessed needs for development. The Local Plan Sustainability Appraisal has considered the environmental, social and economic implications of the needs set out in Policy S/JH. A very significant evidence base supports the Proposed Submission Plan to ensure that it can be delivered, and to ensure that environmental impacts are mitigated, including for example addressing water supply and impact on nature sites. The Councils recognise that there can be tension between supporting continued economic growth and improving housing affordability. It would be inconsistent with national policy to seek to limit economic growth; our

identified housing need includes a housing affordability uplift to help address the housing affordability challenge. Delivery of sites identified in Policy S/DS, together with relevant thematic policies elsewhere in the plan, will support delivery of a significant number of affordable homes.

The Councils have continued to engage with Anglian Water since the draft plan stage regarding ensuring waste water treatment capacity to meet the development included in the Plan. See further responses to this issue and to other comments regarding delivery of infrastructure under Policy S/DS.

Based on regular engagement with relevant bodies throughout our plan-making process, the Councils have not asked neighbouring districts to meet their development needs; nor have we been asked to meet the development needs of other districts. Full details of our approach to cross-boundary issues including development needs are set out in our Duty to Cooperate Statement of Compliance and Statement of Common Ground.

Our Housing Needs of Specific Groups Update for Greater Cambridge (HNSG, 2025) considers the specialist accommodation needs of older people and people with disabilities. The two groups are considered together as: there is a clear link between age and disability, the population aged 75 and over is used in the modelling as a proxy for calculating the need from all ages of older people and people with disabilities, and some specialist housing provided can be used by both older and disabled people. The HNSG 2025 makes clear that the current and future demand for specialist accommodation is influenced by a host of factors, including the balance between demand and supply in any given area and social, political, regulatory and financial issues. Additionally, it highlights that the extent to which new homes are built to accessible and adaptable standards may, over time, have an impact on the demand for specialist accommodation for older people, as they often want to remain at home rather than move to care. The Local Plan therefore seeks to ensure that a variety of types of accommodation for older people and disabled people are

provided across Greater Cambridge. As well as meeting the specific identified needs through standalone developments for specialist housing and through provision within strategic sites, other policies in the Local Plan such as Policy H/HM and Policy H/SS, alongside Cambridgeshire County Council's proposed increased hours for domiciliary care and the use of technology enabled care, will help older people and disabled people to downsize or stay within their community. The supporting information to Policy S/DS provides a summary of how the accommodation needs of older people and people with disables will be met, and further detail is provided in Appendix 12 of the Development Strategy Topic Paper (2026).

The HNSG 2025 highlights that whilst the calculations undertaken to identify the accommodation needs of older and disabled people are compliant with national planning practice guidance, they potentially overstate the level of need. The study therefore also references Cambridgeshire County Council's demand profiles for older people and disabled people, both of which have been calculated using a different approach to assessing needs focussed on local data sets, informed by local knowledge, and based on population forecasts linked to dwelling stock estimates. These dwelling stock estimates take account of housing trajectories published in 2022, reflecting adopted Local Plan housing requirements. Whereas the specialist accommodation needs for older people and disabled people in the HNSG 2025 have been calculated taking account of population forecasts linked to the standard method of calculating local housing need.

The supporting information sets out the evidence base documents used to inform the requirements for the accommodation needs of different groups, and it also explains that the overall housing requirement identified in the policy addresses the needs of the total population, and that the needs for affordable housing and specialist housing for specific groups form part of this total need and are not additional to it. The accommodation needs of the different specific groups have been calculated within the context of the overall housing need (calculated using the standard method) as set out in the HNSG 2025.

Any proposals for self-contained specialist housing for older people and disabled people are required by Policy H/AH to provide at least 40% of the new homes on-site as affordable housing, unless off-site provision or a financial contribution is justified. The policy requirement has been amended to remove the specific numbers relating to market and affordable units, as the delivery of a mix of tenures is required through other policies within the plan.

Officers have continued to engage with Anglia Ruskin University (ARU) during 2026, and as a result of the information provided the identified need for student accommodation from ARU has been amended. The Councils' consideration of student accommodation needs, and the calculation of the updated need, is included in Appendix 13 of the Development Strategy Topic Paper (2026). Identifying a level of need within the Local Plan does not prevent ARU from seeking to increase the proportion of students living in purpose built student accommodation during the plan period, or from bringing forward proposals for additional purpose built student accommodation beyond their level of identified need. It also does not prevent student accommodation from being brought forwards in the second half of the plan period, for which the Councils are not seeking to identify a specific level of need due to there being a greater uncertainty in anticipated growth in student numbers during this period.

Our response to representations relating to the neighbourhood area housing requirement is included within the response to representations on Appendix D (now Appendix C) of the Local Plan. The housing requirements for neighbourhood areas are specifically set out in response to a requirement within national planning policy, and it is not necessary to set out housing requirements for all parishes as the Local Plan already includes a development strategy, allocations and policies for windfall developments that indicate the level of housing that is appropriate within a settlement or parish. Neighbourhood Plans are not required to plan for housing needs, and the neighbourhood area housing requirements are therefore not relied upon to meet the overall local housing need identified in the Local Plan. The proportion of the identified need 'distributed' to neighbourhood areas is already anticipated to come forwards as windfall developments across Greater Cambridge. If there are specific local housing needs

identified in a parish or settlement, these can be addressed through a Neighbourhood Plan, or windfall developments. The housing requirements for the 27 designated neighbourhood areas that are set out in Appendix D (now Appendix C) of the Local Plan are for the plan period of 2024-2045, and are not annual requirements. These housing requirements are a proportion of the overall housing requirement for Greater Cambridge within the plan period, and therefore will not add up to the annual housing requirement or the plan period housing requirement set out in Policy S/JH.

Table of representations:

Summary of issues raised in comments	
Support for the identified housing need, noting that it aligns with the National Planning Policy Framework's goal to boost housing supply based on local needs.	203045 (Cemex UK Properties Ltd), 204105 (G W Balaam & Sons), 211261 (Terra Strategic)
Support for requirement of providing a minimum of 48,195 homes and need for affordable housing.	211456 (Hayfield Homes Construction Ltd)
Support for the approach to employment: • Support for draft Policy S/JH, which aims to provide 73,300 new jobs and a diverse range of local employment opportunities. • We support the Plan's commitment to sustaining and expanding globally significant research, science and technology sectors, alongside its clear recognition that housing delivery must keep pace with job growth if Greater Cambridge is to remain inclusive and competitive. The scale of employment and housing growth identified in the Plan reflects Greater Cambridge's pivotal role in the UK economy. Planning positively for this growth is essential if the full benefits of its world-leading science and innovation base are to be realised.	204649 (Jaynic), 208131 (Albion City Development)
Objections to identified housing and employment need or comments that they should be revised upwards, including for the following reasons:	202364 (CLC Trust), 203307 (J Manning), 205140 Home Builders Federation, 201945 (KG Moss Will

Summary of issues raised in comments	Comments highlighting this issue
• The Central growth scenario of 73,200 jobs is seen as conservative and not reflective of the full growth capacity of the Cambridge economy – the higher growth scenario as acknowledged in the Employment and Housing Needs Update should be used in policy revisions. • Oxford Economics evidence points to substantially higher levels of job creation • The 2025 Employment and Housing Needs Update should be recalculated to include commuting patterns adjustment as per the 2023 Greater Cambridge Employment and Housing Evidence Update Employment Land, Economic Development and Relationship with Housing report • Restricting employment growth to historical trends fails to embrace the advancement technology brings. To do so in one of the most innovative clusters in world fails to meet Government's key priority of growing the economy. • The plan's employment target of 73,330 jobs to 2045 under-estimates historic growth and therefore the required industrial floor-space of 317,000 sqm is too low	Trust & Moss Family), 201967 (Shelford Investments), 202028 (Wimpole Associates), 202077 (J Francis), 202098 (Cambridgeshire County Council (Strategic Assets)), 202309 (CALA Group Ltd), 202364 (The CLC Trust), 202534 (Granta Land Ltd - Land West of Station Road, Meldreth), 202557 (Ely Diocesan Board of Finance), 202623 (British Land), 202648 (Granta Land Ltd - Land at Sheene Farm, Meldreth), 202663 (Granta Land Ltd - Land East of Station Road, Meldreth), 202747 (Martin Grant Land Limited), 203063 (Trinity College), 203075 (Granta Land Ltd - Land North of Mingle Lane and East of Hinton Way, Stapleford), 203147 (Christ's College), 203307 (J Manning), 203380 (Jesus College), 203404 (Jesus College), 203463 (Hopkins Homes), 203891 (Hill Residential (Fulbourn Site)), 203904 (Babraham Research Campus Ltd), 203912 (Abbey Properties Cambridgeshire Limited), 203921 (Emmanuel

Summary of issues raised in comments	Comments highlighting this issue
• Concern that assumptions re larger household size and increased commuting, compared to previous assessment of need, are not sustainable; larger household sizes embed affordability issues not being able to move out of parents' home; increased commuting lacks sustainability. • There is an increasing disparity between the jobs target and the housing target. Greater Cambridge needs to plan for a corresponding increase in housing delivery, because anything else jeopardises the continued economic success of Cambridge and the delivery of the required housing in the right locations. • Using previous commuting assumptions will result in increased numbers of workers commuting into the area. • The approach to commuting assumptions is not justified. • The provision of affordable housing is considered to justify an increased housing figure, especially given recent delivery records • Affordable housing target is too low and does not reflect demand. On some strategic sites provision is reduced in favour of providing infrastructure.	College (Wilberforce Road), 203925 (Hill Residential (Sawston Site)), 204027 (E W Pepper Ltd), 204108 (Railpen), 204118 (Emmanuel College (Long Road)), 204120 (Richborough), 204136 (Hill Residential (Hardwick Site)), 204153 (Tritax Big Box Developments), 204204 (R2 Developments Ltd), 204234 (Bellway Strategic Land), 204323 (Barratt Redrow), 204353 (Hill Residential (Great Abington Site)), 204361], 204361 (Wain Estates), 204397, 204414 (Bellway Strategic Land), 204451 (Brookgate Land Ltd and Network Rail Infrastructure Ltd), 204499 (Places for People), 204508 (Redrow South Midlands), 204536 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 204599 (SmithsonHill), 204634 (Urban & Civic and Hill Residential), 204797 (Quy Tech Ltd on behalf of landowners), 204831 (Pigeon), 204833, 210221 (Vistry Group), 204896 (St John's College Cambridge), 205000 (Endurance Estates), 205080 (Axis Land

Summary of issues raised in comments	Comments highlighting this issue
• The housing target is not consistent with national policy because upward adjustments for growth and affordable housing have not been considered. • Housing target should be adjusted upwards to take proposed infrastructure developments (e.g. EW rail, new busways and stations), economic growth ambitions and affordable housing needs into consideration; inadequate housing provision could be a barrier to growth. • Incorporate the additional growth ambition of the Cambridge Growth Company and Combined Authority • The proposed figures for job and housing needs should be regarded as minimums rather than maximums • Increase the housing delivery to a minimum of 61,000 new homes which is more akin with the likely housing needs given the planned employment growth. • Objects to plan expanding villages beyond the outer Green Belt, advocating for the inclusion of Gt Shelford sites to meet housing needs sustainably. • Critical of the lack of updated HELAA assessments for site 115766, which has constrained opportunities.	Partnerships Ltd), , 05140 (Home Builders Federation), 205240 (Cambridge Realty Limited), 205000 (Endurance Estates), 205080 (Axis Land Partnerships Ltd), 205084 (North Barton Road Landowners Group), 205140 (Home Builders Federation), 206216 (Granta Land Ltd - Land at Valley Farm, Meldreth), 207436, 207437, 207438 (Pioneer Group Ltd), 208326 (PX Land Ltd), 208397 (Ceres Property on behalf of land owner at Freisland Farm, Swavesey), 208700 (Guilden Morden Developments Ltd), 208770 (Croudace Homes), 201851 (Chivers Farms Limited), 208899, 208900 (Nightingale Land and Hill Residential Ltd), 209326 (B Homent, J Tee & R Smith), 208700 (Guilden Morden Developments Ltd), 209172 (Turnstone Real Estate Ltd), 204893 (Great Shelford, Ten Acres LLP), 204904 (St John's College Cambridge), 210312, 210313 (Russell Smith Farms), 211046 (Wates Developments (and Landowners)), 209032 (Marshall Group

Summary of issues raised in comments	Comments highlighting this issue
• Concern regarding compliance with NPPF para 23, additional sites are needed to meet housing requirements by 2045 and to include a reliable buffer of at least 10% and revisit of the 'Exceptional Circumstances' case to ensure sustainable sites are not overlooked. • welcomes the commitment to updated Green Belt Study requesting publication before Regulation 19 consultation. • Concern Plan does not currently provide sufficient land to meet the housing requirement, allocate College land.	Properties), 209033 (Marshall Group Properties), 211668 (SmithsonHill), 211679 (Newlands (Cambridge) Limited)
Whilst the Local Plan identifies some level of need within the villages of the District, the current development strategy makes no attempt to meet this need. From a review of the Evidence Base, it appears no assessment of the level of affordable housing need has been made for the Villages of the District. Therefore, the Councils have failed to assess the level of both market and affordable housing need.	209709, 209710, 209714, 209715, 206787 (Endurance Estates)
Cambridge City and South Cambridgeshire administrative areas should be substantially higher number of homes delivery than the minimum of 71,586 dwellings between now and 2050 given its position role as the International Life-Science and employment driver for the County and the Government's Case for Cambridge.	208384 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
The Plan allocates more housing than required to 2045. Even without Grange Farm, housing need would be met.	211715 (J Clifford)
Responder Objects to policy and requests the housing target is recalculated to include the previous commuting patterns adjustment, consistent with the adjustment made in the 2023 'Greater Cambridge Employment and Housing Evidence Update Employment Land, Economic Development and Relationship with Housing' Report. Requests the housing target includes some upward adjustments for growth ambitions, reflecting the Greater Cambridge City Deal and the Cambridgeshire and Peterborough Devolution Deal, and the Cambridge Growth Company.	211607 (Bloor Homes Eastern)
Whilst it is understood why the 2021 census information is not considered robust as it was influenced by the COVID-19 pandemic, it is not robust to use "Census 2011 commuting assumptions applied up to the population supported by the standard method, and 1:1 commuting assumptions above this" as the basis for justifying the housing requirement. Previous commuting patterns are as a result of historic under-delivery of housing relative to jobs growth. Using previous commuting assumptions will	211102 (Hallam Land Management)

Summary of issues raised in comments	Comments highlighting this issue
result in increased numbers of workers commuting into the area. Whilst some will use public transport, this will inevitably result in an increased number of workers using Greater Cambridge's constrained road system. The proper planning of the area would see a greater housing requirement identified, which can readily access existing public transport and cycle links (the Guided Busway in this instance) and proposed new employment opportunities. The proposed (inadequate) identified housing requirement risks increasing strain on key infrastructure whilst also driving up property values due to a shortage of supply relative to demand. As evidenced within the Case for Cambridge report, it is already the case that economic growth in the region is being held back by a lack of adequate housing supply relative to demand, which is evident when considering that South Cambridgeshire has one of the highest house price-to-earnings ratios in the Country.	
Questions assumptions in the plan regarding job growth in Cambridge and impacts of AI on employment, suggesting a phased development approach based on specific criteria being met first	205638 (A Brown)
Responder objects misalignment of job target with the housing target requiring potential employees to commute into Greater Cambridge to fill jobs leading to increased in-commuting likely by car, if public transport	211608 (Bloor Homes Eastern)

Summary of issues raised in comments	Comments highlighting this issue
options are not available or the delivery of transport infrastructure projects are subject to unconfirmed funding decisions and associated development.	
Responder objects to the Report concluding no adjustments being required to the housing target for the draft GCLP to address affordable housing needs and requests housing target include some upward adjustment to address affordable housing needs.	211609 (Bloor Homes Eastern)
Responder objects to flaws in the methodological approach to quantifying the relationship between need for jobs and homes; not take account of the latest projections. The approach to HRRs is flawed and bakes in historic housing shortages in the areas. Failing to recognise increases in households associated with extra economic activity and household growth will worsen affordability pressures, and there is no uplift for affordability in the methodology that would have any material impact on the ability of those groups – such as younger people and other concealed households – to better access homes at a price consistent with their incomes. The Plan is not sound as the evidence is flawed and likely underestimates the number of homes necessary to meet the housing needs associated with	211662 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
increased levels of economic activity and overcome barriers to investment necessary to achieve it, contrary to NPPF paras 61, 63 and 85 and 86 (d)	
Objects as the strategy represents only 'baseline' economic growth that would be expected if housing delivery were in line with the standard method. The Plan is not currently sound because it is not consistent with national policy (specifically paras 85-86) as required by NPPF para 36(d).	211663 (SmithsonHill)
Objects a supporting text at para 2.10 of the draft Plan states "growth of around 4,000 additional jobs per annum" which is not reflective of the EHNU, which shows (Table 3.7) the 'central' scenario being associated with 3,490 jobs per year and is therefore not in accordance with the GCLP's own evidence (were it to be accepted on its own terms) and is misleading. The Plan is not currently sound because it does not reflect its own evidence, as required by NPPF para 36(b).	211664 (SmithsonHill)
Objects to Policy as lack of housing relative to demand is likely to contribute less housing affordability. Affecting business and public services recruiting and retain workers, increase demand for affordable housing. Businesses may choose to locate elsewhere, stifling economic growth in Cambridgeshire in this way would also certainly undermine wider regional and national economic growth prospects.	211667 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
Objects to housing initiatives which it could be reasonable to argue that housing supply does not have a net positive effect on the availability of housing for existing residents of Greater Cambridge. The Councils should consider the extent to which new housing delivery in the trajectory will serve different market needs. This should consider existing and future housing needs of different groups, as well as growth scenarios (both scheme specific and general).	211675 (SmithsonHill)
Objects to the Plan seeking to place a restriction on the size of a logistics Unit, even though supply and demand for storage and distribution floorspace is acute in Greater Cambridge. The Plan is contradictory to Paragraph 32 and Paragraph 87 of the NPPF, the latter stating that planning policies and decisions should recognise and address the specific locational requirements of different sectors.	211683 (Newlands (Cambridge) Limited)
Comments paragraph 2.72 of the Plan states that additional new industrial/logistics floorspace will be facilitated through longer term provision at Cambourne, and through incorporating some industrial/logistics floorspace within other, unspecified mixed-use employment allocations. However, existing permitted employment floorspace is not for B2/B8 floorspace planned to be delivered at Cambourne.	211678 (Newlands (Cambridge) Limited)

Summary of issues raised in comments	Comments highlighting this issue
It is not clear what use classes are proposed to be delivered at any sites referenced at para 2.72 or will deliver any of B2/B8 need that has been identified. Clarity is required through the policy allocations as to the anticipated uses each employment allocation will be seeking to deliver if the approach is to be effective in ensuring the employment needs are met.	
• Concern Plan relies on larger schemes for development, and as such recommend: 15% should be the minimum buffer if North East Cambridge is not included, and the current growth assumptions are taken forward. Requiring an uplift of at least 4,096 homes not currently allocated; • 20% should be the minimum buffer if North East Cambridge is included, requiring an uplift of at least 2,445 currently unallocated homes.	211672 (SmithsonHill)
Comments it is important that GCSP consider whether economic factors suggest that population (and therefore housing) growth is even higher than the standard method indicates is needed, particularly in the context of NPPF paras 85-86. Noting ONS's population and household projections which post-date the	211657 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
2021 Census; the 2022-based sub-national population and household projections. These projections also reflect more up-to-date assumptions nationally about levels of future long-term international migration; a key influence on demographic change in Greater Cambridge. It would be prudent for GCSP to consider these new data sets.	
Comments the 'high' scenario should be adopted, aligning with the scale of the Government's ambition to 2050.	
Comments Stantec's evidence states the local requirement for B8 is considered to be 609,230 sq m. The Policy plans for a shortfall of more than 270,000 sq m when assessed against Stantec's assessment, which is considered to reflect the NPPF and PPG.	211680 (Newlands (Cambridge) Limited)
Comments states strategic need has not been planned for as there is no evidence of Greater Cambridge working with adjacent Authorities to deliver on the wider strategic need, and need of an economic sector (logistics) whose importance is emphasised at Paragraph 86(c) of the NPPF, has not been planned for.	211681 (Newlands (Cambridge) Limited)
Comments analysis of gross completions is considered to form a better indicator of actual demand, as the logistics market in Greater Cambridge experiences low vacancy levels, given the lack of supply.	211682 (Newlands (Cambridge) Limited)

Summary of issues raised in comments	Comments highlighting this issue
That 317,000 sqm floorspace figure underestimates the demand for industrial/warehousing floorspace in the region, and that additional land (comprising 609,760 sqm) should be allocated ensure that the logistics sector, mid-tech, manufacturing, and life sciences sectors can address local, regional and national demands.	
Concern the housing target is not consistent with national policy as upward adjustments for growth and affordable housing have not been considered. Notes the job target is not aligned with the housing target. A job target that is higher than the housing target requires potential employees to commute into Greater Cambridge to fill those jobs, leading to an increase in in-commuting to Greater Cambridge with most of the in-commuting would be by car, particularly if public transport options are not available or the delivery of transport infrastructure projects are subject to unconfirmed funding decisions and associated development.	211244 (Manor Oak Homes – Cottenham Site), 211252 (R Harvey)
Responder comments in the interests of ensuring Greater Cambridge exceeds expectations, this suggests greater weight should be given to the 'high' scenario in the EHNU as an aspirational yet realistic scenario and would a true 'step change' be a scenario associated with even higher housing and job growth.	211658 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
• Responder comments that there is no evidence that aligning the number of homes to jobs in the way assumed by the evidence will have the impact on affordability necessary for those in the 25-44 age group currently unable to afford homes to access them. There is no evidence around the supply-price-affordability relationship to support the idea that the statistical relationship of homes will enable the needs of that particular group to be met by simply limiting the increase in supply to the specific number of additional households in that group. • Additionally, the premise of the standard method is to provide a level of housing over and above the assumed projection of households (i.e. demographic change) to improve - or at least moderate - the worsening affordability of housing. All else being equal – including housing supply and population change - affordability worsens when incomes increase. This means that in a growing economy, even if the number of homes matched the population growth linked to the number of jobs, affordability would worsen unless the supply of homes is increased further to a sufficient extent that it impacts on prices. Matching the number of homes to the number of additional households driven by economic	211659, 211660, 211661 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
growth misses. GCSP's approach provides no material uplift to housing supply that might be expected to improve affordability; and is likely to create a deterioration in affordability for younger and lower income households, rather than an improvement, failing to meet need and in businesses struggling to recruit due to problems of affordability for workers. • adjustment HRRs using assumptions from 2014-based projections and to go 'halfway' to the 2008-based projections are not meeting need a That starting point from which projections look forward bakes in significant problems of affordability and a mismatch between homes and housing need in Greater Cambridge; even in 2012, Cambridge had an affordability ratio of 9,5 compared to 7.6 in East of England and 6.6 in England as a whole (Source: ONS) b There is no benchmarking of the 'as is' position in Greater Cambridge in terms of its relative position on affordability, concealed households, household formation and what this means about the level of housing required to meet needs and address the historic problems that exist.	

Summary of issues raised in comments	Comments highlighting this issue
c The adjustment to HRRs only goes ‘halfway’ to the 2008 figure. It does not explain why it does not go ‘all the way’.	
Comments that the policy should treat the economic need figures as minimum requirements: • Allow for appropriate flexibility and a level of choice for different sectors. • The job figure will likely need to evolve to align with the Government's broader growth agenda whilst ensuring the vision can be achieved sustainably. • Reflecting the need for additional jobs as indicated by the Greater Cambridge Employment and Housing Needs Update, which projects a need for between 67,600 and 90,900 additional jobs. • Historical growth trends show that the Greater Cambridge economy expanded by nearly 4,000 jobs annually during its strongest growth phase, suggesting a potential for sustained job creation. • Technological advancements in life sciences are transforming the sector, necessitating a flexible approach to employment growth that accommodates innovation rather than restricting it to historical trends.	204945 (Lolworth Developments Limited), 204462 (The Royal London Mutual Insurance Society Ltd), 204451 (Brookgate Land Ltd and Network Rail Infrastructure), 210220 (Vistry Group)

Summary of issues raised in comments	Comments highlighting this issue
• concerned by the apparent dismissal of the higher growth scenario despite the study itself clearly accepting that this 'could be achieved or exceeded'.	
The Draft Local Plan's underlying evidence base underestimates the need for storage and distribution floorspace in Greater Cambridge, which is not aligned with the area's ambitious growth aspirations.	205277 (Newlands (Cambridge) Limited)
Comments regarding the approach taken to jobs and homes forecasts including the following: • Employment and housing growth assumptions lack robust, up-to-date evidence, especially the forecast of 73,300 additional jobs. • Plan is working on outdated statistics of business needs, particularly labs • The plan cites the Iceni report but it doesn't mention 73,300 jobs • Support for the use of local data to best inform the modelling of jobs and housing growth • The Local Plan's approach to housing need is broadly welcomed, particularly its use of local data, headroom for growth, and commitment to a diverse mix of housing types and tenures, including affordable housing	201178 (Save Honey Hill Group), 201326 (D Lott), 201499 (C Meads), 202428 (University of Cambridge), 203520 (Cambridge Ahead)

Summary of issues raised in comments	Comments highlighting this issue
Responder supports the increase in jobs being planned for in the Draft Local Plan to around 73,300 additional jobs and housing supply is increased to meet this need. Housing land identified in the Plan is insufficient.	211101 (Hallam Land Management
The plan is centrally predicated on the creation of 73,000 jobs and the major strand of this is the so-called knowledge economy. The report on which it is based was written in 2022 so three years out of date.	207346 (K Rhodes)
Update the Plan to reflect the ambitions of the CPCA Local Growth Plan, including key growth sectors. Given the Local Growth Plan ambitions, rapid economic growth, transport improvements (including the collaborative work on the Greater Cambridge Transport Strategy), and government support through Cambridge Growth Company, the Plan needs to provide for at least its High scenario (59,409 homes).	205239 (Cambridgeshire and Peterborough Combined Authority)
Concern that additional sites are allocated within the Plan in order to address the shortfall of mid-tech floorspace within the current version.	211481 (Trinity College)
In order to enable the Plan to be responsive to changing market conditions and planned or new measures to alleviate infrastructure constraints it is	203906 (Cambridge Growth Company)

suggested that the policy wording allows flexibility for housing and employment growth beyond the Local Plan High Growth trajectory.	
• Statement of Common Ground does not make it clear how many houses will be built in neighbouring areas • unmet need for neighbouring authorities has not been taken into account to date.	204268 (Croudace Homes), 205140 (Home Builders Federation)
Support for aligning housing figures with the government's standard method to avoid overburdening local infrastructure and resources, and potentially needing to seek assistance from neighbouring authorities to meet a portion of the enhanced housing figure.	201656 (Huntingdonshire DC)
West Suffolk council can confirm it is not seeking to accommodate any housing need identified in Greater Cambridge.	204914 (West Suffolk Council)
Recommends that to ensure that the emerging Local Plan is positively prepared and can be found sound, the Councils must work with Huntingdonshire and North Hertfordshire to ensure there is not an unmet housing need and to ensure that strategic cross-boundary matters are considered as part of the Local Plan.	209758 (Thakeham Homes Ltd)
Concern regarding the extent of the “need” for development in Greater Cambridge and if “need” is to assist the central government in meeting their targets so that they can demonstrate that they have met at least one of their	208713 (J and C Collins)

Summary of issues raised in comments	Comments highlighting this issue
manifesto promises. If the effect of recent immigration levels is part of the need for development in the area and may be the drive by the successive governments in this regard.	
73,300 jobs projection is 'optimistic' rather than 'central' given the current economic outlook. The approach might be better framed as catering for an aggressive projection of future requirements to mitigate the risk of underdevelopment.	201005 (M Colville)
Concern the Plan does not currently provide sufficient land to meet the housing requirement	211066 (Savills)
Concern the Plan underestimates needs and additional sites are required to be allocated, and whether the Plan is "…prepared positively, in a way that is aspirational but deliverable" (NPPF Para 16).	211422 (Gonville & Caius College
The forecast R&D office employment floorspace need is already met by supply.	204637 (R Turnbull)
Housing needs cannot be responsibly, realistically or sensibly articulated without parallel consideration of all of the necessary associated infrastructure.	201581 (J Neal)

Summary of issues raised in comments	Comments highlighting this issue
Concern that new infrastructure may not be delivered in a timely manner given the speed of build out and to the extent that is required.	202120 (Elsworth PC)
The plan currently doesn't allow for enough housing for any increase in local employment and is not sufficient to serve the employment currently in the area.	205172 (L Gardner)
While some new jobs will be created by the development at Cambourne North, it remains to be seen how many go to local residents and whether they will include the mix that the Plan hopes for.	207097 (Elsworth PC)
As there is not enough housing or water for existing residents, that will create a need to supply more of both, which can't be done without exceeding climate targets set by law.	205214 (A Copping)
Increasing supply of housing stock should reduce house prices and make homes more affordable for people working in Cambridge, however the initiative risks being undermined without legislation to prevent the purchase of accommodation for short term letting.	201918 (A Davidson)
The vast majority of migration will be in the social care sector, relatively temporary and relatively low paid (though hopefully sensibly paid). The projections for population growth deliberately avoid the impact of Government Policy towards immigration and we know that all political parties' attitudes towards immigration control are hardening significantly.	207342 (K Rhodes)

Summary of issues raised in comments	Comments highlighting this issue
The policy should stipulate “A minimum of 48,195 new homes meeting the needs of the total population of which at least 20 per cent must be social at a maximum of 60 per cent of market rents and a further 20 per cent affordable at a maximum of 80 per cent of market rents.”	208747 (Trumpington Residents Association)
The Local Plan must shift from a growth-led strategy to a resource-constrained model. This requires the plan to stop treating employment projections as inevitable targets and instead treat the region's environmental limits—specifically the depletion of the chalk aquifer—as the primary cap on development.	202732 (Cambridge Past, Present and Future)
Stronger rural proofing should ensure neighbourhood targets, specialist housing and job growth are aligned with rural transport, digital connectivity and community infrastructure capacity.	203143 (Cambridgeshire ACRE)
Objection to the policy’s prescriptive requirements on tenure for older person’s housing. Encourage the policy wording to be revisited to support the full range of specialist housing across all tenures, with proposals supported where they align with specific policies such as Policy H/SH. Suggest creating separate targets for housing for older people and housing for disabled people.	201944 (Anchor Hanover)

Summary of issues raised in comments	Comments highlighting this issue
Concern specialist housing for older people will not all be delivered in the plan period, due to phasing and locations are located as part of wider/ larger proposals, delivery lacks certainty.	211261 (Terra Strategic)
1500 new nursing and residential care spaces is not enough for this ageing population and nothing for the needs of the pre-nursing stage elderly who live alone.	204522 (C Forbes-Cable)
Concerned that the figure for student accommodation need is misleading. More recent evidence is provided, which seeks to better reflect the plan period.	203985 (Anglia Ruskin University)
Concern regarding data inconsistencies between the housing requirement in S/JH of 2,295 dwellings per year and the housing need in Appendix D of approx. 1,600 homes. There is a discrepancy of 695 houses in these two data sets. If extrapolated across the plan period this would imply a potential discrepancy of 13,900 homes.	208714 (J and C Collins)
Comments regarding the housing requirements for neighbourhood plans element of the policy, including: • the Plan to use “indicative housing figure” for neighbourhood plans (not “requirement”) • correct the Eddington census anomaly that inflated Girton’s baseline	202217 (Girton PC)

Summary of issues raised in comments	Comments highlighting this issue
If the policy is to retain a section setting out the housing requirement for neighbourhood areas, then an additional section should be added to include provision for housing in areas that are not neighbourhood plan areas. This could set out projected growth in other villages within the hierarchy and offer a greater structure to growth across the district.	204492 (Rosconn Group)
There is no mechanism to deliver the identified housing need for Stapleford and Great Shelford. Local evidence demonstrates an affordable housing need of 648 for this area. over the period 2023 – 2043.	208901, 208902 (Nightingale Land and Hill Residential Ltd)
Paragraph 3.43 of the Strategy Topic Paper explains this change by highlighting that Cambridge's current commuting ratio is below 1, meaning there is a greater number of employees who are in commuting to the region. Whilst this is acknowledged, this fact is arguably a demonstration of historic under-delivery of housing relative to jobs growth, rather than a coherent justification for a continued lower housing requirement moving forward. In light of this, it is therefore disappointing that Greater Cambridge are content to pursue only the minimum housing requirements, effectively shifting residual housing demands into neighbouring authorities, which risks embedding unsustainable commuting patterns and increasing pressure on existing infrastructure in and around the City.	209716 (Endurance Estates)
See comments made previously on the Themes.	202340 (P Deer)

Summary of issues raised in comments	Comments highlighting this issue
The Plan foresees 73,000 additional jobs in the area up to 2045, but only 50,000 new homes. This leaves a deficit of 23,000 homes. The planned deficit of 23,000 homes inevitably means that even more people who work in Cambridge and S Cambs will have to travel in from the hinterland, and a large majority of these people will travel by car, as they do now, making Cambridge and S Cambs' traffic problems and air quality even worse than they are now. The estimate of 73,000 new jobs may be an under-estimate because there is already 1 million square metres of additional employment space planned in the area by 2045, which I estimate could provide space for up to 83,000 new jobs. Plus the rise in homeworking since COVID means there will be jobs in excess of those located in formal, non-domestic employment space. Creating workspaces far in excess of the planned supply of housing will only exacerbate the housing shortage and further increase house prices and rents locally.	203277 (J Palmer)
Concerns the strategy proposed to meet the identified need is deliverable and about the location of new development, the majority to be delivered by new settlements to the north and west of Cambridge, ignoring growth in the villages east of Cambridge with access to the city and would benefit from services and facilities that will support Cambridge East.	211470 (Beechwood Estates Ltd), 211475 (G Robinson and Partners)

Summary of issues raised in comments	Comments highlighting this issue
Comments provision made for 48,195 new homes across a range of tenures. Which is existing adopted supply (37,865 units), plus 13,463 additional units planned for under this plan meeting the need plus a 6.5% (3,133-unit) buffer (i.e. 51,328 units in total, comprising of existing, adopted sites and draft allocations under this draft plan). Suggests the distribution of development could be made more sustainable. Over-reliance on larger sites to come forward and be built out within the plan period. Requires a more proportional breakdown to allow for organic growth in suitable settlements to ensure that there are appropriate levels of development in these locations. Allocate more smaller and medium sites for development to ensure that delivery momentum can be sustained in the short term.	208336 (Gladman Developments)
Concern there is a question of soundness if the plan is not effective in delivering housing (NPPF 2024 paragraph 36) due to increase in requirements of new standard method and this must be addressed.	208362 (Endurance Estates)
Respondent argues the Standard Method figures correlates with the job and housing projections, that adoption of these figures is appropriate. However, in accordance with the requirements of the NPPF this is not considered to be an appropriate strategy accounting for reasonable alternatives and other	208376 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
publicly available evidence. Suggests Policy S/JH is not justified and the DLP should not be considered sound and to revise the development strategy to align with the higher growth scenarios for Greater Cambridge.	
Responder requests clarification of data source used to determine housing units and bed spaces cited in the Paragraph 3c of Policy S/JH. Queries cross-referencing with County Council's demand profile? States their data, the projected need for residential and nursing beds for individuals aged 18–64 within Cambridge City and South Cambridgeshire is approximately 12 beds by 2041, appears to differ from the figures presented. States the difference is significant and recommend that the these are reviewed and confirmed before being published due to the risk of a) oversupply b) inappropriate type of supply of housing being developed as a result.	210542 (Cambridgeshire County Council)
Comments Paragraph 36 a) of the NPPF is clear that to be positively prepared, the Local Plan should, as a minimum, seek to meet the areas objectively assessed housing needs. This is the minimum level of growth that should be planned for and clearly is not in line with the growth ambitions set out at the national level or in the Local Growth Plan. The level of growth should be higher than the minimum level of growth as proposed using the Central level of growth or standard method housing and job figures.	208378 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
Responder states national policy is clear that meeting an area's objectively assessed needs should only be a minimum (i.e. Paragraphs 11b, 36a & 62 of the existing Framework and Policy PM2 1.b, Policy S1 1.a, and Policy PM14 2.a of the emerging Framework) and that Plans should be prepared positively. Additional housing should be considered and can be achieved through the Government's railway station policy the Plan strategy and the infrastructure implications associated with unlocking this growth should be factored in and reflected.	211072 (Ashwell & Morden Landowner Consortium)
Responder states Plan currently covers a plan period to 2045. The provision for 48,132 dwellings proposed over that period, therefore will deliver less than 50% of the government's lower aspiration of delivering 100,000 dwellings in the Greater Cambridge Area by 2050 or less than 33% of the housing required using the higher figure of 150,000 dwellings. Based on this, it is considered that the levels of job and housing growth targeted are not justified and are not an appropriate strategy taking into account the reasonable alternatives. Policy S/JH is considered unsound and requires amendment. Increase the level of forecast jobs and homes to be delivered the Plan to ensure alignment with the Government's planned growth for Greater Cambridge.	208379 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
Responder recommends **a**llocation of additional small and medium development sites to provide greater flexibility and help mitigate against slow or non-delivery of strategic sites to enable delivery of necessary homes and jobs, and redress the current fall in housing land supply, as recognised at NPPF paragraph 73.	208386 (NIAB Trust)
Responder states a justification for adopting a higher growth scenario in the Plan to meet the government's growth targets, achieved through the allocation of further sites on locations where changes to the NPPF make it inevitable that they will otherwise come forward as speculative applications.	211471 (Beechwood Estates Ltd), 211476 (G Robinson and Partners)
Planning for growth in workspaces that races far ahead of the planning increase in housing supply does not support the stated environmental and transport aspirations, and in fact it makes it impossible to achieve them. Indeed, further growth in workspaces in the countryside, away from housing and train links, pushes in precisely the opposite direction. Rather than the current emphasis in the Local Plan on building as many new dwellings as possible, there should be more emphasis on limiting the number of new workspaces – so new homes have the intended effect of making homes more affordable, especially for young people.	203279 (J Palmer)
The Plan's commitment to accommodating employment growth and supporting the clustered nature of the Cambridge innovation economy is	208932 (Cambridge Growth Company)

Summary of issues raised in comments	Comments highlighting this issue
supported. CGC acknowledges that the draft Plan's employment growth projections are based on a 'central scenario' and are reflective of identified constraints. However, we would like the draft Plan to be clear that subject to resolution of those constraints, employment growth exceeding the Local Plan central scenario could be delivered within the Plan period and that policy wording should include sufficient flexibility to accommodate higher and accelerated levels of growth prior to 2045.	
CGC would like to see the Plan more explicitly recognise the value of intensifying and expanding the identified innovation clusters to fully realise growth potential and agglomeration benefits. Enabling an intensification /densification of cluster sites should where appropriate incorporate an element of housing, including innovative housing typologies, to help support their function. CGC also welcomes the draft Plan's support for a diverse range of commercial space to accommodate different stages of business and employment growth. CGC also supports the draft Plan's approach to meanwhile uses, circular economy principles and low-carbon development.	208933 (Cambridge Growth Company)
Regarding para 2.10 of the Draft GCLP central case as the 4,000 additional jobs per annum is not consistent with the EHNU 2025. The proposed industrial need requirement of 317,000sqm set out in paragraph 2.12 is considered to be an under-estimate of the overall	209173 (Turnstone Real Estate Limited)

Summary of issues raised in comments	Comments highlighting this issue
requirement if market signals are appropriately applied, particularly in respect of existing floorspace that will be displaced by mixed use allocations, the significant scale of aging industrial stock that may be lost/redeveloped, and the scale of suppressed demand. Responder recommends the policy and evidence base should be updated, including having regard to the revised additional job number as described.	
Recommend Councils consider the 'high' job growth scenario of c.4,300 jobs per year – if not even higher and the associated level of housing provision.	209694 (CEG Land Promotions Ltd)
The Plan's focus on delivering a diverse mix of housing types and tenures, including affordable housing, is supported as is recognition of models such as build-to-rent, Community Land Trusts, co-living and employer-led housing. Achieving a greater diversity of housing than historically delivered by the market should be a clear objective of the Plan and as appropriate made explicit for site allocations.	208934 (Cambridge Growth Company)
The plan provides for an additional 73,300 jobs over 21 years, a growth rate of 1.3% pa. The 73K additional jobs is consistent with the additional jobs supported by the standard method of assessing housing need, based on population growth and affordability uplift, adding in workers who commute into Greater Cambridge. However, the analysis uses 2011 levels of in-	208935 (Cambridge Growth Company)

Summary of issues raised in comments	Comments highlighting this issue
commuting, the most recent comprehensive data, so it is very likely to be undercounting current levels of in-commuting and therefore undercounting the jobs that would be supported by the standard method. However, it is acknowledged that there are no more up to date published data sources to evidence.	
The supporting Iceni Employment and Housing Needs Update acknowledges that the high growth scenario could be achieved or exceeded. For this to take place a step change in infrastructure investment and development would be needed to facilitate growth, notably in transport to connect in and move labour, as well as in wider services infrastructure and the expansion of both housing and commercial development programmes. In order to enable the Plan to be responsive to changing market conditions and planned or new measures to alleviate infrastructure constraints it is suggested that the policy wording allows for housing growth beyond the Local Plan High Growth trajectory.	208936 (Cambridge Growth Company)
Comments dependent on allocations that have not come forward from the adopted plans. No confidence in those sites, adopted in the 2018 Local Plans, will now come forward if there has been no movement on them since adoption.	208331 (Gladman Developments)

Summary of issues raised in comments	Comments highlighting this issue
The respondent objects to Policy S/JH, stating it should be considered alongside Policy S/DS, which they also oppose, as both policies are interconnected and impact future growth in Greater Cambridge. While supporting the objective of meeting housing needs, the respondent criticises the reliance on large sites for housing delivery, arguing it will hinder the necessary increase in housing supply. The respondent believes the draft plan's focus on Neighbourhood Plans is insufficient and limits growth opportunities, recommending more direct allocation of smaller and medium-sized sites. The respondent urges a review of the Housing and Employment Land Availability Assessment to identify deliverable sites near sustainable settlements to support local growth. They reference a report indicating that affordable housing is crucial for attracting skilled workers and supporting productivity growth in industrial clusters.	204492 (Rosconn Group)

Summary of issues raised in comments	Comments highlighting this issue
The respondent notes that Greater Cambridge has a significant affordable housing shortage, with demand outpacing supply, particularly for a diverse range of job roles. They argue that the proposed Grange Farm New Settlement will not address immediate housing needs, as it will take several years to deliver homes. The respondent suggests that their client's site at Land North of Pampisford Road is suitable for allocation, being a medium-sized greenfield site that can quickly contribute to housing supply. They conclude that Policy S/JH is unjustified and ineffective, stating it will delay housing delivery and does not align with the requirements of the NPPF.	
ECC acknowledges that “Greater Cambridge economy is nationally and internationally important”. For the Plan to be effective it is important that in developing the employment strategy there is acknowledgement of the cross boundary and strategic matters that must also be clearly articulated. In particular for the economy, as previously highlighted within the ECC	210474 (Essex County Council)

Summary of issues raised in comments	Comments highlighting this issue
response, the emerging Greater Cambridge Local Plan must acknowledge and appreciate the opportunity provided for international connectivity by London Stansted airport. Given the international significance of the employment clusters, and for the Local Plan to be effective it must have an appreciation of the proximity to London Stansted airport, and also seeking to ensure that surface accessibility to improve connectivity with Greater Cambridge is fully explored when developing the emerging Plan.	
The latest Plan confirms previous assessments of jobs and housing needs, but it does not reflect the reality that many new jobs in Cambridge and S Cambs are in biotech and IT fields, which are notoriously prone to downturns and uncertainty. It is not possible to predict accurately how many jobs and workplaces there will be in Cambridge and S Cambs in 20 years. Arguably, it would be better to focus on five-year time horizons, when forecasts of jobs, workplaces and housing needs are more reliable.	203291 (J Palmer)
Terra supports the provision of a minimum of 48,195 new homes in the period up to 2045 to meet the objectively assessed needs in Greater Cambridgeshire. It is noted that the current supply is cited as 37,865 with a requirement for 10,330 additional new homes to be identified as new allocations to meet the housing need.	211217 (Terra Strategic)

Summary of issues raised in comments	Comments highlighting this issue
Land at Oakington Road, Cottenham is sustainably located adjacent to the Development Extents of Cottenham and constitutes an appropriate medium size site for housing to come forward.	
LSH supports the requirement of providing a minimum of 48,195 homes over the Greater Cambridgeshire area. The Housing Needs of Specific Groups in Cambridge and South Cambridgeshire Report (August 2025) concluded that there was an annual need in Greater Cambridge for 2,309 dwellings, with paragraph 7.159 stating that there is an acute need for affordable housing in both local authorities (Cambridge City and South Cambridgeshire) and that it is clear that the provision of new affordable housing is an important and pressing issue in the area (para. 7.169).	211230 (Living Space Housing)
Concern for provision of specialist housing accommodation as housing needs of specific groups are accounted for within the overall housing requirement of 48,195 dwellings, the proposed housing requirement falls short of the Government's standard method requirement, the calculation of which does not evidence how it has included consideration of the housing needs of specific groups. There is no Housing and Economic Needs Assessment such that no evidence is provided identify how the housing needs of specific groups have	211274, 211275 (Woolsington One Ltd)

Summary of issues raised in comments	Comments highlighting this issue
been calculated, or the implication of this on the overall housing requirement for the Plan.	
Responder states minimal buffer for housing land supply across the plan period creates an unnecessary risk that Greater Cambridge will fall below the 5 years needed. The way to resolve this would be to include a greater number of short-medium sized sites.	210711 (Gladman Developments)
The Plan states land identified within New Sites totals 13,463, a substantial proportion of which comprises of large strategic allocations typically having greater infrastructure requirements unlike smaller sites that can be delivered more expediently.	211600 (LGH Hotels Management Limited)
Concern does the Plan period meets the NPPF requirement (set out at para. 22) for strategic policies to look ahead over a minimum 15 year period from adoption, and for policies to be set within a vision that looks ahead at least 30 years, where larger scale developments such as new settlements and significant urban extensions are proposed.	211038, 211051 (Wates Developments)
Concern the supporting text of the Plan acknowledges the need for flexibility to allow for potential achievement of higher job growth, but this has not been reflected in the wording of Policy S/JH itself. As such there is a potential risk of restricting job growth and failing to meet the economic objective of sustainable development included in the NPPF (para 8a).	211039, 211052 (Wates Developments)

Summary of issues raised in comments	Comments highlighting this issue
Concern strategy relies heavily on Northstowe to deliver homes. Must be matched by infrastructure delivery mechanisms for public transport upgrades, social and civic facilities, and timely delivery of healthcare facilities as assured by S106 planning obligations. Failure to deliver these in line with obligations jeopardises Northstowe's sustainability and ability to support future housing growth. Master developer must pursue a strategy leading to timely, visible, and quality infrastructure delivery, in conjunction with quality, affordable and desirable homes, improving delivery rates.	208074 (Northstowe Town Council)
Comments that the Plan only meets the minimal "objectively assessed need" leaves no headroom for the extra growth Government and industry partners are actively seeking to stimulate. A conservative outlook means the Plan could fall short of the Government's and Combined Authority's ambitions. If growth even partly approaches the higher national expectations, the planned employment land and floorspace would be insufficient to support it.	211487 (Trinity College)
Concern Policy S/JH identifies objectively assessed needs over the plan period for 73,300 additional jobs to support knowledge intensive sectors and provide a diverse range of local jobs. The Greater Cambridge Employment and Housing Evidence Update 2025, this figure equates to	211513 (Trinity College)

Summary of issues raised in comments	Comments highlighting this issue
317,000sqm of industrial and warehousing floorspace (Use Class B2/B8). Within the draft plan is only a supply of 29,000sqm demonstrating a significant shortfall of approximately 288,000sqm across the plan period.	
Land at Kingsfields (land north and south of A428) is well positioned to support the objectives of Policy S/JH and the wider spatial strategy of the Local Plan. Its relationship with the proposed EWR corridor represents a rare opportunity to align employment growth with nationally significant infrastructure investment, consistent with national policy objectives to support sustainable economic growth, productivity and modal shift. This representation is further supported by a Transport Written Representation prepared by Pell Frischmann, which demonstrates the suitability and deliverability of transport connections between the Land North of the A428 and Cambourne North and the central Cambourne. It is also reiterated that the employment land is capable of delivery in parallel with the A428 improvements and EWR proposals.	208277 (The Church Commissioners for England)
Responder comments the allocation Land north of A1307, Bar Hill (Slate Hall Farm) includes approximately 220,000 sqm of employment floorspace. The Council's decision to allocate this site for development misses an opportunity to allocate housing land for development at Bar Hill to provide homes in close proximity to major centre of employment.	211597 (LGH Hotels Management Limited)

Summary of issues raised in comments	Comments highlighting this issue
Land at Denny End Road, Waterbeach (HELAA Site: 56211) Responder states the Plan does not currently provide sufficient land to meet the housing requirement due to the continuing reliance on in-commuting; and strategic sites. Suggests the allocation of Land at Denny End Road, Waterbeach.	204927 (Savills)
Responder states that Forest City is a proposal to deliver 400,000 new affordable homes. Delivered through a development corporation model combined with a community land trust structure, enabling housing affordability and employment. Forest City is unlikely to be accommodated within the Local Plan at this stage, given its need to further develop its evidence base, however, we would hope that GCSP would not oppose the proposal.	208129 (Albion City Development Corporation Ltd)
Land West of London Road, Fowlmere Responder requests flexibility to support higher jobs growth to be incorporated in the Plan. To provide appropriate flexibility for unforeseen economic growth, a range of additional contingency site allocations should be included within the housing trajectory. Ensuring the Plan is positively prepared, justified and effective in accordance with the NPPF tests of soundness. This site offers a sustainable location for development and is	211040, 211053 (Wates Developments)

Summary of issues raised in comments	Comments highlighting this issue
immediately available, contributing to the Councils' short to medium housing delivery rates.	
The Local Plan supporting text also confirms that the Neighbourhood Plan areas can choose to meet or exceed the housing requirement but that the delivery of allocations already included in the GCLP cannot be used to meet the housing requirement of a neighbourhood area. The Stapleford and Great Shelford Neighbourhood Plan covering the area does not include any allocations/ the level of anticipated growth (c.134 net new homes) is considered to significantly underplay the role of the villages and the potential these highly sustainable settlements can play towards delivering the Vision for Greater Cambridge.	209971 (Granta Land Ltd)

Policy S/DS: Development strategy

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Broad support for the development strategy concentrating jobs and homes within urban centres, new settlements or in close proximity to proposed infrastructure, as the most sustainable locations helping to reduce the need to travel, promoting public and active travel, and have the least climate impact. Comment from Natural England and Anglian Water that the development strategy principles align with their strategic priorities and long-term ambitions.

Comment that the plan should align with the Cambridgeshire and Peterborough Spatial Development Strategy, including suggestion the plan period should be extended to 2050.

Objection that the strategy is too conservative in identifying insufficient jobs and homes for sustainable growth in Cambridge, does not align with the Government's growth agenda, and that the housing requirement does not align with jobs growth. Comment that the Plan does not provide enough housing land to meet the needs. Objection that the Plan is not meeting the need for specific sectors including large scale warehousing, mid-tech, agri-tech, and data centres.

Concern that the development strategy is locating housing away from employment sites with negative consequences, including increased pressure on transport corridors, with the suggestion that employment and housing must be planned together in mixed-use development to reduce the need for costly public transport extensions.

Objections that the strategy places an overreliance on a few large strategic sites for growth, which require uncertain new infrastructure, often without funding or consent, that risks delivery, that is contrary to the NPPF requirements for a proportion of homes on smaller sites and for enhancing rural community vitality, with the suggestion that there is justification for release of land from Green Belt, that a 20% headroom is included and that additional smaller sites should be allocated to ensure delivery early in the plan period and support small/medium housebuilders to enhance housing diversity and foster local growth. Comments that the housing trajectory is based on over simplistic delivery rates and is not credible, with historical data demonstrating slower delivery from strategic sites. Comments suggesting a diversified strategy with proportionate growth on the edge of Cambridge, in expanded existing settlements and development along transport corridors, with various sites promoted. Comments raising concerns with the scale, delivery and impacts of strategic sites including Grange Farm, Cambourne North, Cambridge East. Comments raising concerns with the anticipated delivery from windfalls, including the windfall allowance, and that the Local Plan is dependent on allocations that have not come forward in the adopted Local Plans.

Comments in support of not removing additional land from the Green Belt as it is unnecessary to meet development needs. Concern with the policy approach that development needs alone do not justify Green Belt release, that the strategy was determined ahead of the Green and Grey Belt review, and that updated evidence is needed including a review of grey belt. Suggestion that there should be targeted review of the inner Green Belt to take a holistic approach to sustainable development.

Concerns around adequate water supply and the lack of infrastructure to support the proposed development, including that the required infrastructure may not be deliverable through the development process alone. Concern that there is a lack of clarity over the timescales for delivery of strategic transport infrastructure, the need for sustainable transport alternatives to the private car including in the rural area, and raising concerns about the impacts of specific transport schemes such as Cambourne Station, East West Rail and CSETS. Comment that the Plan cannot be properly considered without the Greater Cambridge Transport Strategy.

Concerns that the provision of Gypsy and Traveller pitches within strategic allocations, regularisation of existing sites, household dissolution and enforcement action is likely to result in over-provision within the plan period. Additionally, concerns that the Local Plan does not include a roadmap or commitment to delivery within strategic sites, and that the burden is placed on optimisation and intensification of existing sites particularly through S/AMC/GT. Concerns that Smithy Fen is already out of proportion with the proposed number of pitches considered appropriate for new communities, and that adopted planning policies H/21 and H/22 have not been carried forwards.

Response to main issues raised in representations:

Support for the development strategy is noted.

This version of the plan is being produced ahead of the Spatial Development Strategy so cannot be informed by it. The plan period of 2024-2045 is in excess of the 15 years required by national planning policy, and is considered an appropriate time horizon to plan for, balancing providing certainty for the long term with the difficulty of forecasting development and other needs far into the future.

For both employment floorspace and housing the plan includes a flexible supply that provides headroom above the identified objectively needs, as set out in below, with further detail provided in the Strategy Topic Paper.

Anticipated supply from completions in 2024/25, existing commitments, the windfall allowance and new allocations is in excess of the housing requirement of 48,069 dwellings for 2024-2045 set out in the Local Plan. A headroom of 8.2% is provided. There are also a number of strategic sites that will continue delivering beyond the plan period. The Housing Delivery Study – Addendum (2026) sets out that there is no national planning policy requirement for headroom to be included over the plan period, but it is sensible to do so to provide resilience. It also highlights that with the requirement to review local plans every 5 years, a plan review can address any shortfall later in the plan period if it arises, and that Greater Cambridge has more organisations supporting the delivery of housing and infrastructure delivery tools at its disposal than the majority of local planning authorities across the country. The Cambridge Growth Company's explicitly stated role is to enable and accelerate key developments in and around Cambridge. As such this area will have the tools to accelerate housing delivery beyond the rates included within the housing trajectory, which would again add to the housing supply within the plan period. The headroom of 8.2% is therefore considered to be appropriate for Greater Cambridge.

Comments that the development strategy locates housing away from employment sites with negative environmental consequences have been considered. The development strategy directs development to the most sustainable locations to reduce commuting over long distances and enable travel by sustainable modes, whilst having regard to Green Belt purposes. The strategy focuses on strategic sites that have existing or proposed public and active travel connections to Cambridge and other key employment locations. The strategy includes significant mixed use development within and on the edge of Cambridge outside of the Green Belt

close to employment centres, in particular at Cambridge East, and also includes housing development close to employment locations away from Cambridge, including at Land adjacent to A11 and A1307 at Grange Farm.

The Councils have considered comments that the Plan is not meeting the need for specific sectors including large scale warehousing, mid-tech, agri-tech, and data centres. For large scale warehousing, the Council's evidence identifies a robust need for warehousing meeting Cambridge market needs. It would not be appropriate for the Greater Cambridge Local Plan to identify and apportion a need for strategic warehousing facilities serving national or regional markets that include but go beyond Greater Cambridge. The future Cambridgeshire and Peterborough Spatial Development Strategy (SDS) provides a credible prospect that a long term solution to the need for warehousing and logistics serving national or regional markets affecting Greater Cambridge and the wider Cambridgeshire and Peterborough area will be identified in the foreseeable future. Ahead of the SDS, emerging local plans in the area provide a positive approach in responding to evidenced needs for warehousing and logistics, including for warehousing and logistics serving national or regional markets where a need has been identified. Noting significant supply in the wider area and that the sub-regional and regional need is not confirmed, Cambridge City Council and South Cambridgeshire District Council consider that there is no case for immediately allocating additional supply in the emerging Greater Cambridge Local Plan that would address warehousing and logistics needs serving national or regional markets. For mid-tech, the Councils' Industrial and Warehousing Study 2024 explored this topic including engaging with mid-tech occupiers, identifying mixed views. The Proposed Submission Plan includes sufficient allocations in priority locations that meet the need identified in that Study. For agri-tech, whilst there are Agri-Tech strengths across the wider region, the concentration is less distinctive in Greater Cambridge and clustering is less apparent compared to other sectors. The Councils' evidence does not identify a need for an additional site in Greater Cambridge to enable the clustering of AgriTech businesses. For data centres, while the Councils' evidence does not explore this issue explicitly, very few representations have raised the need for this emerging use. The Councils consider that the

very significant amount of employment floorspace included in the Plan would provide opportunities for such uses to come forward in desired locations.

In response to objections that the strategy places an overreliance on a few large strategic sites for growth, the development strategy focuses on the most sustainable locations to create vibrant, self-sustaining communities with a range of facilities and services, supported by planned high-quality public transport, and delivering homes to meet the needs of a variety of groups. The strategy promotes effective use of brownfield land including development at Cambridge East on the edge of Cambridge, released by the vacation of the airport, as well as at consented new settlements that include significant brownfield land at Northstowe, Waterbeach and Bourn Airfield. Consented sites such as these are included in the strategy and will continue to build out during the plan period. The strategy also provides flexibility by directing development to a range of locations, including smaller village sites, to meet local needs and ensure a consistent supply of housing delivery.

In terms of the deliverability of the strategic sites included within the Plan, the Infrastructure Delivery Plan identifies the infrastructure requirements relevant to each of these, including identifying funding and delivery timings. The Housing Delivery Study – Addendum (2026) considered the certainty and timing regarding the key infrastructure that each strategic site relies upon, to inform its conclusion that the trajectory for each site and the trajectory as a whole is deliverable.

The Councils recognise that the proposed strategic allocations will have significant impacts. Equally, alternatives to the proposed strategy, for example dispersing development to South Cambridgeshire villages, has been evidenced to have transport impacts that could not be mitigated. The impacts for each site have been carefully considered through evidence and via engagement with relevant organisations, for example via the further exploration of transport, ecology and landscape impacts associated with Cambourne North. Drawing on this evidence, the Infrastructure Delivery Plan sets out for each strategic scale site the infrastructure

required to mitigate the impacts of development, and the allocation policies each include firm requirements to ensure that all impacts of development are addressed.

The Councils have carefully considered the approach to Green Belt in this Plan. Drawing on our evidence and consultation feedback, we do not consider that our development needs alone provide the ‘exceptional circumstances’ required in national policy to justify removing land from the Green Belt in this Local Plan, having regard to the identification of other sources of land supply that can meet needs sustainably without the need for Green Belt release. We have, however, identified site specific exceptional circumstances for releasing land from the Green Belt at the Cambridge Biomedical Campus and Babraham Research Campus. Whilst we do not consider it necessary to release Green Belt to meet the general development needs identified in this plan, we have updated our Green Belt study in accordance with the latest National Planning Policy Framework and Planning Practice Guidance to ensure it provides a robust assessment, including to identify grey belt land within Greater Cambridge.

The Councils recognise the significance of the water supply challenge in Greater Cambridge, and have explored this topic in depth with all relevant national and local partners. As part of the Proposed Submission documentation, a Statement of Common Ground regarding water supply has been agreed between these partners, confirming that, whilst water supply issues will need to continue to be carefully monitored, the Local Plan has appropriately considered water supply issues. There will be statutory water supply planning by way of the Cambridge Water’s WRMP29 which will consider water supply planning over a minimum 25 year horizon, including taking into account the Local Plan. Water Resources East will also be producing an updated Regional Water Plan. Subject to appropriate infrastructure planning and associated approvals, funding and delivery through these processes, water supply is not a barrier to delivering the level of development proposed in the Proposed Submission Local Plan.

Comments on transport have been considered. Transport evidence supporting the Proposed Submission Plan demonstrates that

the transport network can accommodate the sites included in the development strategy subject to the provision of appropriate mitigation. This mitigation is set out in the Infrastructure Delivery Plan. In addition, the draft interim Greater Cambridge Transport Strategy sets out proposed solutions to address the connectivity needs of Cambridge City Centre, and also all other strategic transport schemes required to deliver the strategic sites identified in the Local Plan development strategy. As such, the draft interim GCTS provides sufficient proportionate evidence at this Regulation 19 stage to support the delivery of the sites within the strategy. The CPCA is committed to approving a final GCTS in November 2026 to support the submission of the Local Plan for examination in December 2026.

A response to the representations received relating to the delivery of specific sites, including their lead-in times and build out rates, and relationship with the delivery of infrastructure is set out in the response to representations on Appendix D (previously Appendix E). The Housing Delivery Study for Greater Cambridge – Addendum (2026) sets out AECOM's recommendations for responding to the representations relating to housing delivery, including the windfall allowance, and it also sets out AECOM's review of the housing trajectory for the Local Plan, including considering the Councils' housing trajectories for the new allocations and the overall deliverability of the development strategy. Appendix 10 of the Development Strategy Topic Paper (2026) sets out how the Proposed Submission Local Plan housing trajectory has been created, the Councils' assumptions for the deliverability and developability of each new allocation, and detailed annual trajectories for each of the new allocations. The Housing Delivery Study – Addendum (2026) concludes that the Proposed Submission Local Plan housing trajectory is deliverable, and that there is a balanced mix of viable sites that can deliver across the plan period.

Actual completions and allocations are anticipated to deliver a significant proportion (just over 87%) of the housing requirement of 48,069 dwellings, with the remainder (just under 13%) anticipated to be delivered by windfall sites. There is a history of windfall delivery in both Cambridge and South Cambridgeshire and the policies in the new Local Plan do not seek to limit the delivery of

windfall sites compared to current or previous policies, therefore it is considered realistic that new homes will continue to be delivered on windfall sites. The Housing Delivery Study – Addendum (2026) confirms that the recommendations in the Housing Delivery Study (2021 and 2025) for the windfall allowance are realistic and reliable for use in plan-making in the Greater Cambridge area.

The Councils have considered each of the adopted allocations from the Cambridge and South Cambridgeshire Local Plans 2018 in light of paragraph 127 of the NPPF 2024, and the results of this assessment are included in Appendix 3 of the Development Strategy Topic Paper (2026). The Councils' overall conclusions on which sites should be allocated in the Proposed Submission Greater Cambridge Local Plan, taking account of all other evidence, are set out in Appendix 8: Review of sites to inform identification of allocations at Proposed Submission stage.

The Councils consider that completions in 2024/25, existing commitments, proposed new allocations, and the windfall allowance have a good prospect of delivering the objectives of paragraph 73a of the NPPF 2024, which sets out that at least 10% of the housing requirement should be on sites no larger than one hectare. An alternative approach of allocating specific sites to demonstrate compliance would require identifying large numbers of small sites in the rural area, that would otherwise be enabled to come forward anyway via the other policies in the plan, including for example Policy S/SH, and as assumed in our windfall allowance. This would significantly add to the plan making process and compromise the aims and principles of our development strategy, by directing a significant portion of growth to less sustainable locations where levels of car use would be higher, impacting on our response to the challenges of net zero carbon and Climate Act obligations. It would also likely result collectively in requiring large amounts of land to be released from the Green Belt as the majority of the larger and better served villages are located within the Green Belt. Information on the likely supply of homes on sites of 1 hectare or less is set out in Appendix 2 of the Development Strategy Topic Paper (2026).

The Accommodation Needs Assessment of Gypsies, Travellers and Travelling Showpeople (ANA, 2025) makes recommendations for meeting the needs of Gypsies and Travellers in Greater Cambridge, including through turnover on existing sites, regularising of sites that are not permanently authorised, additional pitch provision using existing sites, making pitches on existing sites available, sites becoming vacant through household dissolution, and new sites for permanent pitches identified either as standalone sites or associated with major development sites. Each of the recommendations included in the ANA in terms of potential sources of supply to meet the identified needs of Gypsies and Travellers have been considered by the Councils, and the results are set out in Appendix 11 of the Development Strategy Topic Paper (2026). Although it is anticipated that around 185 pitches will be delivered within the plan period, this is based on assumptions relating to: household dissolution, pitches being made available where they are currently occupied by non-travellers, and strategic sites delivering new sites within the plan period. It is important that there is flexibility within the supply to enable sites to be brought forward at the appropriate time to meet identified needs.

Amendments have been made to Policy H/GT to clarify the principles for the development of traveller sites within strategic sites, including in relation to their location within the site and their delivery. Policies H/21 and H/22 from the adopted South Cambridgeshire Local Plan have been carried forwards into Policy H/GT. Policy S/AMC/GT is intended to set out the principles for proposals relating to the reconfiguration of sites to ensure that they result in an improvement in health, safety and living conditions for Gypsy and Travellers. Within South Cambridgeshire, there are existing concentrations of Gypsy and Traveller sites within specific parishes. For each of these parishes, Gypsy and Traveller pitches make up 1.1% to 2.6% of the ‘dwellings’. Whereas, for strategic sites, the number of pitches would amount to between 0.24% and 1.2% of the ‘dwellings’ on the site.

Overarching

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for Development Strategy includes: • Broad support for the 7 strategic priorities. • excellent proposals and detailed intentions that are well communicated • Support for strategy, specifically the retention of the NEC allocation and policy support for employment-led development, site intensification, in a sustainable location. • We welcome this vision document with its focus on new sustainable sites on active travel routes. • For stated order of preference for future housing land-use and retaining and enhancing the Cambridge Green Belt • limited infill in rural villages where public transport is poor and car travel is the only realistic option • support for the growth ambition and strategic direction, and inclusion of additional headroom in both jobs and housing projections. • Support Cambourne North being identified as an integral part of the strategy to meet housing, employment and community needs and deliver sustainable development.	203570 (The Crown Estate), 201528 (Stapleford PC), 205079 (Y Dignon) 202820 (Cllr K Porrer), 203900 (Cambridge Growth Company), 211535 (Martin Grant Land Limited), 211103 (Hallam Land Management), 211081 (The National Trust), 211067 (Savills), 211063 (St John's College Cambridge), 211041, 211054 (Wates Developments (and Landowners)), 210222 (Vistry Group), 208937 (Cambridge Growth Company), 208380 (NIAB Trust)

• A strategy that includes a particular focus, and reliance, on strategic sites in Greater Cambridge is logical and supported in principle. • Supports the plan-led system in principle, and broadly supports the development strategy and approach to site allocations. • It is noted that the 'Overview' section of the supporting text, at para. 2.55 refers to a blended strategy to meet a variety of needs which responds to opportunities provided by different sources of supply. This general approach is supported. • It is supported that (at para. 2.55d) sites should be developed that can be well-integrated with existing communities to reinforce the distinctive character of the city, towns and villages, having regard to development at densities and in forms which make best use of land whilst creating well-designed, characterful places. • Part 1 is supported, it is considered appropriate that development should be focused within Cambridge City and on the outer edge of Cambridge, accounting for the global importance of Cambridge as the focus for growth.	
Support for the development strategy concentrating jobs and homes, within urban centres, new settlements, or in proximity to existing or proposed infrastructure: • Prioritising new homes in sustainable locations • Reduce the need to travel and enhance co-location benefits • Promoting public and active modes is the natural choice • Locations with the least climate impact • Integrating green infrastructure	201012 (M Colville), 201657 (Huntingdonshire DC), 201023 (K Mahoney), 201376 (Gamlingay PC), 208491 (Central Bedfordshire Council) 202612 (Ickleton PC), 204701 (Optimis Consulting Ltd), 202822 (Cambridge City

• Agree to developing sites at appropriate densities to optimise land use and create well designed places • Support for continued development of the Cambridge Biomedical Campus, intensification at Eddington, the Innovation District at Cambridge West, and the evolution of Cambourne with a new East West Rail station. • Support long term vision which will continue new homes, jobs and infrastructure beyond the plan period to help maintain a land supply and reduce need for development in less sustainable locations • Expresses clear support for the hierarchy of development set out in the policy. • Ickleton PC generally supports the Development Strategy for Greater Cambridge.	Council Liberal Democrat Group), 202609 (Ickleton PC), 204720 (Croudace Homes), 204139 (Richborough)
Support for spatial approach directing most new development to the northern part of the district, using brownfield sites and the A14 corridor, aligning with the jobs-led housing need and sustainable growth objectives	203256 (North Herts Council)
Supports plans to increase numbers of accessible/adaptable homes (e.g. via application of M4(2) building standards).	202079 (Great Shelford Village Charity)
Support for order of preference and approach to future land use for housing and the retention and enhancement of the Cambridge green belt.	203263 (Horseheath PC)
Allocated sites within the GCLP reflect a balanced approach to growth, ensuring that development: Is appropriately scaled to the size and function of settlements, Is supported by	205849 (Lolworth Parish Meeting)

infrastructure planning and mitigation, Responds to identified local and strategic needs, Protects the intrinsic character of rural communities. Lolworth recognises that planned development, when delivered in accordance with the Local Plan, can support sustainable growth while safeguarding the qualities that make villages such as Lolworth distinctive and viable.	
Concern that the development strategy is locating housing away from employment sites with negative consequences: • Housing growth becoming dispersed while employment remains concentrated around Cambridge, increases congestion, increasing pressure on transport corridors and making sustainable travel harder. Highlights the importance of providing safe, attractive routes for walking and cycling. • Location of housing delivery away from employment sites. Residential development to be in Cambridge close to existing infrastructure and sustainable transport options. • Highlights the need for employment and housing to be planned together to avoid increasing car trips, congestion and carbon emissions, and enable equitable access for households without cars. Supports mixed-use development and co-location of homes and jobs to enable walking and cycling and reduce the need for costly public transport extensions. Also raises concern that	201738 (T Burford), 201686 (B Le Gallez), 202506 (H Brown), 203145 (Cambridgeshire ACRE), 203335 (Great Wilbraham PC), 204500 (D Potts), 204701 (Optimis Consulting Ltd), 203663 (V Ashton), 203200 (A Hoare), 204632 (Max Fordham), 205280 (A Williams), 203311 (L Dassy), 204187 (Mr and J Johnson), 205122 (J Grantham), 202451 (A Brown), 203662 (T Preud'homme), 205028 (N Spenley), 204763 (R De Beaux), 204716 (Mothers CAN Cambridge), 204559 (R Hoadley), 204658 (R Humphrey), 205438 (A Kirchgaessner), 204506 (Redrow South Midlands), 209067, 211764 (Camcycle)

higher-density development and additional car infrastructure may reduce opportunities for open green space, private gardens and community spaces. • Comment on the need for clearer detail on the geographical distribution of planned employment, that plan actually supports the needs of employees, businesses/employers, and the desired economic growth. • Notes that the development strategy does not set out employment opportunities within out-of-town development areas, which risks forcing longer car-dependent journeys. • Notes limited growth directed towards the south and southeast of Cambridge. Raises concern that the RSC area has very limited proposed housing compared with east and north Cambridge, despite being a major employment centre. States that low supply inflates prices and harms local communities. Argues that development in/adjacent to existing settlements—particularly along transport corridors—is more sustainable and more popular than new settlements such as Grange Farm. Recommends allocating additional development in or near Rural Centres. • Concern strategy does not meet the needs of those living in villages, risk of concentrating growth benefits away from villages, still placing pressure on rural services and roads, little reference to cumulative impacts on village infrastructure, rural health access or digital connectivity. Limited attention to strengthening everyday service access within rural communities. Stronger rural	

proofing would include clearer safeguards for rural services, investment in village transport links and a stronger role for parish councils in shaping growth. Suggests importance of enabling plan-led and organic growth in villages to support rural community vitality and local housing needs, notes affordable and specialist housing. Recommendations for emphasis on proportionate growth in rural settlements. Calls for more explicit direction on job and housing needs in rural areas. • Recommends development of approximately 65 dwellings in a sustainable rural settlement is seen as a modest and valuable contribution to housing needs. • Sustainable development not achievable unless no more growth and concerns over the environment. Suggests businesses, housing, roads, people, should be directed elsewhere.	
Much of the Plan's transport discussion, and wider transport debate, is framed around commuting into Cambridge. This commuter-led framing creates two problems. First, transport systems designed primarily around peak commuting struggle to deliver viable and attractive services. Second, it overlooks the fact that the majority of trips are not made for work, but for everyday activities such as shopping, education, healthcare and social life. Access to local amenities plays a far greater role in shaping travel behaviour than access to distant employment alone, yet this is not sufficiently reflected in the spatial strategy.	209068 (Camcycle)

In Cambridge, it is possible within this Plan period to achieve sustainable mode share of up to 90% of trips if land use and connectivity are planned in a way that provides people with local needs and high-quality active travel and public transport, whilst correctly pricing the cost of car ownership. At present, there is a risk that overly cautious assessments and a reluctance to allocate housing in more challenging locations are constraining the Plan's potential to deliver sustainable development.	211763 (Camcycle)
It is considered that the proposed development strategy fundamentally conflicts with the strategic priority relating to wellbeing and inclusion. The wellbeing and inclusion strategic priority identifies the Council's intention to ensure that 'everyone benefits from the development of new homes and jobs'. However, it is evident that this priority will not be achieved through the implementation of the proposed spatial strategy whereby the vast majority of growth is proposed to be located within the area between the A11 and A14. Figure 8 of the Draft Plan (reproduced below) illustrates how a significant proportion of the region will not benefit from any jobs or employment growth, demonstrating that the rural area of the region will not see the benefits of new development.	211276 (Woolsington One Ltd)
Many of the proposed new workspaces will be on the Wellcome Genome Campus, which is located away from railway stations and housing. Even though the Wellcome Trust works hard to provide coaches from Cambridge to Hinxton, many of the people working there drive from Cambridge and elsewhere because this is more convenient.	203278 (J Palmer)
The Local Plan should:	211777 (Camcycle)

● Remove the Grange Farm allocation from the Plan ● Avoid substituting constrained urban or edge of Cambridge sites with remote or poorly connected locations ● Prioritise development in locations where sustainable travel can be the default from day one, without reliance on speculative or uncommitted transport mitigation.	
Objections that the strategy places an overreliance on a few large strategic sites for growth: • Objects to the strategy as fundamentally flawed in meeting identified housing and employment needs. • Raises concern that the strategy is overly dependent on major new settlements and infrastructure that is not yet confirmed, including the proposed rail link. States that locations do not have sufficient infrastructure to support additional growth. Concern re feasibility of significant infrastructure need and impact on delivery. • A number of these strategic sites have significant constraints which will likely result in significant delays to delivery. • NPPF Paragraph 23 emphasises the need for a clear strategy for land delivery to meet assessed needs. • A 20% buffer is recommended instead of the proposed 6.5% to ensure robust planning and adequate housing supply	201929, 201938,, 201946, 201936 (M Asplin), 202035 (Wimpole Associates Ltd), 202328 (Granta Land Ltd), 202365 (The CLC Trust), 201854 (Chivers Farms Limited), 207537 (Horningsea PC), 207535 (Home Builders Federation), 203138 (ESCO Prospect), 203309 (J Manning), 206213 (Granta Land Ltd - Land at Valley Farm, Meldreth), 206071 (Wimpole Associates Ltd), 203892 (Hill Residential (Fulbourn Site)), 203965 (Hill Residential (Sawston Site)), 204043 (E W Pepper Ltd), 203317 (W Bowden), 204087 (M Richmond), 202450 (I Morris), 202160 (H Fordham), 202627 (British Land), 203069 (Pegasus Group), 206079 (Wimpole

• Historically lead to delays in delivery rates, raises concern that relying on the same approach will not deliver the required scale or pace of development, and risk that housing need is not met. This will impact 5 year housing land supply. • Housing trajectory is based on over-simplistic delivery rates, and is not credible. Questions the realism of delivery assumptions, noting that current build-out at major sites such as Northstowe and Waterbeach is significantly below what would be required to achieve the target of 37,865 homes by 2045. Historical data shows a consistent delay in housing delivery from strategic sites, averaging 4.1 years longer than anticipated. • Concerns with over reliance on delivery at new settlements and delivery from windfall sites, with a significant decrease in housing provision within the Cambridge Urban Area and a reduction in the rural area. • Comments on over-reliance now placed on new settlements in meeting housing needs. 93% is made up of 5 sites. 44% of the proposed distribution in housing growth is now anticipated to come forward at the new settlements, compared to 23% in the adopted Local Plan and 18% in the previous Structure Plan. • Objects to the growth of Cambridge and expresses a preference for no expansion of the city. States that while sustainability, biodiversity and climate goals are supported, it is not realistic to accommodate the proposed level of growth while simultaneously reducing traffic and enhancing biodiversity.	Associates Ltd), 204971 (Martin Grant Land Limited), 202081 (J Francis), 202763 (Martin Grant Land Limited), 202766 (P Norman), 203157 (Christ's College, Cambridge), 202906 (The Trustees of the C Y Nutt Deceased Will Trust), 202887 (Northwest Biotherapeutics Capital Limited), 203342 (The Varrier Jones Foundation), 204720, 208771 (Croudace Homes), 204376 (Hill Residential (Great Abington Site)), 204439 (Wain Estates), 204434 (Bellway Strategic Land), 204640 (Urban and Civic and Hill Residential), 202536 (Granta Land Ltd), 204241 (Bellway Strategic Land), 204139 (Richborough), 204420 (Bellway Strategic Land), 203924 (Emmanual College), 204122 (Emmanual College), 204164 (Tritax Big Box Developments), 204275 Croudace Homes), 203390 (Jesus College), 203406 (Jesus College), 201940,

• Objects that the proposed level of housing growth is unsustainable in a predominantly rural county, stating that development would erode countryside gaps and overwhelm existing settlements such as Cambourne, and the need to address connectivity. Raises concern that recent new settlements lack community cohesion and adequate infrastructure. • Objects to scale of development, creates long term disruption, harms liveability, and is driven by development pressure rather than local need. • Recommendation for a diversified strategy with proportionate growth in expanded existing settlements and development along transport corridors to accord with NPPF which encourages development to be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. • strategy should plan for a higher level of employment and housing growth with a greater supply buffer given uncertainty over delivery of key sites. • Suggested that additional smaller sites on the edge of Cambridge in sustainable locations should be considered. • Suggested that additional allocations at strategic growth scale are added to Improve the pipeline supply in sustainable less constrained locations such as to the east of the subregion and at Six Mile Bottom. • Fails to allocate appropriate levels of development within settlements. Only 205 out of 13,463 homes identified for 2024-2045 will be in rural areas, suggesting	201947 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073, (J Francis), 202433 (The CLC Trust), 202554 (Ely Diocesan Board of Finance), 203576 (Horningsea PC), 204073 (South Cambridgeshire District Council), 206076 (Wimpole Associates Ltd), 203511 (ESCO Prospect), 202156 (R Lambert), 202913 (K Trudgeon), 204106 (Richborough), 206104 (Wimpole Associates Ltd), 209328 (St John's College Cambridge), 204511 (Redrow South Midlands), 208398 (Ceres Property on behalf of landowner at Freisland Farm, Swavesey), 204043 (E W Pepper Ltd), 205011, 208363, 208364, 208365, 211536 (Endurance Estates), 204850, 204868 (Great Shelford (Ten Acres) LLT), 204506 (Redrow South Midlands), 211107, 211108 (R Raywood, A Bradney and D Unwin), 204529 (Rosconn Group), 204956, 205002,

more flexibility in allocations to mitigate delays with strategic sites. Additional small sites should be allocated (various sites are promoted), including in the more sustainable villages to ensure delivery early in plan period. • Plan leaves ongoing pressure on surrounding villages through Green Belt evidence and promoted sites, despite the absence of formal allocations. • Crucial to identify small sites, including in grey belt, to increase supply of identified sites for housing, to support small/medium housebuilders, enhance housing diversity and foster local growth. • Ensure delivery of more homes earlier in the plan period. • Allocate more medium scale sites capable of delivering 150-250 dwellings. • Concern development strategy misses the sustainability benefits of homes in rural areas for community resilience and is flawed. Further small sites be allocated to ensure delivery rates in sustainable locations early in the plan period • New settlements are expected to deliver less than 40% affordable housing. • Justification for release of land from Green Belt to direct housing to sustainable locations, as significant need for housing and affordable housing. • Infill pressures already exceed the eight-dwellings-per-site limit, creating traffic and community concerns • Figure 12 shows distribution of growth with rural areas and windfalls 16%, compared to 23% in adopted plan and 30% in 1999-2016 plan. • Plan does not confirm with NPPF requirements:	211059 (Wates Developments), 205311 (Axis Land Partnerships ltd), 206352 (Grants Land Ltd – Meldreth)), 207996 (Cambridgeshire County Council), 201968 (Shelford Investments), 202099 (Cambridgeshire County Council (Strategic Assets)), 202558 (Ely Diocesan Board of Finance), 211610, 211611 (Bloor Homes Eastern), 211584 (Terra Strategic), 211583 (Mr & Mrs Smith), 211477 (G Robinson and Partners), 211472 (Beechwood Estates Ltd), 211410, 211411 (CALA Group Ltd), 210222, 210223 Vistry Group, 208903 (Nightingale Land and Hill Residential Ltd), 208381, 208382 (NIAB Trust)

○ Paragraph 73 - failing to deliver at least 10% of homes on sites no larger than one hectare, rather than relying on windfall developments. Current approach allocates 3.5% of the housing to small sites, which is below the NPPF's 10% target. ○ Paragraph 83 - strategy does not align with requirement to enhance rural community vitality, in reliance on windfall developments not planned allocations. ○ Current Green Belt release criteria conflict with NPPF 2024 paragraph 146 ○ Contradicts Dec 2024 NPPF and Feb 2025 PPG update which require a sequential approach prioritising grey belt for release, by failing to map this land the Councils bypass a national mandate to support village vitality (NPPF 83) and small-site delivery (NPPF 73). ○ Plan is premature on the basis it fails to have regard to emerging revised NPPF, in particular 20% of allocations should be on sites of between 1 and 2.5 hectares. ○ Objects as approach is problematic, regarding delivery timeframes, and inconsistent with key principles of the NPPF. Paragraph 72 of The Framework acknowledges the importance of strategic housing land supply comprising a sufficient mix of sites, regarding availability, suitability and economic viability.	

○ Paragraph 72a states that ‘land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved’. According to this data, 94% of all new dwellings proposed between 2024 and 2045 are allocated across only 6 sites, 3 of which are new settlements. The ‘Rest of the Rural Area’ comprises rural centres and group villages, a total of 48 settlements, and has only 3 sites allocated for a total of 205 new homes. The proportion of development attributed to major, strategic sites not only carries a huge risk to deliverability but is also inconsistent with The Framework. • Housing delivery assumptions for all of the strategic sites are reassessed, taking into account realistic annual housing delivery rates and the delivery of critical infrastructure required for those sites. • To Release Land from the Green Belt to meet development needs. • Make additional allocations are made in the more sustainable villages, including Fulbourn, Great Shelford, Sheene Farm, Meldreth • Revise sequential hierarchy of types of location to account for sustainability benefits of sites adjacent to villages. • Revise housing trajectory with realistic figures for delivery on major sites.	

The Draft Plan does not provide enough housing land to meet the 48,195 home target and the 73,300 job target: • A housing land supply buffer of at least 10% (ideally 15-20 %) is required. • It is evident that the housing land identified in the Draft Local Plan is insufficient to meet the real-world need in and around Cambridge for two further key reasons: the continuing reliance on in-commuting; and the reliance on strategic sites.	207904 (Barratt Redrow), 204355 (Barratt Redrow), 204139 (Richborough), 204929 (Places for People), 203890 (Hill Residential (Fulbourn Site))
It is considered that the strategic priorities for the draft GCLP would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development at the more sustainable villages including Fulbourn, Great Abington.	203890 (Hill Residential (Fulbourn Site)), 204340 (Hill Residential (Great Abington Site))
Concern the strategy will not deliver the needs of a growing population: • Green belt releases south-east of Cambridge are piecemeal and fail to represent a holistic approach to sustainable development. • Grange Farm is ill thought out, will become a car commuter settlement given its proximity to A11/M11 and ease of access towards London. It is unlikely the majority of new residents work in southern research cluster. Too small to deliver most services residents will need resulting in out-commuting. • Should deliver a comprehensive plan for south east of Cambridge, edge of Cherry Hinton, Queen Ediths, Biomedical Campus, with targeted review of inner green belt, including accessible natural greenspace.	202493, 202510, 202513, 202524 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust)

• Small targeted extension of Peterhouse Business Park would deliver new accessible rich countryside to support growing city.	
Suggests removing or discounting speculative development dependent on unresolved infrastructure funding, provide distinction between allocated and non-allocated supply, and adopt a more cautious, deliverability-led approach that protects Green Belt land, water resources, village character and transport networks	207537 (Horningsea PC)
A strategy should be underpinned by simple enduring design principles. It doesn't have to be complicated, stick to the 'Keep It Simple" mantra.	201920 (A Davidson)
Suggestion there needs to be greater focus on mixed-use zoning with specifics on how to achieve hyperlocal and interconnected employment and community amenities. Cambridge already has many scattered zones with residential areas desperately needing local leisure and shopping areas	205292 (P Colledge)
Comment that the plans do not provide adequate development opportunities in villages around Cambridge, particularly where transport hubs exist that could support housing for employment areas.	205244 (L Gardner)
Objects that the Newlands proposal would dominate the rural landscape, is inappropriate in scale/height, and would add around 4,500 daily vehicle movements at an already congested junction. States the development would serve national/regional distribution needs rather than local needs.	202838 (W Nichols)
Comments proposed allocations, both existing and proposed, are in locations where the required public transport does not currently exist and the delivery of which is outside the control of the Greater Cambridge authorities.	209966 (Granta Land Ltd)

Barratt David Wilson Homes and the North West Cambridge Consortium of Landowners object to Policy S/DS: Development Strategy, while broadly supporting it for carrying forward allocations from adopted plans, particularly Darwin Green. They note a minor observation regarding the policy wording, specifically that Darwin Green is not mentioned in part 2 (b) 'on the edge of Cambridge', unlike other carried forward allocations. The respondents request that Darwin Green be explicitly included in the policy wording under part 2 (b), as it is represented in Figures 8 and 9 referenced in the policy.	203015 (Barratt David Wilson Homes and the North West Cambridge Consortium of Landowners)
Policies S/DS and S/SH should be considered together, as S/SH outlines the settlement hierarchy that informs growth locations in S/DS. Fulbourn is identified as a Minor Rural Centre, which should accommodate growth due to its proximity to Cambridge and good transport links. The respondent suggests adding a sub-category for 'Well Connected Minor Rural Centres' to better reflect sustainability, including Fulbourn, Milton, Melbourn, and Waterbeach.	204929 (Places for People)

Land north and west of Wilbraham Road, Fulbourn is proposed as a strategic site to enhance housing supply and mitigate risks associated with delayed developments. Changes to plan: Part 1 of the policy should be revised to refer to 'Well Connected Minor Rural Centres' and include the allocation of land to the north and west of Wilbraham Road, Fulbourn as a sustainable mixed use allocation to delivery over 2,500 dwellings.	
The plan should align with the Cambridgeshire and Peterborough Spatial Development Strategy: • Combined Authority will produce a Spatial Development Strategy by 2028. Local Plan will be required to align with SDS and if not amended now will be immediately out of date. With Local Government Reorganisation this could be the last Local Plan to guide growth in Greater Cambridge area. Plan should deliver a development strategy which reflects and supports the approach being taken at both the national the regional level and ensures that the area can maximise the benefits and opportunities available at the local level. Plan period should be extended to at least 2050. • Plan period needs to be extended to 2050 to align with the Cambridgeshire and Peterborough Spatial Development Strategy and accounting for the number of strategic allocations within the plan, that will result in substantial growth after the plan period.	208396 (Ceres Property on behalf of land owner at Freisland Farm, Swavesey), 204106 (Richborough), 208377 (NIAB Trust)

• In accordance with the requirements of paragraphs 25 and 26 of the NPPF, it is critical that the emerging DLP is aligned to the Local Growth Plan and the emerging Spatial Development Plan for Cambridgeshire. • As a starting point, this should ensure that housing and employment growth is substantially increased to align with the objectives for Cambridgeshire & Peterborough.	
Comments in relation to the impact on the rural area and rural communities: • Concern that whilst increased housing and jobs are welcome regard must be given to existing landscape and infrastructure. There is a danger villages will be swamped. • Concern rural communities are not clearly visible within high level framing. Priorities around reducing car use and focusing development in well-connected locations could disadvantage villages unless matched with investment in rural transport, digital connectivity and local services. There is limited recognition of rural health inequalities, ageing populations and the role of parish councils and community organisations. Stronger rural proofing would ensure the strategic priorities explicitly address rural access, inclusion and infrastructure needs alongside urban growth. • Concern increasingly agricultural land is being taken, how that affects food production.	202282 (L Turton), 203140 (Cambridgeshire ACRE), 203336 (Great Wilbraham PC), 203617 (H Thomas), 201734 (R Stobbart), 205609 (Y Dignon)

• Concern plan sets out prioritisation for urban centres and the communities and rural communities, such as Great Wilbraham, are disenfranchised. If development in smaller villages is limited the Plan should include strategies for proactively working with villages to develop more sustainability and viability for residents, potentially services such as buses, schools or shops requiring extra support and are not, in themselves cost effective. • Concern Plan encouraging sparse rural development and so unsustainable development which increases transport related emissions, climate change, harming biodiversity, producing places far from amenities, not socially included and don't foster social inclusion. • Recommends focus on building dense human-scale developments near to the amenities people want such as in the city of Cambridge. • Concerns that development which encourages car use will harm carbon emissions, landscape and rural liveability. • Support for response submitted by Cambridge Sustainable Food	
Comments in relation to the environment, green spaces and biodiversity: • Comment that this section lacks adequate allocation for green spaces and wildlife and broadly runs contrary to that goal, leading to destruction rather than enhancement of green space within the city; this must be reconsidered with a much greater emphasis on large, healthy, biodiverse surroundings. • Suggests greater emphasis on access to nature and green spaces.	207151 (P Colledge), 202650 (S Berridge), 202156 (R Lambert), 203263 (Horseheath PC)

• Concern that development is not grounded in the environmental limits of the area, particularly the reliance on depleted chalk aquifers and associated risks to landscape, health, and environmental quality. • All development must be sustainable; we strongly support this basic tenet of the plan.	
We endorse the proposal as it strengthens Cambridge's role in the Oxford-Cambridge growth corridor, delivers mid-tech and advanced-manufacturing capacity and aligns with the employment and economic objectives set out in the Development Strategy.	203243 (Cambridgeshire Chambers of Commerce)
Comment that the Plan requires further work on critical issues such as travel and flooding, which have not been adequately addressed	207525 (P Deer)
Support for use of development of brown field sites and repurposing of empty buildings, less development of green belt and green spaces.	201156 (G Briscoe), 201682 (S Smith)
Comments that the strategy omits provision for attitudinal change towards affordable, sustainable, healthy, local food.	205079 (Y Dignon)
Comment highlights the long-term strategic potential of the Ashwell and Morden area, outside the Green Belt, well-connected by rail and suitable for sustainable growth and suggest it be explored for future housing provision	203257 (North Herts Council)
The general strategic approach of the Plan to develop new settlements and significant extensions to the largest settlements is consistent with NPPF and specifically NPPF 77, provided the development is supported by the necessary infrastructure and facilities	210982 (C Newell)

The strategic policy approach takes the pressure off the middle-sized and smaller villages of South Cambridgeshire which are rural and generally poorly supplied, with a high proportion of Conservation Areas and other designations and generally a closer relationship between the village and its rural surroundings. This proposed Plan prioritised approach also ensures sustainable housing is easier to implement once the infrastructure and facilities are provided.	210985 (C Newell)
Currently the planned provision of Infrastructure and facilities is questionable, especially in the supply of water and electricity and in the treatment of sewage, and especially their viability within the next 5 years when they are relying on a failing aquifer, depleted chalk streams and overburdened local facilities. The current Plan relies too much on a future Fens reservoir that is at a very early stage and the proposed re-purposing and intensification of extraction from Grafham Water, both of which are outside the Development Plans area and are likely to have significant impacts which are not made clear.	210986 (C Newell)
Concern plan does not provide clear modelling of how Section 106 and CIL contributions will be used to improve village connectivity	207997 (Cambridgeshire County Council)
Suggests the term “Rural Centres” is misleading – these settlements are close to Cambridge and well-served, they should not be grouped with larger hub villages; “Minor rural centres” function more like suburban areas	207998 (Cambridgeshire County Council)
Amend Policy S/DS to include:	211420 (Wilson Bowden Developments Limited)

1. The need for jobs and homes will be met as far as possible in the following order of preference, having regard to the purposes of the Cambridge Green Belt: "c) On the edge of Royston; “	
The North Herts Economic Strategy 2025-2030 notes that given the proximity of The York Way industrial area in Royston to Cambridge and London, every attempt should be made to forge wider and deeper links to the Cambridge Sub-Region (at page 17). Whilst the Plan now includes two new class B2/B8 allocations, this leaves the Cambridge supply effectively limited only to these two sites, such that possible investors seeking industrial floorspace are faced almost with a duopoly position. Provision of additional land for class B2/B8 floorspace as part of Royston’s cluster of ‘major advanced manufacturing and life sciences’, should be supported, both to meet North Hertfordshire objectives and address any Greater Cambridge shortfalls that may flow from the Local Plan.	211419 (Wilson Bowden Developments Limited)
Concern that the approach limiting development in villages will not support improvements to rural transport connectivity.	210999 (Cambridgeshire County Council)
Strategy Topic Paper which summarises the SA growth options assessed states that edge of Cambridge sites in the Green Belt, or urban extensions to Cambridge, would be likely to deliver more homes within the plan period than those away from Cambridge. Yet, the spatial strategy is allocating sites away from the edge of the city which	209696 (CEG Land Promotions Ltd)

evidence shows deliver more slowly in this geography. It also notable that the GCLP carries forward allocations in the urban area which have not delivered since the adoption of the previous local plans. There are well documented difficulties around the viable delivery of brownfield sites in the current economic climate so assumptions about their delivery should be realistic in this context.	
Greater Cambridge is vital to the economic aspirations of the UK, both now and in the future. However, to ensure that continues, the GCLP needs to respond positively to the concerns raised by a range of stakeholders which would threaten the delivery of sustainable growth in the area, which include: 1) the delivery of a quantum of housing that will enable the job growth expected across the wider Greater Cambridge region, including a wide range of sizes and tenures, to ensure that businesses can draw upon the necessary labour pool; and 2) the location of houses in areas which are accessible to and well supported by public transport links and can take advantage of the significant investment that is going into improving local infrastructure such as the delivery of Cambridge South station, East West rail and new guided busways.	209691 (CEG Land Promotions Ltd)
• Concern Policy S/2 (Spatial Strategy) should demonstrate a clear “brownfield first” approach, consistent with NPPF paragraphs 11 and 119, prioritising the reuse of previously developed land, empty homes, and under-used buildings. • Growth should not be directed to locations where inclusive access cannot be delivered.	208948 (CPRE Cambridgeshire and Peterborough)

• Development in areas lacking accessible pavements, crossings, or step-free routes risks excluding disabled people and conflicts with the Public Sector Equality Duty (Section 149, Equality Act 2010).	
Edge of Cambridge should be lower in the order of preference than Cambourne and new settlements.	201012 (M Colville)
S/PRIA/EG and EW Bridge and Underpass(es) cultural hub Project: • I support development within the designated PRIA of a Cultural Hub offering accessible programme. • The area surrounding the bridge and underpasses is lacking a sense of place. • Introduce community, sports and cultural programme and upgrades to the public realm to promote safety and identity. • Strengthen active transport N/S and E/W connections around the infrastructure for better connectivity, prioritising residents and visitors.	205237 (University of Cambridge)

Jobs and homes

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Supports Development Strategy and recommends that allocations, housing and employment growth identified, are a minimum requirement with flexibility allowing optimised levels of growth. Allocations identify options for expansion and extensions	203908 (Cambridge Growth Company)

where these can be supported in transport, landscape, and in green and other infrastructure terms.	
Supports target of 48,195 houses, with headroom of 30-69% above the incremental target of 10,330 homes, likely probability of meeting or exceeding the target.	201012 (M Colville)
Comments planned developments resulting in additional 17,950 homes after 2045, will help meet future expansion requirements and provides additional headroom.	201012 (M Colville)
Comments housing requirement is not aligned with jobs growth, increasing car commuting into Cambridge, and not meeting climate change strategic priority.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis), 202433 (The CLC Trust), 202555 (Ely Diocesan Board of Finance)
Concern over amount and location of jobs and homes: • Concerns over increased number of jobs and homes in Cambridge. Jobs needed elsewhere. • Concern over number of housing numbers. You say you want an additional 48,195 homes, Northstowe and Waterbeach provide 37,865 homes, and additional sites 13,460 homes. These add to 51,325 homes not 48,195. Cambourne North will provide 13,000 new homes, Cambourne 2350 and Grange Farm 6000. This is way more than 13,460. • Concern Plan does not provide analysis of employment growth to match its housing evidence, are homes and jobs are being planned together. Growth in	201223 (S Williams), 201500 (C Meads), 201699 (R MacDonald), 201992 (D Langley), 202861 (J Williams), 203197 (G Orwell), 204043 (E W Pepper Ltd), 204160 (Mr and Mrs J Johnson), 204908 (K Brightwell), 201499 (C Meads),

jobs only where equivalent new housing can be provided, within cycling distance and good public transport links. • Concern plan envisages housing growth over a wider area, with employment still focussed around Cambridge, leading to pressure on transport corridors, and making sustainability harder. Need detail of where employment will be located, that transport issues can be addressed. • Concerns housing becoming more dispersed and employment concentrated around Cambridge. • Concerns that the allocation of 10,330 homes between 2024 and 2045 is insufficient for sustainable growth in Greater Cambridge. • Concerns a lack of housing in smaller villages is a constraint on sustainable development, new households would need to relocate away from their communities. • Request to identify a broader range of housing sites in South Cambridgeshire's rural areas to promote sustainable growth and support local economies. • Concern housing distribution disregards the CPIER report's recommendations, reducing flexibility of housing delivery and limit market choice. • Comments commute from Cambridge satellite towns to the city centre challenging and residents of these towns are reliant on cars as public transport connections are poor	

• Travel to work when settlement is dispersed but employment is all within the city is an issue. • Dispersed growth increases pressure on transport corridors and reduces sustainability • Detail of where employment is planned across the geography requested • The report by Iceni (Greater Cambridge Employment and Housing Evidence Update) considers the central employment scenario was the best option, suggesting 66,600 new jobs. Yet your plan is for 73,300 new jobs. This is incorrect. You cite the Iceni report but it doesn't mention 73,300 jobs. Its higher growth scenario suggested 76,700 jobs, but says it's unlikely. Their range was from ~30k-78k and you do not explain why you've mis-cited the report and taken a very high estimate incorrectly. The number of houses needed is based on the number of jobs, so you have over-estimated the number of houses needed.	
Housing and employment supply figures are overstated and insufficiently robust.	203576 (Horningsea PC)
Concern on reliance on windfall sites for housing delivery, declining numbers suggest need for certainty in small and medium-sized site allocations.	201854 (Chivers Farms Limited)
Consider the undesirability of maintaining high windfall assumptions and instead allocate a greater number of sites. Promoting greater levels of delivery on allocations and lower levels on windfall sites would give Councils a greater level of control over development coming forward and would encourage plan-led development in line with the NPPF's ambitions. Windfalls are inherently uncertain, it is hard to plan the	211674 (SmithsonHill), 211045, 211046, 211058 (Wates Developments (and Landowners))

necessary infrastructure around such a significant scale of windfall development, especially if it comes forward in a piecemeal nature. High reliance on windfall sites is much more likely to lead to unsustainable village development than a strategy where the Council has control over ensuring village development is located where there is good access to a high quality public transport network and provides the required infrastructure.	
Objection that Policy S/DS identified housing and job needs are too conservative: • The allocation of 10,330 homes from 2024 to 2045 is insufficient for sustainable growth in Cambridge. • Do not align with the government's growth agenda for Greater Cambridge. • To match Oxford-Cambridge corridor. • Supporting text at Para 2.64 does not consider that development needs alone provide the exceptional circumstances to justify removing land from the Green Belt, however the ambitious growth context for Cambridge means that the Council needs to consider the potential release of Green Belt land. • Supporting text in paragraph 2.64 does not consider the potential for Green Belt land release, despite the possibility of new evidence changing this context. • Do not reflect the higher growth scenarios identified in the latest employment and housing needs update. • Requests site allocated to meet the increased demand.	203157 (Christ's College, Cambridge), 203390 (Jesus College), 203406 (Jesus College), 202035 (Wimpole Associates Ltd), 204043 (E W Pepper Ltd), 206075, 206103, 206095, 206092, 206070, 206100 (Wimpole Associates Ltd), 210311 (Russell Smith Farms)

• Plan assumes a 'central' rather than a 'high' scenario aligning more with a growth trend over the last 20 years than the higher growth of the last 10 years despite national aspirations for sustained economic growth in the area. • Needs identified through the draft Local Plan do not reflect Cambridge's potential and are not sufficiently ambitious.	
Comments strategic priorities of the Plan delivered only with higher housing requirement, an amended development strategy, and additional development on the edge of Cambridge.	205046 (North Barton Road Landowners Group)
Concern that the Plan does not address local housing needs adequately, particularly in terms of affordable housing, potentially exacerbating affordability issues in communities like Histon and Impington	207589 (Chivers Farms Limited)
Comment that Plan does not provide a clear spatial analysis of employment growth to match its housing evidence, making it difficult to assess whether homes and jobs are being planned together. Without either a better balance between housing and employment or a step change in direct, high-quality active travel and public transport connectivity, the spatial strategy risks locking in long-distance travel and car dependency for decades.	205229 (J Thomas)
Concerns as no recognition of self-and-custom-build housing as a strategic requirement, (statutory duty under the Self-Build and Custom Housebuilding Act 2015 and supporting national policy). As placed in policy (H/CB) and not spatial strategy, plan	201936 (M Asplin), 202086 (M Asplin)

risks not addressing the backlog on the self-build register. Strategy not positively prepared and compliant with national policy, PPG, or legislative requirements.	
Supports the development of specialist housing in sustainable locations but requests that planning decisions consider the existing number of specialist housing units in the development's locale to prevent overwhelming healthcare services and to maintain a balanced community demographic.	201547 (Stapleford PC)
Scaling up to meet aggressive housing targets can be achieved by a well architected hub-and spoke model.	201920 (A Davidson)

Employment provision

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comment that there is a lack of clarity how the employment floorspace will be distributed across the proposed allocations within the plan	208498 (Central Bedfordshire Council)
Concerned that the Plan cannot respond to the inherent creativity and unpredictability of business. Ensuring approach has some additional flexibility and responsiveness.	203887 (Histon and Impington PC)
The Policy direction facilitates the ability of Rural Centres and Minor Rural Centres to meet objectively assessed needs for jobs. The Site (Evolution Business Park, Milton Road) is strategically located between a Rural Centre and a Minor Rural Centre, with good access to nearby Milton Park and Ride and therefore represents a viable site to	206949 (Cambridge Realty Limited)

accommodate the development requirements of the Plan period. The provision of 73,300 additional jobs should be more aspirational and align closer with the vision-led test of the NPPF. Policy S/DS should recognise longer term targets for additional jobs and preferred development areas. Recognising these aspirational targets including reference to forthcoming development in suitably sustainable locations ensures that the Council's approach remains forward looking, avoids inadvertently constraining employment land within the Greater Cambridge area, consistent with wider national planning policy objectives.	
In terms of employment delivery, Endurance Estates suggest should consider a more flexible approach which recognises the loss of Industrial and Mid-Tech floorspace in recent years. The Evidence Base outlines a clear need for additional Industrial and Mid-Tech floorspace and references requirements for B8 floorspace locations on the SRN. This is supported, however in light of the high-level of demand, it is considered that a flexible approach to locations would be most appropriate. This should include, as a minimum, support for locations along other radial routes, including the A10 south of Cambridge.	209712, 209713, 209711, 209708, 209709 (Endurance Estates)
Policy fails to reflect the outcomes of the published evidence base in terms of the locational requirements of general industrial uses. Greater Cambridge Warehouse and Industrial Space Needs Report (2025) concludes that c.30% of the residual industrial land need is for sites on the urban fringe (for	209174 (Turnstone Real Estate Limited)

general industrial and MidTech uses, as well as last mile local distribution). However, the strategic employment allocations fail to identify sites that meet the identified locational requirements for general industrial operators, and are capable of being delivered in the short term to meet identified needs. The strategic sites identified in Policy S/DS generally fall into 2 categories a) delivery as part of a large mixed use allocations; or b) sites on the A14. The WISN explains the importance of this locational requirement for the general industrial and MidTech sectors, specifically those wholesale and trader counter operators, whose business model is based on being in close proximity to its customer base.	
In Cambridgeshire and Peterborough, the Agri-Food & Tech sector employs 3,500 people across 115 companies, generating approximately £1billion in revenue. Agri-Food & Tech businesses benefit from excellent land quality for farming, world-renowned academic institutions, a strong supply chain in terms of international food processing, food packing, distribution and logistics, and world leading R&D facilities. The Local Growth Plan projection maps predict growth of the agri-food and tech sector by £1.2bn by 2050 and expect to see employment growth in this sector of 7,700, a 57% increase from now. Sustainable sites which can be delivered early in the plan period,	208385 (NIAB Trust)

such as NIAB's sites at Park Farm, would support this ambitious level of growth in the agri-food and tech sector, and as such it is considered that they should be allocated in the DLP.	
The spatial distribution policy, identifying site allocation S/SHF for c. 240,000 sq.m of B2/B8 uses – i.e. 65 % of the total industrial and warehouse allocation provision in the GCLP – is supported. The strategic location and size of the allocation site provides flexibility and choice to the, historically constrained, Greater Cambridge market. There is no merit in policy S2e(i) prescribing units be limited to small-medium size. This would distort the functioning of the market, by limiting choice to meet business needs on the principal and largest employment allocation site.	204970 (Lolworth Developments Limited)
Trinity Hall consider that an updated version of adopted allocation M5 be added to chapter 3 of the Draft Plan to confirm that the site of 82-91 Hills Road and 61-63 Bateman Street is allocated for commercial redevelopment.	202773 (Trinity Hall)
Comment on impact of proposals for new large logistics and business sites between the A14 Swavesey J24 and Bar Hill J25 junctions, and major new housing at Cambourne North, Bourn and continued development of Northstowe, will impact both highway and water infrastructure around the Swavesey area.	203039 (Swavesey PC)
Selecting only 2 large sites to deliver the majority of Greater Cambridge's industrial and logistics space is considered to be ineffective. Through S/SHF approximately 70% of all Industrial & Logistics need will be delivered by one land promoter. This creates risk to the deliverability.	211687, 211689, 211690 (Newlands (Cambridge) Limited)

Location of large scale logistics schemes adjacent to the Strategic Highway Network, and away from residential locations can help to reduce congestion and emissions, and improve air quality and public health. NPPF Paragraph 110, Appeal decisions (APP/C3105/W/24/3352512) have emphasised that the operational needs of Logistics outweighs any perceived disadvantage from an accessibility perspective.	
Policy fails to reflect the outcomes of the published evidence in supporting the displacement of existing industrial land due to the emphasis on allocating large, complex sites. The Development Strategy delivers the majority of the employment requirements, in particular general industrial space, on sites off the A14 or as part of larger mixed-use site redevelopments, such as North East Cambridge or Cambridge East. The need for general industrial space to support the local economy is immediate and urgent, and the over reliance on large complex sites will cause further unacceptable and unnecessary adverse impacts to this sector. Furthermore, allocated sites such as North East Cambridge already contain existing general industrial floorspace. Whilst the policy aspires to deliver replacement space as part of any redevelopment scheme, there will inevitably be a period of time when the existing use is displaced pending its reprovision. During this time, it is important that	209175 (Turnstone Real Estate Limited)

opportunities exist in the right location to rehouse these employment uses to ensure that they continue to meet the needs of the local resident population, but that they do so in an efficient and sustainable manner that does not result in increased vehicular trips by the private car.	
The proposed Tritax development does not form part of the GCLP's spatial strategy and has not been identified as a suitable or necessary allocation through the plan-making process. Allowing a speculative, large-scale logistics development outside of the adopted or emerging plan framework would fundamentally undermine the integrity of the Local Plan system. The GCLP directs major employment and logistics development to locations that are: - Strategically planned - Well connected by appropriate transport infrastructure - Capable of accommodating such uses without unacceptable harm. The Tritax proposal does not meet these criteria in the context of Lolworth.	205850 (Lolworth Parish Meeting)
BRC object to the policy and request that point ii is reworded as below: Babraham Research Campus – a new employment-led mixed use allocation to support further growth of this existing world leading bioscience research and innovation campus and improve the health and wellbeing of future employees, residents and the local community through targeted environmental enhancements: including approximately	203462 (Babraham Research Campus)

48,000m2 employment floorspace for office and research & development and approximately 83 additional homes, supported by focused additional facilities that complement existing local services; Changes to plan: Please see comments above regarding rewording of the policy to reflect approximately 83 additional homes.	
Paragraph 87 of the NPPF identifies the importance of making provision for clusters and networks of data-driven, creative and high technology industries and the inclusion of new facilities and infrastructure that are needed to support the growth of these industries (including data centres). Cambridge is known as an area of excellence for science and technology sectors, including the large number of science parks located around the city and surrounding villages. It forms part of the Oxford-Cambridge Arc, which is a globally significant growth corridor, labelled as Europe's Silicon Valley. Major infrastructure projects such as the forthcoming East West Rail have added to the productivity and sustainability of the area. Therefore, it is considered that the construction of a data centre, or wider B2/B8 use on the Site would be in line with the requirements set out within national planning policy.	211515 (Trinity College, Cambridge)
We object to the employment allocations as listed in the policy (point 2). There is need to identify additional sites for employment development, including to the south of Cambridge. An additional site should be allocated to deliver a major Data Centre tailored to the needs of the AI boom, complemented by innovation-inducing	210314 (Russell Smith Farms)

infrastructure in agricultural technology to contribute the local community's talent pool and economy, whilst making a global presence for Cambridge in AI.	
Greater Cambridge needs to adopt a much more substantial housing supply buffer than the 6.5% currently proposed. As a result, Greater Cambridge should employ a housing land supply buffer of over 10% and preferably circa 15-20% above the identified requirement which, for the reasons set out under the Policy S/JH: New Jobs and Homes, also needs to be higher than the Standard Methodology figure.	211103 (Hallam Land Management), 211067 (Savills), 211063 (St John's College Cambridge)
The draft Local Plan illustrates within Table 4 that with the inclusion of capacity at North East Cambridge a 14.7% buffer, in excess of the minimum housing requirement, would be provided. However, with insufficient certainly over deliverability of this site it should be excluded from the calculation and therefore a resultant buffer of just 6.5% would remain. This is insufficient and therefore additional site allocations should be included at this stage in the plan making process to ensure the plan is effective (deliverable over the plan period) as required by the NPPF.	211044, 211057 (Wates Developments (and Landowners))
To encourage a more reliable delivery rate across the plan area we propose that additional sites are allocated to ensure the consistent delivery of dwellings to significantly boost the supply of homes as required by Paragraph 61 of the NPPF. Only 17 of these 19 sites are strictly 'new'. In total the 17 sites will provide 7,013 dwellings (equating to approximately 12.69% of the total supply). It is therefore clear that the Plan	211043, 211056 (Wates Developments (and Landowners))

continues to make provision for a very limited number of new sites. There is a heavy reliance on existing and previously identified sites rolled forward from the adopted Local Plans and many of these sites are on a large scale which also means they typically take longer to be brought forward.	
CGC is supportive of the Development Strategy identified in the draft Plan but recommends that the planned allocations and the housing and employment growth identified in each, are treated as the minimum requirements and that the allocations are flexible enough to allow for optimised levels of growth. Identification of options for future expansion and extensions of these allocations where these can be supported in transport, landscape, and in green and other infrastructure terms is supported by CGC.	208937 (Cambridge Growth Company)
Dernford Reservoir site Concern for shortage of large-scale plant science, indoor farming and agritech type uses in the southern Cambridge corridor, where Dernford Reservoir is located and no provision made for Data Centre uses. There is a significant need for this use type within the area, given the location of the site in close proximity to the large employment sites at; Granta Park, Babraham, Wellcome Genome and the Biodmedical Campus. Plan does not conform with the NPPF requiring Local Planning Authorities to identify suitable locations for data centres. The draft plan does not make any reference to data centres, nor identified within the accompanying Greater Cambridge Warehouse and Industrial Space Needs Assessment.	210310, 210315 (Russell Smith Farms)

Strategic and smaller scale development

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Concern large strategic site allocations predicted housing delivery rates are unrealistically high, and the delivery timetable for infrastructure to support these is uncertain.	201940 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073 (J Francis), 202554 (Ely Diocesan Board of Finance), 211410, 211411 (CALA Group Ltd). 205104 (Axis Land Partnership)
Concern over ability of strategic sites-focused development strategy to meet Housing and affordable housing needs; would approach support residents or services and facilities in those villages, and would not meet the great places, homes, connectivity and infrastructure strategic priorities services and facilities in those villages, or meet the great places, homes, connectivity and infrastructure strategic priorities.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis), 202555 (Ely Diocesan Board of Finance)
Comments strategic priorities would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development at the more sustainable villages including Willingham, Fulbourn, Sawston, Hardwick, Great Abington, Bar Hill	203303 (J Manning), 203890 (Hill Residential (Fulbourn Site)), 203918 (Hill Residential (Fulbourn Site)), 204130 (Hill Residential (Hardwick Site)), 204346 (Hill Residential (Great Abington Site)), 211599 (LGH Hotels Management Limited), 211478 (G Robinson and Partners)

The plan should include a greater mix of smaller and medium sized sites: • Agrees identifying numerous small sites for development is impractical due to inadequate infrastructure in rural areas and potential negative impacts on green belt. • Concern plan does not allocate small and medium-sized sites needed for housing delivery and supporting small builders, despite their importance highlighted in the NPPF. The focus on large developments limits choice for prospective homeowners, and local residents to remain in communities. • To provide a realistic five year housing land supply, as these sites come forwards quicker • To enable a wide range of house builders to enter the market and provide a wider range of product and increase in local employment • Suggests a balanced approach including more allocations in rural villages to support local housing needs and prevent population imbalance. • Allows the SME sector to grown, delivering homes to increase the range of new homes available, and aligns with paragraph 73 of the NPPF.	201547 (Stapleford PC), 201854 (Chivers Farms Limited), 206215 (Granta Land Ltd - Land at Valley Farm, Meldreth), 204043 (E W Pepper Ltd), 211457 (Hayfield Homes Construction Ltd), 211518 (Endurance Estates), 211105 (Hallam Land Management), 211473 (Beechwood Estates Ltd), 211478 (G Robinson and Partners), 211532 (Hopkins Homes), 211231, 211579 (Living Space Housing), 201854 (Chivers Farms Limited), 211262 (Terra Strategic), 204102, 204144, 204145 (GW Balaam & Son)
The Development Strategy fails to accurately provide for rural and village growth to ensure sustainability and vitality of settlements, particularly sustainable large villages: • Minor Rural Centres are referred to as part of the development strategy but there are limited allocations – add growth at the more sustainable villages with a very good range of services and facilities, accessible by a range of modes of	211612 (Bloor Homes Eastern), 211604 (LGH Hotels Management Limited), 211584 (Terra Strategic), 211534 (Hopkins Homes), 211516 (Endurance Estates), 211415 (CALA Group Ltd), 211068 (Savills)

transport, and where there is an identified need for affordable housing for those with a local connection to the village. • Additional population helps in sustaining and improving the viability of existing services. • Growth within villages, including villages within the Green Belt, is essential to ensure they continue to be vibrant, inclusive communities with new opportunities for residents to stay in those communities. • Growth in villages should be better prioritised to ensure that those who wish to live in the rural areas are able to do so and that there is a variety of choice for the rural community. It is important that villages have adequate incremental growth to sustain the services they currently offer as well as offering appropriate additionality of services to avoid them becoming “sleeper villages". Plan makes allocations for just 265 homes on four sites adjacent to existing villages (Duxford, Highfields, and Melbourn). This is the outcome of a fundamental flaw in the framing of the hierarchy of locations within this policy, which reflects an approach to sustainability that gives predominant weight to environmental factors, notably transport emissions, to the detriment of the social sustainability of existing settlements.	
Supports rural area at the bottom of the preference list.	201012 (M Colville)
The proposed development strategy sets out where new homes and jobs identified in Draft Policy S/JH are to be provided to meet the visions and strategic priorities of the Plan. The strategy is reliant on previous allocations from the adopted Plans. New	211218 (Terra Strategic)

strategic scale allocations are proposed (a) within the Cambridge urban area; (b) on the edge of Cambridge; (c) at New Settlements; (d) In the Rural Southern Cluster and (e) In the Rest of the Rural Area. The remainder of the development needs are to be met at smaller sites within; a. Cambridge urban area; and b. the rural area, where further development is to be limited with allocations for jobs and housing focused on Rural Centres and Minor Rural Centres, and the settlement hierarchy policy providing for windfall development for different categories of village consistent with the level of local service provision and quality of public transport access to Cambridge or a market town. National Policy sets out a requirement for small and medium sized sites to be identified to accommodate at least 10% of the overall housing requirement on sites no larger than one hectare, unless it can be shown that there are strong reasons why the 10% target cannot be achieved.	
Concerns there are a number of risks with the development strategy. The proposed that 44% of housing target delivered at new settlements is very reliant on the delivery of the existing strategic sites, there is no evidence that delivery at these sites will increase above current rates. It is assumed that housing delivery at some of the strategic sites would be 300 dwellings per annum, but this rate has not been achieved at existing strategic sites in Greater Cambridge or delivered at these rates for a sustained period. The housing delivery rates at some of these strategic sites appear optimistic and not evidence based. The delivery of the proposed strategic sites at Cambourne North and	211245 (Manor Oak Homes – Cottenham Site), 211253 (R Harvey)

at Grange Farm are reliant on delivery of transport projects that are not approved, and where funding and delivery timescales are uncertain. Most of the existing new settlements will deliver less affordable housing than the policy requirement of 40%, due to these developments to also deliver significant levels of new transport and community infrastructure in initial phases The same for affordable housing delivery at Cambourne North and at Grange Farm. It is requested that the housing delivery assumptions for all of the strategic sites are reassessed.	
Concern that the Strategy lacks sufficient allocation of housing sites in existing settlements, which could enhance delivery speed and promote the vitality of these areas. Include new sites in sustainable village locations, which would provide local benefits, including affordable housing and support for existing services.	207189 (ESCO Prospect)
Concern that the scale of development deemed acceptable in Group Villages, (which includes Over), is too low. This restriction does not reflect Over's sustainability and capacity for further housing.	207191 (ESCO Prospect)
North East Cambridge should remain included in core numbers	201012 (M Colville)
Concern draft allocation not capturing the full capacity of the safeguarded land or the additional 131 ha of expansion land at Cambridge East, limiting transformative growth, jobs and homes.	209031 (Marshall Group Properties)
Responder questions soundness of Plan given lack of certainty of deliverability of NEC and Grange Farm within the Plan period and meet need, questioning whether further green belt release is required.	211444 (Gonville & Caius College)

Concern North East Cambridge is retained, as should no alternative funding become available ahead of the Regulation 19 stage later in 2026, it would be unsound to continue to include the site for allocation in the Plan.	203069 (Pegasus Group)
Support for Strategy for Cambridge Business Park at the heart of NEC and TCE is advancing proposals to comprehensively re-develop the site to deliver significant employment-led development and intensification of the site and is clearly aligned with the Development Strategy. Policy criteria 2(a)(i) sufficiently supports development in NEC in the event the CWWTP is not relocated away from the site, which is uncertain during the plan period.	203570 (The Crown Estate)
Concern Cambridge East allocation is it realistic given Marshalls has cancelled its planned move from Cambridge Airport, delivery trajectory is considered to be uncertain.	203069 (Pegasus Group)
Concern over omission of land at South West Cambridge, include to enhance strategic transport connections and support sustainable mixed use development	202440 (University of Cambridge),
Comments on the Cambourne Expansion: • Support the aspirations to substantially expand Cambourne. Concerns regarding accessibility along the A428 from southern Huntingdonshire, particularly St Neots, into Cambridge and its surroundings. • Concern of impact on the small villages north of Cambourne or the farming land which provides food for the existing population. • Concern that Cambourne and Northstowe have been unsuccessful at fostering sustainable communities with real centres and amenities.	201657 (Huntingdonshire DC), 201682 (S Smith), 205673 (M Meyer-Kelly), 202122 (Elsworth PC)

• Cambourne North is a new settlement, separated from the existing town by a trunk road and railway, and not an organic outgrowth of existing Cambourne. • There is also perhaps a sense of rectifying things that were not got right originally (e.g. the lack of a town centre). • Whether integration will be “supporting services and facilities” in anything but the long term seems unlikely.	
Comments on Grange Farm include: • Concern Grange Farm will provide homes with good transport links to London, encouraging commuters to take a large proportion of the accommodation, negating the intended good environmental outcomes. • Concerns in scale of delivery where the planned sustainable development of the south-east edge of Cambridge could replace some of what is proposed at Grange Farm, Abington to achieve a smaller and more appropriately sized development. • Concern site location and setting is within the least spoilt and most attractive landscape surrounding Cambridge and issues with development density and lack of identity. Recommends site be rejected from Development Strategy as alternate sites in far less sensitive landscape that are better suited to a 6000 house development. • Objects as development in/around Rural Centres is more sustainable than at Grange Farm (existing infrastructure, amenities, etc).	201894 (R Pargeter), 202526 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 203405 (B Reeve), 204160 (Mr and Mrs J Johnson), 203069 (Pegasus Group)

• objection to the proposed allocation under Policy S/DS at point “2.c. new settlements”, “ii. Land adjacent to the A11 and A1307 at Grange Farm • predicated on the Cambridge South East Transport (CSET) busway coming forward to make sustainable • questioned whether Grange Farm will be capable of delivering any new homes within the plan period • comments more appropriate to adopt an alternative Development Strategy which offers a more balanced approach to the distribution of growth, which recognises the role of existing sustainable settlements. • Comments significant doubt over the ability of the proposed allocations to deliver new homes within a timely manner and challenges the justification for the inclusion of Grange Farm within the Plan. Not planning positively to meet its identified needs as required by national planning policy (para 36).	
Concern the policy limits the size of development at ‘minor rural centres’ and lower tiers. The policy should not restrict the scale of growth for rural settlements, as this may affect the settlement's ability to maintain its existing facilities and support necessary growth. The Council should therefore consider the delivery of services and facilities alongside the planned strategic growth of settlements.	208340 (Thakeham Homes Ltd)
The strategy lacks justification and consistency with national planning policy, failing to consider suitable alternatives or deliver sustainable development. Support for the expansion of Cambourne, but the development framework should	203963 (Abbey Properties Cambridgeshire Limited)

include existing food retail uses at Caxton Gibbet, the EV charging car park and land to its east suitable for various uses. The boundary appears to follow the outline planning permission for Cambourne West without further review, which may not be appropriate. The concentration of allocations in the rural southern cluster limits opportunities in other rural areas, despite comparable transport links in locations like Girton, Oakington, and Over. A more dispersed growth strategy for villages would help sustain them and better utilise the infrastructure delivered across Greater Cambridgeshire. The approach aligns with Appendix D of the Local Plan regarding housing requirements for Neighbourhood Plans. Errors in the policy include unnamed Figures and unclear wording in part 2 c 2.	
Comments that large site allocations present an opportunity to deliver sustainable travel at scale, but priority must be given to walking, cycling, and public transport, embedded from the beginning.	207540 (R De Beaux)
Higher-density development can support sustainable travel, but only when it is paired with low car ownership and strong alternatives to driving. Dense schemes are too often	204716 (Mothers CAN Cambridge)

delivered alongside high levels of private parking, which consumes land, dominates streets and undermines walking and cycling. This also pushes up housing costs, forcing households without cars to subsidise parking through higher prices. The Plan should explicitly link higher density development to lower car ownership, avoid assuming one car per home, and require parking to be optional, generally separated from housing, and transparently priced. Without this, density will continue to be experienced as a problem rather than an opportunity	
The plan predominantly focuses on Cambridge, neglecting over 100 areas in South Cambridge, lacking a clear explanation of how growth in new towns and Cambridge will benefit South Cambs communities. There is no clarity on funding opportunities for infrastructure improvements, including the construction of new schools, doctors' facilities, and road repairs in the SC villages, despite recent big developments in Cottenham for instance	202784 (I Koutoudis)
Comments regarding The Wilbraham's: • Concern lack of development opportunities around the Wilbraham's. Residents would support land release from greenbelt, if enables refresh the population and try to protect the school from closure. Not opposed to high quality development and community led development schemes such as Community Land Trusts could be used. See having a funding stream and professional support for these types of projects as ways of providing new housing.	208725, 208726, 208727 (Cllr Matthew Morgan)

• Concern The Wilbraham's have been ignored in the Local Plan. Support for CIL to spread land value uplift more widely from the large developments favoured by the draft plan. Notes a cycle route to Fulbourn might be a very useful 106, or CIL project for the future for the Wilbraham's. Concern for small villages ability to refresh themselves and draw in new people or allow older residents to downsize and are not adequately reflected in the current local plan.	
Concern proposed green infrastructure opportunity areas unrelated to strategic development allocations that could support their delivery are unlikely to be delivered.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis)
The Housing Delivery Study Addendum (2025) cites particularly high annual build out rates, noting these have previously been achieved due to the continued economic growth within Greater Cambridge. However, it fails to advance any evidence that policy changes will have a material impact on the delivery of windfall sites and therefore it is unclear how this aligns with the requirements of the NPPF. The Councils should consider the potential of omission sites which could facilitate a more joined-up approach to development for the 7,225 homes currently anticipated on windfall sites.	209697 (CEG Land Promotions Ltd)
Land South of New Road, Guilden Morden (site reference 40563), Responder suggests the site should be deemed suitable, available and achievable for the preferred development type.	208672, 208668 (Guilden Morden Developments Ltd)

Supports the identification of the four strategies set out on page 16. Suggest feasibility of the strategies be tested after the assessment of all sites in both Call for Sites consultations, and concern in not including increased development at the Group Village scale, given the sustainability of the settlements within this tier is referenced throughout the evidence base and is not dependent on the presence of a train station. Recommend Policy S/DS be revised at part e, insofar as development in the wider rural area should be inclusive of all sustainable locations, regardless of being beyond the 'Rural Centre' or 'Minor Rural Centre' Tiers.	208674 (Guilden Morden Developments Ltd)

Green Belt, Grey Belt

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Supports the view that releasing greenbelt or grey belt land is unnecessary to meet development needs, and the importance of preserving the greenbelt for local landscape, nature, health, and recreation.	201547 (Stapleford PC)
Green Belt prevents communities in the environs of Cambridge from merging into one another and with the city. Those purposes are still relevant and justified localised extensions and brownfield sites are compatible in principle with the NPPF.	210983 (C Newell)

Comment that there is plenty of land beyond the Green Belt that is still undeveloped and the new towns and infrastructure being developed can address the forecast economic growth	205656 (M Foote)
The apparent early determination, in advance of the published Green Belt review, that there are no strategic exceptional circumstances to justify release of Green Belt land, and by extension grey belt release for strategic planning purposes, remains a concern.	202627 (British Land)
Objection to Policy S/DS; the supporting text claims the development need does not meet the 'exceptional circumstances' test for Green Belt release, despite NPPF 2024 allowing release where needs cannot be met otherwise. Wrongly treats the need for Green Belt release as 'exceptional'; the exceptional circumstances test should be reassessed given the higher growth evidence.	206093, 206096 (Wimpole Associates Ltd)
Since Cambridge received its £400 million government funding commitment, and with the city's rising profile through the OxCam Corridor project and its promotion as part of the UK's new Biotech "Silicon Valley", pressure on surrounding countryside has intensified dramatically. Private developers and investors are targeting land just beyond the Green Belt, not because it is appropriate or sustainable, but because it is less protected and easier to exploit. The impacts of this on small rural communities like ours are severe, cumulative and ongoing.	209117 (S Hepworth)
National policy does not facilitate the creation of local Green Belt purposes. The Cambridge Local Purposes do not align with the national purposes, particularly Cambridge Purpose 3. This relies on merging of communities (i.e. the necklace	203968 (Anglia Ruskin University)

villages), in contrast to the national purpose which applies to the merging of towns. It is therefore considered that the Development Strategy should rely on a full Green Belt review, assessing land against the applicable national purposes.	
Concerns that as policy states that development needs alone do not justify Green Belt release, and delivery of Policy S/NEC is contingent on relocating the CWWTP, which requires Green Belt land to be removed. The Plan fails to transparently identify and assess this consequential Green Belt impact. The Councils' position that Grey Belt need not be identified because Green Belt is not being released is inconsistent with the Plan's spatial strategy. This lack of transparency undermines soundness and prevents proper consideration of Grey Belt land in accordance with national policy.	202116 (M Asplin)
The Councils' claim in Para 2.64 - that they need not identify Grey Belt land because they make no Green Belt releases - is a fundamental contradiction. Policy S/NEC is "predicated" on a relocation that the made DCO confirms will take 34 hectares of Green Belt. NPPF 148 requires that any Green Belt release must prioritise previously developed and Grey Belt land. By suppressing the relocation's Green Belt impact, the Councils have failed to apply the mandatory sequential tests for Green Belt release, making the plan inconsistent with national policy (NPPF 36d).	202592 (Save Honey Hill Group)
Comments undeveloped Green Belt on the edge of Cambridge is the critical in meeting the fundamental objective of the Green Belt to prevent urban sprawl.	201184 (M Foote)
It is important for the Green Belt Assessment to be updated. An up-to-date Assessment is needed to provide a qualitative assessment of the purposes and functions of the	202736 (Cambridge Past, Present and Future)

Cambridge Green Belt, and given the current pressures and contexts, demonstrate its relevance to the setting of the historic city. The lack of an up-to-date Green Belt Assessment will undermine the plan.	
Objects to Policy S/GB as based on the 2021 Green Belt Assessment and omits Grey Belt criteria; an updated assessment and review of Green Belt boundaries are required. Sites in locations that are defined as grey belt should be strongly considered in order to increase the supply of homes.	206072, 206091, 206105 (Wimpole Associates Ltd)
Comment that the revised Green Belt Assessment has not been published and that the omission of a 'Grey Belt' analysis breaches Planning Practice Guidance; we recommend the assessment be updated to identify Grey Belt land.	206097, 206090, 206089 (Wimpole Associates Ltd)
The evidence produced in support of the GCLP demonstrates that the edge of Cambridge could be a sustainable location for homes and jobs, noting its accessibility to existing jobs and services. Whilst acknowledging that the Councils have to give consideration to the Green Belt, CEG considers that the approach to discounting sites based on Green Belt constraints has significantly hindered the plan's ability to take advantage of the most sustainable development opportunities. These sustainable locations are those which could do the most to help ease transport congestion and their associated environmental pressures by placing growth where there is a very viable alternative to the private car. This runs contrary to the strategic priorities related to climate change, wellbeing, great places and connectivity.	209692 (CEG Land Promotions Ltd)

Policy fails to recognise role of that Grey Belt land could play in assisting to meet employment needs. The Development Strategy Topic Paper (December 2025), in particular Appendix 4, explains why GCSP does not consider exceptional circumstances exist in this instance. However, the evidence base and Sustainability Appraisal consider a series of alternative development strategy approaches to meet identified needs, including use of Green Belt land on the edge of Cambridge. The Topic Paper concludes that Green Belt sites on the edge of the urban area could perform well, but explains that the main disadvantage of such an approach would likely be the significant harm to the Green Belt. However, this conclusion pre-supposes that such sites are Green Belt, rather than Grey Belt land.	211589 (Turnstone Real Estate Limited)
However, there is a danger that in some places the green belt is drawn too tightly around the edges of some villages and thus prevents small-scale appropriate developments that would enhance the environment and provide long-term rural resilience. A sensible, measured engagement should take place over the role of the green belt in relation to smaller village developments.	203071 (Little Wilbraham and Six Mile Bottom PC)
Comments on Green Belt release include: • Plan correctly states that development needs do not justify further Green Belt release, even with the existing headroom and post-2045 developments.	201012 (M Colville), 201184 (M Foote), 204642 (C Forbes-Cable),

• Two identified sites with exceptional circumstances for Green Belt release are unique and should not lower the bar for future releases. • Supports limited Green Belt release land on the edge of Cambridge to meet the general development needs identified in this plan and it is not necessary for you to identify grey belt land. • Supports conclusion it is not necessary to release Green Belt land on the edge of Cambridge to meet the general development needs identified in this plan and it is not necessary for you to identify grey belt land. • Support the idea of the green belt and your points regarding what the green belt is. However, there are sites that are allocated as green belt that are not in fact but already in the village envelope. These areas of green belt do not tick the boxes of your description of green belt, so I suggest they are released. We have one such site in the middle of a village. It was to be released in earlier stages of this plan but has been removed in this stage. The Walled Garden, Whittlesford CB22 CB280901. Please release it from greenbelt.	
Responder objects to approach to Green Belt release. CEG highlight that they support the expansion of the Biomedical Campus, but Cambridge has both a booming life sciences sector and tech sector and restricting the release of Green Belt to just enabling the expansion of one existing life sciences operator feels restrictive, and a limiting option in facilitating and realising the undoubted economic growth.	209693 (CEG Land Promotions Ltd)

Green Belt comments at Mingle Lane site: • Comments insufficient exceptional circumstances to justify releasing land behind Mingle Lane from the greenbelt. • Support for not including Mingle Lane (S/RHC/HW) in Plan. Housing need can be met by other new substantial developments proposed such as that at Cambourne together with new rural Southern Cluster sites such as those at Spicers, Hinxton and Babraham. • GCLP suggests at para 2.64 that the identified development needs alone are not considered to provide the 'exceptional circumstances' required in national planning policy to justify removing land from the Green Belt, this is based on the presumption that the proposed allocations will deliver as anticipated. • Strong support for retention of land between Mingle Lane, Stapleford and Hinton Way Great Shelford (S/RSC/HW) within the Green Belt, as it is important for the visual and social benefit to the community of both villages. There is no justification to release this land for development. • Concern that land at Hinton Way (Policy S/RSC/HW) is potentially being removed from Green Belt as this would cause irreversible damage and leave the neighbourhood open for developments which could ruin the quality of life.	201547 (Stapleford PC), 201579 (J Sennitt), 203069 (Pegasus Group), 207497 (A Scott)
NLHRL contend that the site S/RSC/HW is Grey Belt and given the Government's emphasis of directing homes where they are well related to rail services it should be reallocated for development. The Site Allocations Topic Paper states the Housing Land	208904 (Nightingale Land and Hill Residential Ltd)

and Availability Assessment considers the site as a deliverable option. At paragraph 6.67 it states that the decision to allocate the new settlement at Grange Farm now means that there is a significant allocation in this area and on the route of the Cambridge Southern Corridor transport improvements. It concludes that the Council considers sufficient sites have been identified without the need to release land from the Green Belt. The identification of Grange Farm, whilst located in the southern cluster does not specifically respond to the needs of individual settlements such as Great Shelford and Stapleford.	
Suggests the planned release of Green Belt land at the south of the Nine Wells site is an important green space that campus staff, visitors and hospital patients use increasingly.	201023 (K Mahoney)
Suggests Green Belt in the parish of Stapleford at the tip of the southern tentacle of sprawl heading towards London will be given additional protection to prevent further loss (given the recent hectares lost to development extending the village by over 10%)	201184 (M Foote)
Excluding this accessible site on Green Belt grounds is inconsistent with the Plan's objectives for sustainable rural communities	207434 (KWA Architects)
The development of area land registry ID:CB280901 complies with all outlined requirements and was initially included in the draft plan for Whittlesford but was subsequently excluded.	205412 (L Gardner)

The proposed development meets the criteria for existing infrastructure and transport networks without encroaching on rural green areas. It is a small-scale development that addresses current housing can be quickly built to meet current needs, while preserving the heritage environment with sensitive planning. The development would enhance access to green space for local residents.	
Comments on Parcel H05 include: • weak physical distinction from Horningsea, showing site is functionally part of the settlement rather than the open countryside. • backland garden enclosed by residential dwellings, with limited countryside views and dominant urbanising influences, making it unsuitable for Green Belt protection. • a limited or no contribution to Green Belt Purposes 1-3, release would have a minor impact on the adjacent Green Belt. • current Green Belt boundary is arbitrary, bisecting a single planning unit and lacking permanent, recognisable features as required by NPPF 149(e)-(f). • Aligning Green Belt boundary with Defined Development Extent would resolve the policy tension noted in paragraph 2.136 of Policy S/DE.	206080, 206081, 206082, 206083, 206084, 206085, 206086, 206087 (M Asplin)

• Sustainable location with active-travel links, a suitable small-site that could help meet the Council's 6.5 % shortfall in small sites. • Removing the parcel from the Green Belt would support the vitality of Horningsea village, aligning with NPPF paragraph 83 which the current Development Strategy fails to address.	
The Consultation Draft NPPF (2025) sets a clear intended direction of travel within Policy GB3(1a) which notes Green Belt boundaries should be altered through the preparation of Local Plans where this would enable the development of land around stations. Whilst until the Draft NPPF (2025) is adopted it will carry limited weight and the Greater Cambridge Local Plan is to be examined against the NPPF (2024), GCSP should consider the intended direction of travel for future policy and consider land (including Green Belt land) for allocation that is well connected to train stations.	211531 (Corpus Christi College, Cambridge)

Gypsies, Travellers and Travelling Showpeople, Residential moorings for boat dwellers, Other caravan dwellers, Specialist accommodation

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comment that the plan is likely to provide over and above the identified need for travellers within the plan period.	208494 (Central Bedfordshire Council), 207655 (Cottenham PC)

Comment that optimisation and intensification of the existing sites at Chesterton Fen Road and Smithy Fen is iniquitous and unfairly discriminates against all the residents of Cottenham (and Chesterton), including those residents on the Smithy Fen site, and will place an increased and unfair burden on the village.	207655 (Cottenham PC)
Careful consideration needs to be given to any planning at the Smithy Fen site.	203867 (J Welford)
Object to Policy S/AMC/GT, optimisation of Gypsy and Travellers sites. Smithy Fen is already overcrowded and unsafe. The site opposite is an eyesore on the countryside. Traffic levels are already high on a single track road with passing places. Local doctors are overstretched. Why does Smithy Fen need to grow when new sites like Northstowe and Waterbeach do not have Traveller sites.	208496 (L Gardner)
The proposed increase in Traveller settlements in South Cambs without justification, especially when Cambridge has more infrastructure and amenities, is extremely controversial. What is the contribution of such sites in the local community and economy? What is the necessity of intensifying Traveller sites in Milton and Cottenham, when these locations exceed appropriate size and are remote, leading to safety concerns for residents. The already proposed new settlements far exceed the ANA report requirements of 159 spots.	202784 (I Koutoudis)

Infrastructure

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
New healthcare infrastructure delivery is resource intensive, and funding constraints from the NHS are worsened by population growth from housing developments. New developments should proportionately contribute to the healthcare needs arising from increased population due to housing growth. Healthcare infrastructure should be prioritised in infrastructure delivery due to its strategic importance in supporting housing growth and sustainable development.	205050 (NHS Cambridgeshire and Peterborough Integrated Care Board)
The Local Plan has a role to make it clear that there is a requirement for development contained within the Plan to help fill funding gaps in the delivery of transport infrastructure. The GCP schemes, as already discussed, are heavily relied upon within the Plan. Whilst the GCP programme has funding, it is predicated on match funding for infrastructure and therefore developers benefitting from such infrastructure will be expected to contribute proportionately towards schemes that serve their sites. As a result, obligations for both infrastructure and for commuted sums for maintenance should be factored into the Infrastructure Delivery Plan and associated sites within it.	210516 (Cambridgeshire County Council)
The aim that development will only be allowed if it is accompanied by the right infrastructure that will deliver the range of supporting services, facilities and	210984 (C Newell)

infrastructure that workers, visitors and residents need is crucial to protect the three strands of sustainability	
Concern over the lack of infrastructure to support the proposed development: • Especially schools, medical facilities and qualified medics, community facilities, transport, and increase in people, vehicles, pollution. • Lacks clarity on the infrastructure required to support development on the edge of Cambridge (CSET and Busway identified as critical infrastructure in the Infrastructure Delivery Plan but not explicitly referenced within Grange Farm and the Cambridge Biomedical Campus expansion policies.	201172 (J Lambert), 207533 (S Berridge), 203894 (KWA Architects)
Notes the key importance of infrastructure coming forward in time to support new communities and being rigorously enforced.	202820 (Cllr K Porrer)
Concerns plan appears overly optimistic about infrastructure project timelines and lacks a clear funding strategy for necessary water infrastructure.	202214 (A Sykes)
Concern infrastructure required to support population growth may not be deliverable through the development process alone and will need significant additional investment from external sources. Such as healthcare infrastructure, noting that a replacement for Addenbrookes Hospital could require £2.2 billion. There is a concern that without adequate capacity, economic growth could lead to social and environmental decline, resulting in unsustainable development.	202897 (Cambridge Past, Present and Future)
Section 4.3 of the Infrastructure Delivery Plan (‘IDP’) sets out the priority projects. The Cambourne to Cambridge ('CtoC') bus link is identified in Table 4-1 as a strategic	203440 (Juniper Propco)

transport measure. It is unclear in its wording whether it is anticipated it will be delivered by 2035. Clarification should be provided regarding the anticipated timescales within which CtoC will be delivered. This may become clearer prior to the Regulation 19 version of the plan being produced	
Recommends Grampian conditions should be considered to ensure healthcare infrastructure is built in a timely manner.	202214 (A Sykes)
Concern Plan overlooks the post-16 education system that sustains that workforce. Families drawn by opportunity also prioritise high-quality 16–19 provision, and Cambridgeshire's specialist tertiary model—including institutions such as Hills Road Sixth Form College—needs to be brought into scope. Post-16 places require long lead-in times, suitable sites and coordination with the Department for Education therefore capacity cannot be flexed quickly. Without explicit recognition in policy, site safeguarding and proactive planning with providers, the proposed housing and jobs growth will become unbalanced, constrain parental choice and weaken the skills pipeline. To be deliverable, the Plan must treat post-16 education as critical infrastructure.	202854 (Hills Road Sixth Form College)
Comments regarding the Infrastructure Delivery Plan include: • Comments transport inadequate in South Cambridgeshire, noting Great Shelford, requires improvement alongside new projects, as highlighted in the draft Infrastructure Delivery Plan.	202214 (A Sykes), 202433 (The CLC Trust)

• Concerns that the draft Infrastructure Delivery Plan fails to mention need for a new acute hospital to meet the healthcare demands of the growing population. • Concerns over uncertainty in the infrastructure delivery timetable for expanded developments like Cambourne and Grange Farm	
Some flexibility will be needed to meet unexpected events, outcomes or dependencies on infrastructure projects which may or may not be delivered. Most notably, in August 2025 the Government announced that it will not be funding the relocation of the Cambridge Waste Water Treatment Plant (CWWTP) creating uncertainty as to whether Councils' vision for North East Cambridge can be taken forward. We appreciate the purpose of plan making is to have a "plan-led" system, building in as much certainty as possible as to where development and infrastructure should take place over the plan period. However, as the GCLP has already witnessed unforeseen events along the way can impact on the development strategy, and some key sites are dependent on major infrastructure being funded and implemented.	211423 (Gonville & Caius College)
The Plan's housing supply position indicates that, excluding the North East Cambridge allocation (which is surrounded by uncertainty given its reliance on the relocation of the Cambridge Waste Water Treatment Plant (CWWTP) and funding to do so which was withdrawn by Government in August 2025), the Councils are planning for only a modest level of flexibility above the identified housing requirement.	210224 (Vistry Group)

Should funding be secured to enable full delivery at North East Cambridge, this headroom would increase, but it remains contingent on factors outside the Councils' direct control.	
Para 2.79: Healthcare infrastructure and, in particular, the necessary new acute hospital must be included in this paragraph. GCSP should also consider whether Grampian conditions could be applied to a failure to build appropriate healthcare infrastructure. If not, some other mechanism will be needed.	210891 (Great Shelford PC)

Water supply, drainage, waste water and flood risk

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
When Anglian Water submitted our Business Plan to Ofwat in 2023, the framework was not designed to account for the pace and scale of growth outlined by the government in the "Realising the Full Potential of Greater Cambridge" statement, and the subsequent change to the standard method for calculating local housing need in the National Planning Policy Framework and Planning Practice Guidance updates (December 2024). This means that the scale of growth funded in our AMP8 Business Plan, does not sufficiently reflect the scale of growth pressures or the level of funding to address them.	209157 (Anglian Water Services Ltd)
It is noted that the preferred option for the spatial strategy is identified as a blended option, underpinned by development strategy principles. These principles align with	209159 (Anglian Water Services Ltd)

Anglian Water's strategic long- term ambitions to be resilient to the risk of drought and flood, a carbon neutral business, enabling sustainable economic and housing growth, and working with others to achieve significant improvements in the ecological quality of catchments in our region. We support the development management principle that necessary utilities should be supported in a sustainable way so that the environment is protected and enhanced. We consider this principle is fundamental to supporting sustainable and resilient growth, and to enable investment to be brought forward to address the considerable growth being planned for the Greater Cambridge area, whilst ensuring the environment is protected.	
Anglian Water notes that the Development Strategy for Greater Cambridge directs growth to the most sustainable locations, with the focus on the Cambridge urban area, Cambourne, other new settlements and the rural southern cluster which has strategic transport links and employment opportunities. Anglian Water recognises that nationally strategic infrastructure projects such as the A428 Black Cat to Caxton Gibbet upgrade and East West Railway are catalysts for sustainable connected growth across our region and together with three planned busways into Cambridge, have shaped the Development Strategy for Greater Cambridge. The key sites within the Cambridge urban area, and on the edge of Cambridge (a and b) includes North East Cambridge. It is noted that the policy (2.a.i) provides flexibility for	209158 (Anglian Water Services Ltd)

the type of development indicated for this site, as a result of the Government's withdrawal of funding for the Cambridge Waste Water Treatment Plant Relocation (CWWTPR) in August 2025, following Development Consent Order approval for the scheme in April 2025. Anglian Water considers that this flexibility for development of the site is important, because of the investment now required to address capacity at the existing Cambridge WRC. i./iii/v For new settlements, there is a considerable expansion at Cambourne North to link with a new proposed East West Rail station and the carried forward allocations at Bourn Airfield and Northstowe. The growth at Cambourne, has and continues to be considerable. Both Cambourne and Northstowe are within the Uttons Drove WRC catchment, which is being considered as part of our longer-term planning for the 2025–2030 asset management period (AMP8) and beyond. In line with PR24 adaptive planning principles and our ongoing discussions with Ofwat, we are reviewing growth forecasts across our operating areas and developing options on how to approach investment that can respond to uncertainty in the scale and timing of development. Any future investment at Uttons Drove would contribute to additional capacity and resilience within the catchment; however, it is unlikely that this alone would accommodate the full scale of growth currently proposed. Supporting later phases of development at these locations will therefore require a longer-term strategy, progressed through future	

planning and price review cycles as growth assumptions are refined and investment needs are confirmed.	
Comments that growth cannot happen until there is a water supply solution: • Assertion that there will be enough water for the expanded population is a joke. • New reservoirs are being built but there is uncertainty how these will be filled. • Concern the scale of growth is placing further unsustainable demands on water resources to detriment of already depleted chalk aquifer and degraded chalk streams, until Fens reservoir (late 2030s) and pipeline (2032) are in place.	201223 (S Williams), 202438 (A Fisher), 202484 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust)
Environment Agency notes: • in the policy's Supporting Information on "Ensuring a deliverable plan" mentions "is not anticipated to be completed in the housing trajectory accompanying the Local Plan until 2032" - We would recommend the statement "is not anticipated to" to be improved by including further information from developers of the strategic sites on their planned phasing. • Environment Agency recommends in table 2 highlights Allocations for the periods 'Homes 2024-2025' and 'Homes Post 2045'. We recommend this table be revisited and an additional column be added which details new local plan allocations for 'Homes 2024/25-2031/32' and 'Homes 2032/33-2045' (or any further breakdown, that reflects when water supply is planned to be available from other strategic schemes like the Fens Reservoir).	211127, 211128, 211129, 211130 (Environment Agency)

• Environment Agency are encouraged by the statement “Delivery and phasing plans will need to demonstrate engagement with the water industry, and respond the availability of water supply improvements.” and would recommend including this wording to this policy or to policy CC/WE. • Environment Agency recommends in paragraph 2.86 appears to be missing the word ‘waste’ before ‘water treatment works’, in the first sentence. We recommend being clear throughout the Plan when referring to Waste Water Treatment Works, to avoid confusion with Water Supply Treatment Works, which are commonly referred to as just water treatment works.	
We note the proposed new pipelines to alleviate the shortage of drinking water and the proposal to reduce extraction from the aquifer and particularly chalk streams, both of which we strongly endorse. However, it is our understanding that there is a delay in the availability of water from Lincolnshire using the new pipeline until after 2030. How will this gap be manged and what is the impact of this on the plan period?	203264 (Horseheath PC)
Questions where sewage works are to support this plan?	202282 (L Turton)
Concern over both lack of water and flooding which made worse by development over fields and flood plains.	202282 (L Turton)
Concern any increase in flooding due to A428 is being widened is taken into account.	201682 (S Smith)
Comments on environmental resources (green spaces and water) are at their limit. No credible solutions provided where the resources will come from, and what will be done to restrict demand and usage.	205438 (A Kirchgaessner)

We do not share the optimism expressed in Paragraph 2.84: Cambridge Water Supply Area Evidence prepared for GCSP does not highlight that the Grafham Transfer is a key dependency. Cambridge Water's WRMP24 refers, in relation to the Cambridge Water Recycling Centre effluent re-use scheme. The IDP states opportunities for a new surface abstraction from the River Cam. The Cam runs through the parish and this strikes us as unlikely. The evidence report also refers to water credits that the Government has said nothing publicly about since March 2024. It would surely be preferable to seek urgently to solve the problem identified in the evidence that water reuse and recycling for large new development sites may be an option.	210892 (Great Shelford PC)

Transport

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
In broad transport terms CCC supports the Local Plan and the associated development strategy. The transport evidence developed to date alongside the development strategy demonstrates that the Local Plan is deliverable in transport terms, if sufficient mitigation of the key development locations is provided. It is however important to state that all the strategic sites contained in the draft Local Plan require transport mitigation strategies to support their delivery. This mitigation includes stringent trip budgets which are to be agreed with CCC as Highway Authority. In addition, the transport infrastructure	210513 (Cambridgeshire County Council)

requirements for each of the strategic sites are significant, therefore deliverability and viability will be key considerations. CCC would re-emphasise that in transport terms, the strategic sites are heavily reliant on the GCP programme of works being delivered.	
The development of the Greater Cambridge Transport Strategy (led by the Cambridgeshire and Peterborough Combined Authority) will provide the transport Strategy to support the Local Plan. The Council is working with the CPCA to support this process. The draft Local Plan makes several references to City Access (e.g. Figure 13). This workstream has been superseded by the forthcoming Greater Cambridge Transport Strategy.	210514 (Cambridgeshire County Council)
In relation to the point made about viability and infrastructure requirements to ensure a development site is deliverable, it is essential to recognise that whilst CCC agrees that the Grange Farm site can be delivered in transport terms with sufficient mitigation, it is only deliverable if CSETS phase 2 is built as well as an extension to CSETS with grade separation over the A11 into Grange Farm, with bus priority across a new junction on the A1307. This is a significant and complex infrastructure requirement. Grange Farm would benefit from a detailed transport strategy to set out the full transport mitigation package, as is the case with Cambourne and other strategic sites.	210515 (Cambridgeshire County Council)
Comment that is important that the Greater Cambridge Transport Strategy is available as the plan progresses	207534 (East Cambridgeshire DC)
Comments regarding the Transport Evidence Report	211765, 211766 (Camcycle)

• Helpfully shows that development in Cambridge and on the edge of Cambridge generates far fewer additional car trips per home or job than remote new settlements, and has dramatically lower car mode share. • largely relies on 'predict and provide' modelling, testing conservative assumptions and then seeking mitigation, rather than exploring what could be achieved through stronger policy requirements and place-based design. • makes comparisons between sites such as Grange Farm, Waterbeach and Northstowe that do not reflect the different delivery mechanisms and constraints that will shape real-world travel behaviour	
EWR Co strongly support the Council's growth strategy (Policy S/DS) which is 'heavily informed' by the location of existing and proposed public transport schemes, including EWR. The EWR project will play a major role in helping the Councils achieve their ambitions for Greater Cambridge by 2045.	209085 (East West Rail Company)
Comments not sensible on the plan ahead of the Combined Authority's Travel Strategy	201902 (C Deer), 202118 (Elsworth PC)
Concern Plan cannot be properly considered without the Greater Cambridge Transport Strategy, given implications of substantially higher levels of commercial and private transport journeys and condition of local roads, and the Infrastructure Delivery Plan.	201913 (R Baker)
Recommendation for appropriate transport and travel modelling to mitigate potential negative impacts on travel towards Cambridge from Huntingdonshire.	201657 (Huntingdonshire DC)

Mitigation proposals should encompass various travel modes and maximise opportunities for Huntingdonshire residents and businesses to access public and active transport.	201657 (Huntingdonshire DC)
Ultra-fast and efficient public transport links from 'spokes' into the Cambridge (the hub) would minimise congestion and journey times.	201920 (A Davidson)
Recommends a future light rail network linking up larger villages and new towns with Cambridge and each other. Locating facilities close to stations.	202362 (A Carpen)
Concern at over-expansion of local economy and move toward sustainable transport.	201223 (S Williams)
Argues that public transport and active travel must be the starting point for all development, with properly designed, networked routes to avoid car dependency and ensure use.	201734 (R Stobbart)
Comments as new housing is out of Cambridge, but people work mostly in Cambridge, transport will be more stressed, and sustainable travel modes have not been consistently included. • The Plan should map where homes are built and where employment is located, to see the needs for transport. • Included more detail on supporting public and active transport between settlements and the city, between settlements and Policy for local amenity within settlements to assist with day-to-day travel within the communities • Add policy to support active travel within new communities and retrofitting to existing settlements.	201812 (J Baumberg), 201826 (T McKoewn)

The plan should have binding targets for the proportion of journeys walked/cycled and by public transport and for reduction in car ownership (and car dependency). Major developments should have targets for mode share and permeability.	202283 (A Lawrence)
Higher-density development should be linked to lower car ownership and strong alternatives to driving to support sustainable travel. Current dense developments often include high levels of private parking, which affects land use and increases housing costs for non-car owning households. The Local Plan should require parking to be optional, separated from housing, and transparently priced to ensure density is viewed positively.	204632 (M Fordham)
Reduce reliance on the private car: • Reduce the dependence on cars for village residents • Public transport to villages needs to be significantly improved	201894 (R Pargeter), 201023 (K Mahoney)
Recommends increased importance on sustainable transport. Privately-owned electric vehicles do not solve other problems; are expensive way to reduce carbon; are not a sustainable solution.	202283 (A Lawrence)
Comments strategy underplays the role that the existing public transport network can and should play in delivering sustainable development.	203069 (Pegasus Group)

States that the planned Cambourne rail station will adversely impact Boxworth, with inadequate road infrastructure likely to turn the village into a major access route, causing significant detriment.	202838 (W Nichols)
Comments in relation to the CSETS transport corridor scheme: • Supports improvements to transport corridors, pivotal to transport strategy, but concerns over the proposed CSET route, failing to use existing transport corridors and for cutting through Green Belt land. • Comment that the Better Ways for Busways has proposed an alternative to the CSET scheme utilising the existing transport corridor, with less environmental impacts, more accessible, and more cost efficient. • Proposed CSET busway is not compliant with upgrading EXISTING transport corridors. Abandon this hugely destructive and unnecessary scheme, instead improve the frequency and affordability of buses running on the existing roads. • Objection to CSET route and questions if multi-modal access road is needed if the Better Ways for Busways' alternative for a busway spur off the A1307 Hinton Way roundabout was adopted. • Figure 13: is potentially misleading. CSET proposals are still at Inquiry, it is not a committed scheme but a proposed scheme.	203087 (N Campbell), 210184 (Historic England), 204099 (A Baker), 207656 (K Foreman), 202617 (P Waters), 201547 (Stapleford PC), 203174 (D Morgan), 207533 (S Berridge), 204944 (C Arthurs), 204942 (O Arthurs), 204758 (M Fyfe), 204448 (N Pond), 203180 (D Morgan), 209022 (Hobson's Conduit Trust)
Questions proposed multi-modal access road from Granham's Road to the Cambridge Biomedical Campus (CBC), suggesting alternative busway spur from the A1307 Hinton Way roundabout be considered.	204107 (A Baker)

Concern Plan takes no account that by 2045 most vehicles will be EVs.	201902 (C Deer), 202118 (Elsworth PC)
Concern regarding transport improvements, with the draft Infrastructure Delivery Plan not acknowledging existing transport network condition needing to be addressed. While the development of Cambridge and CBC offers potential opportunities for residents of Great Shelford in employment and healthcare, the village carries many of the major transport routes in the South Cambridge area and bears the brunt of their ongoing development.	208089 (Great Shelford PC)
We have concerns about amount of growth on the northeast and eastern sides of Cambridge, and recreational pressure on our sites arising. It is acknowledged that the Local Plan is informed by the location of existing and committed public transport schemes and that a Transport Strategy is being prepared by the CPCA. However, the National Trust has the Wimpole Estate, Anglesey Abbey and Wicken Fen which are important heritage, greenspace and tourism facilities for its residents and visitors. Their importance to Greater Cambridge should not be undervalued. All three of these sites are poorly connected to the city and to the proposed strategic development sites, with very limited opportunities to access the sites by sustainable transport modes. This is an issue that the National Trust are very keen to address but cannot do this in isolation. We are keen to work with other stakeholders and partners to seek opportunities to improve these links.	211081 (The National Trust)
Comments on roads conditions, access, use and safety include:	202214 (A Sykes), 202282 (L Turton)

• Highlights problem areas: (A1301), level crossings, and poor road surfaces to enhance transport safety and accessibility for cycling. Concern over capacity of rural and major roads with increased usage.	
Concern for A14 congestion at peak times at M11 pinch point, and limited input from highways agencies on traffic impact of developments?	201322 (R Morley)
Concern no indication of the East/West railway is included as line of it is incorrect and therefore the local plan.	201682 (S Smith)
Concerns the environmental impact of the East West Rail's southern approach, regarding local wildlife and the Mullard Radio Astronomy Observatory.	202214 (A Sykes)
Concern that in villages car transport will have to remain a mainstay of local transport, and with move to electric vehicles, the plan needs to ensure that the electricity supply infrastructure is sufficient to meet this need.	201894 (R Pargeter)
Comments regarding CSET include: • Objection to CSET route as not within a public transport corridor. • Better Ways for Busways proposed an alternative route along A1307, which does not cross greenbelt land. • Offers additional evidence supporting the benefits of the proposed on-road route. Alternative route would be less environmentally destructive, improve accessibility for a range of users, and cost-efficient. Plan should be scrapped and a new plan created which looks at taking the busway alongside the road.	202620 (I Smith), 202684 (J Hunting), 203051 (C Schofield), 203126 (J Jasiewicz), 204085 (J Robinson), 208405 (M Cooper)

Strategic cross boundary matters

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Concern level of growth detrimentally impact on neighbouring areas to meet and deliver their own economic ambitions and growth aspirations.	208495 (Central Bedfordshire Council)
SCC understands from the settlement strategy and allocations that there is a low level of windfall and allocated growth in the area of South Cambridgeshire that directly affects our border. Our comments relate to highways and transport; minerals and waste planning, and education issues. Our officers would be happy to further engage with you as your plan progresses.	210629 (Transport 2000 Cambs & W Suffolk)
Given their proximity to Essex it is essential that Greater Cambridge councils work collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts and connectivity within Essex, in particular highways and transportation, Early Years and Child Care, Education and Adult Community Learning.	210471 (Essex County Council)
ECC notes that the Greater Cambridge Local Plan proposes “six new development strategy choices not considered for previous plans, which form geographically focused hybrids of the previously identified sources of supply”. ECC welcome joint working to ensure consideration is given and actively planned to ensure accessibility and connectivity to key services and facilities that will benefit Cambridgeshire and Greater	210472 (Essex County Council)

Essex residents, visitors and those investing in these localities. This is particularly important given ECC's role as a neighbouring infrastructure and service provider.	
Comments where opportunities to review any cross-boundary site allocations, Hertfordshire County Council should be invited to engage and contribute on matters relating to service provision across administrative areas to ensure there are comprehensive mitigation strategies	204034 (Hertfordshire County Council)
Responder questions Plan's discordance with approaches set out emerging Peterborough Local Plan and Huntingdonshire Local Plan points to a failure to cooperate and align with neighbouring local authorities, which must be addressed to enable the storage and distribution sector to thrive in accordance with market conditions, and the NPPF.	211686 (Newlands (Cambridge) Limited)

Document presentation / content

Summary of issues raised in comments	Comments highlighting this issue
Key elements of the evidence base underpinning the Development Strategy lack sufficient transparency at Regulation 18 stage, including the absence of recorded outcomes in Defined Development Extents Review Appendix C, and limited explanation of how site information has been interpreted in HELAA and Green Belt assessments. This restricts meaningful engagement on reasonable alternatives. The Council is requested to ensure that assessment outcomes and reasoning are clearly documented prior to Regulation 19 to support an effective and justified plan-making process.	202449 (M Asplin)

Figure 9, page 59 of the draft plan missing a symbol for the Cambourne North proposals? Four locations are identified but there are only 3 symbols on the map	208506 (Central Bedfordshire Council)
Concern Polices Map not showing defined green separation zones on the Policies Map (between Northstowe, Oakington and Longstanton), lack of clarity undermines the effectiveness of the Development Strategy. The Plan should explicitly designate and protect green separation on the Policies Map.	204372 (Cllr T Bygott)
A clear diagram showing the spatial and temporal distribution of employment growth, using the same geography and timeframes as Figure 12, is essential to assess whether homes and jobs are being planned in the same places and to properly understand the transport implications of the spatial strategy.	211767 (Camcycle)
Figure 13 - The figure is potentially misleading. The CSET proposals are still at Inquiry, it is not a committed scheme but a proposed scheme. We recommend that you amend status of CSET to proposed, not committed.	211976 (Historic England)

Objection sites

Summary of issues raised in comments	Comments highlighting this issue
Whilst we support the overall inclusion of sites at part e) of the strategy, we do not consider that sufficient sites in such locations have been considered as part of the evidence base and therefore included within the Plan. This is the case for the land opposite Brewery Road, as discussed in relation to the HELAA 2025 above. This site is	211270 (Mr & Mrs Smith)

within the Southern Rural Cluster, adjoining a Group Village (where one allocation is proposed) with good public transport links. Despite this, it was excluded from assessment within the HELAA 2025.	
Objection as an infill site in Whittlesford should be included in the Plan, walled Garden, Whittlesford CB280901 for 8 homes, as rural villages on the edge of Cambridge.	204433 (C Forbes-Cable)
Cambridge Science Park North Supports inclusion of Cambridge Science Park North as will generate around 3,500 skilled jobs and at least 460 training and apprenticeship places in science, technology and mid-tech sectors.	203242 (Cambridgeshire Chambers of Commerce)
The existing Cambridge Science Park is of national significance, the first of its kind, it has fostered collaborative working across the UK tech and life sciences sectors both within Cambridge and nationwide. It attracts top-tier global tech companies due to its enduring competitive global brand. It forms part of the Oxford-Cambridge Arc and the innovative growth corridor between London, showing its location as an area of high quality provision for the science and technology sector. Not only is there a high prevalence of research and development facilities linked to skilled manufacturing already at Cambridge Science Park, it is also home to some of th more exportable subsectors within this employment sector. Cambridge Science Park has considerably higher exportability than the national average in both high-tech and	211482 (Trinity College (CSP) Limited)

mid-tech sectors. Evidence to date would suggest that establishing standalone sites further out of the City do not work; If we do not provide these facilities in Cambridge, these companies may choose to locate operations outside of the UK altogether. There is every intention that the provision at Cambridge Science Park North (HELAA Reference 40096) will match and elevate Cambridge's global position.	
Cambridge Junction's future redevelopment and reprovision, and the detailed implications of the Draft Local Plan, have only become clear at Regulation 18 stage. In addition, the Create Cambridge Insights Report has only recently been completed and provides a new evidence base on cultural infrastructure need and delivery. This representation therefore responds to newly available information, site allocations and evidence.	204806, 204802, 204826 (G Shaw)
The Gt Shelford Site 115766 access assessment remains unchanged with a RED rating, but the respondent argues it should be upgraded to GREEN based on a full transport assessment, access is suitable for emergency services, sustainability, no harm to nearby heritage assets, low flood risk, indicating access is suitable for development, and re-evaluated to GREEN due to a reduction in proposed residential units. The respondent asserts it should reflect a more appropriate GREEN score based on the evidence submitted.	204933 (Great Shelford (Ten Acres) LLP)
The site at Land South of Shelford Road, Fulbourn, should be included in the Plan to enhance housing variety, as it is in a sustainable location with access to local facilities	204941 (Miller Homes)

and public transport on the edge of Cambridge Centre. The land adjoining Land South of Shelford Road Fulbourn site could also be included in the Plan for further housing development, promoting comprehensive development and a natural edge to the village.	
Suggests Grange Farm is not a sustainable solution for AvTech workers and given the Plan recognises IWM Duxford as an AMC, the Plan should recognise and make provision for housing for the new AvTech workers. Responder states Maarnford Farm is the last development parcel identified in Duxford, meeting some immediate housing need but will not address the medium to longer term need, including the AvTech workforce. Suggests a new masterplan led plan is required to facilitate sustainable growth in Duxford.	211426, 211427 (Gonville & Caius College)

Comments on the Housing and Economic Land Availability Assessment

Summary of issues raised in comments	Comments highlighting this issue
There are conflicts in the Urban Intelligence reports on Sites and factual errors should be corrected. The reports are not up to date regarding build-outs. The section Category of Settlement treats sites outside the settlement boundary as being the same as sites adjacent them. In policy terms they are very different and therefore it should be clear when a site is within the defined settlement development boundary and when in countryside. Flood Risk RAG zones do not agree with historic and/or current flooding	211930 (C Newell)

and previous Local Plan Flood Zones. Archaeology RAG Assessments should identify where excavations are partial and a full build-out would affect areas not assessed.	

Policy S/SH: Settlement Hierarchy

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was general support for the policy citing reasons including provides a clear structure for directing development and helps prevent speculative development in the least sustainable places. Others commented that boundary extents were too restrictive and limited growth in rural locations and smaller villages. Some considered the approach did not reflect draft National Planning Policy, some requested wording changes, whilst others questioned whether the policy was contrary to the current NPPF.
A number commented on the lack of a review of settlements' capacity.

Anglian Water asked that the policy make clear that that the requirement for adequate infrastructure to be able to be made available should be applied to growth at smaller settlements including Minor Rural Centres, Group Villages, and Infill Villages. The Environment Agency asked that "and areas of flood risk are avoided" be added to the policy.

Some comments queried the approach taken in the Settlement Hierarchy Study, including to revise the settlement hierarchy methodology to ensure consistent and transparent comparison between Group Villages. A suggestion was made for a more comprehensive review of settlements and their role within the wider settlement hierarchy, noting the relationship between settlements, and taking into account committed and proposed growth, improved connectivity and changing functional relationships.

A significant number of comments proposed amendments to the categorisation of specific settlements where they considered settlement to be suitable for a different tier due to scale, infrastructure, services or sustainability. The promoter of a site on the edge of Royston recommended designation within the hierarchy.

A possible draft Policy S/SH Discrepancy with the housing requirements is responded to in the responses to Appendix D.

Response to main issues:

Comments supporting the policy approach are noted.

The Settlement Hierarchy policy forms one part of the development strategy, which has carefully considered the approach to directing development to sustainable locations. National policy and the Local Plan including policy S/SH directs growth to those settlements which can support most growth sustainably. Rather than considering the capacity of each settlement, the Councils consider that the proposed policy approach provides a clear policy framework informing an appropriate response to planning applications ensuring that they can be considered on their own merits.

Some comments also referenced the draft NPPF proposal for flexibility at railway stations, suggesting greater account is taken of them in informing the hierarchy. The outcome of that consultation is not known. The location of railways stations is a factor in the scoring of settlements in the Settlement Hierarchy Study.

The policy has been amended to make clear that that the requirement for adequate infrastructure to be able to be made available should be applied to growth at smaller settlements, in response to Anglian Water's representation. The requirement to avoid flood risk was not added noting that this national policy requirement would be addressed via other policies in the Plan.

The Councils consider that the Settlement Hierarchy Study 2025 remains a robust and proportionate evidence base for informing the Proposed Submission Settlement Hierarchy policy. The categorisation of settlements in a particular hierarchy category within the Settlement Hierarchy Study is a matter of judgement, drawing on, but not being wholly defined by, the sustainability scoring. While the scoring itself did not account for the interaction of settlements, the rationale for categorisation of settlements did include this consideration where relevant. It is considered that adding specific scores for relationship with other settlements would form an overly complex methodology. The scoring itself is based on a rounded assessment of services and facilities.

The Councils have considered all settlement specific representations that were received during the Draft Plan consultation. However, based on review the Councils consider that the categorisation of settlements in that Settlement Hierarchy Study remains robust, and that there is no need for further modifications to any settlement's position in the hierarchy from that proposed at Draft Plan stage. Consideration of Royston's role in relation to the Greater Cambridge development strategy is addressed within the Strategy topic paper.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comments supporting the policy includes: • broad support for policy	202613 (Ickleton PC), 201377 (Gamlingay PC), 202734 (Cambridge Past, Present and Future),

• provides a clear structure for directing development • helps prevent speculative development in the least sustainable places. • for group villages to have no more than 8 houses per scheme • appropriate Cambridge identified at top of the hierarchy • support for the Towns to have own position in the hierarchy • support for Cambourne defined as a town, along with Waterbeach New Town and Northstowe • inclusion of Great Abington and Little Abington in Group Villages • appropriate for Swavesey to be defined as a Minor Rural Centre • support for designation of Ickleton as an Infill Village. • growth to be directed to Great Shelford and Stapleford recognising position in hierarchy and the number of services and facilities within the settlement. • support for Willingham defined as a Minor rural centre • proportionate distribution of growth is important to ensure that settlements – both large and small – remain sustainable and that growth takes place in locations which can support it • support for Meldreth defined as a Group Village • support the proposed overall policy for minimal development in small villages in rural South Cambridgeshire in preference for larger new centres that are already being established	204142 (Richborough), 204167 (Tritax), 205121 (North Barton Road Landowners Group), 204577 (C Forbes-Cable), 201767 (C Blakeley), 203315 (J Manning), 210666 (Gladman Developments), 209134 (Meldreth PC), 208905 (Nightingale Land and Hill Residential Ltd), 203267 (Horseheath PC)

• Anglian Water is generally supportive of the approach set out in the policy, and the provisions setting out the parameters for growth in each settlement category. It is noted that for Cambridge, Towns and Rural Centres the policy is clear that development should come forward (without any limit imposed) "provided that adequate services, facilities, and infrastructure are available or can be made available as a result of the development". However, this same requirement is not included for growth at smaller settlements including Minor Rural Centres, Group Villages, and Infill Villages. • Anglian Water requests that this qualifying statement to demonstrate that adequate infrastructure is available, should be applied to all the settlement categories within the settlement hierarchy, so development proposals clearly address infrastructure capacity - this includes wastewater treatment capacity in the network and the receiving WRC (as evidenced by the Stage 2 Detailed Water Cycle Study). For small settlements (e.g. Tadlow) where we have WRCs with a descriptive permit i.e. Descriptive Works - our position statement indicates that proposals that seek to connect to our network will be objected to unless the developer can demonstrate there is sufficient capacity at the works, OR an onsite solution such as a package treatment plant is approved.	209162 (Anglian Water Services Ltd)

Alternatively, similar wording to Policy S/DE clause 1.c could be used for the smaller settlement categories to ensure "There is the necessary infrastructure capacity to support the development".	
Environment Agency requests changes to policy wording at the end of points 1 and 3: 'Residential development and redevelopment…. provided that adequate services, facilities and infrastructure are available or can be made available as a result of the development *and areas of flood risk are avoided.'*	211131 (Environment Agency)
Comments objecting to the policy include: • suggests policy classification lacks currency and, when combined with other draft plan policies, risks excluding sustainable small sites under one hectare, contrary to NPPF paragraphs 73 and 83 • argues policy sections (9) and (10) impose limitations on growth, policy is unjustified and ineffective, failing to deliver necessary growth and contradicting paragraph 36 of the NPPF. • inconsistent with key principles of the NPPF. Paragraph 72 acknowledges the importance of strategic housing land supply comprising a sufficient mix of sites. • NPPF (2026) directs development to sustainable locations, the current hierarchy fails to support.	201856 (Chivers Farms Ltd), 204454 (Cottenham PC), 204557 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 204618 (Papworth Everard PC), 202331 (Granta Land Ltd - Land at Valley Farm, Meldreth), 201948 (KG Moss Trust & Moss Family), 202366 (The CLC Trust), 201969 (Shelford Investments), 202538 (Granta Land Ltd - Land West of Station Road, Meldreth), 202651 (Granta Land Ltd - Land at Sheene Farm, Meldreth), 202667 (Granta Land Ltd - Land East of Station Road, Meldreth), 204056 (E W Pepper), 208680 (Guilden Morden Developments Ltd), 208773 (Croudace Homes),

• recommends change to policy reflecting the role of railway stations to reflect Government policy. Upgrade settlements with direct connections to high-quality public transport. • reassess hierarchy, include a new category for 'Well Connected Minor Rural Centres' including Fulbourn, Milton, Melbourn, and Waterbeach prioritising growth over less sustainable options • states potential to undermine the growth of rural communities • recommendations to assess settlements individually on sustainability, connectivity, and functional integration and then review hierarchy • indicative maximum scheme sizes are arbitrary and should be removed. Should be assessed on site context rather than fixed thresholds. • suggests removal of development without limitation on sites within the three Rural centres • requests limits on individual schemes in line with those specified in adopted Neighbourhood plan • states policy neglects sustainable opportunities at the Edge of Cambridge • states policy applies only to land within defined development extents creating ambiguity regarding the assessment of sites with strong ties to Cambridge	208785 (Granta Land Ltd – Land East of Station Road, Meldreth) 208809 (Granta Land Ltd – Land West of Station Road, Meldreth), 201955 (M Asplin), 201958 (M Asplin), 201963 (M Asplin), 202103 (Cambridgeshire County Council), 202559 (Ely Diocesan Board of Finance), 203049 (Cemex UK Properties), 203163 (Christ's College), 203315 (J Manning), 203393 (Jesus College), 204103 (G W Balaam & Son), 204125 (Emmanuel College), 204143 (G W Balaam & Son), 204173 (J Johnson), 204445 (Bellway Strategic Land), 204459 (Wain Estates), 204514 (Redrow Homes South Midlands), 204949 (Places for People), 205132 (Axis Land Partnerships Ltd), 203408 (Jesus College), 204244 (Bellway Strategic Land), 204398 (Hill Residential (Great Abington Site), 204566 (Rosconn Group), 204858 (Pigeon), 203982 (Abbey Properties Cambridgeshire Ltd), 201006 (M Colville), 202366 (The CLC Trust), 205024, 209746, 209747, 211523, 211522,

• revise the settlement hierarchy methodology to ensure consistent and transparent comparison between Group Villages. • considers the hierarchy inconsistent with the distribution of growth set out within the Development Strategy • Group villages not in the green belt should be elevated in the hierarchy • Permitting windfall development inside development extents disregards the sustainability of Rural Centres and prevents their growth. • discrepancy between draft Policy S/SH and the housing requirements outlined in Figure D1 of Appendix D • Local residents should have input • development adjacent to settlement boundaries should be allocated for • quantum of development which a settlement can support should consider the wider proximity to services not just services in Central Cambridge and Market Towns • Instead of the arbitrary 8km cycle distance, points should be awarded to settlements which benefit from the Greenways; their purpose is to allow non-motorised commuting to services and employment including in Central Cambridge • fails to recognise that there are services and job opportunities outside of Central Cambridge and the Market Towns	211521, 211520 (Endurance Estates), 211198, 211208 (R Raywood, A Bradney and D Unwin), 211586 (Terra Strategic), 211458 (Hayfield Homes Construction Ltd), 211048, 211060 (Wates Developments Ltd), 207022 (Mac Mic Land)

• suggests Waterbeach new town and Waterbeach to be considered as one complete settlement and (both) be at Town tier. • Papworth Everard should be a Group village as is no longer on a par with other Minor rural centres. • Horningsea should be reclassified as a Group village to reflect scale, characteristics and sustainability. • queries identification of Linton as a Minor rural centre • lacks evidence to support Over as a Group Village and not elevate to a Minor Rural Centre	
Objects to the settlement hierarchy on the basis that it restricts growth in villages such as Great Wilbraham, undermining their ability to remain viable and meet local needs. States this approach risks turning smaller villages into dormitory settlements, increases dependence on private cars and reduces freedom for non-drivers including children and older residents.	203338 (Great Wilbraham PC)
Suggests policy could set out how new and emerging settlements will be addressed during a future review	203414 (Lichfields)
Comments regarding lack of review of the capacity of settlements to accommodate additional development or development threshold limits remain relevant if no sites are available	203895 (Hill Residential (Fulbourn Site)), 203935 (Hill Residential (Sawston Site)), 202083 (J Francis), 211622 (Bloor Homes Eastern), 211613 (Bloor Homes Eastern), 204161 (Hill Residential (Hardwick Site))

States in naming the largest villages ‘Rural centres’ it’s unhelpful, they are not rural and this locks people out of planning discussions as is counterintuitive. Whereas Minor rural centres are rural in character.	203888 (Histon and Impington PC)
Concern infill villages not located on major transport corridors will remain without reliable and frequent public transport opportunities, affecting numerous villages.	203888 (Histon and Impington PC)
Suggests consideration of sustainability measures and infrastructure investments associated with the wider growth location should be more fully acknowledged in the settlement hierarchy assessment. (Linton site)	204837 (Vistry Group)
Redrow requests an assessment of the sustainability credentials of each settlement in the District, undertake a review of the capacity of the most sustainable villages in South Cambridgeshire—including Group Villages located close to Cambridge with strong transport links (Hauxton) - to determine whether additional development can be accommodated within existing development framework boundaries, allocate additional land at the edges of these settlements to ensure that growth is appropriately directed, sustainably delivered, and consistent with the Plan’s stated objectives.	204514 (Redrow South Midlands)
The respondent supports the proposed Policy wording • Bar Hill is designated as a 'rural minor settlement' with a role in providing services for a small rural area, having more facilities than most other settlements in Greater Cambridge. • Bar Hill's as a MRC, strategic location on the A14 is beneficial for the logistics sector, suitable location for industrial and logistics growth in	204167 (Tritax Big Box Developments)

Greater Cambridge, being outside the Green Belt and close to the city, unlike Histon and Impington and access to a local workforce and necessary infrastructure for industrial and logistics uses. • The respondent references key paragraphs from the NPPF 2024 and NPPF 2026 that align with the operational needs of the freight and logistics sector.	
Comments on the policy approach include • Suggests current approach does not align with the NPPF's direction to boost new housing supply, as noted in paragraph 61 and amending part 5 of Policy to allow residential development within defined extents and on adjacent land, provided adequate services and infrastructure are available • restrictive approach in smaller villages risks limiting opportunities to sustain rural communities. • policy focuses on limiting growth rather than enabling rural sustainability • scheme sizes make affordable housing delivery harder, support of local services or responding flexibly to local need. • Little reference to rural transport gaps, digital connectivity or the cumulative impact of small developments.	203149 (Cambridgeshire ACRE), 203149 (Cambridgeshire ACRE), 204708 (Croudace Homes), 204976 (Martin Grant Land), 211614 (Bloor Homes Eastern)

• Stronger rural proofing would allow more flexibility where schemes support affordable homes, local services and community led development.	
“Rural Centres” is a misleading term. These are among the least rural villages: they do not feel remote, lack strong rural characteristics, are close to Cambridge, benefit from good transport links, and are not shaped by a rural economy. The label is therefore unhelpful and should not be applied to the largest hub villages. “Minor rural centres” are more genuinely rural, although many function economically as suburban settlements, with high levels of commuting and, in some cases, their own science parks. Describing these places as rural introduces bias into policy discussions and planning decisions, obscuring their hybrid or suburban character. “Smaller villages”, by contrast, are distinctly rural, facing traditional rural challenges and displaying classic rural characteristics, yet they are not classified as rural under the current terminology.	211000 (Cambridgeshire County Council)
Settlement Hierarchy Study Update represents a proportionate review of the earlier assessment rather than a comprehensive reassessment of settlement roles and relationships between settlements. As such, it provides limited analysis of how committed and proposed growth, improved connectivity and changing functional relationships may influence the suitability of settlements.	210227 (Vistry Group)

It is considered that the approach taken through the update remains overly focused on existing services and facilities and does not sufficiently account for committed growth, proposed allocations, or the dynamic role that some settlements play within the wider spatial strategy. In particular, the assessment gives limited weight to the strong functional relationship between certain Group Villages and Cambridge itself. (Land at Fen Ditton)	
Concerns that new evidence and site-specific information only became available at Regulation 18, affecting the ability to comment earlier on settlement hierarchy implications.	204808 (G Shaw)
Comments on classification of Melbourn and Meldreth include: • suggests Melbourn and Meldreth to be considered as one settlement. • railway station serves both villages • villages of Melbourn and Meldreth should be designated as a Rural Centre • reiterates Melbourn and Meldreth function as a combined settlement with shared services, facilities and schools. Notes recent active travel upgrades strengthen links. • argues a combined or re-scored settlement should be designated as a Rural centre	206217 (Granta Land Ltd - Land at Valley Farm, Meldreth), 202331 (Lanpro)

Comments on classification of Melbourn: • Melbourn could be re-designated as a Rural Centre • Settlement Hierarchy Paper (2021) allocates 14 points, with high scores for shops and services and secondary school • Melbourn is the largest village in the south-west of the district • Greenway Scheme will provide better accessibility to Cambridge by sustainable modes • higher score than Rural Centres in terms of secondary school provision than Great Shelford and Stapleford, designated as a Rural Centre	211417 (CALA Group Ltd), 211061 (Wates Developments)
Comments for classification Great Shelford and Stapleford include: • Argues the classification as a single Rural centre undermines the distinct identities of the two villages and contravenes clause 1a of Policy S&GS 12 Neighbourhood Plan • Concerns raised regarding implications of permitting unrestricted residential development in a combined rural centre • They have a very different range of amenities and services; highlights a lack of amenities in Stapleford • Suggests that minor rural centre is a more appropriate classification for Great Shelford	201549 (Stapleford PC), 202674 (S Berridge), 2010894 (Great Shelford PC)
Comments regarding re-classification of Cottenham: • size suggests Rural Centre not Minor Rural Centre	207654 (Cottenham PC), 204454 (Cottenham PC), 211219 (Terra Strategic), 211232, 211580

• need for delivery of services and infrastructure due to Significant increase in housing. • concern of impact for long-term sustainability of the village • proposed change in settlement status is contrary to the level of services and facilities within Cottenham. • At appendix 11 Cottenham scored 15 points, higher than Gamlingay (scored 7) and Willingham (scored 9). Both of these settlements are also identified as minor rural centres. Settlements with varied scores and are identified as the same category village should not be the case.	(Living Space Housing), 211246 (Manor Oak Homes)
Comments regarding housing limits in Cottenham: Responder objects to indicative maximum scheme size of 30 dwellings, noting identified housing requirements for neighbourhood areas of 130 dwellings identified to be delivered at Cottenham between 2024-2045. How will this number of dwellings be delivered. The defined development extent for Cottenham as being drawn tightly around existing development at the settlement, with no development opportunities within the defined developed extent that would be sufficient to deliver the 130 dwelling neighbourhood area requirement identified by the Draft Plan.	211277 (Woolsington One Ltd)
Comments on classification of Willingham as a Minor Rural Centre. • There is no justification for the arbitrary figure of a maximum of 30 dwellings in MRC.	211263 (Terra Strategic)

• This limits the level of growth that the Minor Rural Centre and less efficient use of land contrary to national planning policy which requires proposals to make the most efficient use of land.	
It is strongly considered that the failure of the evidence base to consider all modes of transport and bus services within Fowlmere and its connectivity to the surrounding settlements represents a flaw in the overall settlement assessment. This has subsequently resulted in sites that are being promoted within Fowlmere not being properly considered for development and not being subject to an independent site assessment.	211048 (Wates Development Ltd)
Suggests review Fulbourn, a Minor rural centre, and include as a Rural centre due to its facilities and transport links.	204962 (Miller Homes)
Notes the inconsistency of retaining Group village development restrictions for Elsworth while a major development of over 13,000 homes is proposed within close by.	202123 (Elsworth PC), 202346 (P Deer), 201906 (C Deer)
Suggests designation of Bourn Airfield as a Rural Centre	203414 (Juniper Propco (Bourn) Limited)
Suggests Bassingbourn and Kneesworth should not be 2 settlement types as they are one settlement.	201373 (Gentian Development Ltd)
It is important that the hierarchy is applied flexibly and in a manner that supports the effective delivery of the development strategy. Opportunities such as Fen Ditton, which are capable of accommodating additional growth in a sustainable manner, can play an important role in contributing to housing delivery, particularly where they are of a scale that complements existing	210228 (Vistry Group)

services and facilities while supporting their long-term viability. (Land at Fen Ditton)	
Argues that Caxton should be identified as a Group Village due to its close proximity to Cambourne and the high level of services and facilities accessible by walking and cycling. States that these sustainability credentials justify an upgrade in classification.	204274 (LVA)
Land to the west of Cambridge Road, Melbourn We do not disagree with Melbourn's position in the Settlement Hierarchy and endorse its recognition as a sustainable location and able to accommodate additional residential growth. The approach proposed within Policy S/SH of the Plan, however, is that Minor Rural Centres will support an indicative maximum scheme size of 30 dwellings. It is evident that Melbourn is capable of accommodating larger sites, with the proposed allocation for 120 dwellings at land to the west of Cambridge Road (Policy reference S/RRA/CR), underlining this point.	211061 (Wates Developments)
Land at Swans Corner (HELAA Reference 208803) Whittlesford has a good range of services and facilities for a Group Village. It contains a primary school, village store, a post office and other community facilities. It also has bus connections to Cambridge and Saffron Walden and a train station providing good connections to Cambridge and London. In our opinion, Whittlesford is a suitable village for some growth and additional	211692 (native land)

residential development should be supported in the emerging Greater Cambridge Local Plan.	
Land at Mingle Lane, Great Shelford While we agree with the placement of Great Shelford and Stapleford within the settlement hierarchy, it must be remembered that this area has excellent access to Cambridge which will improve as part of future infrastructure initiatives such as the CSET busway and the new Cambridge South Station as part of the Cambridge Biomedical Campus which will be directly accessed from Shelford station. Given the recognition of the number of services and facilities available within the settlement, it is imperative that growth is directed to this location. The Land at Mingle Lane allocation should therefore be re-introduced.	208905 (Nightingale Land and Hill Residential Ltd)
North of Willingham Road, Over (HELAA reference 40323) Plan lacks sufficient residential sites in the north western quadrant of Cambridge, failing to acknowledge the need for housing for residents who work to the west. The site North of Willingham Road, Over meets the criteria for smaller site allocation, and the Plan lacks justification for not including such sites, indicating a potential failure to meet local housing needs.	203467 (ESCO Prospect)

A detailed assessment of smaller sites, including North of Willingham Road, Over, should be conducted to ensure at least 20% of allocations in the Local Plan are on sites of the appropriate size. Due to the significant size constraints placed on settlements it is not possible to deliver these as windfall sites.	
Land at Prospects Royston, previously Three Prospects Farm, land east of Royston, (HELAA ID 40511). Policy S/SH should be revised to identify land beyond the A505 at Royston as being in the second tier of the hierarchy, below the Cambridge urban area itself but above Cambourne and the other new settlements and on a par with sites on the edge of Cambridge as a location for strategic and sustainable housing and employment growth.	203331 (Wilson Bowden Developments Ltd)
Land at Girton Road, Girton (site ID 115170) • Responder states the higher growth scenario from the Greater Cambridge Employment and Housing Needs Update should be used in future policy revisions. • Allocation of small and medium sized sites is essential to meet housing requirements, as over-reliance on windfall sites is not a sound planning approach.	204361 (Wain Estates)

• site ID 115170, is one such site which is well-situated and well-connected to support sustainable transport, aligning with the Local Plan's ambitions for knowledge-intensive sectors.	
Land North of Pampisford Road is situated on the edge of Great Abington (Site Id: 115179) • Respondent requests removal of arbitrary limitations for the scale of development that might take place in Group Villages. • Or limits increased, as 8 is not justified and limitations applied to other settlements in the hierarchy removed also with all sites evaluated on their own merit against sustainability and the capacity of existing facilities and services to accommodate growth. • Limits on development are inconsistent with Government policy on promoting a step change in growth. • Where there is no neighbourhood area, the plan examines growth in those villages and directly allocates sites for development. Great Abington is a Group Village but not a Neighbourhood Area, and yet it sits adjacent to Granta Park, a major employment area, a sustainable location, can support economic growth at this employment site. The site is an ideal candidate for allocation through a change in policy.	204566 (Rosconn Group)
Land south of Hauxton Road in Little Shelford	211254 (R Harvey)

• The responder has promoted a site in Little Shelford. Little Shelford is defined as an Infill Village in the settlement hierarchy and has a reasonable level of services and facilities. Given the sustainability credentials of Little Shelford, it is felt that it would be more appropriate for it to be defined as a Group Village. • Concern there is no review of the capacity of settlements to determine available land within the development framework boundary, or the development threshold limits remain relevant. • Concern no major residential development opportunities within the development framework boundary of Little Shelford. Small scale would not deliver affordable housing or provide any meaningful support to existing services and facilities. Little Shelford affordable housing needs are not being met. • Amendments should be made to the development strategy to direct development to the more sustainable infill villages including Little Shelford to support existing services and facilities, deliver additional facilities, and meets identified affordable needs of villages.	
Land at west of North End, Bassingbourn (HELAA ID: 200809). • Important that small and medium size sites such as the site proposed, to meet the housing requirement of the area, compared to major sites and new settlements.	

A one size fits all approach to site allocation is inappropriate and does not allow individual characteristics and benefits of a site. The Framework is clear that sufficient allocations should be included in Local Plans, and the Plan fails to facilitate sufficient allocations in a range of sustainable settlement.	211201, 211200, 211210 (Rainier Developments & Strategic Land)
Concern the level of windfall allowance within the overall housing delivery figure for the Plan. Represents a significant proportion of the total housing to be delivered and is not guaranteed. Given the housing need figure for Greater Cambridge and reliance on large sites and new settlements to deliver the majority of the residual housing need, the Plan should allocate additional smaller sites to ensure the housing need is met and particularly within the short term.	211272 (Mr & Mrs Smith)
Support Cambridge Junction and Create Cambridge in asking that: • cultural infrastructure's ongoing revenue and organisational capacity needs are recognised, not just physical buildings • culture is embedded in cross-cutting outcomes (innovation, health, education, community resilience) • partnership frameworks between councils, cultural organisations and communities are referenced as delivery mechanisms aligning community infrastructure with lived cultural use.	204830 (G Shaw)

Concern ‘Rest of the Rural Area’ comprises rural centres and group villages, a total of 48 settlements, have only 3 sites allocated for a total of 205 new homes. • The proportion of development attributed to major strategic sites is a risk to deliverability and inconsistent with the Framework. • Regarding draft allocations, a ‘blanket approach’ has been taken, with maximum dwelling numbers given to all settlements below Rural centres.	211209 (Rainier Developments & Strategic Land)

Policy S/DE: Defined development Extent

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

A number of comments supported the approach to Defined Development Extents (DDE), citing reasons including their role in protecting the countryside, village character, and focusing development into sustainable locations.

Some comments proposed specific amendments where they considered the proposals map did not correctly reflect the existing position. Others proposed that the DDE should be amended to include their proposed development site.

Objections to the DDE policy considered the policy was too restrictive and should be more flexible. They were restricting growth in sustainable villages where development was needed. The DDE has not been changed significantly since 2004. Some considered the approach did not reflect draft National Planning Policy.

Response to main issues:

Comments supporting the role of developments and approaches to specific areas are noted.

Defined development extents identify which areas should be considered part of settlements for planning purposes so that it is clear where policies for the built-up areas of settlements give way to policies for the countryside. This is necessary to ensure that the countryside is protected from gradual encroachment on the edges of villages and to help guard against incremental growth in unsustainable locations. In the countryside development is generally restricted to uses that need to be located there. Making the policy more flexible or including areas of open land on the edges of settlements would undermine the development strategy, which seeks to focus development on sustainable locations responding to evidence including in relation to climate change and transport.

Some respondents argue that the current policy is restricting growth outside defined development extents in villages. The strategy and policy approach is to enable development in the most sustainable locations, working in conjunction with policy S/SH: settlement hierarchy. Therefore, defined development extents do play a role in directing growth to the most sustainable locations across Greater Cambridge. The plan has demonstrated how identified development needs are to be met.

There are a range of circumstances where development outside defined development extends will be supported, including affordable housing exception sites. Villages also have the opportunity to produce neighbourhoods plans if they wish to address specific local issues.

Some comments reference compatibility with national policy, and in particular the Draft NPPF 2025. Whilst as a legacy local plan the soundness of this local plan will be considered against the NPPF 2024, it is notable that the draft NPPF sets specific policy for development within and development outside settlements. The Defined Development Extents would therefore assist with the application of these policies. Some comments also referenced the draft NPPF proposal for flexibility at railway stations. The outcome of that consultation is not known. The location of railways stations has been a consideration when determining the development strategy.

Since the Draft Plan stage, a further review of the defined development extents was undertaken to ensure it remains up to date with the current extent of the built up area of the settlement where planning permissions have been largely completed.

A number of comments reference specific site proposals they have put forward for allocation. Whether the site should be identified for development has been reviewed through consideration of the development strategy, informed by evidence including the Housing and Economic Lond Availability assessment. It is not the role of a change to the Defined Development Extent to enable development of a site, that would be done through allocations. Changes have therefore not been made to bring in land which does not meet the definition.

In terms of specific policy wording changes, it is not necessary to widen paragraph 2c, as infrastructure examples sites in comments would be able to demonstrate their need for a countryside location.

Responses to representations which propose a change to the framework rather than to reflect an allocation:

- **Land west of Old North Road, Bassingbourn cum Kneesworth –** Updates to reflect consented and completed developments have been identified on the Proposed submission proposals map.
- **Caxton Gibbet food retail site, Cambourne** - This land falls outside the built up area of the village. It is a distinct site more closely related to serving the highway network, the proposed DDE in this location is sound.
- **Land off Ermine Street Caxton -** The defined development have been reviewed. Sites with planning consent have been added when they are complete or substantially complete. The site reference has yet to be built.

- **Between Brook Street and Brockley Road, Elsworth** - This area extends beyond the built up area of the village and is correctly shown as being outside the defined development extent.
- **Land North of Thriplow Road, Fowlmere –** The defined development have been reviewed. Sites with planning consent have been added when they are complete or substantially complete. The site reference has yet to be built.
- **South of Thompsons Meadow, Guilden Morden -** The planning committee report on 20/03151/REM– Land South of Thompsons Meadow, states 'There is also an undeveloped grassed area to be retained in the south east corner of the site which helps to mitigate the impact of the development on views into the site from the access along Thompsons Meadow and contributes to retaining a countryside and edge of village character. ' The countryside edge should be defined to the extent of the built up area, and the proposed DDE in this location is sound.
- **Howells Way, Hardwick** – DDE has been reviewed in this location to take account of the now completed development.
- **Land at Cottenham Road, Histon -** DDE define where policies for the built-up areas of settlements give way to policies for the countryside. This is necessary to ensure that the countryside is protected from gradual encroachment on the edges of villages and to help guard against incremental growth in unsustainable locations. In this location the low density of development means the area is distinct from the built-up area. The area has been recognised as green belt in successive local plans. There are no exceptional circumstances to remove the land from the green belt.
- **The Boundary, High Street, Horningsea -** Disagree. The land identified does not form part of the built up area of the village. The line identifies an appropriate distinction between the built up area and the countryside. The land has been identified as green belt, there are no exceptional circumstances for its release.
- **Horseheath Road and Bartlow Road Linton -** Whilst a number sites were granted planning permission where the tilted balance was applied because of a lack of 5 year housing supply at the time of their consent, when these developments are

complete (or substantially complete), the developments have been taken into account in preparation of the Proposed Submission policies map, reflecting that they now form part of the built up area of the village.

- **TPP Campus Melbourn –** The site is recognised as an Established Employment Area, outside the defined development extent. This is considered the appropriate response to the site.
- **Site Allocation S/RRA/CR, Land to the west of Cambridge Road, Melbourn –** The site is shown as an allocation on the proposed submission policies map. Once the built form is considered though the planning application process the DDE can be amended in a future review of the local plan.
- **Former Oakington Tomato Farm, Dry Drayton Road, Oakington –** this site is on the western edge of Oakington. Whilst it did have glass houses present, is open nature and separation from the village means that it would not fall within the definition of the defined development extent.
- **Land at Gog Magag Way and Haverhill Road Stapleford** - The Chalk Hill development referenced was a permitted as rural exception site, and remained in the green belt. There are no exceptional circumstances to release the Strawberry Feilds site from the green belt.
- **Hay Street, Steeple Morden –** The supporting text of the policy states that ‘Property boundaries shown on Ordnance Survey (OS) mapping have been taken into account in defining defined development extents. However, since there are many large gardens on the edge of settlements, the defined development extents sometimes cut across such gardens, especially (but not solely) if parts of those gardens relate more to the surrounding countryside than they do to the built-up areas. The 'cutting' of some gardens is regarded as a positive development management tool to limit the potential for further residential development in smaller villages with few facilities and little or no public transport’. The line in Hay Street remains appropriate.

- **The Walled Garden, Whittlesford -** This site is in the green belt, and correctly defined as being outside the DDE. Other sites have been identified to meet housing needs, and exceptional circumstances to release this land from the green belt have not been identified.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for Policy includes: • High bar for development outside of villages/rural centres • protection of open countryside • Protection from encroachment • prevents unsuitable development inside and outside of development extents. • Without policy small rural communities could quickly lose their character. • no new housing developments outside defined development areas, except for Parish-led Neighbourhood Plan allocations. • Intent to ensure development located in the most sustainable places • essential for controlling development around villages • principle of defining settlement boundaries around villages	201013 (M Colville), 201769 (C Blakeley), 201896 (R Pargeter), 202615 (Ickleton PC), 204974 (D Davies)

• potential rural exception sites would dry up as parcels of land at village edges would offer the prospect of making large profits if developed and proposals based on maximising developer profits would predominate. • should be no exceptions for green belt land	
Cambridge Science Park, Cambridge Support for inclusion of site within the Defined development extent.	203070 (Trinity College, Cambridge),
Protect rural views.	209678 (H Hale)
Welcome the reference to heritage in criterion 1b.	210086 (Historic England)
Hay Street, Steeple Morden Objection to boundary in Steeple Morden. Should follow a consistent settlement edge aligned with adjacent built form and include the application site.	202095 (R Wright)
Horseheath Road and Bartlow Road Linton Object, amend to NOT include the Horseheath Road and Bartlow Road developments as resulted from the lack of a Local Plan being in place in 2015-2018	201670 (Linton PC)
South of Thompsons Meadow, Guilden Morden Object as DDE should be extended to reflect development south eastern part of the settlement (planning permissions S/3077/16/OL and 20/03151/REM)	201811 (Peter David Homes Ltd)
Caxton Gibbet food retail site, Cambourne Objection to boundary extent at Cambourne, extend to include land up to the A428, encompassing the Caxton Gibbet food retail site and the EV car charging area.	204011 (Abbey Properties Cambridgeshire Ltd)

Land west of Old North Road, Bassingbourn cum Kneesworth (Site reference 210373) Comment Defined Development extent needs amending to reflect recent planning approvals.	201374 (Gentain Development Ltd)
Land North of Thriplow Road, Fowlmere Requesting review boundary for consented development 24/01254/OUT as outside the boundary, and for existing built development at The Triangle, Fowlmere which is outside of the DDE.	205574 (Mulberry Strategic Land)
Land off Ermine Street Caxton Suggests Caxton development extent be updated to reflect outstanding housing commitments at Land off Ermine Street, planning application reference 23/01335/OUT.	204304 (LVA)
Land at Cottenham Road, Histon Comments question why current boundary excludes a number of houses.	200988 (D Jessop), 201278 (G Mortimore), 202873 (S Catling), 201430 (S Chivers)
TPP Campus Melbourn TTP Campus should be designated as being part of the Melbourn DDE.	210721 (TTP)
The Boundary, High Street, Horningsea (site reference 59410) 2021 Green Belt Study confirms a "weak distinction" between Parcel H05 and the inset, yet the map bisects this single planning unit. As an enclosed backland garden plot, the site makes a limited contribution to Green Belt purposes. The DDE must therefore be corrected to follow the physical property line, supporting sustainable small-site delivery.	201995 (M Asplin)

Land at Gog Magag Way and Haverhill Road Stapleford Built up area of the village was extended to the east of Stapleford in the early 2000s by residential development at Chalk Hill and again in the 2020s by development of the Strawberry Fields residential care village.	201550 (Stapleford PC), 210895 (Great Shelford PC)
Between Brook Street and Brockley Road, Elsworth Questions Defined Development Extent in Elsworth not embracing parcel of my land where historically there was residential housing. This would entail a movement of the DDE nominally to the west.	201431 (R Woolf)
The Walled Garden, Whittlesford Should not be in the green belt as it is village central and surrounded by houses) has been taken out of this latest plan having been in earlier stages.	204628 (C. Forbes Cable), 205412 (L Gardner)
Site Allocation S/RRA/CR, Land to the west of Cambridge Road, Melbourn Object as Site Allocation S/RRA/CR is shown outside the settlement boundary, inconsistent with other areas such as Waterbeach New Town. It should be within the defined development extent.	204641 (Vistry)
Objections to policy include: • reformed NPPF (2026) emphasis for development in sustainable, well connected locations, which the current policy contradicts by restricting growth to defined boundaries. • minimal allocations, tightly drawn development boundaries and prescriptive limits on scheme size will constrain organic growth	202927 (The Trustees of the C Y Nutt Deceased Will Trust), 204129 (Emmanuel College (Long Road)), 204520 (Redrow South Midlands), 211524 (Endurance Estates)

• largely unchanged since the 2004 Local Plan, with minor adjustments • stagnation and potential loss of local services • regarding all countryside sites equally is unjustified • flexible, criteria-based approach is sought to support appropriate rural growth and a balanced distribution of housing across Greater Cambridge • boundary-based approach inflexible • fails to acknowledge sustainable sites that are functionally part of the urban area. • policy lacks a mechanism for positively assessing sites based on accessibility and their potential to support sustainable development • lack of review to consider whether boundaries remain appropriate or capable of accommodating future development needs of individual settlements. • Where constrained by the Green Belt current approach prevents any meaningful outward expansion, even in sustainable locations. • should be subject to a full review to accurately reflect the development potential and sustainability of individual settlements and where no capacity within existing boundaries, the Local Plan should allocate appropriate village edge sites in the most sustainable locations • fails to allow for well-connected windfall growth in villages on the basis set out above in relation to policy S/SH	
Anglian Water supports the policy requirement 1.c to ensure that there is the necessary infrastructure to support the development within defined settlement extents. However, it	209163 (Anglian Water Services Ltd)

is considered that this should be equally applicable to developments outside defined settlement extents but may still be adjacent to the settlement and/or our WRC catchments - e.g. Rural exception sites. The policy does not specifically reference the delivery of utility services /infrastructure in the countryside, which would include critical water and wastewater infrastructure to serve existing and future communities.	
Responder requests changes to policy wording at the end of points 1 and 3: 'Residential development and redevelopment…..provided that adequate services, facilities and infrastructure are available or can be made available as a result of the development *and areas of flood risk are avoided.'*	Anglian Water Services
Objects to policy and appendix are unsound as they (para 2.138) limit boundary changes largely to completed development. • This creates a circular methodology that constrains the identification of sustainable small sites, contrary to the NPPF requirement to proactively identify land to boost supply (paragraph 73) and support thriving villages (paragraph 83). • The blanket treatment of residential gardens is overly rigid, and the approach is premature in the absence of updated Green Belt and "grey belt" evidence, reducing flexibility and clarity at plan-making stage.	202005 (M Asplin), 204272 (R2 Developments Ltd)
Objection to Policy includes: • focusing development solely within DDEs is inconsistent with draft Policy S5 of the NPPF, which advocates for a more flexible approach to development locations	204272 (Pegasus Group), 204292 (R2 Developments Ltd), 211479 (G Robinson and Partners),

• hinder sustainable growth by restricting new homes in locations just outside these extents, despite their proximity to public transport. • approach does not align with the government's direction to boost housing supply as outlined in paragraph 61 of the NPPF • approach contradicts the NPPF's pragmatic direction towards allowing suitable development near existing settlements and transport infrastructure. • Locations near Foxton Railway Station cited	
Comments on the policy raise concerns that: • Boundary largely unchanged since 2004 boundary • inconsistent with proposed NPPF changes that advocate for a more flexible approach, allowing development on well-related sites. • suggests part 1 of policy to allow development on unallocated land well-related to defined development extents, aligning with the NPPF's pragmatic approach. • boundaries limit the opportunities for any development in villages • housing and affordable housing needs of these villages would not be met. • no support for existing services and facilities, or the delivery of additional facilities	202570 (Ely Diocesan Board of Finance), 203318 (J Manning), 204171 (Hill Residential (Hardwick Site)), 204411 (Hill Residential (Great Abington Site)), 204711 (Beechwood Estates Ltd), 204728 (Croudace Homes), 204985 (Martin Grant Land), 211247 (Manor Oak Homes), 211255 (R Harvey), 211615 (Bloor Homes)
Comments existing boundaries have largely not changed significantly since 2004. The current extent restricts development, not supporting existing services or allow for the delivery of additional facilities (noted Whittlesford, Swavesey, Fulbourn).	202368 (The CLC Trust), 204567 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 203897 (Hill Residential (Fulbourn Site))

Objection to policy due to its inflexibility, not positively prepared or justified. Update to allow for flexibility in development outside defined boundaries to address unmet local housing needs.	205031 (Endurance Estates)
Concern that development boundaries drawn tightly around the existing settlements and excluding existing properties and built form. Question how the windfall allowance can be met, without relaxation of the Defined Settlement Extents, to enable smaller sites that are more immediately deliverable in the short term to come forward.	211273 (Mr & Mrs Smith)
Suggest policy would benefit from supporting information on how to interpret local character.	202735 (Cambridge Past Present and Future)
Defining development extents provides clarity, but the sharp distinction between inside and outside boundaries may limit flexible responses to rural housing and service needs. While Rural Exception Sites are supported, there is little recognition that small scale growth on the edge of villages can help sustain schools, shops and community facilities. The policy does not reference rural infrastructure constraints such as transport, drainage or digital connectivity. Stronger rural proofing would allow limited, well designed edge of village development where it meets local need and supports long term village sustainability.	203151 (Cambridgeshire ACRE)
Revise the wording of Policy S/DE to enable a more flexible approach to development outside of defined development extents. Draft Policy S/DE should seek to accord with draft Policy S5 of the 2025 NPPF. This would ensure that the Local Plan, upon adoption	208338 Thakeham Homes Ltd)

would not conflict with National Policy, but also widen the scope of where the principle of development would be applied allowed outside of settlements.	
Policy is not sufficiently flexible to allow for unallocated development that is located beyond the settlement boundary when there is a specific need for the development type.	208682 (Guilden Morden Developments Ltd)
The use of settlement boundaries should not preclude the ability of sustainable development opportunities from coming forward and should include a mechanism to ensure that development beyond settlement boundaries can come forward to respond to changes in circumstances over the plan period. Indeed, such an approach is currently being consulted by Government as part of the national decision-making policies and the policy should be modified to allow such flexibility with circumstances relevant to Greater Cambridge. Development should be directed to the more sustainable villages including Great Shelford and Stapleford to support existing services and facilities, deliver additional facilities, and meet identified affordable needs of villages.	208906 (Nightingale and Hill Residential Ltd)
The proposed policy based on settlement boundaries (or defined development extents) around settlements is supported. However, the proposed development strategy to restrict the number of dwellings in certain tiers of the settlement hierarchy and the low number of site allocations proposed for the rural areas will prevent sustainable development from being brought forward unless further sites are allocated for development and included within the settlement boundary. Will need to be drawn more flexibility if windfalls relied upon are to be delivered.	211049, 211062 (Wates Developments and Landowners)

Agree that policy S/DE should include the need for there to be the necessary infrastructure capacity to support the development. That should also apply to the other development areas outside defined development extents and where development is supported by other policies in this Local Plan.	211926 (C Newell)
West of Broad Lane, Cottenham site: policy approach to development outside the defined development extents should be relaxed adjacent to the defined development extents for housing where this is required to meet an identified neighbourhood area housing requirement as an amendment to policy text. Woolsington One Ltd's promoted site represents a suitable, available, and deliverable site adjacent to the defined development extent, can come forward in the early years of the Plan period contributing towards meeting the neighbourhood area housing requirement for Cottenham of 130 dwellings.	211278 (Woolsington One Ltd)
Land north of Gog Magog Way, Stapleford (site reference 45417) Support in principle but policy is not supported by sufficient allocations in sustainable locations such as Rural Centres. There are many sustainable locations adjacent to the development extents where an allocation/Green Belt release would not harm the purposes of the Green Belt.	204177 (Mr & Mrs J Johnson)
Madingley Objects stating extent is restrictive in Madingley, amend to include a limited number of previously developed small sites on the edge of the village. Better reflecting national	202444 (University of Cambridge)

policy, support the vitality of the village, enabling sustainable development without undermining character.	
Mingle Lane Great Shelford Objection requesting update to extent in Stapleford at its boundary with Great Shelford on Mingle Lane. Remove the one remaining parcel of undeveloped land in Stapleford at its boundary with Great Shelford on Mingle Lane from the development extent.	203057 (M Foote)
Land to the land South of Station Road, Harston (site reference 115742). Objection to restrictions on development outside defined extents, amend to include exceptions for limited infilling in the Green Belt.	203413 (Jesus College)
Land south of Church Street, east of High Street, Guilden Morden (site reference 40300) **Land off Swan Lane Guilden Morden (site reference 40304)** **Land at Town Farm Guilden Morden (site reference 40315)** **Land to the west of Brook End Steeple Morden (site reference 40294)** **Land to the southwest of Ermine Way Arrington (site reference 40292)** **Land to the east of Old North Road Kneesworth (site Reference 40299)** Objects as current extents are too restrictive in specific villages, limiting opportunities for growth. Need to identify land within and adjacent to village boundaries for sustainable growth to enhance community sustainability, enabling new facilities, amenities, and transport.	204068 (E W Pepper Ltd)

Land South of St Neots Road / West of Howells Way, Hardwick (site reference 40273) Objection due to lack of flexibility and justification, regarding the rigid settlement limits for Hardwick not accurately reflecting the built form (Paragraph 2.132 of S/DE), and policy is contrary to Para 83 of the NPPF – policy should identify 'Land South of St Neots Road / West of Howells Way, Hardwick' for residential development. Settlement boundary was changed with the inclusion of the new development at Meridian Fields, at the southern edge of Hardwick. It is not clear why this development has been included within the defined settlement boundary, whilst Capstone Fields (immediately adjacent to the Site) and other residential built form along St Neots Road has been excluded.	204885 (Pigeon)
Fen Ditton Currently defined development framework boundary for Fen Ditton means that limited development would take place in this village. There would be no support for existing services and facilities. It is very likely most development opportunities that did exist within Fen Ditton have been taken up by now, and any that do remain would be for one or two dwellings only. There are no opportunities within the settlement boundary for Fen Ditton to deliver major development of 10 or more dwellings where affordable housing would be required.	202088 (J Francis)

Fulbourn, Great Shelford DDE boundary means that limited development would take place in this village. The housing and affordable housing needs would not be met. There would be no support for existing services and facilities, or the delivery of additional facilities. The community aspirations (in the made Fulbourn Neighbourhood Plan) for open space, improvements to health facilities, and for additional green infrastructure would not be met.	201949 (KG Moss Will Trust & Moss Family), 201970 (Shelford Investments)
Land at Valley Farm Meldreth (site reference 130982) **Land West of Station Road Meldreth (site reference 131266)** **Land at Sheene Farm Meldreth (site reference 131267)** **Land East of Station Road, Meldreth (site reference 131268)** Objection states policy not consistent with the draft new NPPF policy S5 supporting development outside settlements where is within walking distance of a well-connected railway station. Meldreth station is well-connected in terms of draft NPPF policy S5 and recommends additional exception in para 2 for development close to well-connected railway stations that refers to the new NPPF following publication of the final version in summer 2026.	202332, 202539, 202654, 202688 (Granta Land Ltd)
Land North of Pampisford Road, Great Abington (Site reference 40539) Objection, policy does not support the 'organic' growth of smaller settlements.	202927 (The Trustees of the C Y Nutt Deceased Will Trust)
Girton, Oakington, and Over Objection to boundary extent at Girton, Oakington, and Over amend to include Call for Site ID 115392 and additional sites from the Call for Sites in 2026.	204011 (Abbey Properties Cambridgeshire Ltd)

Emmanuel College: Long Road, Cambridge Object as the current boundary-based approach of Policy S/DE is seen as inflexible, failing to acknowledge sustainable sites that are functionally part of the urban area. The policy lacks a mechanism for positively assessing sites based on accessibility and their potential to support sustainable development.	204129 (Emmanuel College (Long Road))
Histon and Impington (Glebe Way Histon (site reference 40192)) Concern for promoted sites which are on the edge of a settlements. Histon and Impington defined development framework boundary for means that limited development would take place in these villages, housing and affordable housing needs would not be met. There would be no support for existing services and facilities, or the delivery of additional facilities.	202107 (Cambridgeshire County Council (Strategic Assets))
Cambridge Science Park North Concern as Policy S/DE does not align with NPPF S5. Draft Policy S5 (principle of development outside settlements) sets out the requirement for only certain forms of development to be approved outside of settlement boundaries. This includes development for housing and mixed-use which would be “within reasonable walking distance of a railway station which provides a high level of connectivity to jobs and services”. Footnote 26 expands the use of the term ‘railway stations’ to include underground, tram and light-rail. The Cambridge Guided Busway is authorised through the legal mechanism of a Transport and Works Act Order (TWAO) and so it is considered that the guided busway would fall under the footnote definition.	211484 (Trinity College (CSP) Limited)

Meldreth Concern as Policy S/DE does not align with NPPF S5; Meldreth railway station is well-connected in terms of draft NPPF policy S5. Suggests update to the settlement and green belt boundaries to include their properties within the village. Explicit exceptions should be added to Policy S/DE for sites that are close to a well-connected railway station given proposed changes to national planning policy.	206218 (Granta Land Ltd - Land at Valley Farm, Meldreth), 202668 (Granta Land Ltd- Land East of Station Road, Meldreth)
Land South of Shelford Road, Fulbourn (site reference 51610) DDE should be amended and land allocated. Site is beneficial for completing the village edge, contributing to a clear and logically defined development extent.	204965 (Miller Homes)
Great Wilbraham Great Wilbraham development extent leaves almost no potential sites and prevents further housing even though of a scale, density and character appropriate to the village. Noting that developments outside these extents may be allowed where it would support other polices in the plan; we argue that an explicit reason might therefore be to help make local communities sustainable. A small village such as Great Wilbraham does not have the finances or manpower to undertake a Neighbourhood Plan. The Council should be obliged to work with us to assess need and develop a plan.	203346 (Great Wilbraham PC)
North of Royston - Three Prospects Farm - Land to east of A505 and south of A10, Melbourn (Site Reference 40511) DDE should be revised to include an ‘edge of Royston’ allocation, or at least a reserve/safeguarded site for mixed-use development.	203325, 203328 (Wilson Bowden Developments Limited)

Hauxton Do not seek a direct amendment to the wording of Policy S/DE itself, but that defined development extents should be subject to a full review to ensure they accurately reflect the development potential and sustainability of individual settlements	204520 (Redrow South Midlands)
Land North of Pampisford Road, Great Abington (site reference 40256) Reliance on Neighbourhood Plans limits growth opportunities. Plan should allocate more small and medium-sized sites. Development extents are tightly drawn, limiting growth potential within settlements and undermining the viability of existing services. Failure to deliver necessary growth renders plan unsound.	204545 (Rosconn Group)
Land north of A14 Bar Hill (site reference 40121 and 40244) Objects to the wording of Policy S/DE, suggesting modifications are necessary to enable sustainable employment development on suitable land, including areas outside defined development extents. Wording is inconsistent with National Planning Policy. Assumption that land outside defined extents is unsuitable for development lacks justification. Modifications to the policy should be made to support the logistics and freight sector.	204174 (Tritax Big Box)
Support Cambridge Junction and Create Cambridge in asking that genuinely affordable cultural production space is required, and safeguards usable creative space from being diluted.	204835, 204815 (G Shaw)
Former Oakington Tomato Farm, Dry Drayton Road, Oakington (no site reference) Oakington Defined Development Extent should be amended to include the tomato farm which would allow this land (which is previously developed and accommodates two	211740 Homes England

dwelling houses) to come forward for development should it not be required for use to support the development of Northstowe.	
Land at Bartlow Road development, and The Land at Horseheath Road (no site reference) The windfall sites north east and south east of the village of Linton are problematic developments approved due to lack of a 5-year housing supply. They are shown incomplete on the village inset map and have incomplete boundaries. They therefore do not comply with the Plan criteria under Policy S/7 Page 11 Paragraph 30 and should not have been included in the defined development extent.	211929 (C Newell)

Policy S/GB: The Cambridge Green Belt

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Whilst some representations supported use of the local Green Belt purposes, others challenged that they were inconsistent with updated national Green Belt policy and that grey belt should have been identified and reviewed before determining the development strategy, and that the policy should make explicit reference to the grey belt.

Comments argued that exceptional circumstances existed for further Green Belt release. Some questioned the impact of Green Belt on the development strategy and that it channels development away from Cambridge and should be removed. Many representations said that a comprehensive review of the Green Belt should be carried out to identify grey belt and further sites for development should be identified in sustainable locations in these areas of lower contribution Green Belt land. There were comments that the updated Green Belt evidence should have informed the Draft Plan and been published then. There were several comments that purpose 1c of Policy S/GB is inconsistent with the second purpose in NPPF paragraph 143 in that it refers to communities and not towns and should be amended which could affect the implementation of grey belt policy at the planning application stage.

There was support for more ambition for the beneficial use of Green Belt land such as for amenity space and biodiversity. Some comments proposed adding new areas of Green Belt land (including at Cambourne and Great Shelford).

Representations questioned whether national policy had been followed when identifying the Green Belt release that the draft plan does propose. Comments supported land being maintained as Green Belt in a number of locations, including the West Fields and around Fen Ditton and Horningsea. Mingle Lane Great Shelford received support for maintaining the site as Green Belt (following its removal from the plan between the preferred options and Draft Plan stage), whilst another comment proposed that the allocation be reintroduced.

Little Wilbraham, Great Wilbraham, and Six Mile Bottom Parish Councils considered that the Green Belt was too tightly drawn to give flexibility for some development in villages. Clearer reference was requested to show how essential rural development, including farm diversification and local needs housing could come forward.

There were a large number of representations from developers and landowners identifying sites as grey belt and that they were suitable for development, many of which were accompanied by supporting information.

Response to main issues raised in representations:

A Cambridge Green Belt Assessment was published to accompany the First Proposals in 2021. An update to this study, the ‘Greater Cambridge Green Belt Assessment Review following changes to National Policy and Guidance’ (2026), has now been produced and is published to accompany the Proposed Submission Local Plan. The updated study has carefully considered changes to national planning policy and guidance, and considered issues raised in representations to the Draft Local Plan.

The study confirms that the long established Cambridge Green Belt purposes provide a locally-specific application of the NPPF purposes, delivering a more helpful structure for the analysis of variations in the role of Green Belt land than provided by the more generic NPPF purposes. The city has a Green Belt because of its historic character and all three Cambridge purposes form elements of NPPF Purpose D. The Study also considers how grey belt should be applied in a Cambridge context. It reviews parcel by parcel contribution to Green Belt purposes, highlighting areas that could provisionally be considered as grey belt where they do not make a strong contribution to Green Belt purposes.

Paragraph 146 of the NPPF establishes that where it is necessary to release Green Belt land for development, plans should give priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The plan making process has not identified exceptional circumstances for Green Belt release to meet general needs. As such, the identification of the location of grey belt land within Greater Cambridge does not affect the Councils' position regarding the identified preferred development strategy. This is considered in depth in the Strategy Topic Paper and its Appendix 4. The Strategy Topic Paper also shows how the plan making process (including Sustainability Appraisal) has considered the merits of alternative strategies that would involve Green Belt release.

The updated Green Belt assessment provides further clarification about the relationship between the Cambridge Green Belt purposes and the national Green Belt purposes set out in the NPPF. Cambridge only has a Green Belt because of its historic character, and as such the Cambridge purposes are a locally specific application of NPPF purpose D: to preserve the setting and special character of historic towns. The Cambridge purpose which refers to 'communities' (part 1c of the policy) is therefore referring to preventing the necklace of villages surrounding Cambridge from merging into one another and with Cambridge, which is one of the factors defining the special character of Cambridge and its setting.

The supporting text of the policy has been updated to reference the Green Belt Study Review in relation to grey belt. It is not necessary for the policy to repeat national policy regarding the application of Green Belt / grey belt for development management.

Justification has been identified for the release of Green Belt land at Cambridge Biomedical Campus and at the Babraham Research Campus. Outside those areas exceptional circumstances for other Green Belt release has not been identified. Proposals for new Green Belt to be designated would have to meet NPPF (2024) paragraph 144. Given the location of Cambourne relative to Cambridge, it is not considered there is a case to extend the Green Belt.

Whilst a draft allocation was identified at Mingle Lane in Great Shelford in the First Proposals, reasons for its removal from the Draft Plan were provided. There remain no exceptional circumstances for its release. A representation proposes adding to the Green Belt in this location, however the boundary is considered to be correctly drawn.

In terms of comments received protecting or promoting particular sites in the Green Belt, the selection of sites for allocation has followed a rigorous process in the HELAA. The HELAA takes a 'policy off' approach to the Green Belt and considered all sites whether they are in the Green Belt or not. The consideration as to whether a site is suitable for release from the Green Belt is part of the wider plan making process and whether there are exceptional circumstances for this. Further detail about this process is set out in the Development Strategy Topic Paper and its Appendix 4: Revised Greater Cambridge Local Plan Green Belt considerations review (2026). More detailed responses to comments on the Green Belt Assessment and in relation to whether a site is considered to be grey belt can be found in the Greater Cambridge Green Belt Assessment Response to comments from Site Submissions Update and Draft Local Plan Consultation (2026) and also in Annex 1 of Appendix 4 of the Development Strategy Topic Paper.

Table of representations:

General

Summary of issues raised in comments	Comments highlighting this issue
Support the protection of the Green Belt and its purposes.	201014 (M Colville), 201021 (I Crowson), 201298 (N Campbell), 201551 (Stapleford PC), 201728 (Histon & Impington PC), 201916 (A Davidson), 202736 (Cambridge Past, Present and Future), 204986 (D Davies), 204642 (C Forbes-Cable), 221927 (C Newell), 211082 (The National Trust), 210896 (Great Shelford PC)
Welcome the 3 key purposes of the Cambridge Green Belt being set out in the policy. Welcome the reference to a compact city and historic core.	210087 (Historic England)
The Local Plan should be more ambitious in providing amenity space in the Green Belt.	201280 (F Samuel)

We strongly support this policy and, as a rural parish, particularly value clause 1c. However, we are disappointed that clause 1 of the policy does not explicitly pick up on supporting para 2.145. Despite our parish being surrounded by Green Belt, we have very limited access to it or links between our green spaces; hence, the Stapleford and Great Shelford Neighbourhood Plan (Policy S&GS 19) proposes multiple new off-road routes and linkages between existing routes. It is wrong that such a basic need as access to green spaces for recreation, health and wellbeing remains aspirational unless facilitated by major development. The policy should also explicitly support the enhancement of the beneficial use of Green Belts currently in the supporting text.	201551 (Stapleford PC), 210896 (Great Shelford PC)
The policy should include explicit reference to Grey Belt, consistent with the NPPF, and identify Grey Belt land within Greater Cambridge.	201857 (Chivers Farms Limited), 202038 (Wimpole Associates Ltd), 204487 (Wain Estates)
Policy S/3 (Green Belt) must be fully aligned with Section 13 of the NPPF, which affords strong protection to Green Belt land. The Green Belt supports biodiversity, food security, climate resilience, and public health, including access to nature for disabled people.	208950 (CPRE Cambridgeshire and Peterborough)
The Green Belt is important for biodiversity and the Local Plan needs to include language that can protect it from development. The term 'exceptional circumstances' needs tightening up.	201916 (A Davidson)
Do away with the Green Belt or buy the land from private owners and prohibit crop fields and plant trees everywhere. If it's not accessible by residents, it's not a real green belt. I'd rather see the city grow, and no farms, which should be forbidden.	205494 (C Campos)

Paragraph 2.142: Does designated sites include designated heritage assets? If so, this should be made explicit with the addition of the word heritage. We recommend that you add reference to designated heritage sites.	210185 (Historic England)
The end result of the Green Belt is simply to move development further from Cambridge resulting in worse located developments for everyone. It would be better to build high quality dense, liveable suburbs (Eddington is a fairly good example) close enough to the city for people to feel part of it, and to cycle to most of their destinations, benefit from the amenities that already exist	203630 (H Thomas)
Support the inclusion of the national Grey Belt definition in the supporting text. The inclusion of Grey Belt within the NPPF and corresponding Planning Policy Guidance is a vital tool for identifying low-contribution land that should be prioritised for sustainable delivery.	202071 (M Asplin)
Policy S/GB is unsound because it does not demonstrate alignment with the February 2025 PPG, which advises authorities to identify grey belt land to inform Green Belt review. The Plan states that grey belt identification is unnecessary, yet provides no alternative explanation of how national guidance has been applied. There is a risk that lower-contributing land is overlooked. The Development Strategy also appears to have been concluded before updated Green Belt evidence is published, raising concern that the evidence base has not fully informed the plan at Regulation 18 stage. A comprehensive review of the Green Belt should be carried out to identify further sites for development in sustainable locations that can be delivered without harm to the purposes of land being designated as green belt. We would expect Greater Cambridge to update its Green Belt assessment, which currently dates from 2021, to reflect this updated policy and identify potential grey belt areas.	202071 (M Asplin), 202021 (M Asplin), 204246 (Bellway Strategic Land), 202038, 206077, 206088 (Wimpole Associates Ltd), 205095, 206788 (Endurance Estates), 208777 (Croudace Homes), 204990 (Martin Grant Land), 211447 (Gonville & Caius College)

We object to draft Policy S/GB: The Cambridge Green Belt on the basis that none of these purposes are as listed at paragraph 143 of the NPPF. Having regard to the merging of places paragraph 143 makes it clear that the purpose of the Green Belt is 'specifically to prevent neighbouring towns merging into one another' as opposed to 'communities in the environs…'. It is notable that the policy does not refence Grey Belt, nor does the policy allow for any consideration of need or Green Belt review over the plan period. Notwithstanding, that Green Belt release has been considered acceptable to facilitate development at East Cambridge and Cambridge Biomedical Campus. We object to Policy S/GB: The Cambridge Green Belt on the basis that further green belt release is required to meet additional need for employment floorspace.	210316 (Russell Smith Farms)
Purpose 1c in Policy S/GB is inconsistent with the second purpose in NPPF Paragraph 143 i.e. it refers to communities and not towns and should be amended. Consistency with national policy is one of the soundness tests for local plan policies. The reference to communities rather than towns could have implications for how inappropriate development in the Green Belt is assessed and the implementation of grey belt policy at planning application stage.	202369 (The CLC Trust), 203898 (Hill Residential (Fulbourn Site), 202108 (Cambridgeshire County Council (Strategic Assets), 202572 (Ely Diocesan Board of Finance), 204283 (Croudace Homes), 204455 (Bellway Strategic Land),

	205136 (North Barton Road Landowners), 201950 (KG Moss Will Trust & Moss Family), 201971 (Shelford Investments), 204182 (Hill Residential (Hardwick Site), 204530 (Redrow South Midlands), 209967 (Granta Land Ltd), 204990 (Martin Grant Land), 211616 (Bloor Homes Eastern)
The Development Strategy Topic Paper indicates that the identified need for jobs and homes can be met without using Green Belt land, but a revised Green Belt Assessment is needed to inform the Draft Local Plan. There is a call for additional housing and job allocations to meet a more aspirational growth level, suggesting that full weight cannot be given to the Green Belt without considering its release. The omission of Grey Belt references in Draft Policy S/GB is challenged, highlighting the NPPF's and PPG's requirement to identify Grey Belt land in Green Belt Assessments. Draft Policy S/GB is viewed as inconsistent with national policy, requiring a revised Green Belt Assessment, consideration of higher growth targets, and inclusion of Grey Belt in the Local Plan.	204246 (Bellway Strategic Land), 204487 (Wain Estates)

The PPG is clear that where local authorities seek to review and alter Green Belt boundaries it is expected that authorities identify grey belt land to inform this work and prioritise development in accordance with paragraphs 147 and 148 of the Framework.	208907 (Nightingale Land and Hill Residential Ltd)
It is not evident though that the Councils have given sufficient weight to the climate crisis and housing crisis we now face (which were not material factors when the green belt policy was originally established), and these are exceptional circumstances which would justify a more flexible and permissive approach to grey belt release in particular. We understand that the Councils are undertaking a Grey Belt review which is due to be published after the Draft Local Plan consultation. It will be important to ensure that this review is published and the opportunity provided for it to be reviewed and commented upon in advance of the finalisation of the Proposed Submission Consultation (Regulation 19) scheduled for Summer / Autumn 2026.	209329 (St Johns College Cambridge), 211533 (Hopkins Homes)
We understand that the Councils are undertaking a Grey Belt review which is due to be published after the Draft Local Plan consultation. It will be important to ensure that this review is published and the opportunity provided for it to be reviewed and commented upon in advance of the finalisation of the Proposed Submission Consultation (Regulation 19) scheduled for Summer / Autumn 2026.	211064 (St John's College Cambridge)
There is some inconsistency with the wording of the 5 purposes stated in NPPF 143 a-e. The LP policy should also be expanded to include safeguarding the countryside from encroachment. The explanation should be clarified to limit exception sites to affordable housing.	211927 (C Newell)
The policy would benefit from clearer reference to how essential rural development, including farm diversification and local needs housing, can be accommodated without undermining Green Belt purposes, ensuring protection of openness alongside the vitality of rural communities. Strict application	203154 (Cambridgeshire ACRE)

without rural nuance could restrict modest community facilities, rural employment or affordable housing that supports village sustainability.	
The council appears not to have applied the NPPF-required hierarchy (previously developed land, grey-belt, other Green Belt) when considering releases and has not provided sufficient evidence of exceptional circumstances to justify additional Green Belt releases.	205874 (British Land)
Despite our parish being surrounded by greenbelt, our access to it is limited. It is wrong that such a basic need as access to green spaces for recreation, health and wellbeing remains out of reach. Green Belt should stay as Green Belt (or preferably made 'greener' by making it more biodiverse). We have just had a huge development built on what used to be actual strawberry fields but I can't see this on the map. I don't think there has been a thought to how this new development impacts on the local health services (or lack thereof) either.	202677 (S Berridge)
The Cambridge Green Belt aims to provide a green buffer around the city and villages to prevent urban sprawl. There is concern that the green belt is too tightly drawn around some villages, hindering small-scale developments. Small-scale appropriate developments could enhance the environment and contribute to long-term rural resilience.	203071 (Little Wilbraham and Six Mile Bottom PC)
We strongly encourage GCSP to approach the grey belt assessment with an open mind, to reassess existing assumptions in light of the newly defined concept of the ‘grey belt’ in the revised NPPF, and to explore the potential of such sites positively and strategically. Careful consideration of opportunities in grey belt areas has the potential to enable denser and more sustainable development, supporting wider social and environmental objectives of the draft Plan.	203521 (Cambridge Ahead)

Welcome the commitment to an updated Green Belt Study but request that the findings be made available before the Regulation 19 consultation.	204910 (Great Shelford (Ten Acres) LLP)
It is noted that no Green Belt study has been undertaken at this stage to inform the Draft Local Plan. This is a fundamental gap in the evidence base that needs to be addressed prior to Regulation 19.	211525 (Endurance Estates)
It is considered that upward adjustments are required to the housing target, the development strategy should direct development to the more sustainable locations including on the edge of Cambridge, and there are exceptional circumstances to release land from the Green Belt	205136 (North Barton Road Landowners)
National policy does not facilitate the creation of local Green Belt purposes. The Cambridge Local Purposes do not align with the national purposes. The fact that Local Purposes have applied previously does not justify their continued application in light of changes to national context. A Green Belt review is warranted to assess land parcels against the relevant national Green Belt purposes.	203970 (Anglia Ruskin University)
The final part of Policy S/GB which states ", and having regard to the Cambridge Green Belt purposes set out above" appears to be unnecessary text.	204019 (Abbey Properties Cambridgeshire Limited)
Exceptional circumstances exist at a strategic level to justify amendments to the Green Belt by virtue of the need for the Greater Cambridge Local Plan to identify additional suitable and sustainable sites for development to meet identified needs, and subsequently directing appropriate growth to sustainable villages. The draft Greater Cambridge Local Plan currently fails to give grey belt any consideration in informing the proposed Development Strategy. Therefore, it is clear that the Greater Cambridge Local Plan needs to be informed by a full assessment of the Green Belt in light of the Government's introduction of grey belt and emerging national planning policy.	208323 (PX Land Ltd), 209327 (B Homent, J Tee and R Smith), 210300 (Northwest Biotherapeutics Capital Limited)

Object to building on any more of the protected green areas of our city. Due to the enormous numbers of new houses being built on green belt sites encircling the whole of the city that should make it a priority to preserve the few green spaces within the city for mental health for all who dwell in the city and nature including bee and wildlife corridors.	208479 (H Belle)
Thakeham supports and endorses to the Government's desire to see land which does not contribute fully to the purposes of Green Belt (grey belt), make a meaningful contribution to housing supply. Whilst draft Policy S/GB is considered to align with National Policy, the Council should ensure that consideration is given to promoted sites within the Green Belt that can come forward to meet the Local Housing Need, whilst not strongly contributing to purposes a), b) or d) of the Green Belt.	208339 (Thakeham Homes Ltd)
Policy S/GB of the draft GCLP sets out the Green Belt policy for Cambridge. Paragraph 143 of the NPPF sets out the five national purposes for Green Belts. The second purpose listed in Paragraph 143 states "b) to prevent neighbouring towns merging into one another;". The third purpose for the Cambridge Green Belt in Policy S/GB states "1c. prevent communities in the environs of Cambridge from merging into one another and with the city". Purpose 1c in Policy S/GB is inconsistent with the second purpose in NPPG Paragraph 143 i.e. it refers to communities and not towns. Consistency with national policy is one of the soundness tests for local plan policies. The reference to communities rather than towns could have implications for how inappropriate development in the Green Belt is assessed and the implementation of grey belt policy at planning application stage. **Changes to plan:** It is requested that Purpose 1c in Policy S/GB is amended to refer to towns and not communities. The amended text should be as follows: prevent towns in the environs of Cambridge from merging into one another and with the city.	211248 (Manor Oak Homes)

Areas of Green Belt

Summary of issues raised in comments	Comments highlighting this issue
If/when it is necessary to release less critical parts of the Green Belt for development, compensatory improvements and countryside enhancement/biodiversity enhancement should be concentrated in the more critical remaining parts of the Green Belt especially those that already have existing enhancement initiatives that can be joined up to landscape scale such as the Magog Hills south of the town.	201185 (M Foote)
It is important that the Green Belt around Fen Ditton and Horningsea is maintained. It is so important for residents from all over Cambridge as part of the Green lungs of Cambridge and important recreational space.	207352 (L Woolfenden)
The Green Belt boundary is too tight around Great Wilbraham village, mainly following property boundaries. The nearest properties in Fulbourn are 1.5 miles from the edge of Great Wilbraham. Some development on plots within the relatively open structure of the village is very far from the 'ribbon development' which the Green Belt is designed to prevent.	203349 (Great Wilbraham PC)
We would like to explore the possibility of having a green belt with statutory status and of sufficient depth between Cambourne North and the villages in order to better protect the villages against coalescence.	202126 (Elsworth PC), 202350 (P Deer)
It is important to maintain the Green Belt, in particular, the West Fields to retain decent walks and the clear views from Red Meadow Hill towards Cambridge	202425 (Residents Association of Old Newnham – RAON)

A key purpose of the Green Belt is to maintain physical separation and open countryside between settlements. There is still a small area of open undeveloped rural land at the boundary between Great Shelford and Stapleford that is not currently assigned as Green Belt. The policy map showing the Green Belt should be updated to include this parcel since it is vital, since, it alone, will serve the purpose of preventing the urban sprawl completely connecting the two settlements.	203068 (M Foote)
There are sites that are allocated as green belt that are not in fact but already in the village envelope. These areas of green belt do not tick the boxes of your description of green belt so i suggest they are released. We have one such site in the middle of a village. It was to be released in earlier stages of this plan but has been removed in this stage. The Walled Garden, Whittlesford CB22 CB280901. Please release it from greenbelt.	204642 (C Forbes-Cable)
Support for small-scale development where infrastructure exists, provided it does not harm surrounding rural areas or increase the risk of village merging. The site land registry CB280901 in Whittlesford was previously included in the local plan for sensitive development but has been removed in the latest plan despite it meeting the criteria of sustainable sensitive development.	205473 (L Gardner)
Retain land in the Green Belt subject to Policies S/CBC & S/SEA/CBC, as there is a surplus supply of Offices/R & D floorspace identified in the Employment & Housing Needs Assessment and the loss of 22 hectares of Green Belt is not justified. There is a need to mitigate the loss of Green Belt, both from the loss of Green Belt in the adopted Local Plan at CBC, & for the 22 hectares to be deleted from the Green Belt. NPPF Green Belt Policy requires	204790 (R Turnbull)

measures to enhance opportunities for recreation. This should be achieved by increasing the area of Wandlebury Country Park & the Gog Magog Country Park towards Stapleford and between CBC and Great Shelford.	
The respondent supports the government's reforms of the NPPF regarding the modernisation of green belt policies, specifically the identification of 'grey belt' land for potential development. The respondent argues for greater flexibility in permitting development on low-quality green belt land to boost housing supply, highlighting Histon and Impington as a sustainable location due to its transport connectivity.	204990 (Martin Grant Land)

Sites

Summary of issues raised in comments	**Comments highlighting this issue**
West Fields Strongly support the decision not to develop the Green Belt land known as the West Fields and to retain this important part of the Green Belt, which allows views from the west.	208486 (C Johnson), 203282 (J Palmer)
Mingle Lane – Site S/RSC/HW Strong support for the land marked S/RSC/HW on the Greater Cambridge Local Plan to be retained as Green Belt. The existing Greater Cambridge Local Plan had identified this land as being suitable for release from the Green Belt, but that the consultation in 2021 showed unanimous objection to this release - the only voices in favour were from the land owner and the developers and their representatives.	208497 (R White), 208499 (H White), 208882 (C Bendelack)

The extensive allocations for new housing in other areas of South Cambridge, including Cambourne, Grange Farm, Bourne, Hinxton and others render the need for this exceptional release of Green Belt redundant. Release of this Green Belt would also destroy the natural environment it was instituted to protect. In our garden, backing onto the area, we routinely have visits from deer, foxes, badgers, squirrels, sparrow hawks, green woodpeckers and many other species, all of which would suffer from the proposed developments.	
Cambridge Biomedical Campus The Landowners' proposed southern entrance to the CBC should be humble, unobtrusive and carefully landscaped so as not to add to the Very High Harm the CBC would be doing to the Green Belt. We are strongly opposed to a prominent gateway being created in this location. If agreed, it should be unobtrusive and blended into the landscape of Cambridge City edge. Great concern at the open-ended position the CBC has taken on this crucial matter - by, we propose, making it abundantly clear that if a further extension of the CBC into the Green Belt were to be agreed in the 2025-2045 Greater Cambridge Local Plan, it would be conditional on a CBC Landowners' contractual commitment to make no further bids in the future for yet more land to be taken out of our precious and diminishing Green Belt. Unless the Landowners agree to that condition, the proposed Phase 4 addition to the CBC should not be agreed.	208745, 208746 (Trumpington Residents Association)
Mingle Lane – Site S/RSC/HW NLHRL have land interests in Great Shelford (land at Mingle Lane) and are promoting the site for residential development for approximately 110 dwellings. The site was originally identified as a	208894, 208907 (Nightingale Land and Hill Residential Ltd)

preferred option for development at the ‘First Proposals’ stage of the GCLP under site reference “S/RSC/HW” accommodating approximately 100 dwellings. Nightingale Land have acquired additional land to the north that could increase the development potential of the site to approximately 190 dwellings. The site has subsequently been removed from the current consultation following the identification of land at Grange Farm. The site meets the Grey Belt criteria and sustainability of the site remains unchanged from the Council's initial identification of the site. The site should be reintroduced as an allocation.	
Site 59410 Exceptional circumstances exist to justify removal of the Green Belt designation from the remainder of site 59410. The Council’s 2021 Green Belt Study identifies a weak physical distinction from Horningsea, limited countryside views, and only minor harm arising from release, with the site making a limited contribution to Green Belt purposes. The current boundary is arbitrary, bisects a single enclosed planning unit, and undermines design-led outcomes. Correcting the Green Belt boundary, alongside inclusion within the DDE, would create a clear, permanent and defensible boundary, support sustainable small-site delivery, address identified supply shortfalls, resolve acknowledged policy tension, and provide long-term certainty.	202036 (M Asplin)
Site 115407 Advocate for a site-specific exception for Site ID: 115407 for commercial and recreational use. Recent consultation indicates strong community support, with 71% of residents backing the proposal for high-quality recreational space.	201728 (Histon & Impington PC)

The strategic release of this Green Belt parcel should be seen as a net benefit to the community. The site is well positioned for sustainable development due to exceptional connectivity via Guided Busway routes and surrounding bus services. We advocate for consolidated, high-impact employment hubs similar to the Cambridge Science Park, rather than smaller developments. Proposal includes a dedicated Country Park and diverse employment opportunities, offering greater long-term community value than its current designation.	
Woodcock Close, Impington Concerns are raised regarding the dated Green Belt Assessment and the lack of commitment to review Grey Belt sites, which are becoming increasingly relevant in planning policy. It is recommended that the Plan Policy (S/GB) explicitly references Grey Belt and includes the identification of Grey Belt land within Greater Cambridge, aligning with NPPF requirements. To ensure the Local Plan's longevity, a revised Green Belt Assessment should be conducted in accordance with Appendix E of the NPPF 2025.	201857 (Chivers Farms Limited)
Rectory Farm - 2025 Call for Sites Ref 222cfe Grey Belt Land should be identified within the revised Green Belt Assessment and Draft Local Plan. The Council needs to properly consider the inclusion of well-performing sites in the Grey Belt such as Land Adjacent to A1303 and M11, Rectory Farm.	202038 (Wimpole Associates Ltd)
Site 40271 Land East of Balsham Road in Fulbourn This site would meet the definition for grey belt land, as set out in Chapter 13 and Annex 2 of the NPPF and in Section Id.64: Green Belts of the Planning Practice Guidance. The site does not strongly contribute towards Green Belt purposes (a), (b), or (d). The promoted development would not lead to the unrestricted sprawl of a large built-up area, it would not result in the coalescence of neighbouring	203898 (Hill Residential (Fulbourn Site))

towns, and it would not affect the setting and special character of a historic town. The site is not designated as a protected area, other than being within the Green Belt. Fulbourn provides a range of services and facilities and employment opportunities, and is accessible by sustainable modes of transport. A Landscape Capacity and Grey Belt Assessment (tor & co, February 2025) was included with the updated Call for Sites submission in March 2025. It is considered that this would fall within the definition of grey belt land, and should be released from the Green Belt to meet development needs.	
Evolution Business Park and associated land, Milton Road, Cambridge submission To realise the Site's potential to expand its employment generating capabilities as an Established Employment Area, it should also be released from the Cambridge Green Belt, especially as it comprises previously developed land. Given the Site's existing built form, it does not make a positive contribution to the purposes of the Cambridge Green Belt and should duly be released to facilitate future development of the Business Park.	206951 (Cambridge Reality Limited)
GTSA Site, Great Shelford 115766 Concerns are raised regarding compliance with NPPF paragraph 23, suggesting that additional sites are necessary to meet housing needs by 2045. The respondent advocates for a higher buffer in the growth strategy to support local jobs and meet housing needs, particularly for specialist and older persons' housing. This should be met on smaller non-strategic sites in a highly sustainable location such as Gt Shelford	204910 (Great Shelford (Ten Acres) LLP)
Cambridge South Cambridge South represents a unique opportunity to deliver housing to meet a broad range of needs but specifically those of the Biomedical Campus in line with national policy. It is	208212, 208215 (Pigeon Land & LIH)

eminently deliverable; unencumbered by existing uses or landownership complications. It's clearly defined physical boundaries mean it is a clear grey belt site, which can be planned as a sustainable extension of the city. Sites on the edge of Cambridge have a track record of delivering high quality development. Cambridge South would be the next success story and there are demonstrable exceptional circumstances to justify its release from the Green Belt. It is considered that Cambridge South complies with these criteria and would (under the draft NPPF) therefore not represent inappropriate development in the Green Belt. Whilst it is against the 2024 version of the NPPF that the dGCLP is being prepared, the draft is already a consideration and will become even more material when it is adopted. Any spatial strategy that involves the consideration of Green Belt land would be remiss not to consider the implications of grey belt and of the draft NPPF's definition of what would not be inappropriate development in the Green Belt and the more near-term impact on development management this will have.	
Land north of Long Road, 'Darien Meadow' The Site is currently designated as Green Belt, but recent national policy changes regarding 'grey belt' have not been incorporated, leading to a flawed assessment. The site is grey belt land for decision-taking purposes. The Development Strategy Topic Paper indicates a future Green Belt Assessment, but this should have informed the Draft Local Plan due to significant policy changes.	204131 (Emmanuel College (Long Road))

To ensure the Plan is sound, a revised Green Belt Assessment should be published, higher growth scenarios considered, and grey belt land identified for sustainable development.	
Land west of Duxford Road The site should be allocated for development in the emerging Plan as it meets the criteria for grey belt land as per the Planning Practice Guidance (PPG, February 2025); the submitted Landscape and Visual Assessment demonstrates that Land west of Duxford Road does not contribute to the purposes of the Green Belt, thus supporting its classification as grey belt land. The site is not affected by Footnote 7 designations, confirming its eligibility for grey belt classification and potential for development.	204283 (Croudace Homes)
Foxton The government's reforms to the NPPF in December 2024 modernised green belt policies, allowing development on low-quality 'grey belt' land, which may include the respondent's client's site at Foxton. There is a need for greater flexibility in permitting homes on sites near well-connected rail stations, as the client's site meets these criteria and has good cycle connectivity to employment areas. A thorough green belt review is essential for the Local Plan process to ensure the development strategy for Greater Cambridge is based on an accurate assessment of land contributions to green belt purposes. Draft Policy S/GB diverges from the NPPF, particularly in criterion c), which aims to prevent merging of communities around Cambridge, whereas the NPPF focuses on preventing merging of neighbouring towns.	204306 (R2 Developments Ltd)
Land at Girton Road, Girton	204487 (Wain Estates)

Please see attached a Green Belt Study for Land at Girton Road, Girton, which details how the site is classified as Grey Belt due to its weak contribution to Green Belt purposes. The study indicates that development on this site would not significantly impact the gap between Girton and Histon.	
Comberton The respondent highlights that the government's reforms to the NPPF in December 2024 allow for development on low-quality 'grey belt' land, suggesting their client's site at Comberton may qualify. They argue for greater flexibility in permitting homes on sites near Minor Rural Centres to support the government's aim of boosting housing supply.	204498 (Beechwood Estates Ltd)
Land east of Hauxton The respondent argues that the land east of Hauxton should be released from the Green Belt, as it is categorised as 'grey belt' and makes a limited contribution to Green Belt purposes, thus supporting the deliverability of the emerging GCLP. Redrow highlights that the proposed site can address unmet housing needs and is well-connected to local services, schools, and transport corridors, making it suitable for development. The Green Belt and its purposes should be subject to review around Hauxton.	204530 (Redrow South Midlands)
Quy Tech site, Stow-cum-Quy The respondent objects to draft Policy S/GB, stating it does not align with the National Planning Policy Framework (NPPF) and fails to consider Grey Belt land or the need for Green Belt review. It is argued that the Quy Tech site does not significantly contribute to the purposes of the Green Belt, as	204809 (Quy Tech Ltd on behalf of landowners)

it would not lead to urban sprawl or the merging of towns, and would not impact Cambridge's historic setting. The respondent suggests that the development of the Quy Tech site would have the least impact on sensitive Green Belt land compared to other nearby sites, advocating for its removal from the Green Belt.	
Land South of Shelford Road, Fulbourn, site 51610 / 115137 in the HELAA. Policy S/GB and the Green Belt Assessment (2021) conclude that there is no need to release the green belt, as 'exceptional circumstances' are not present. The new site allocations are deemed unsustainable as they are located far from Cambridge Centre, potentially increasing reliance on private cars, conflicting with NPPF paragraphs 110 and 115. The Sustainability Appraisal 2025 notes that development beyond the green belt may lead to increased vehicle travel due to poor proximity to existing services and jobs. The respondent argues that Land South of Shelford Road, Fulbourn qualifies as Grey belt under NPPF paragraph 143, and its release would not affect neighbouring towns or historic character, warranting its allocation for smaller sites.	204973 (Miller Homes)
Teversham The respondent indicates that the client's site at Teversham may be classified as 'grey belt' due to its poor performance against green belt purposes, suggesting it could be suitable for development. The	205054 (G Robinson and Partners)

respondent argues for greater flexibility in permitting development on grey belt land to support the government's aim of increasing housing supply, highlighting the site's connectivity to Fulbourn and Cambridge. A thorough green belt review is recommended as part of the Local Plan process to ensure the development strategy for Greater Cambridge is based on an accurate assessment of green belt contributions. The respondent points out a divergence in Policy S/GB, specifically criterion c), which should be amended to align with the NPPF by preventing communities in the environs of Cambridge from merging with the city. A further recommendation is made for a comprehensive review of the green belt to identify additional sustainable development sites that do not compromise the purposes of green belt designation.	
Site 40509 on Babraham Road The Green Belt assessment underpinning the Local Plan is not sufficiently robust. Site 40509 on Babraham Road has been excluded solely due to its Green Belt designation, despite being adjacent to an allocated site, close to a proposed transport hub and located within a highly sustainable village. Evidence shows the site does not contribute strongly to Green Belt purposes and that any landscape harm could be mitigated. The assessment also fails to reflect the delivery of CSET, which would make the site infill. As a result, less suitable sites are allocated, contrary to the Plan's sustainability objectives.	203905 (Waterbeach Instruments Ltd)
Land off Beach Road, Cottenham It is clear that the Greater Cambridge Local Plan needs to be informed by a full assessment of the Green Belt in light of the Government's introduction of grey belt. Given that the previous assessment of	208777 (Croudace Homes)

land off Beach Road, Cottenham concluded that it does not strongly contribute to any of purposes (a), (b), and (d), there is a strong case that the land should be designated as grey belt, and thus suitable for development.	
South East Cambridge It is considered that the approach taken by Greater Cambridge is fundamentally incorrect, including failing to consider the potential for Grey Belt sites to accommodate growth. As both the NPPF and PPG identify clearly, a full Green Belt review should be undertaken in authorities where Green Belt release is required to fulfil development needs. The development of some Green Belt sites on the edge of Cambridge such as South East Cambridge would lead to more sustainable forms of development through shortened commuting distances and prevalence of public transport options than strategic growth options beyond the Green Belt. Therefore, the approach taken on Green Belt land is currently incomplete, including failing to consider the availability of Grey Belt land on the edge of Cambridge.	209690 (CEG Land Promotions Ltd)
South of Oakington Road, Cottenham The respondent believes that a revised Green Belt Assessment should have been completed and published as part of the consultation process, as it may change the context for considering Green Belt land release. The omission of 'Grey Belt' references in Draft Policy S/GB is challenged, as the NPPF mandates its identification in Green Belt Assessments, and the respondent recommends its inclusion in the Local Plan. Draft Policy S/GB is inconsistent with national policy and calls for a revised Green Belt Assessment,	203172 (Christ's College)

consideration of higher growth targets, and inclusion of Grey Belt land. The respondent suggests that the Council should engage more effectively with Green Belt issues to form a sustainable spatial strategy and considers the inclusion of well-performing Grey Belt sites essential. The respondent points to a specific site, South of Oakington Road, Cottenham, as a low-impact Green Belt land that should be released to support sustainable development in line with NPPF guidelines.	
Land East of Bridge Road, Impington The respondent considers that the site is Grey Belt and also in a sustainable location and that there are exceptional circumstances to justify the alteration of the Green Belt to include the release of sites such as Land East of Bridge Road, Impington. Survey work and engagement is being undertaken to demonstrate the deliverability of safe, convenient access to the Site.	210440 (Barratt Redrow)
South West Cambridge (HELAA Ref. 52643) It is widely accepted that Cambridge is tightly bound by Green Belt which constrains new development and expansion of the city. The NPPF guides that Green Belt boundaries should only be altered in exceptional circumstances, any changes to Green Belt boundaries should endure beyond the plan period. The priority for the release of land from the Green Belt should be previously developed land, grey belt land, and then other Green Belt locations. The need to promote sustainable patterns of development should also be considered when deciding on land to be released from the Green Belt. This approach would limit the need to travel, offer a choice of transport modes, reduce congestion and emissions, and improve air quality and public health.	206825 (North Barton Road Landowners Group)

It is considered that exceptional circumstances exist to release land from the Green Belt through the Greater Cambridge Local Plan process, which are related to housing and affordable housing needs and economic growth.	
Sites at Park Farm, Histon Section 13 of the NPPF requires Green Belts to be reviewed as part of the plan making process and encourages the use of previously developed land and grey belt where this aligns with the promotion of sustainable development and the development strategy. Paragraph 155 confirms the circumstances where the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate and paragraph 156 sets out the Golden Rules which apply to land proposed for release from Green Belt for housing. The NPPF also indicates that significant weight should be given to development proposals which comply with the "Golden Rules" set out for grey belt development. The amendments introduced by the revised NPPF to Green Belt policy, and particularly the assessment of Grey Belt, mean that this site can now be positively assessed.	208387 (NIAB Trust)
Land at Fen Ditton We would highlight that there is currently not an up-to-date Green Belt Assessment provided within the Local Plan evidence. These representations set out the findings of a Green Belt Review, which demonstrates that Land at Fen Ditton performs weakly against the purposes of the Green Belt set out within draft Policy S/GB and that its consideration as Grey Belt would not undermine the overall integrity or function of the Cambridge Green Belt.	210229 (Vistry Group)

Changes to plan: Release Land at Fen Ditton from the Cambridge Green Belt and incorporated within the settlement boundary of Fen Ditton through its allocation.	
Cambridge Science Park North (HELAA Reference 40096) A Green Belt Review has been undertaken for the land promoted as Cambridge Science Park North (HELAA Reference 40096). The Green Belt Review highlights that the site could be considered "grey belt" land. Consideration is needed for the exceptional circumstances that exist to release Green Belt land for allocation as part of the Local Plan, particularly to meet the sub-region's mid-tech floorspace needs.	211485 (Trinity College (CSP) Limited)
Swans Corner, Whittlesford (HELAA Reference 208803) We consider that 'exceptional circumstances' exist to justify a review of the Cambridge Green Belt boundary through this Local Plan process, and the subsequent release of land adjacent to Swans Corner. Please refer to the maps within the accompanying attachments for further clarification. We consider that the National Planning Policy Framework (NPPF) has changed policies that affect the Green Belt. Local planning authorities are now required to meet their objectively assessed housing needs. The Green Belt boundary should be consistent with the overall development strategy and with the principles of sustainable development.	2011691 (native land)
The extent and removal of Green Belt land at Babraham Hall should be reviewed as it does not provide space for development that could not be accommodated elsewhere with less impact on the openness, countryside and environment.	211931 (C Newell)

Policies Map

Summary of issues raised in comments	Comments highlighting this issue
The draft Policies Map is incorrect in that it does not accurately depict the greenbelt boundary to the east of Stapleford. The map needs amending to show land removed from the greenbelt and now occupied by Strawberry Fields retirement care village on Haverhill Rd, Stapleford.	201551 (Stapleford PC)

Green Belt Assessment

Summary of issues raised in comments	Comments highlighting this issue
The purposes in the Greater Cambridge Green Belt Assessment do not address the fundamental aim in para 142 of the NPPF to "to prevent urban sprawl by keeping land permanently open". The methodology does not include a harm assessment for village of Stapleford but seems to have "merged" it with our neighbouring village of Shelford which is one of the outcomes that the methodology is seeking to prevent.	201168 (M Foote)
This policy is supported by a 2021 harm assessment methodology that is flawed because it is based on some Cambridge specific purposes alone and does not reflect the national planning policy framework. We welcome the fact that this methodology is currently under review and due to be re-issued this year (2026)	203091 (M Foote)

Attached document provides a detailed critique of the current methodology including the apparent omission of the village of Stapleford in its harm assessments.	
The NPPF (2024) introduced a clear duty for Grey Belt land to be identified when undertaking Green Belt Assessments for the purposes of determining applications; reinforced within the Planning Practice Guidance (PPG) (Para 001 ref.001 64-001-20250225). The direction of travel towards authorities being required to identify Grey Belt land within local plans is further evidenced within the Consultation Draft NPPF (2025)(GB2[3]) and at Appendix E where the criteria for undertaking Green Belt Assessments is outlined. To ensure the longevity of the Local Plan, it is recommended the revised Green Belt Assessment is undertaken with regard to Appendix E of the NPPF 2025.	201857 (Chivers Farms Limited), 202038 (Wimpole Associates Ltd)
The revised Green Belt Assessment should have informed the Draft Local Plan and been published as part of the Regulation 18 Consultation.	202038 (Wimpole Associates Ltd)
It is important for the Green Belt Assessment to be updated or this will undermine the plan. An up-to-date Assessment is needed to provide a qualitative assessment of the purposes and functions of the Cambridge Green Belt, and given the current pressures and contexts, demonstrate its relevance to the setting of the historic city.	202736 (Cambridge Past, Present and Future)
Current Green Belt Study is out of date and not representative of the current position in terms of policy (noting the introduction of grey belt) or in terms of growth targets which underpin the Local Plan. The revised Green Belt Assessment has not been published for consultation in support of the Local Plan and as such the GCSP's approach to allocating and discounting sites for release within the Green Belt is unclear.	201688, 205873 (British Land)

It is understood that a revised Green Belt Assessment will be published after the Regulation 18 Consultation closes, however this should have informed the Draft Local Plan and been published as part of the Regulation 18 Consultation. Also, the omission of any reference to 'Grey Belt' within the Draft Policy S/GB is challenged. The NPPF (2024) introduced a clear duty for Grey Belt land to be identified when undertaking Green Belt Assessments for the purposes of determining applications; reinforced within the Planning Practice Guidance (PPG) (Para 001 ref.001 64-001-20250225). Identifying Grey Belt land within the revised Green Belt Assessment and Draft Local Plan is hence both a policy requirement and crucial to ensuring the Local Plan promotes sustainable patterns of growth (as required by the NPPF). The Council needs to properly consider the inclusion of well-performing sites in the Grey Belt. For example, Land to the South of Station Road, Harston (ref: 115742) was assessed within the Council's Green Belt Assessment (2021) which supported First Proposals (2021) Draft Local Plan (Parcel HS9). Changes to plan: To ensure that the Plan is sound will require: - The publication of a revised Green Belt Assessment to support the Local Plan - A consideration of higher growth targets and subsequent review of the Green Belt / Grey Belt where necessary. - The identification and inclusion of the Cambridge Grey Belt within the Local Plan to guide development to sustainable Grey Belt sites.	203419, 203397 (Jesus College)
LSH agrees with this Policies alignment with National Policy within the NPPF relating to Green Belt release on sites that accord with the Golden Rules. As previously stated above, the Greater Cambridge Green Belt Assessment Final Report August 2021	211233 (Living Space Housing)

reviewed this site for Green Belt release and it was concluded that the site makes limited contributions to the overall Green Belt and could be potentially released with minimal impact.	

Policy S/MO: Monitoring

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the need to monitor annually.

Comments were made mainly from Savills, in regard to the review of the Local Plan in relation to housing and economic floorspace land supply, and whether an earlier trigger point is needed where there are issues with land supply. It is an issue that there are not specific enough outcomes of non-compliance with the trigger points set out in the policy.

Concerns were raised in relation to climate change and holding developers to account, and there is a gap regarding renewable energy generation and space heating demand. In a similar vein, Biodiversity Net Gain and aspirations for higher standards also need to be properly monitored and enforced over the lifetime of development.

Concerns were also raised about the timely delivery of infrastructure and the monitoring of infrastructure delivery is sufficient so that it is delivered prior to the completion of homes. Concerns were also raised about the lack of rurally specific impacts.

Concerns were raised from local residents, Create Cambridge and Cambridge Junction about making sure cultural provision is reflected in the monitoring of delivery of the Local Plan.

Further responses objected to the wording of the policy because it lacks clarity on how monitoring outcomes will inform decision making.

Further comments were made about the lack of monitoring of affordable housing and the allocation of new sites being an action to mitigate this.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The Monitoring policy and Appendix F Monitoring Framework have been reviewed to ensure it remains relevant and an accurate reflection of the strategy and content of the Local Plan at the Regulation 19 stage. Appendix F Monitoring Framework sets out how monitoring outcomes will inform decision making and reviews of local planning policy going forward. The indicators in the monitoring framework apply to rural and urban areas, the monitoring of homes, employment, greening and infrastructure will be consistently completed across rural and urban areas.
- The policy itself remains unchanged after a review of comments because the review approach taken in this policy remains sound in the context of any changes to the Local Plan. The policy has been reviewed by officers for clarity, and this has resulted in some minor changes for grammar.
- Appendix F Monitoring Framework has been updated to reflect any modifications to policy wording that have arisen from the updating of policy. This includes urban greening, 20% biodiversity net gain, accessible open space requirements for residential and commercial uses, and cultural provision. Infrastructure delivery will be monitored through the IDP and with third party stakeholders delivering the infrastructure to ensure these are made in a timely manner.
- Modifications to Appendix F Monitoring Framework have been made following representations from local residents on the need to monitor space heating demand and renewable energy generation. In response to Create Cambridge, local residents and Cambridge Junction, cultural provision has been included as a monitoring indicator.

- Parishes will not be included in the review of monitoring indicators directly as this is the responsibility of the Local Planning Authority. However, there will be an opportunity to comment and engage with the outcomes of the review of the Local Plan through consultation on responses to the reviews, such as consultation on new policy and processes. Affordable housing is monitored in indicator M25E, and the review of the Local Plan will include a Call for Sites where appropriate.

  Windfall housing is monitored through the annual update to the housing trajectory which informs the number of completions of homes which is monitored in the monitoring framework.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Inclusion of Parishes in the review of the monitoring indicators.	202351 (P Deer), 202128 (Elsworth PC)
Create Cambridge are asking that creative Industries data is disaggregated from the Cultural Sector in future monitoring, that assumptions about resilience and commercial success are tested separately for cultural infrastructure and that use of the Create Cambridge Insights Report is included as evidence.	202062 (H Chamberlain), 202150 (Cambridge Junction), 202316 (Cambridge Junction), 202320 (Cambridge Junction / Create Cambridge), 202205 (H Tam), 202398 (J Webber), 202418 (T Shaw),

	202467 (K Jones), 202691 (T Altmann), 202721 (W Townsend), 202764 (Cambridge Junction / Create Cambridge), 202790 (S Lee), 202889 (Cambridge Junction), 202892 (Cambridge Junction), 202942 (R Terry), 202966 (T Flinders), 203367 (N Ellis), 203447 (S Ashworth), 203479 (L Heap), 203548 (D Lever), 203637 (University of Cambridge), 203856 (N Yeni), 203877 (University of Cambridge), 204416 (New International Encounter), 204719 (A Giarlis), 204856 (L Matthews), 205007 (Wysing Arts Centre), 205068 (University of

	Cambridge), 205128 (H Paterson), 205217 (J Walsh), 205329 (A C de Azevedo Lamha), 205366 (L Howse), 205372 (N Oakley), 205419 (Cambridge Junction / Create Cambridge), 205427 (A Seiglow), 203121 (The Arts Theatre Cambridge), 204188 (Cambridge Junction/Create Cambridge), 204188 (Cambridge Junction / Create Cambridge), 202330 (Cambridge Junction / Create Cambridge) 202892 (Cambridge Junction)
Timely provision of infrastructure, usually available before dwellings are occupied, is critical to successful placemaking and should be a priority. Monitoring must be backed up with resourced enforcement if infrastructure is not brought forward as agreed.	202826 (Cambridge City Council Liberal Democrat Group)

The monitoring set out for Policy CC/NZ is insufficient. It is missing space heating demand, on-site renewables and lifecycle carbon requirements.	202878 (M Cleminson), 202611 (C Pointon)
The monitoring approach is clear, but it does not specify how rural impacts will be tracked. There are no explicit measures for rural service access, transport availability, digital connectivity or delivery of rural exception housing.	203155 (Cambridge ACRE)
Monitoring must ensure that the positive intentions in e.g., Policy BG/TC (such as the 30% minimum gain in tree canopy) is properly supported, monitored and properly enforced over the lifespan of the long-lived trees.	201664 (J Neal)
The respondent objects to the wording of Policy S/MO, stating it requires modifications to ensure effectiveness and adaptability to changing circumstances. Policy S/MO lacks clarity on how monitoring outcomes will inform decision-making, risking its effectiveness in addressing delivery shortfalls or unforeseen constraints. It is requested that Policy S/MO is modified to clarify how monitoring outcomes will be used to inform decision-making during the plan period; and explicitly acknowledge the need for flexibility where monitoring identifies delivery risks or shortfalls.	204183 (Tritax Big Box Developments)
Support for annual monitoring.	204643 (C Forbes-Cable)
The respondent strongly objects to Draft Policy S/MO, citing a lack of specific consequences and timeframes for unachieved housing and employment policies. The respondent acknowledges Appendix F (Monitoring Framework) but finds the wording of Policy	205039 (Endurance Estates)

S/MO insufficiently specific regarding triggers and consequences for policies not being achieved. The respondent criticises the current wording as subjective, and it implies a judgement from the Council on the timeliness of policy implementation.	
How can we avoid developers rowing back on environmental standards? The council has strict monitoring and policy control standards and environmental standards are central to that.	210303 (Rustat Neighbourhood Association)
• The respondent objects to the policy wording, stating it requires modifications to ensure effectiveness and adaptability to changing circumstances. • The respondent cites NPPF 2024 Paragraph 86 (e) and NPPF 2026 Policy E1, emphasising the need for flexibility in planning policies or commitment to action when development delivery falls behind anticipated trajectories or relies on limited large sites. • Policy lacks clarity on how monitoring outcomes will inform decision-making • The absence of a clear mechanism for responding to delivery issues may hinder development, risking the Local Plan's objectives and economic growth. • The respondent argues that Policy does not adequately link monitoring outcomes to corrective actions, undermining effectiveness. • requests Policy be modified to clarify the use of monitoring outcomes in decision-making and to acknowledge the need for flexibility in response to delivery risks.	204183 (Tritax Big Box Development)
• Requests the Monitoring Framework includes specific indicators related to rights of way condition, connectivity and user satisfaction. • Delivery mechanisms are clearly identified for the implementation of access improvements, including collaboration with parish councils, landowners and user groups.	208170 (Cambridgeshire Local Access Forum)

Food access and affordability ● % of households within a 10-minute walk of a “healthy food retailer” (define locally: e.g., supermarket, greengrocer, community food hub, market at least weekly). ● Number of neighbourhood centres with a weekly fresh-food offer (street market, community market or equivalent). ● Change in density of hot food takeaways within 400m of schools (or other agreed buffer), and net change in A5 uses in priority areas. ● % of major developments delivering “affordable food space” (e.g., low-rent unit(s) or peppercorn concession for social enterprise/community food).	208196 (Cambridge Sustainable Food)
Community food infrastructure and resilience ● Number and floorspace (sqm) of community food assets delivered (community kitchens, food hubs, social supermarkets/co-ops, shared storage/cold chain). ● Number of community kitchens with certified/compliant fit-out suitable for training/enterprise (food hygiene compliant, accessible).	210966 (Cambridge Sustainable Food)
Local production and land ● Area of BMV agricultural land (Grades 1, 2, 3a) safeguarded vs lost (net). ● Hectares of peri-urban land under active food production (commercial or community-supported) within Greater Cambridge (net change). ● Area of edible/fruit tree planting delivered (e.g., number of fruit/nut trees).	210967 (Cambridge Sustainable Food)
Skills, health and inclusion ● Number of school/community settings with food growing + cooking facilities delivered through	210968 (Cambridge Sustainable Food)

development contributions. ● Accessibility KPI for growing spaces: % of new food-growing sites meeting inclusive design standards (accessible paths, raised beds provision, adapted plots).	
Circular economy: waste prevention and redistribution ● % of new non-residential food premises with compliant food-waste separation and storage (designed-in, not retrofitted). ● Tonnes of edible surplus redistributed locally per year (through accredited/community partners), and/or number of redistribution partnerships enabled by plan-led space. ● % of major developments providing on-site or neighbourhood-scale composting provision (where appropriate), with a management plan	210969 (Cambridge Sustainable Food)
Local economy and enterprise ● Number of food enterprises supported in neighbourhood centres (start-ups, co-ops, social enterprises) and survival rate at 24 months where the Plan provides affordable workspace. ● Proportion of public-sector/community anchor procurement spent locally or a proxy such as number of anchor institutions participating in local/sustainable food procurement initiatives.	210970 (Cambridge Sustainable Food)
“Systems” Indicator - to prove the Plan is delivering a joined-up food offer. ● % of strategic sites / major allocations delivering a Food Systems Delivery Plan (a short, standardised plan covering access, community assets, growing space, waste, and local enterprise), secured through condition/S106.	210971 (Cambridge Sustainable Food), 210977 (Y Dignon)
Food access and affordability ● % of households within a 10-minute walk of a “healthy food retailer” (define locally: e.g., supermarket,	206966 (Y Dignon)

greengrocer, community food hub, market at least weekly). ● Number of neighbourhood centres with a weekly fresh-food offer (street market, community market or equivalent). ● Change in density of hot food takeaways within 400m of schools (or other agreed buffer), and net change in A5 uses in priority areas. ● % of major developments delivering “affordable food space” (e.g., low-rent unit(s) or peppercorn concession for social enterprise/community food).	
Community food infrastructure and resilience ● Number and floorspace (sqm) of community food assets delivered (community kitchens, food hubs, social supermarkets/co-ops, shared storage/cold chain). ● Number of community kitchens with certified/compliant fit-out suitable for training/enterprise (food hygiene compliant, accessible).	206967 (Y Dignon)
Local production and land ● Area of BMV agricultural land (Grades 1, 2, 3a) safeguarded vs lost (net). ● Hectares of peri-urban land under active food production (commercial or community-supported) within Greater Cambridge (net change). ● Area of edible/fruit tree planting delivered (e.g., number of fruit/nut trees).	210973 (Y Dignon)
Skills, health and inclusion ● Number of school/community settings with food growing + cooking facilities delivered through development contributions.	210974 (Y Dignon)

● Accessibility KPI for growing spaces: % of new food-growing sites meeting inclusive design standards (accessible paths, raised beds provision, adapted plots).	
Circular economy: waste prevention and redistribution ● % of new non-residential food premises with compliant food-waste separation and storage (designed-in, not retrofitted). ● Tonnes of edible surplus redistributed locally per year (through accredited/community partners), and/or number of redistribution partnerships enabled by plan-led space. ● % of major developments providing on-site or neighbourhood-scale composting provision (where appropriate), with a management plan	210975 (Y Dignon)
Local economy and enterprise ● Number of food enterprises supported in neighbourhood centres (start-ups, co-ops, social enterprises) and survival rate at 24 months where the Plan provides affordable workspace. ● Proportion of public-sector/community anchor procurement spent locally or a proxy such as number of anchor institutions participating in local/sustainable food procurement initiatives.	210976 (Y Dignon)
Appendix F – Monitoring Framework The actions set out in Appendix E are not quick delivery options, unlike allocating more sites which fall under the SUE threshold.	208367 (Endurance Estates)
While the monitoring monitors specialist housing uses, the monitoring also fails to monitor the delivery of affordable housing which should be rectified. Again, there should be levers in the local plan which can be pulled to create a timely difference in housing delivery. Sites which are in the Green Belt which come forward as Grey Belt sites have to have a higher percentage of affordable housing and therefore	208368 (Endurance Estates)

allocating sites at a more modest scale would enable there to be clear and specific delivery of new affordable housing.	
Mid-term changes to the Local Plan and additional Local Plan allocated development sites seem to be proposed. That potentially redefines windfall sites as strategic sites and goes beyond the scope of a monitoring process. Site allocation should go through the proper Local Plan procedure with due public consultation.	211932 (C Newell)

Consultation Statement

Appendix 4: Response to Representations - Summary of the Plan

Greater Cambridge Local Plan

Published as part of the Proposed Submission Local Plan - Regulation 19 consultation (August 2026 - September 2026)

GREATER CAMBRIDGE
SHARED PLANNING

Summaries of Draft Plan Representations, and Response to Main Issues Raised

Summary of the Greater Cambridge Local Plan

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of Main Issues:

A number of comments offered broad support for the draft plan and its approach. Issues sited include approach to balancing support for the economy with environmental and social issues. The importance of ensuring that the policies and principes were effectively applied was mentioned in a number of the comments.

Some representors expressed concern about the level of growth that was proposed by the draft local plan. The impact of development on the area, that it was overly focused on economic development, and that government focus on Cambridge meant people had little say. Impacts of growth ion infrastructure, congestion and character of the area where mentioned, as well as concern about the impact on the heritage of the area. There was also concern that it wasn't addressing problems, such as a lack of affordable housing, and transport.

Other comments considered that the plan did not respond to the needs of the economy or to government aspirations. Some stated that plan was not delivering enough for villages, and considering how villages could be made more sustainable.

Some commentors considered the plan should have less focus on climate change and biodiversity, and more on meeting community needs. Others were concerned that the plan would not deliver its climate ambitions because of the scale of proposals.

Comments were made on the summary on particular sites. Concern was expressed about the impact of East West Rail and Cambourne North, including on wildlife, heritage, and the impact it would have on surrounding communities. Land adjacent to A11 and A1307 at Grange Farm raised a number of comments objecting to the proposal, similar to these made on the site policy itself, including questioning the choice of site, landscape, biodiversity and heritage impacts, transport access, and the impact on nearby communities. A number of other sites were referenced in comments, wither seeking their inclusion or supporting their omission from the plan.

On infrastructure, comments from emergency services bodies sought to ensure their areas were appropriately addressed by the plan. Other comments highlighted the importance of infrastructure being delivered when it is needed, and examples were sited of when this had not happened. Specific infrastructure issues were mentioned, including the need to support food growing.

Comments on cultural infrastructure stressed the importance of maintaining and funding provision, including if the Junction is redeveloped.

A wider variety of transport issues were raised. There was concern about the quality of bus services, and that they would need to be improved to accommodate growth. Light rail was suggested by some. More needed to be done to support active travel, and this should be a high priority when designing places. The quality of road infrastructure was raised, including concern about potholes.

Some representors raised concern about the format of the draft plan consultation. The level and technicality of the consultation material and the consultation platform may have discouraged participation. Some also question the difference consultation made, as the local plan hadn’t changed significantly form previous stages.

Other comments picked up a variety of issues.

Response to representations

Comments offering general support for the draft plan and the approach are noted.

The level of homes and jobs being planned for has been carefully considered, and is justified by the evidence being published alongside the Local Plan. National planning policy requires local plans to respond to the needs of the area. We

have considered the needs of the economy and likely growth in jobs, and the number of homes needed to support it. This also accords with the standard method of calculating the needs for homes set by government. We have tested a range of strategic development approaches, considering their impact on economic, social, and environmental issues, and have developed an appropriate spatial strategy to accommodate development needs whilst and protecting the environment.

The strategy for villages has allocated sites where it is sustainable to do so as part of the wider development strategy, but also included policies which would support appropriate windfall development and rural exception sites. Neighbourhood planning also remains a toll available to parishes if they wish to address local issue directly.

The development strategy proposed has been strongly driven by climate change considerations, along with a set of robust policies to ensure the form of development responds as well.

On specific sites, the issues raised on Cambourne North and Land adjacent to A11 and A1307 at Grange Farm have been carefully considered and addressed in the evidence related to site policies. They are considered to remain appropriate elements of the development strategy. Comments supporting the omission of specific sites are noted.

The plan has been informed by a significant evidence base related to infrastructure provision. This includes and Infrastructure Delivery Plan, and topic specific evidence such as related to water supply. Policies seek to ensure that the right infrastructure is provided when it is needed. This has included liaison with emergency services, healthcare and education providers. A study specifically exploring food growing was also commissioned to inform the plan. The plan has also been informed by a study exploring cultural infrastructure provision.

Cambridgeshire and Peterborough Combined Authority are producing a Greater Cambridge Transport Strategy. This identifies how transport measures will accommodate planned growth. A draft is being published alongside the Proposed Submission Local Plan. The development strategy has also been subject to transport modelling, used to identify the specific measures need to support development.

Comments on the consultation platform are noted. We endeavour to improve our consultations and learn lessons from each stage, so will take on board comments. We aim to make the consultation accessible, and offer help to anyone to make sure they can have their say. In terms of responding to the feedback, we cannot always change the plan in the way individual comments seek, but we carefully consider all comments received.

Table of representations:

Comments expressing general support for the plan

Summary of issues raised in comments	Comments highlighting this issue
Strongly support the Plan's: • Commitment to planning positively for innovation-led economic growth, informed by robust local data and an understanding of the clustered nature of the Cambridge economy. • Recognition of the need to plan for a diverse range of housing types and tenures, ensuring that housing delivery keeps pace with job growth and supports workforce retention at all stages of life. • Support for flexibility and headroom in employment space and housing provision, enabling the Plan to respond to higher-than-anticipated economic performance. • Emphasis on innovation infrastructure, including the intensification and evolution of existing clusters, campuses and science parks. • Integrated approach to infrastructure planning, including transport, utilities, digital connectivity and energy, and the recognition that delivery depends on strong system-wide alignment across multiple strategies and delivery bodies. • Support for appropriate densification to high design and environmental standards, particularly in locations well served by transport and services. • Balanced provision for "whole economy" needs, including mid-tech, industrial and logistics space.• Commitment to climate change mitigation, biodiversity net gain and high-quality placemaking, which are essential to long-term competitiveness. We also support the Plan's recognition of Greater Cambridge as the intellectual and innovation engine of the Corridor. The success of Greater Cambridge underpins growth across the wider Corridor, including in Stevenage, Harlow, London and Peterborough, supporting high-value jobs, skills pipelines and resilient supply chains.	208493 (UK Innovation Corridor)

Summary of issues raised in comments	Comments highlighting this issue
CA welcomes the vision of good growth, which balances support for the internationally significant innovation economy with improved quality of life for local communities. We support the use of robust local data and the recognition of the clustering nature of the economy, alongside flexibility to allow additional commercial space and housing where performance is strong and infrastructure constraints are addressed. The Plan's reliance on externally delivered infrastructure, particularly transport, highlights the need for system-wide alignment. Greater flexibility on high-quality densification and a more strategic approach to grey belt assessment would further support sustainability, housing delivery, and growth objectives.	203517 (Cambridge Ahead)
We are very supportive of the proposed themes and strongly support the high aspirations of this proposed local plan including the policies on Climate, biodiversity, water management, well being and social inclusion, green spaces, jobs, homes and infrastructure	202817 (Cambridge City Council Liberal Democrat Group)
Linton Parish Council (LPC) are broadly in favour of the principles included in the draft Local Plan. LPC are in favour of avoiding the spread of development throughout local villages as thus smaller scale development would fail to provide adequate infrastructure and services.	201672 (Linton PC)
Comments offering general support include: • I think this sounds good. • This sounds amazing, especially the boosted housing, public transport and access to green space in a currently enclosed Green Belt area. • Support your vision, development strategy and development specifics for the Local Plan. I understand that some of the specifics are dependent on adequate infrastructure including water, which is as it should be. • An incredibly large amount of work has clearly gone into the development of the Draft Greater Cambridge Local Plan, which residents really appreciate.	200990 (C Leach) 201000 (H Hale) 201004 (M Colville) 201161 (S Oliver) 201028 (A Harris)

Summary of issues raised in comments	Comments highlighting this issue
• The overall conclusions appear to be sensible and heading towards a valuable plan. I therefore agree with the majority of proposals, although, as ever, there is of course room for some improvements • Principles need to be adhered to - don't let developers wriggle out of provision of affordable housing, green space, contributions to infrastructure (e.g. schools, Addenbrooke's hospital, GPs); ensure developers build these things first not last. • All sounds very sensible, if can be delivered without compromising - especially around green spaces, provision of infrastructure, avoidance of reliance on cars and provision of water supplies. These are areas where corners are so often cut. • I support the goals of the plan. Wellbeing in communities is important to me. I have been active in campaigning for play spaces for children and teenagers. I see these squeezes out by the completing goals of land for housing and land for biodiversity and nature. I would like to see these specifically called out so they are not lost, and recognition that play is an appropriate activity within some green spaces. • The plan is largely broad principles/intentions, well evidenced and aligning with environmental, well-being and key planning concerns e.g. transport, housing, work and commercial. • Encourage you to find ways to discourage car use and eliminate parking on pavement. • Agree with the aims. Am concerned about university/town differences. • Congratulations to all involved for producing very good Local Plan. May the policies be implemented as clearly as stated. I particularly welcome the proposed balance of environmental and economic factors: GDP is an inadequate measure on its own. I support efforts for reduced climate change impact and development standards higher than national ones • I very much support the emphasis on environmental sustainability, especially recognising the need to ensure from the start the use of active and sustainable transport instead of reliance on cars. I support the net zero goals.	201422 (Residents Association of Old Newnham) 201817 (T McKeown) 202135 (H Lowe) 204351 (J Nelson) 203538 (P Blandford) 203861 (J Prince)

Comments on levels of development

Summary of issues raised in comments	Comments highlighting this issue
I believe the whole plan's premise about the growth of Cambridge is wrong. Being more than familiar with Silicon Valley, I shudder at the phrase Silicon Fen. I also wonder what happened to levelling-up. Why should we continue to grow at the expense of northern areas? Cambridge has neither the resources (i.e. water) nor the infrastructure to support the envisioned growth. The City is already overcrowded. It's unrealistic to believe that all these new developments won't add to the overcrowding.	200991 (R Engler)
I have very mixed feelings about this plan and feel a lot of what you are saying you would like to do is an empty promise and you are not thinking of local people. You do not have the local communities in your thoughts just profit.	201353 (D Wood)
The Government has made a great mistake in defining this area as a priority for 'sustainable economic growth'. Growth is not sustainable in this area.	201421 (S Page)
Central Government wants this development, and individuals have little say	202650 (K Leslie)
Object, I find it frustrating that the plan means even more homes for Cambridge. Having lived here for 18 years I don’t recognise the city and don’t even bother going in shopping at weekend as its too busy and cant move for people. It is sad Cambridge is over crowed and now covered on graffiti and it feels sad where the City is heading. it is a small market town and having 1000s more people means more impact on infrastructure. I think they need to really think about the amount of houses are being built. The city cannot cope with more people.	202423 (R Larkum)
Object, too many of the massive housing developments are occupied by people not from Cambridge, not conforming to Cambridge standards (in business, culture, motoring, lifestyle, tax compliance etc) which causes problem for native Cambridge residents, lowering the quality of life and creating congestion, crime, pollution, services shortages etc. Too much bland and characterless housing is	202542 (C Turner)

Summary of issues raised in comments	Comments highlighting this issue
being put forward simply to create extra council tax revenue without proper (genuine) consideration about the negative effects on life in Cambridge. Over development is also causing problems for wildlife.	
The plan is unreasonable, incomprehensible, utter madness and will create social dysfunction making a mockery of what community is about. The plan needs to be completely revised and placed where local infrastructure could accommodate such an idea. All that is happening on top of all comments above are the landowners reaping even more wealth to accommodate their utter greed and their complete indifference to what a community is about and which is so important in the very difficult world we are now living in.	204432 (S Barron)
Object as Vision is fundamentally not Sound, due to 3 major omissions: 1) It fails to recognise and protect Cambridge's world heritage significance; 2) It totally fails to recognise and manage current conflicts between current growth, let alone the proposed, and the finite physical and environmental constraints of Cambridge and its hinterland; and 3) no evidence, let alone adequate evidence, is provided to show that the proposed levels of growth are "sustainable", and the claimed vision is even remotely feasible. It is shocking that tall buildings proposals are made with no visualisations to show the potential impacts of what is proposed.	203347 (J Preston)
The draft plan is a pipe dream. New housing thus far is ugly. For example, The Marque is beyond hideous. If there no funding for a new sewage works then there is no hope for a new reservoir in the Fens. By 2045, our pot holed roads will have disintegrated and diesel pick up trucks will be needed to traverse them not EVs.	201524 (S Biggin)
You should be working on travel-to-work areas not tight bureaucratic local government boundaries. You do not seem to take into account the government's latest ambitious targets for growth. Without close collaboration with the Mayor and the Cambridge Growth Company your planning exercise is already redundant. Your reliance on the Greater Cambridge Partnership to find solutions is risible.	201267 (A Duff)

Summary of issues raised in comments	Comments highlighting this issue
Supports the Draft Greater Cambridge Local Plan, recognising the need for growth to maintain inclusivity, prosperity, and environmental responsibility. The proposed housing and employment growth is justified but advocate for a more ambitious approach to address the chronic housing shortage. Important to deliver urban regeneration, prioritising brownfield sites and high-density development near transport hubs to enhance sustainable housing delivery. Supports the plan's targeted approach to Green Belt release but suggest remaining open to further reviews to provide well-connected housing and green infrastructure.	201313 (E Munday)
Negative effects of ongoing housing development in village, including road closures and damage caused by heavy vehicles.	201932 (C Pillinger)
My main two failures of this plan are transportation and affordable (housing). Comments include public transport too expensive, developments like airport site will create gridlock. Putting labs in centre will exacerbate problems, with no decent transport proposal. Reopen Cherry Hinton station, upgrading rail links, and building manufacturing plants near railway lines to support future economic needs.	204505 (M Day)
Housing growth is too dispersed while employment remains concentrated around Cambridge.	203304 (J Day)
The plan does not achieve the government’s clearly set ambitions for Greater Cambridge, in which the Greater Cambridge area is foremost in plans for national economic growth. It also misses the specific national policy to support the expansion of the Cambridge Biomedical Campus with associated housing delivery. The Local Plan as currently drafted does not align with the ambitions set out in the Local Growth Plan which aims for a 15% increase in housing by 2035, increasing to a 54% increase by 2050. Government guidance on Local Growth Plans (July 2025) states that they should be the “guiding star” that provides direction for other relevant plans and strategies which should “align” with the Local Growth Plan.	208211 (Pigeon Land and LIH)

Summary of issues raised in comments	Comments highlighting this issue
City centre is too small and too crowded for this over expansion. Green transport is not encouraged by the state of the roads. New developments are not sympathetic in size and scale. The main arteries in and out of Cambridge are clogged already.	202560 (K Leslie)

Comments raising points around the strategy for villages

Summary of issues raised in comments	Comments highlighting this issue
Great Wilbraham Parish Council (GWPC) is concerned that the Local Plan disadvantages our residents and 60k residents in 'Group and Infill' villages in favour of those in new developments and larger, better-connected villages. SCDC is one of the most rural populations in the country, but when considering infrastructure to make communities viable and sustainable and fulfil key strategic themes we are being ignored. Great Wilbraham has close historic, social and geographic links with Little Wilbraham and Six Mile Bottom. The two Parish Councils would like to work together informally and with the Council to develop a strategy for sustainability.	203329 (Great Wilbraham PC)
Support your vision but I don't think the policies and spatial allocation that you have laid out in this Plan are strong enough to deliver on it. I'd like to see more homes near to the jobs (e.g. within the city), more homes around South Cambridgeshire villages with rail stations and more mixed-use development.	205231 (A Wiliams)
The plan clearly treats South Cambridgeshire's towns, villages, and parishes as an inconvenience. Designed and shaped exclusively by and for Cambridge and Cambridge University interests, it marginalises South Cambs. Among thousands of lines, only a brief paragraph acknowledges South Cambridgeshire, effectively dismissing it as inconvenient for delivering infrastructure you have failed to provide over the past decade. Once again, over 120,000 residents are ignored and used as cash cows to support the Cambridge economy. Many people who live and work in Cambridge actually reside in	201302 (I Koutoudis)

Summary of issues raised in comments	Comments highlighting this issue
South Cambs, yet their needs for infrastructure, healthcare, leisure, and wellbeing spaces are repeatedly overlooked.	
Much more must be done to encourage businesses to establish offices / factories / workshops (perhaps as satellites of their HQ) in the larger villages in South Cambs (e.g. Gamlingay) to give the people who live there (and the nearby smaller villages / hamlets) the opportunity to work locally. This will enable them to walk, cycle or drive a short distance to work rather than commute to London or wherever with all the benefits that will bring to the environment and their health – as well as enabling more use of local shops and other facilities sustaining the local economy. What was the village's main industrial area has been turned into a giant housing estate with, seemingly, no thought given to local employment opportunities.	201555 (P Mann)
The attention given to the rural settlement is as vital as it is for new areas. I am supportive of the goals and strategies in the main, but the tactics needed to make sure the existing grows in concert with the new cannot be overlooked. We need the same visioning exercise to take place in say Elsworth as we do Cambourne North. What is the typology of say Elsworth by 2050.	204705 (M West)
“We want our rural villages to continue to thrive and sustain their local services, but we don’t want to encourage lots of new homes in places where car travel is the easiest or only way to get around.” This approach fails to conform with Paragraph 83 of the NPPF. It also fails to recognise the changing work patterns since Covid-19, with recent ONS studies confirming that 28% of working adults in Great Britain hybrid worked between January and March 2025, representing a rise since March 2022.1 Further, the UK Government’s commitment to zero emission vehicles by 2035, which falls within the draft Plan period, promoting the change to electric vehicles.	211582 (Mr & Mrs Smith)

Comments focusing on Environment and Climate change

Summary of issues raised in comments	Comments highlighting this issue
• Object, should have less emphasis on climate change and biodiversity. • The plan has far too much on environmental issues and far too vague a commitment to providing the services needed for such an increase in the size of the community. • Object, Plan bends too much towards climate change, its theories, and its unpredictable and unproven solutions. the council has no business playing god or scientist on this issue and go back to its core duties.	205520 (P Zirngast) 202553 (S Pattinson) 202542 (C Turner)
• Object, Greenhouse gas emissions from constructing the planned 1.5m new homes will exceed interim targets for emissions, and future high emissions are built in which will break the 2050 net zero target without fixing the housing crisis as the distribution of property and its use short-term lets not homes are not dealt with. The Cambridge Plan is part of this. The vision and plan contain a lot of warm words about climate change and biodiversity, but actually in Cambridge isn't in line with these aspirations. Scale and nature of development does not support green building methods. Redeveloping Cambridge market not compatible with climate aspiration. Plan is out of line with national climate and biodiversity targets. • Summary doesn't mention the extreme water stress that Cambridge and the surrounding area suffers from. Climate change will make this worse. No development should be allowed that increases the area's need for water.	203642 (A Copping) 204762 (R Randall)
My confidence is not enhanced by a statement that a 'climate emergency' has been virtuously declared. My take-home from all this is that lots of homes are going to be built in various places whether existing residents like it or not.	201029 (C Pillinger)

Comments on specific sites

Summary of issues raised in comments	Comments highlighting this issue
Cambourne North • Question whether it will result in a genuinely well-planned town with appropriate infrastructure, services, and amenities, or whether it will simply extend an already vast housing estate with only a handful of shops and limited community facilities. • Proposed site for the EWR station and North Cambourne is located on valuable arable land, woodland, and hedgerows, could negate conservation efforts, such as those by the RSPB at Hope Farm • Tranquillity of our village, our home, will be shattered by the huge volume of traffic coursing through the narrow roads • Plans for a multi story car park and link from Cambourne adjacent to designated heritage assets are not enhancing and protecting the fragile barns and house. • Routes from Cambourne should be moved away from existing dwellings. All crossings should include NMU access (including equestrians) to link and extend the bridleway around Cambourne. A new perimeter bridleway should be made as has been in Cambourne.	203722 (G Chamberlain) 203922, 203926 (T Hegan) 201638 (C Doel)
Land adjacent to A11 and A1307 at Grange Farm Comments raising objections with points including: • A1307 is a dangerous road with a history of serious and fatal accidents, The road is severely congested so unless there is a serious transport solution this is not the right location. Access from A11 have been overlooked. • Before any additional development occurs in this area a serious review of schooling • GP practices and local services overburdened. Increased pressure on Addenbrookes and the NHS.	204947, 205621 (M Munns) 205676, 201925, 205677 (M Miles) 204109, 208515, 208516, 208517 (Z Luscombe) 203574 (J Graham) 202072 (M Barry)

Summary of issues raised in comments	Comments highlighting this issue
• Despite reassurances, indicated boundaries have been exceeded and sewage treatment plant is on opposite side of A1307 plus a transport link to the site is via Comfort Cafe land and adjoining field before crossing A1307. • On the flight path to Duxford so any housing could be at risk. • The original HELAA assessment, before the December 2025 update scored the site as RED on suitability grounds. • Damage to the Chalk Stream / aquifer, creation of flood risk • Adverse effects on the Roman Road Site of Special Scientific Interest, stopping irreparable damage. • Archaeological sites there require significant protection, • Impact on character and views, overwhelm nearby villages. • Loss of agricultural land • Other sites would be better.	203416 (D Barkataki) 207553 (C Tjen)
North East Cambridge No reliance should be placed on the council's ability to relocate the Cambridge Waste Water Treatment Plant (CWWTP) and the residential component of Hartree should not be included in prediction of housing numbers.	201314 (E Green)
Kingsway Solar and Forest City I am very concerned about the proposed Kingsway solar farm destroying the countryside. There is also the proposed Forest City how does this match with Cambridges expansion and policies? It appears here in south east Cambridgeshire we are under siege and no one is showing any concerns	201491 (S Jaques)
I strongly support withdrawal of West Fields as potential development site (a Trojan horse).	203538 (P Blandford)

Summary of issues raised in comments	Comments highlighting this issue
Sites are described as “proposed sites” when several developments are clearly already underway. Deeply concerning.	203722 (G Chamberlain)
Site reference 115524 Site would be a disaster for this community. Site 115524 was given an Overall Score of 'Red'. The exclusion of Site 115524 must be permanently enforced. That will protect our vital, extremely limited and increasingly pressurised local amenity space - noting St Matthew's Piece (Cambridge) as the only public park in North Petersfield.	201488 (E Guild)
Object, I am most worried about the traffic and Road capacity through Boxworth and the surrounding villages. There are no clear plans for additional road capacity. The character of the village setting will be completely spoilt. The access to any of the sites along the A14 should not be from Boxworth Road.	201729 (I Negus)
Walled Garden, Whittlesford Object, site should be put back in the plan.	204319 (C Forbes-Cable)
Sites ECC notes that the Plan seeks to help the Genome Campus “employment park evolve into a place, supporting delivery of local services and facilities and helping it to find its place in the network of towns and villages” (page 21). Furthermore at Granta Park the Local Plan is seeking to support its continued success. For both locations, given their proximity to Essex it is essential that the Local Planning Authorities works collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts within Essex in particular connectivity to similar businesses within Essex – Chesterford Research Park within Uttlesford and industries within Harlow; as well as connections to London Stansted Airport. Attention is also drawn to ECC’s role as a neighbouring infrastructure and service provider with statutory roles and responsibilities.	210460 (Essex County Council)

Comments on Infrastructure

Summary of issues raised in comments	Comments highlighting this issue
References to strategic infrastructure should include, "fire and rescue, police, ambulance".	207472 (Cambridgeshire Constabulary) 207505 (Cambridgeshire Fire and Rescue Service)
Highlights importance of adequate healthcare infrastructure for sustainable development and recommends ongoing engagement with the NHS, specifically the ICB, during the preparation of the Infrastructure Delivery Plan (IDP). Healthcare costs should be included in the Local Plan Viability Assessment for relevant development typologies to ensure developers are aware in advance of potential contributions towards healthcare infrastructure.	205178 (NHS Cambridgeshire and Peterborough Integrated Care Board)
ECC notes and welcomes that this section of the Greater Cambridge Local Plan states “development will only be allowed if it is accompanied by the right infrastructure that will deliver the range of supporting services, facilities and infrastructure that workers, visitors and residents need that deliver the goal of making it a world class campus (page 19 of summary for development strategy).	210459 (Essex County Council)
Section 106 must cover adult skills for career switchers	202356 (A Carpen)
Requests a transparent assessment of the costs associated with proposed changes and clarity on who will bear these costs.	201933 (C Pillinger)
Harston PC highlight the need for enhanced local services, such as healthcare and community spaces, to support future growth in the village. Sustainable Energy: The Parish Council supports the inclusion of local sustainable energy solutions but not at the expense of the surrounding farm land/amenity areas or the other policies in the Neighbourhood Plan.	201612 (Harston PC)

Summary of issues raised in comments	Comments highlighting this issue
Facilities provided in new developments have arrived too little too late. e.g. pupils in Darwin Green are having to go outside Cambridge and Northstowe is woeful. There is no sign that lessons have been learnt. There need to be integrated care centres that do more than just gp services. Too much development, e.g. Cambridge North area is bland, soulless, corporate and mediocre. There is no sign of this being addressed.	201722 (A Milbourn)
Build communities. Do not discriminate against one group because it isn't all of the groups. E.g., why can't my church hire the community centre regularly? Why isn't there space for a church building on site? Allow community building.	207152 (R Forder)
Food Growing • Young, passionate growers are dissuaded by the denial of access to good land; huge initial capital outlays; prohibitive planning procedures; logistical problems of parking and distribution opportunities. Missed a section on market gardening of fruit and vegetables for people to actually eat, I only saw one mention of environmentally friendly farming. • Cambridge cannot achieve its net zero ambition without a strategy to transition to a more sustainable food system. Resilience in the food supply chain also needs serious consideration. For these reasons I feel the Local Plan should do more to encourage and support a healthy and sustainable local food system.	205183 (Y Dignon) 205452 (The Cambridge Organic Food Company)

Comments on Cultural Infrastructure

Summary of issues raised in comments	Comments highlighting this issue
Support Cambridge Junction in asking that (supported by Theatres Trust): temporary provision for all cultural functions must be secured before any demolition or displacement reprovision is delivered as an early phase; no gap in provision any future Junction is at least equivalent in standard and capacity, including audience, back-of-house, technical capability, servicing long-term operational/financial viability assessed alongside spatial design delivery governed through a structured process (CJ/Council governance, RIBA stages, shared brief before developer engagement).	202799 (Cambridge Junction) 203841 (N Yeni) 204348 (J Capon) 205262 (N Oakley)
Support the recognition of the cultural and creative industries in driving employment and tourism, highlighting the role of local institutions like University Cambridge Museums, Kettle's Yard, The Junction and Cambridge Arts Theatre. They advocate for the inclusion of arts and culture in communities facilities in new settlements to help to establish and develop communities.	205037 (Arts Council England)
Wysing Arts Centre asks that Cultural Infrastructure is protected and enhanced, as a strategic civic asset; Create Cambridge is embedded in delivery, governance and phasing; artists are involved in masterplanning (RIBA Stage 2-3); Culture is treated as core infrastructure; genuinely affordable cultural production space is required (e.g. peppercorn, with rental charges well-below market rates and established based on evidence, ie Wysing Arts Centre's research on affordable artist studios); rehearsal, making and sole-use studios are prioritised over generic co-working, and that a minimum requirement (e.g., 10% in schemes over 1,000 sqm) is introduced.	204867 (Wysing Arts Centre)

Comments focused on transport

Summary of issues raised in comments	Comments highlighting this issue
Bus comments: • Concern about the lack of reliable public transport in Harston, especially to Cambridge and surrounding areas. We request that the Local Plan includes improvements to bus services. • As the population of the City grows not least with housing the role of the Bus is enhanced – some areas of the city have limited services. Bus infrastructure at Addenbrookes not suitable for disabled people. • Presently from north west Cambridge A14 corridor it takes up to TWO HOURS to get to the Biomedical Campus by bus. No direct links, you have to go into the city and change buses. If the Campus is earmarked as a location for jobs, and there is housing development planned for north west Cambridge, it is imperative that the bus service is vastly improved.	209972 (G Heathcook) 201612 (Harston PC) 201037 (P Spowart)
Light Rail comments: • The new towns need to be linked to Cambridge and each other by a new light-rail network Any light rail network needs to have light rail stops that have medium-high density housing *and* essential services/conveniences in the vicinity • Private vehicles belong the 20th Century and that public transport requires its own Vision to shape development in a strategic way with huge benefits to the quality of life which underpins true prosperity. I don't see such vision in the Plan. The answer is light rail. • There's no transit system in place once in Cambridge, we need metro, trams and other mass transit that is significantly faster and not congestion bound. • Civic welfare as well as economic growth depends on the installation of a mass rapid transit system based on light rail.	202356 (A Carpen) 204647 (P Pope) 201293 (T Roberts) 201267 (A Duff)
Active Travel comments:	202187 (R Forder)

Summary of issues raised in comments	Comments highlighting this issue
• Put it at the centre your treatment of active travel needs goals, metrics, and design intent. Give people better lives. Can they travel shorter distances? Can they travel more healthily, with less environmental impact? Can they leave the ICEV or EV at home? • "minimising...reliance on the private car" should be achieved with a focus on improving accessibility, functionality, availability, and affordability of other sustainable means of transport, rather than disincentivising private car use through financial penalties or absolute access restriction. • There are some good examples of cycle infrastructure, but there is a failure to understand that it has to be good for all journeys, not just parts of some. Despite the rhetoric there is too much car centricity in developments. The scale of development is going to add to the already massive congestion problems. • Transport is a major source of emissions and needs priority when planning and budgeting developments. Electric vehicles are not a helpful solution to congestion, and contribute to sprawling developments that put more pressure on existing road networks. Higher density development must come with much lower levels of car ownership, and parking should be an optional cost. Dense development needs strong walking, cycling and public transport to succeed. Walking and cycling connections should be required in all development designs. • Walkability, including for wheelchair and buggy users, should be a core spatial principle in the Greater Cambridge Local Plan. Supports the Plan's overall direction but walkability is not yet embedded strongly enough across the Vision, spatial strategy, design policies, transport policies, and health objectives	203558 (D Lever) 201722 (A Milbourn) 203304 (J Day) 201474 (M Reader)
Please stop making ordinary people lives difficult, stop creating congestion provide affordable housing. & don't/can't cycle 8+ miles all weathers & don't enjoy 1 1/2 hr bus journeys as opposed to 15 mins by car non peak, 25 mins peak times. leave Coton Orchard alone.	201027 (J Masterson)

Summary of issues raised in comments	Comments highlighting this issue
City centre is too small and too crowded for this over expansion. Green transport is not encouraged by the state of the roads. New developments are not sympathetic in size and scale. The main arteries in and out of Cambridge are clogged already.	202650 (K Leslie)
Current road infrastructure around Cambridge is inadequate for the existing traffic volume, leading to dangerous conditions. Public transport options have diminished, resulting in increased reliance on cars and further strain on the road network. The roads are poorly maintained, with deep potholes creating hazardous driving conditions, exemplified by the route from Elsworth to Dry Drayton. There is a pressing need to prioritise infrastructure improvements for residents before considering population growth in the area.	203919 (T Hegan)
As an east Cambridge resident I would like to emphasise attention to: Critical traffic management issues along Maids Causeway given the development of ARU. Critical need of improved cycle pathways and access.	202135 (H Lowe)
Fen Road Rail Crossing Traffic on Fen Road is heavily impacted by the extremely frequent closure of the level crossing, leading to dangerous speeding by vehicles. There are major safety concerns; someone may easily be killed by speeding traffic. To alleviate these traffic issues close the level crossing and either a) create an entry/exit to the A14 or b) build a road bridge across the railway.	202132 (R Meyer)

Comments on the Consultation

Summary of issues raised in comments	Comments highlighting this issue
Consultation format issues included: • Consultation platform is overly complicated and will put a lot of people off before they can comment suggesting that you do not really want feedback and are hiding behind IT to limit access/response. • The level of technical detail, volume of material, and time required create a significant barrier for ordinary residents. The average person will struggle to engage meaningfully, and many will simply give up. That is not inclusive engagement. • The relevance of field is not clear • The "Instructions" for the consultation on the GCSP website refer only to the use of the "OpusConsult" platform. This requires a registration process before any input. Although GCSP will accept input by post or by email, these options have been effectively concealed by failing to make this clear on the consultation website. Input from the public, particularly older people or other less "internet savvy", has been hindered and discouraged	201024 (P Zirngast) 208881 (D Smith) 201162 (D Quinn) 208634 (G Jones)
Consultation legitimacy points included: • Concern that housing developments will proceed regardless of local opposition, with insufficient attention given to the impact on existing residents and infrastructure. • Last Local Plan draft "consultation"--ZERO changes made despite 25'000+ researched comments received. Yet again, you are simply wasting taxpayers' money with this PRETENCE of democracy: yet another mere box-ticking exercise, with zero intention or legal obligation to implement changes based on public consultation. • Consultations are generally biased, on very limited predetermined options. They are generating apathy and disengagement with public affairs, they're a disgrace and waste of money.	201931 (C Pillinger) 203642 (A Copping) 202542 (C Turner) 203764 (A Wilson) 201030 (A Lindsey)

Summary of issues raised in comments	Comments highlighting this issue
• The plan is presented with deliberately obstructive questions and detours. For example, how is a citizen to know if the plan is legally correct? But the council blocks comments unless the citizen agrees with the council that it is • Process unduly prioritised those of set demographics. As a younger person in full time work I was obliged to miss work in order to attend local meetings.	

Other General Comments

Summary of issues raised in comments	Comments highlighting this issue
ECC acknowledges the national and international significance of the high tech industries, research and development and life sciences within the area. The economies of scale for such industries is also noted in their presence within West Essex, and in particular Uttlesford District and Harlow Town. In developing and shaping the existing and future economic clusters, ECC would welcome further engagement to ensure there is full consideration to the inter-relationship and importance of the industries and employment growth within western Essex. Furthermore in the identification of development needs, it is important to appreciate the role that London Stansted airport plays and will continue to play in supporting the growth and development within these key industries.	210458 (Essex County Council)
New research on neurodiversity & building facades *must* be incorporated e.g. requirement that Health Impact Assessments cover this Require post-occupancy evaluations on all large sites Poor contemporary design should not be used as a reason to repeat poor designs	202356 (A Carpen)

Summary of issues raised in comments	Comments highlighting this issue
Biodiversity and green spaces should be retitled Biodiversity, Geodiversity and Green spaces and reference should be included to geodiversity conservation and sites of geological importance.	203458 (Cambridgeshire Geological Society)
Conversion of “barns”, constructed on Green Belt, then converted to industrial buildings, should be expressly excluded.	205484 (P Meyer)
As an east Cambridge resident I would like to emphasise attention to: additional HMOs, hotels, expansion of retail eg Beehive, Newmarket Road/Elizabeth Way roundabout changes. Placing of additional HMOs to take account of other possible locations e.g. south /north Cambridge and HMO types to be reviewed.	202135 (H Lowe)
More council housing is needed, as is encouragement for downsizing. Water abstraction must be reduced. Tourism needs managing, as does the power of university colleges, to maintain the quality of Cambridge life.	203538 (P Blandford)
We are a very nature-deprived county and enhancing green spaces and biodiversity is very important, but wildlife benefits most in an area not shared with hordes of people so it is important to provide areas for outdoor recreation separately from areas supporting nature as well as places which aim to do both.	203861 (J Prince)
There are overlapping themes, such as Town Centres, Placemaking, combatting the Climate Crisis and economic applications that feature Traditional Architecture as a primary vehicle towards achieving the greatest possible positive outcomes for all of these themes.	201010 (Community Campaigner D Barton)

Consultation Statement

Appendix 5: Response to Representations - About the Plan

Greater Cambridge Local Plan

Published as part of the Proposed Submission Local Plan - Regulation 19 consultation (August 2026 - September 2026)

GREATER CAMBRIDGE
SHARED PLANNING

Summaries of Draft Plan Representations, and Response to Main Issues Raised

About the Plan

About the Plan Introduction

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of Main Issues:

Some representors raised concern about the format of the draft plan material.

A number of neighbouring councils, statutory bodies, and infrastructure provides commented on the importance of continued liaison with them.

A number of Parish Councils raised specific comments about their village to this section of the plan. Stapleford and Great Shelford request that their neighbourhood plan is taken into account, and a number of specific comments around the policies map. Elsworth

Parish Council raise concerns about the impact of proposals that have not been fully addressed. Girton Parish comments included the need to protect the gap between Girton and Cambridge. Horseheath parish support the emphasis on biodiversity and climate change, but raise a general question about the detail of plan implementation. Histon and Impington, and Whittlesford, both raise issues around the delivery of necessary infrastructure. Boxworth Parish Meeting highlighted the need to consider impacts on exiting communities. Great Wilbraham Parish Council said they were supportive of many aspects of the local plan.

Comments challenged the level of development proposed, and that it did not take account of environmental impacts. Others considered that development targets should be more ambitious, and the approach did not and are align with the Local Growth Plan and National ambitions for the area.

Some comments on the development strategy offered general support, but others questioned whether it would deliver the homes needed, was to focused on large sites and new settlements, or did not include enough small sites or sites in villages.
Two representors suggested alternative plan periods, extending the plan period. One comment said the plan did not adequately consider the draft NPPF, which is expected to be adopted in mid-2026, necessitating alignment to avoid future revisions.
General comments raised a wide variety of issues. This includes support for policy approaches but also concern about their effective implementation. The interdependence with infrastructure delivery and wider strategies was also highlighted. Issues included measures to support affordable housing, green infrastructure, rights of way, food growing, protection of heritage, supporting Cambridge’s economic clusters, and sustainable transport. Hobsons Conduit Trust highlighted the importance of protecting the water environment. The importance of places to be creative and social setting were highlighted by a pupil from Comberton.

Cambridge United Football Club see either redevelopment of the current site or potential relocation as critical to the Club's long term viability and sustainability at a time when its current capacity is constrained, the City will grow exponentially and the financial pressures for all football clubs at every level are growing.

Comments on specific sites included concerns regarding Land adjacent to A11 and A1307 (Grange Farm), and the Cambridge Biomedical Campus. East West Rail highlighted the relationship of site proposals with their scheme.

Response to Representations:

Comments on the consultation platform are noted. We endeavour to improve our consultations and learn lessons from each stage, so will take on board comments. We aim to make the consultation accessible, and offer help to anyone to make sure they can have their say. The plan is substantial document with a large amount of supporting evidence, so we did include a nontechnical summary of the plans proposals at the beginning of the document. Technical comments on format will be considered in preparation of the proposed submission version. The consultation includes a wide range of events. We can't go everywhere, but very much sought to deliver good coverage across Graeter Cambridge. We also continuously engage with our parishes and residents associations though regular planning forums.

Officers have continued liaison with neighbouring councils, statutory bodies, and infrastructure provides throughout the plan making process. We continued this process since the draft local plan stage. And have published a record of our engagement.

The great Shelford Neighbourhood plan was adopted in October 20205, making it a part of the development plan. Detailed comments on the defined development extend and other issues have been considered separately. Comments raise concerns

regarding on delivery and infrastructure, the Councils have sought to address these by further developing the evidence base since the draft plan stage. This includes further exploration of measures to address transport challenges by the Combined Authority.

The level of homes and jobs being planned for has been carefully considered, and is justified by the evidence being published alongside the Local Plan. National planning policy requires local plans to respond to the needs of the area. We have considered the needs of the economy and likely growth in jobs, and the number of homes needed to support it. This also accords with the standard method of calculating the needs for homes set by government. We have tested a range of strategic development approaches, considering their impact on economic, social, and environmental issues, and have developed an appropriate spatial strategy to accommodate development needs whilst and protecting the environment. The plan also sets out ambitious polices to guide the form of development responding to climate change.

The strategy for villages has allocated sites where it is sustainable to do so as part of the wider development strategy, but also included policies which would support appropriate windfall development and rural exception sites. Neighbourhood planning also remains a toll available to parishes if they wish to address local issue directly.

The plan period running to 2045 remains the Councils preferred approach. It provides an appropriate length of time after adoption. The plan also identifies a longer term vision, in particular for strategic sites. At time of writing the outcome of the government consultation regarding changes to the National Planning Policy is not yet known. It would not be appropriate amend policy to reflect draft policy approaches.

The wide variety of other issues raised are noted. Rights of Way and connectivity are important, and are addressed in Policy I/ST: Sustainable Transport and Connectivity. The interdependence with the delivery of infrastructure has been recognised in the plan

and the evidence base. It would not be appropriate to add rights of way to the policies map. The county council maintains the definitive map. The councils continue to liaise with infrastructure bodies to ensure the growth needs of the area are addressed. The vision and objectives for the plan recognises the importance of the Cambridgeshire economy, but also that this must be balanced with consideration of social and environmental issues.

On specific sites, the issues raised on Land adjacent to A11 and A1307 at Grange Farm and Cambridge Biomedical Campus have been carefully considered and addressed in the evidence related to site policies. They are considered to remain appropriate elements of the development strategy. Comments supporting the omission of specific sites are noted. Proposals for new or alternative allocations have been assessed through the Housing and Economic land availability assessment and Sustainability Appraisal process.

Table of representations:

Comments on the Consultation

Summary of issues raised in comments	Comments highlighting this issue
Comments on the format of the local plan included: • Online version of this draft plan is different from the PDF one. • Online document presents layered information in silos, making it difficult to compare policies. • Complex to make representations. • A single whole PDF of documents would be useful. • Page numbers need to be corrected.	201222 (S Williams) 202349 (A Hall) 203274 (J Palmer) 203507 (J Neal)

Summary of issues raised in comments	Comments highlighting this issue
• It would be easier for the reader if the policies were numbered as well as/instead of having lettered codes. • Website is hard to navigate and the language is not easy for casual users, which may limit residents' understanding of the process. • Maps should be redrawn to clearly differentiate heritage assets from green-separation areas, removing the confusing pink shading.	208328 (Gladman Developments) 208329 (Gladman Developments) 208460 (Longstanton Parish Council) 210643 (Transport 2000 and W Suffolk)
Lacks a plain English summary, designed to help and support people with poor reading and comprehension skills, or indeed those whose cultural and language backgrounds may be diverse. There is a daunting amount of documentation for residents to familiarise themselves with and limited time. Detailed and complex document.	201471 (P Newton) 201901 (C Deer) 202334 (P Deer) 202324 (A Hamill) 203274 (J Palmer) 203507 (J Neal)
More regular consultation with residents is needed for the new railway bridge and station access. We would like clarification on how the Local Plan will align with other consultations and plans.	205785 (Rustat Neighbourhood Association)
I attended the Greater Cambridge Local Plan - Residents' Associations presentation via Teams on 13 January. The Greater Cambridge Local Plan is a very detailed and complex document, which makes it difficult for residents who are not expert in the whole range of areas covered to make informed	202342 (A Hamill)

Summary of issues raised in comments	Comments highlighting this issue
comment on all those areas. That said, each resident who provides comments has a valid point of view and their opinion must be taken into account.	

Comments from Duty to Cooperate Bodies, and general cooperation issues

Summary of issues raised in comments	Comments highlighting this issue
As the immediate neighbouring authority to the south, UDC shares a significant functional geography, through the M11 Innovation corridor and a landscape feature to the Northern edge of the district. The two areas are intrinsically linked by critical infrastructure corridors—including the M11 and the West Anglia Mainline and by the shared chalk aquifer that feeds chalk streams in the sub-region. Uttlesford District Council remains committed to working collaboratively to support the Greater Cambridge emerging Local Plan to address these cross-boundary challenges. The alignment of our policies on water efficiency are critical for enabling the sustainable growth the region.	204968, 204981 (Uttlesford District Council)
The delivery of new healthcare infrastructure is resource intensive, and the NHS faces funding constraints that are exacerbated by population growth from new housing developments. New developments should contribute proportionately to the healthcare needs arising from increased population due to housing growth. Access to essential healthcare services is vital for promoting good health outcomes and supporting the social and economic wellbeing of an area.	205042 (NHS Cambridgeshire & Peterborough Integrated Care Board)

Summary of issues raised in comments	Comments highlighting this issue
Residential developments significantly impact the demand for additional primary healthcare provision for future residents. Healthcare infrastructure should be a priority for infrastructure delivery, given its strategic importance in supporting housing growth and sustainable development. The healthcare estate must be continually reviewed, optimised for land use, and modernised in line with integrated NHS strategies. Planning policies should facilitate the delivery of essential healthcare infrastructure and be developed in consultation with the NHS to aid in estate transformation.	
The ECC response supports the preparation of the Plan and provides broad support. ECC is committed to working with the respective Local Plan Authorities in seeking to develop the Greater Cambridge Local Plan and understand how our representations can be addressed through modifications. Given their proximity to Essex it is essential that the Local Planning Authorities works collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts within Essex, in particular highways and transportation, Early Years and Child Care, Education and Adult Community Learning.	207668 (Essex County Council)
Thank you for the opportunity to comment on your Regulation 18 Draft Local Plan. We have reviewed the Local Plan in conjunction with the associated supporting documents. We have provided comments and recommendations below which align with the various constraints within our remit.	207670 (Environment Agency)
Thank you for consulting the East of England Ambulance Service NHS Trust (EEAST) regarding Draft Greater Cambridge Local Plan. Detailed comments on individual policies provided.	207671 (East of England Ambulance Service NHS Trust)

Summary of issues raised in comments	Comments highlighting this issue
Both Bedford and Greater Cambridge are located within the Ox Cam corridor and this shared geography means numerous strategic matters have a cross-boundary dimension. These include housing, socioeconomic, infrastructure and water scarcity. It is noted that there are established governance arrangements for the combined CPCA and within this area a local government reorganisation process is ongoing. It is expected that Greater Cambridge will look to the Cambridgeshire and Peterborough geography for its strategic plan making context. There will however remain an important need to ensure that the Local Plan also responds to the drivers of growth originating in the sub region to the west particularly in relation to the following national projects: Universal Studios, the proposed Milton Keynes renewed new town, Tempsford new town and East West Rail.	208223 (Bedford Borough Council)
CBC are unclear at this stage if the statement of common ground statement that there are no areas of disagreement can be supported due to our concerns over the transport implications arising from the cumulative impacts of the allocations and proposed allocations at Cambourne.	208507 (Central Bedfordshire Council)
Historic England very much welcomes the emerging plan and the considerable work undertaken to date. We can see the incorporation of many of the comments we have made in previous consultations which is appreciated. We particularly welcome the substantial effort that has been made in preparing a comprehensive evidence base including both strategic and site-specific heritage impact assessments, topic papers, skyline and tall buildings strategy, townscape characterisation study, landscape sensitivity assessment including renewable energy assessment.	208918, 208919 (Historic England)

Summary of issues raised in comments	Comments highlighting this issue
We recognise the area faces intense pressure for growth, driven by both the economic success and the attractiveness of the area, in large part a consequence of its rich architectural and cultural heritage. We are keen to support sustainable growth in the right locations, but this growth must be carefully managed to ensure that the very things that contribute to the success of the City and surrounding area are not harmed in the process. Historic England is keen to ensure that the emerging plan gives full consideration to the historic environment, both in the choice of site allocations and policy criteria for sites, as well as through a robust and clear suite of historic environment and other policies that seek to both protect but also enhance the historic environment.	
It is important that in setting the portrait of Cambridge there is acknowledgement of the cross boundary and strategic matters that must also be clearly articulated. In particular for the economy, the for the emerging Local Plan to be effective, it must appreciate the opportunity provided by international and domestic connectivity by London Stansted airport, as well as the biotech and advanced manufacturing business clusters evident within Essex (e.g. at Chesterford Research Park and Harlow). Given the "international significance" of the employment clusters, it is essential that there is appreciation of the proximity to London Stansted airport, and also seeking to ensure that surface accessibility to improve connectivity with Greater Cambridge is fully explored when developing the emerging Local Plan.	210466 (Essex County Council)
ECC recommends that the regional planning context be amended to ensure there is clarity concerning ECC's role and relevant statutory plans/strategies. Furthermore it is important that reference is explicitly	210467 (Essex County Council)

Summary of issues raised in comments	Comments highlighting this issue
made to the following plans and strategies – Essex Local Transport Plan 4. It is also important to note that ECC, will be part of a new single strategic authority for Greater Essex. It will take the form of a mayoral combined county authority. It is expected that a new mayor for Greater Essex will be directly elected by the public in 2028.	
The LLFA are pleased with the holistic approach taken to promote surface water management, SuDS, water quality, biodiversity, and climate change. We highly advocate more emphasis on watercourse management and maintenance. Reference should be made to section 25 of the Land Drainage Act 1991 which requires riparian landowners to maintain ordinary watercourses. In addition, Cambridgeshire County Council's Flood Risk Team have published The Watercourse Reinstatement Guide (2022).	210506 (Cambridgeshire County Council)
Cambridgeshire County Council is referenced in several places, please ensure that the Council is referred to as Highway Authority where appropriate.	210524, (Cambridgeshire County Council)
While there are many areas of agreement, as far as we are aware, the Statement of Common Ground was not checked with Transport Strategy or wider CCC colleagues prior to publication. The Council would therefore welcome discussions regarding future iterations of the document Cambridgeshire County Council, was, along with a number of other organisations signatories to the North East Cambridge Area Action Plan Proposed Submission Dity to Cooperate Statement of Common Ground (November 2021). As the safeguarding of waste and minerals remains a strategic matter that	210520, 210545 (Cambridgeshire County Council)

Summary of issues raised in comments	Comments highlighting this issue
affects more than one authority, a reaffirming or update to that statement of common ground to support this draft plan is requested.	
Public health are pleased to see that the vision for Greater Cambridge is based on the seven strategic priorities. Public health welcome the 'Draft vision' for inclusive communities that aim to provide a high quality of life with housing and social infrastructure that meets people's needs through all stages of life; food security; and that the physical and mental health and happiness of people will be prioritised; and that open spaces will be easily accessible and that large scale natural spaces will be able to be reached by active travel modes	210547 (Cambridgeshire County Council)
The influence of Cambridge on western Suffolk is acknowledged in the Suffolk Local Growth Plan and by the fact that it is part of the Cambridge-Norwich Tech Corridor, and the Cambridge Housing Market Area. The County Council would welcome strong recognition of the role of South Cambridgeshire in the wider sub-regional economy as part of this strategy, as alluded to in paragraph 1.17.	210630 (Transport 2000 and W Suffolk)
As you will be aware the new plan-making system provided by the Levelling Up and Regeneration Act 2023, and the November 2025 Commence and Update Local Plan (CULP) guidance, does not include the Duty to Co-operate. It has been advised that LPAs should continue to collaborate across their boundaries, including on unmet development needs from neighbouring areas and Inspectors should continue to examine plans in line with the policies in the NPPF on 'maintaining effective co-operation'.	207669 (Transport 2000 Cambs and West Suffolk)

Summary of issues raised in comments	Comments highlighting this issue
National Highways welcomes the opportunity to comment on the Greater Cambridge Draft Local Plan Regulation 18 Preferred Options consultation. The emerging Local Plan aims to set out the required growth and development for the period of 2024 to 2045. National Highways is a key delivery partner for sustainable development promoted through the plan-led system, and as a statutory consultee we have a duty to cooperate with local authorities to support the preparation and implementation of development plan documents.	210847 (National Highways)
Strongly recommends that the engagement referred to on page 5 of the Spatial Strategy is recorded via a Statement of Common Ground ('SoCG') to evidence effective joint working on cross boundary strategic matters (as per the NPPF at paragraph 36(c). The SoCG does not require agreement between the parties, but does require evidence of constructive, active, and ongoing engagement.	208669 (Guilden Morden Developments Ltd)
The Council has included in its evidence a Duty to Cooperate Statement of Compliance and Statement of Common Ground. In principle, it is supported that these interim documents have been prepared to support the current consultation. Whilst it is recognised that there is engagement between Cambridge City Council and South Cambridgeshire District Council as this reflects the geographical and functional relationship of the area, there are wide ranging cross boundary strategic issues which the Councils will need to demonstrate a written record of the progress to the point of submission with relevant key stakeholders, particularly in relation key infrastructure bodies and whether any requests to accommodate unmet housing needs of neighbouring authorities have been received.	208895 (Nightingale Land and Hill Residential Ltd)

General Comments from Parish Councils

Summary of issues raised in comments	Comments highlighting this issue
The Stapleford & Gt Shelford Neighbourhood Plan (adopted Oct 2025) has not been incorporated into the draft greater Cambridge Local Plan and that this will need doing before the next version of the Local Plan is produced. The draft Policies Map will also need updating to reflect this For example, there is a new Important Countryside Frontage between 41 Gog Magog Way and houses at Chalk Hill, Stapleford, which is not shown and the defined development extent of Stapleford is inaccurate, as is the mapped extent of the Gog Magog Hills in documents supporting the draft Plan. Open spaces, Local Green Spaces and Protected Village Amenity Areas from this Neighbourhood Plan need to be included in the Policies Map.	201526 (Stapleford Parish Council) 208087 (Great Shelford Parish Council) 202661 (S Berridge) 202182 (A Sykes)
The proposals in the Local Plan have some potential benefits but there are also a lot of concerns which the Plan does little to allay. Plan says little or is silent on a number of critical issues, such as travel, flooding, etc, and there has been little apparent consideration of the impact of significant new housing / logistical developments beyond the immediate Cambourne area. Dissatisfaction about commenting on the Plan when there is so much yet to be done. It is noted the plan provides a framework but it is for developers to come forward with proposals and deliver them. Speed of build out has implications for delivery of community services and facilities. Concerns about the involvement of unelected bodies with which parishes have no contact and no influence, and the possibility of the appointment of a Development Corporation.	202110, 202114 (Elsworth Parish Council)

Summary of issues raised in comments	Comments highlighting this issue
Policies Map for Girton is a great step forwards from the version in the Local Plan 2018.	202170 (Girton Neighbourhood Plan Team)
GPC seeks discussions on topics such as Girton Gap protection, alignment with national policy, development extents, active travel, grey belt methodology, and community enterprise space. GPC is committed to evidence-based planning that protects Girton's identity and ensures the Local Plan accommodates the realities of a Green Belt settlement.	202278 (Girton Parish Council)
Horseheath PC agree with the aim of having a vibrant economy that also significantly reduces impacts on the environment and climate. We would like to see a defined aim to increase biodiversity as we understand this is intimately linked with mitigating climate change and environmental degradation. We support a higher level of biodiversity gain to be required for new development than the current national requirement. Support an emphasis on active travel together with enhanced cultural opportunities.	203262, 203265 (Horseheath Parish Council)
Whittlesford Parish Council supports the overall ambition to plan for growth but considers that the scale and phasing of development proposed in Rural Southern Cluster area is not currently aligned with deliverable infrastructure, particularly transport, water supply and community facilities.	203549 (Whittlesford Parish Council)
In general we support the direction of travel, but it is very difficult to fully endorse this document when in so many areas there are few details about the process of implementation and particularly the measures that will be put in place to detect and deal with non-compliance.	210708 (Horseheath Parish Council)
A critique of the plan would be that major housing development sizes are north/ northwest of the city outside the green belt and a large amount of employment sites are south. The current public transport	204741 (Histon and Impington Parish Council)

Summary of issues raised in comments	Comments highlighting this issue
model is hub and spoke with a congested spoke/city centre. These are challenging problems but bearing in mind the relative flexibility of the jobs market vs the inflexibility of public transport options it arguably designs in continued reliance on cars for the majority of south cambs residents. Aspirations for public transport ring roads or some alternative solution feel necessary.	
Boxworth Parish Meeting supports the need for Greater Cambridge to continue to develop and there is a requirement for additional housing and employment in the area. It is vital that these developments are managed in such a way that they not only provide for the future needs of a growing population but do so in a way that does not adversely affect existing communities. We welcome the opportunity to comment on the Draft Local Plan and hope that our constructive engagement can add value.	202748 (Boxworth Parish Meeting)
We are supportive of many aspirations in the Local Plan and congratulate the planners on completing this major work.	206565 (Great Wilbraham PC)

Comments on Levels of Development

Summary of issues raised in comments	Comments highlighting this issue
Plan is based on outdated perceptions of the need for, "growth" not taking into consideration climate change or AI and assuming that the previous attractions of Cambridge as a place to live and work will hold good in a changing world..	202944 (C Hills)

Summary of issues raised in comments	Comments highlighting this issue
Cambridge Friends of the Earth, yet again, cannot and will not provide a veneer of democratic accountability by participating in yet another Consultation to, effectively, enable further environmental and social destruction of our region to placate the voracious appetttes of developers and landowners and the policies of an environmentally and socially ignorant administration, who can see no further than the next election.	210709 (Cambridge Friends of the Earth)
Given the blythe assumption of the 'need' for ever increasing 'economic growth' in the region, Cambridge Friends of the Earth refuses to respond in full to this 'consultation'. We feel that doing so would, potentially, provide credibility to the edicts driving the creation of this Local Plan. Given the continual push for growth in the region, far in excess of its ecological, environmental and social limits, do we have to assume that the Local Plan is being promoted by madmen, economists or, quite possibly, mad economists?	203251 (Cambridge Friends of the Earth)
The plan makes an assumption that there is such a thing as 'sustainable development'. The climate crisis and the need for immediate and steep reductions in emissions means that most development is not sustainable and that the expression 'sustainable development' has become a contradiction in terms. Rethink the focus on development and substitute a focus on steep emissions reduction and protection of the natural environment.	204860 (R Randall)
Does not plan for enough housing. In particular, government targets should be treated as a minimum, not a maximum.	204502 (Redrow South Midlands)

Summary of issues raised in comments	Comments highlighting this issue
Future proofing Cambridge to be successful by 2050 requires the food production system to be supported and invested in as a high priority. To achieve the wellbeing of our community will require investment and support to those producing our food. Any proposed development will reduce our ability to produce our own food in this country.	205175 (Y Dignon) 2098715 (J&C Collins)
Food Security does not appear to be considered as a Strategic Priority. Any proposed development will reduce our ability to produce our own food in this country. Whilst none of know what the future may hold, the farming of any arable land in this country should, in our opinion, be preserved for future generations. Whilst it could be argued that the arable land that is proposed to be developed upon is a relatively small proportion of the country's overall arable land, more and more land is being developed upon nationally.	208715 (J & C Collins)
The vision for Greater Cambridge is supported. However, to achieving this vision it is necessary for the Plan to be based on ambitious targets for growth. It requires amendments to ensure that the level of growth and housing allocations reflect the Vision and are aligned with the Local Growth Plan and National ambitions for the area.	208395 (Ceres Property on behalf of land owner at Friesland Farm, Swavesey)
The plans are a response to Government pressure and arbitrary targets: why should 73,000 jobs and people end up here? The present large settlements are too near Cambridge and are not self-sufficient: Waterbeach, Cambourne, Northstowe. That means traffic into Cambridge. Other planned developments threaten to link nearby villages into one large conurbation. The inevitable rise of traffic and pressure on water supply and sewage disposal cannot be satisfactorily accommodated by the scale of development	D Jones (208480)

Summary of issues raised in comments	Comments highlighting this issue
that is proposed. Some vested interests will profit from the economic development, but many ordinary people will see no benefit from the 'prosperity' that is promised.	
The preferred housing target, the development strategy and the selected allocations for the draft GCLP are unlikely to fully deliver the Vision for Greater Cambridge. The housing requirement is not aligned with jobs growth, which would lead to more people commuting into Cambridge to work mostly by car.	211605, 211606 (Bloor Homes)

Comments raising general issues related to the Development Strategy

Summary of issues raised in comments	Comments highlighting this issue
Supports the Vision for Greater Cambridge, emphasising the need for sustainable and prosperous growth in the area. Development Strategy is overly reliant on new settlements and major development sites dependent on significant infrastructure projects. Overly optimistic about delivery timescales for draft allocations, risking failure to meet housing needs within the plan period. Need a more balanced approach to growth distribution, recognising the potential of villages.	203025 (Cemex UK Properties Ltd)
I support the plans for protecting the environment while trying to accommodate growth. However I live in a village in South Cambridgeshire and do not support the idea that villages should not take their share of extra houses. Our village (Haslingfield) needs extra affordable houses so that it continues to be a place that normal families can live. It also needs footpaths and cycle paths connecting it to all the	203130 (R Hatfield)

Summary of issues raised in comments	Comments highlighting this issue
villages around, where vital services (doctors, dentist, hairdresser, shops, small industries) are based, so that people can access these without cars. Stopping it from growing is not a sustainable strategy.	
The introduction recognises South Cambridgeshire villages but largely frames growth around Cambridge and major transport corridors. Focuses strongly on Cambridge's growth and innovation economy, with less emphasis on the distinct needs of rural communities. The strategy prioritises locations with high public transport accessibility, which risks limiting opportunities for rural communities unless investment in rural services, digital connectivity and community infrastructure keeps pace. There is little evidence on rural housing need, employment patterns or service access challenges. Parish councils and rural community organisations are not clearly referenced in shaping infrastructure or growth decisions. Stronger rural proofing would include clearer rural evidence, safeguards for village services, support for rural-enterprise and firm commitments to transport and digital inclusion in smaller settlements. Stronger rural proofing would include clearer rural evidence, recognition of village infrastructure constraints and a stronger commitment to inclusive engagement and place based solutions for smaller settlements.	203137, 203139 (Cambridge ACRE)
I share the aspirations of the Local Plan expressed in the Introduction: reduced climate and environmental impacts, an increase in the quality of everyday life for local people, minimising carbon emissions and car-dependence, supporting the infrastructure we need, increasing nature, wildlife and green spaces, and safeguarding our distinct local heritage. I also support the ambition to make	203275 (J Palmer)

Summary of issues raised in comments	Comments highlighting this issue
Cambridge “a place where walking, cycling and public transport is the natural choice for travel”. Further, I support the stated intentions of only very limited infill development in rural villages with little or no public transport, where car travel is the only realistic option for most people.	
The Plan’s development strategy, which underpins the Plan as a whole and its requirement to meet identified local housing and employment needs in full, is flawed.	203313 (Wilson Bowden Developments)
The plan fails to allocate sufficient small sites (1-2.5 hectares) for housing, focusing too much on large urban developments, which does not meet the needs of the wider area.	203401 (ESCO Prospect)
Broadly support the ambition to plan positively for growth across Greater Cambridge; however, I have serious concerns regarding the soundness of elements of the draft Plan, particularly in relation to transport infrastructure, cumulative impacts on the villages I represent, omissions in the spatial strategy, and deficiencies in the supporting viability evidence. (submitted in my capacity as District Councillor for Whittlesford, Thriplow & Heathfield, and Newton)	204086 (Cllr R Williams)
Does not support equality of access and opportunities or ensure everyone can benefit from development of new homes and jobs. The current strategy seeks to concentrate development in large strategic sites, which does not account for rural housing and employment needs. The lack of allocations in villages means that any new development will inevitably be smaller sale and ad-hoc, will not provide affordable housing, and will not allow for transport and community facility upgrades that would make rural communities more sustainable.	204502 (Redrow South Midlands)

Summary of issues raised in comments	Comments highlighting this issue
Plan relies on strategic sites without placing reasonable level of growth towards sustainable settlements such as Great Shelford and Stapleford.	208914 (Nightingale Land and Hill Residential Ltd)
We support many of the Draft Local Plan's strategic objectives, including meeting housing need, addressing climate change and enhancing the environment. However, our representation focuses specifically on residential development delivered by SME developers on windfall sites, small brownfield sites and sensitive urban redevelopment within existing sustainable locations, which can often be delivered more quickly and sustainably than larger strategic sites.	209704 (NP Architects)
The plan is completely unsustainable with regards sustainable transport. Focus the proposed developments sites on being as close to Cambridge city centre, in locations that do not rely on car travel. Increase the density of the proposed sites in order to allow as many people as possible to access amenities within a short walk. Design around people without cars, for example teenagers, the disabled and the elderly.	203597 (H Thomas) 203744 (W Clements)
The plan is completely unsustainable with regards sustainable transport, which will lead to both lives blighted by massive congestion on the car journeys people are forced to make, and lives removed from the amenities and relationships people actually want. People are moving here in large numbers because of the city of Cambridge, why are we forcing them to lives a half hour drive from where they want to be? Focus the proposed developments sites on being as close to Cambridge city centre, in locations that do not rely on car travel. Increase the density of the proposed sites in order to allow as	203579 (H Thomas)

Summary of issues raised in comments	Comments highlighting this issue
many people as possible to access amenities within a short walk. Design around people without cars, for example teenagers, the disabled and the elderly.	
Advisory Board of Albion City Development Corporation Ltd strongly support the Draft Greater Cambridge Local Plan. The Forest City project is a proposed self-sufficient urban settlement of 45,000 acres, located east of Cambridge and broadly aligned between Newmarket in the north and Haverhill in the south. the Greater Cambridge ecosystem; one of the world's leading centres for science, technology and innovation, with strengths in life sciences, data and digital technologies, advanced manufacturing and research-intensive industries, is a national strategic asset. Strongly supports planning that recognises and enables the continued growth of this ecosystem.	208128 (Albion City Development Corporation Ltd)
Development strategy is too focussed on the delivery of large strategic sites including an expanded Cambourne, existing new settlements at Northstowe, Waterbeach and Bourn Airfield, and a proposed new settlement at Grange Farm. The delivery timetable for infrastructure to support an expanded Cambourne and at Grange Farm is uncertain. For all of the large strategic site allocations the predicted housing delivery rates are unrealistically high, and the delivery of policy compliant levels of affordable housing is often not achieved. The development strategy avoids directing development to the larger villages, including Papworth Everard regardless of their sustainability credentials, existing services and facilities, accessibility by sustainable modes of transport, or affordable housing needs.	211605, 211606 (Bloor Homes)

Summary of issues raised in comments	Comments highlighting this issue
Approach does not support the residents or services and facilities in those villages, and would not meet the great places, homes, connectivity and infrastructure strategic priorities. Will not deliver green infrastructure.	

Comments on the Plan Period

Summary of issues raised in comments	Comments highlighting this issue
The minimum end date of the plan should be 15 years from adoption, as per paragraph 22 of the Framework. The draft plan seeks to cover the period 2024-2045, i.e. 21 years. Gladman supports this approach as it gives additional years should there be any delays in the plan-making process or during examination. However, in order to be consistent with national policy, Gladman would recommend that the plan period to starts in a more recent year – 2025, ending in 2045. The council may then want to amend the ending year to 2046 to maintain the 21-year plan period.	208330 (Gladman Developments)
The plan period should be extended to 2050. A longer plan period is considered to clearly be the most reasonable strategy, when considered against the alternatives.	208383 (NAIB Trust)
To align with the Cambridgeshire Local Plan and emerging Spatial Development Strategy, and accounting for the number of large strategic allocations in the plan, it is considered that the plan period should be extended to 2050. A longer plan period is considered to clearly be the most reasonable strategy, when considered against the alternatives	211595 (Places for People)

Comments on the relationship with National Planning Policy

Summary of issues raised in comments	Comments highlighting this issue
The plan does not adequately consider the draft NPPF, which is expected to be adopted in mid-2026, necessitating alignment to avoid future revisions. The draft NPPF aims to reduce development management policies that exceed national standards, which creates unnecessary burdens. Recommend council review local plan once new NPPF adopted deleting or amending any local plan policies that are inconsistent with the new NPPF to avoid lengthy discussions regarding their weight during application processes.	203401 (ESCO Prospect) 205096 (Home Builders Federation)
To ensure longevity of the emerging Plan, it is recommended that the Council is consistent, where possible, with the NPPF when published in its final form.	206943 (Henry Boot Developments)
We support the overall vision of creating well-designed, sustainable and resilient communities, and welcome the ambition shown in the draft policies. However, a number of the detailed requirements go beyond national standards or lack sufficient flexibility and therefore risk undermining deliverability or delaying the housing trajectory.	208958 (Persimmon Homes East Midlands)

Comments raising General Issues

Summary of issues raised in comments	Comments highlighting this issue
CPRE Cambridgeshire and Peterborough supports the ambition of the Greater Cambridge Local Plan to deliver sustainable growth. However, sustainability must include environmental protection, inclusive access, resilient infrastructure, digital connectivity, and safeguarding of water resources.	208957 (CPRE Cambs and Peterborough)
Support the principles of sustainable growth underpinning the Draft Local Plan.	211112 (Cam Valley Community Rail Partnership)
PfP supports the vision for Greater Cambridge to be a place where a big decrease in our climate and environmental impacts comes with the continued flourishing of the internationally significant innovation economy, and a big increase in the quality of everyday life for all our communities.	211596 (Places for People)
The Owners and Board see either redevelopment of the current site or potential relocation as critical to the Club's long term viability and sustainability at a time when its current capacity is constrained, the City will grow exponentially and the financial pressures for all football clubs at every level are growing given the flow of investment into all the English leagues. We hope the GCLP will prioritise the Club's needs, recognising its unique role in Cambridge	209103 (Cambridge United Football Club)
Newnham Labour ran an informal engagement event to allow the Newnham community to discuss the draft Local Plan with Cllr Katie Thornburrow. 45 people attended and their views are summarised in the report submitted below. Key points arising were 1) support for more Affordable Housing. 2) Support for the REJECTION of development on West Fields, Site ID 115681 3) Support for policies on Climate Change, Green and Open Space, and River Corridors. Widespread uncertainty about the aims of the	201344, 210676 (Newnham Labour)

Summary of issues raised in comments	Comments highlighting this issue
Cambridge Growth Company, and whether it would comply with the democratically developed policies and plans in the Local Plan. Many were also concerned about power of the University Colleges.	
Fails to adequate address the interlinked nature of so many of the issues. The holistic vision is important. It also fails to clarify the relative costs and the difficulty of enforcing the provisions. There is a risk of imbalance in the responses and expenditure. Very little mention of how provisions affecting developers and other third parties are to be enforced.	205462 (D Stoughton)
CLAF supports the overall vision of the Draft Greater Cambridge Local Plan but urges stronger, more explicit policy commitments to protect, enhance and integrate public rights of way and access networks across Greater Cambridge. Clearer policy language and delivery mechanisms will help ensure that access infrastructure contributes fully to the Plan's objectives for sustainable development, healthy communities and green infrastructure.	210965 (Cambridgeshire Local Access Forum)
CSF CIC would welcome working with Greater Cambridge Shared Planning Service, public health and developers to help shape implementable guidance (for example, a short "Healthy and Sustainable Food in New Development" note or SPD module), building on the draft policy foundations already in the Plan.	210972 (Cambridgeshire Sustainable Food) 205609 (Y Dignon)
Use Traditional Architecture Design Codes for new construction and protect all historical buildings including officially listed and non-designated heritage assets from demolition with a ban on demolition of buildings constructed prior to 1950.	130661 (D Barton)
Comments offering general support: • All looks well thought-out, balancing residents needs plus wildlife and the planet.	203443 (G Pountain) 204365 (J Nelson)

Summary of issues raised in comments	Comments highlighting this issue
• Support, if it can be delivered without compromising in the face of finance/pressure from developers etc.	
The Local Plan is interdependent with wider strategies, infrastructure delivery, and enabling services such as water, energy, and social infrastructure. As these strategies and interventions progress, it is important they are informed by consistent evidence and aligned assumptions on spatial strategy, infrastructure provision and phasing, with greater clarity on the assumptions being made where delivery relies on decisions or investment beyond the planning system. Clear recognition of these interdependencies and stronger systems alignment will be critical to ensuring coherent land-use and investment decisions to strengthen the robustness of the Plan in unlocking future growth potential of the Cambridge city region.	203518 (Cambridge Ahead)
The Local Plan broadly is a comprehensive document inclusive of relative analysis detailing the Planning Authority's intentions over the over the next 5 years for Jobs, Housing, Business Environments etc. Perhaps I have missed this, I've seen no 'Impact Assessment' on the impact of extortionate business rates and other Government non-incentivising taxes, the authors of the plan should be complemented.	201571 (Turks Head Farm)
Highlights the rich heritage of small villages in South Cambs and expresses concern over the current housing developments, noting that many houses are being bought for rental purposes, which does not benefit local infrastructure. Concern about the affordability of housing for young couples and low-wage earners, as house prices are rising beyond their reach.	202358 (E Dean)

Summary of issues raised in comments	Comments highlighting this issue
While the vision and strategy are worthy of support, details matter. The Plan assumes the infrastructure problems (primarily water and transport) will magically be solved, but does nothing to provide those solutions. What is the alternative Plan if the local infrastructure needs the Plan relies on are not delivered?	202550 (P Tribble)
Cambridge Junction's future redevelopment and reprovision, and the detailed implications of the Draft Local Plan, have only become clear at Regulation 18 stage.	202802 (Cambridge Junction)
We are supportive of the processes detailed in this section.	202818 (Cambridge City Council Liberal Democrat Group)
We welcome the Plan and recognise the extensive work and stakeholder engagement underpinning its development. We support the Plan's ambition to balance climate and environmental objectives with the continued flourishing of Cambridge's globally significant innovation economy and improved quality of life for local communities. The Local Plan is a critical lever for sustaining international competitiveness, enabling company formation, retention and scale, and attracting global investment. We particularly welcome the emphasis on building on existing clusters and campuses and the recognition of the innovation infrastructure that underpins growth. We encourage the Plan to further strengthen this system-wide approach by explicitly supporting the intensification and expansion of established innovation clusters to maximise agglomeration benefits.	204900 (Innovate Cambridge)

Summary of issues raised in comments	Comments highlighting this issue
General comment to be consulted as the plan moves forward.	206953 (Cambridge Realty Ltd)
Railpen support the Councils' recognition throughout the draft Plan's preamble and supporting text that the region makes a substantial contribution to national economic health. However, we suggest that the growth of the Cambridgeshire economy should be specifically mentioned within the Council's 'Vision for Greater Cambridge'. We would encourage the Council to be bold, and to recognise that the region's continued growth – fuelled by both housing and jobs – is critical to delivering the environment in which future generations can flourish.	207454 (Pioneer Group Ltd Railpen)
Railfuture East Anglia welcome the plan's ambition to tackle climate change, health and create high-quality places with a strong focus on sustainability, wellbeing, good design, walking, cycling and public transport. Railfuture is a partner within the Cambridgeshire Sustainable Travel Alliance of CamCycle, Cambridge Bus Users and Cambridge Living Streets. We fully support their responses to this consultation.	208028 (Railfuture East Anglia)
The emphasis on high-quality placemaking, green infrastructure and biodiversity net gain is essential to maintaining quality of life, while the strong focus on climate change mitigation and adaptation appropriately aligns local growth with national net-zero objectives. We also welcome the integrated approach to transport, utilities and digital connectivity, which will be critical in supporting innovation-led growth at scale.	208132 (Albion City Development Corporation Ltd)

Summary of issues raised in comments	Comments highlighting this issue
Welcome the ambition of the Greater Cambridge Plan and understand the need to plan positively for the city's future. However, I am deeply concerned that, without stronger protections, rural communities like mine are being placed at risk to accommodate growth that primarily benefits the city rather than the wider area. Cambridge's future should not be built by sacrificing the countryside that gives it its character and identity. Planning for long-term success means working in partnership with rural communities, not placing a disproportionate burden on them. I hope this Plan will stand up for places like Weston Colville, so that young people like me can look forward to a future where growth is fair, sustainable and shared.	208483 (E Hepworth)
Support the strategic direction of the Draft Greater Cambridge Local Plan. However, to deliver a genuinely inclusive, safe and sustainable transport and access network, the Plan must explicitly and consistently include equestrian users across its sustainable transport, active travel, public realm, green infrastructure and Rights of Way policies. Without clear policy direction, equestrian access will continue to be excluded at the delivery stage, undermining the Plan's objectives for health, wellbeing, equality, safety and rural economic resilience.	208662 (British Horse Society)
The Cambridge Rights of Way Improvement Plan (ROWIP) does not appear to be explicitly referenced in the Draft GCLP. The ROWIP is a statutory document that set out priorities for the management, improvement and accessibility of the public rights of way network and is directly relevant to policies on green infrastructure, sustainable transport, active travel and open space provision. The Local Plan	208660 (British Horse Society)

Summary of issues raised in comments	Comments highlighting this issue
should formally reference the ROWIP within its evidence base and policy framework to ensure alignment, consistency and effective delivery of rights of way improvements through new development.	
Putting people, places and choice first. We support the ambition of the Local Plan to address climate change, improve health and deliver high-quality places. However, this must be achieved without prioritising one transport mode over others, without unnecessary destruction of green spaces and orchards, and without policies that reduce choice, resilience, or fairness for residents. the Local Plan should: Explicitly commit to transport neutrality, not transport hierarchy. Protect orchards, green spaces and historic landscapes as strategic assets. Treat cars as part of the transition, not the enemy. Support cycling and walking without coercion or exclusion. Ensure policies work for all ages, abilities and life circumstances. Avoid road closures and restrictions that worsen congestion and emissions. Require evidence of deliverability, not aspiration. Balance climate goals with social and economic reality	208834, 208880 (D Smith)
We suggest replacing the term “people with disabilities” with “people with care and support needs” throughout the document. This terminology is more inclusive, as it encompasses a broader range of needs, including those relating to mental health, physical health, and learning disabilities. A range of other detailed wording points are also provided.	210541, 210543 (Cambridgeshire County Council)
Polices Map shows protected open spaces and nature reserves. Public rights of way are an amenity as well as providing connectivity to key sites. As such could they be included on the policy mapping.	210626 (Cambridgeshire County Council)

Summary of issues raised in comments	Comments highlighting this issue
There are overlapping themes, such as Town Centres, Placemaking, combatting the Climate Crisis and economic applications that feature Traditional Architecture as a primary vehicle towards achieving the greatest possible positive outcomes for all of these themes.	201010 (Community Campaigner D Barton)
For four centuries the Trust and its precursors (known as the Feoffees) have been responsible for the protection and maintenance of Hobson's Brook and Conduit, with rights and obligations deriving initially from the 1610 Tripartite Indenture. The Local Plan needs to acknowledge and to state much more explicitly the extreme importance of the maintenance of water quality and the natural environment and habitats along the city's green corridors, including that from Nine Wells to the City centre formed around Hobson's Brook and Conduit.	211724 (Hobsons Conduit Trust)
I support the Local Plan as a whole. I respectfully ask that the missing information be made available for comment and that my comments are taken into account in order to make the Local Plan more robust and appropriate at a local level. These predominately concern issues about character, landscape, flooding, heights and the viability of infrastructure.	211933 (C Newell)
Note from Comberton Village college student Kids like more social settings and prefer fun activities to do with the Local Plan, with opportunities to stand and sit, less talking and more reading and doing things (drawing, making things, being creative) with multiple activities inside and outside. Interacting with different forms (joint classes) and exploring new subjects - music sounds relaxing. Allow kids to share ideas (talking or writing) and let the kids choose some ideas.	211975 (K Thornburrow)

Comments raising points on specific sites

Summary of issues raised in comments	Comments highlighting this issue
Without EWR Co's proposed amendments to policies and the policies map, development of land within the safeguarded area may conflict with, or prejudice the delivery of, EWR and be subject to an objection from EWR Co at the planning application stage or compulsory acquisition authorised as part of the EWR Development Consent Order (if granted), potentially making it undeliverable or undevelopable. EWR Co's proposed amendments would provide the necessary policy tests to ensure that all parties continue to work together to develop proposals which avoid this outcome, whilst also aligning with the safeguarding guidance.	211907 (East West Rail)
Land adjacent to A11 and A1307 (Grange Farm) • The A505 is a busy road with accident hotspots, particularly at the A1301/A505 junction, and warns that the area cannot handle more traffic without significant infrastructure improvements. The A1307 is a high traffic route, warning that increased traffic from the development will negatively affect surrounding villages. • Local services such as GPs, schools, and shops are already at capacity and cannot accommodate an influx of new residents. Opposes the proposed development on Roman Rd, citing its status as an area of local beauty. • Strong concerns about the proposed development, it should not proceed due to the availability of suitable brownfield sites, such as Cowley Road. • The scale and density of the proposed housing in a rural location are troubling, with concerns about disruption to the rural appeal and negative impacts on wellbeing due to construction noise.	202358 (E Dean) 204517, 207552, 207533, 207554 (C Tjen)

Summary of issues raised in comments	Comments highlighting this issue
• Development will harm the local environment, with doubts about the adequacy of mitigation measures for rare sites. The plan for a sewage works upwind of the respondent's property raises concerns about outdoor enjoyment and property value. • Concerns are raised about a permanent site for travellers.	
Cambridge Biomedical Campus Proposed vehicle access from Granham's Road into the Cambridge Biomedical Campus contradicts the goals of Policy BG/GI by threatening the Gog Magog Hills and chalkland fringe, which should be protected. The respondent for the 'Better Ways for Busways' alternative, suggesting a busway spur off the A1307 Hinton Way roundabout as a less invasive solution that would improve emergency access and connectivity.	204551 (E Wilson)

Development Strategy

Note that representations submitted to the overall Development Strategy chapter, Policy S/JH: New jobs and homes and Policy S/DS: Development Strategy have been presented below in a single set of tables addressing topics relevant to the jobs and homes requirements and development strategy, and this has informed the executive summary and response to representations.

Vision and Strategic Priorities

Abbreviations

PC= Parish Council DC= District Council TC= Town Council CA= Combined Authority GC= Growth Company

Summary of issues arising from Draft Local Plan representations:

A number of comments supported the vision and strategic priorities.

A limited number of respondents made recommendations for amendments to the vision and strategic priorities, including suggestions for increasing reference to meeting Government's agenda to accelerate employment and housing growth, adding emphasis on the area's heritage and landscapes, reflecting the importance of green spaces for wellbeing, and adding specific reference to emergency services.

A limited number of respondents raised concern that the housing target and development strategy do not align with the vision.

Response to main issues raised in representations

Support for the vision and strategic priorities is noted.

The Councils consider that the draft plan vision and strategic priorities remain appropriate and have not made amendments in response to representations made at draft plan stage, noting that amendments were made at draft plan stage to add greater emphasis on supporting the economy, that both the vision and strategic priorities already reference our locally distinctive heritage and landscapes and unique character and identities of Cambridge and South Cambridgeshire. Whilst we acknowledge the importance of greenspaces for wellbeing, green spaces provide cross cutting benefits relevant to a number of the strategic priorities. The strategic priorities should be understood collectively; the Councils consider that it would reduce the clarity of the priorities to make cross-references between them. Adding references to specific services such as emergency services is considered too detailed for these strategic level priorities.

Whilst choices made to inform the preferred development strategy inevitably require a balancing between issues included within the vision and strategic priorities, the vision and priorities have informed the development strategy principles and thereby the strategy itself. The Councils therefore consider that the development strategy is aligned with the vision and strategic priorities.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comments on Vision include: • Vision for Greater Cambridge will result in its continued urbanisation. • Vision for Greater Cambridge would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development on the edge of Cambridge and at the more sustainable villages (Willingham, Fulbourn, Sawston, Great Abington, Great Shelford, Fen Ditton, Swavesey) • Housing target and development strategy in the draft GCLP do not align with the Vision for Greater Cambridge, particularly regarding quality of life and carbon emissions. • Supports decrease in our climate and environmental impacts with a continued flourishing internationally significant innovation economy, and a big increase in the quality of everyday life for all our communities. • Need for Vision and the emerging Local Plan to be strengthened to refer to the importance of development delivery within Ox-Cam Arc and meeting Government's agenda to accelerate employment and housing growth within the arc. • Vision must recognise the internationally valued heritage and landscapes of Greater Cambridge. The vision should also recognise that there are potential conflicts	201902 (C Deer), 201940 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073 (J Francis), 202118 (Elsworth PC), 202336 (P Deer), 202433 (The CLC Trust), 202554 (Ely Diocesan Board of Finance), 202729 (Cambridge Past, Present and Future, 202897 (Cambridge Past, Present and Future), 205036 (North Barton Road Landowners Group), 203302 (J Manning), 203889 (Hill Residential (Fulbourn Site)), 203916 (Hill Residential (Sawston Site)), 204126 (Hill Residential (Hardwick Site)), 204340 (Hill Residential (Great Abington Site)), 204518 (Axis Land Partnership and Executors of Norman Winfrid Moore), 204525 (Axis Land Partnership and Executors of Norman

between economic growth and the climate, physical and environmental capacity of the area. The vision should be to explicitly manage and mitigate these conflicting aspirations. • why doesn't the Vision rely on the mix of development strategies outlined in the Spatial Strategy as a whole. There is no specific reference to the type of development or its location. Recommends the Plan Vision be updated to clarify the range of development locations to be utilised to meet demand for housing and other types of development.	Winfrid Moore), 208673 (Guilden Morden Developments Ltd)
The respondent supports the vision for Greater Cambridge, emphasising the need for a Local Plan that sets ambitious growth targets and aligns with national policy as per Paragraph 36 of the NPPF 2024.	204468 (Ceres Property)
Supports the vision and the seven strategic priorities that flow from it. Clarity would be improved if the order is changed, and the inter-relationships are explained.	203411 (Juniper)
The ordering of the development priorities contradicts the fundamental aim and purpose of the Green Belt legislation and the national planning policy framework that enshrines it. This inconsistency was noted during the planning appeal that led to the recently completed new retirement village on the Gog Magog hillside outside Stapleford. More detail is supplied in the attached document which addresses the relationship between the S/DS and S/GB policies and proposes refinements in the section starting on page 3.	203009 (M Foote)
Recommends modification of the Wellbeing and social inclusion priority to read, "Help improve equality of access and opportunities for people in Greater Cambridge to lead	201528 (Stapleford PC), 208088 (Great Shelford PC)

healthier and happier lives, ensuring that everyone benefits from the development of new homes, jobs AND ACCESS TO NATURE AND GREEN SPACES." Access to nature and green spaces is also vital to leading healthier and happier lives and will be increasingly important as housing density increases and where apartments are the major form of housing.	
Concern if developers will deliver on the plan's Well Being/Social Inclusion aspirations.	201902 (C Deer), 202118 (Elsworth PC)
Comment that the plan should make specific reference to the emergency services in Strategic Priority: Connectivity & Infrastructure, and para 2.26.	207473 (Cambridgeshire Constabulary), 207506 (Cambridge Fire and Rescue Service)
The current Plan is seen as not fully aligning with the Vision due to an over-reliance on strategic housing sites, which account for 93% of allocations, risking environmental impact and lack of housing variety. The Sustainability Appraisal 2025 raises concerns about development 'jumping' the green belt, leading to less accessibility to services and facilities, contradicting the Plan's Vision and NPPF sustainability principles.	204941 (Miller Homes)
Responder welcomes a Draft Local Plan that clearly acknowledges Greater Cambridge's national and global significance and plans positively for its continued success. The Plan sets out a strong and integrated approach to growth, recognising the need to align economic expansion with housing delivery, infrastructure provision and environmental stewardship.	208130 (Albion City Development Corporation)

Natural England welcomes the strategic priorities of the Local Plan and are pleased to note that the Vision for Greater Cambridge, includes the aspiration for a big decrease in climate and environmental impacts, and increase in the network of nature, wildlife and multi-functional green spaces.	207600 (Natural England)
Anglian Water is supportive of the seven strategic priorities set out in the Vision, particularly those that align with our long-term strategic ambitions. We support direct reference to higher achievable standards for water use to reduce environmental impacts. Anglian Water is directly engaged with the Cambridge Water Scarcity Group, as we jointly bring forward strategic supply options with Cambridge Water - including the Grafham to Cambridge strategic pipeline (Phase 1 of the 70km Grafham to Rede pipeline) and the Fens Reservoir.	209156 (Anglian Water Services Ltd)
Responder supports – • I. Cross Boundary Matters – matters where more discussion and consideration must be given, such as ensuring connectivity is considered to key employment and international connectivity to London Stansted Airport and Chesterford Research Park • II. Growth and Infrastructure Delivery – the Plan ensures development will be accompanied by the right infrastructure. • III. Strategic Priorities – inclusion of climate change as a strategic priority, welcomes that the Plan seeks to address water supply matters.	210457 (Essex County Council)

• IV. Economic Growth – welcomes that the fast-growing economy is driven by successful partnerships between academics, business, investors and local government, and the commitment to sustainable and inclusive growth.	
Responder supportive of Local Plan, key themes and strategic priorities, and strategy directing growth to the Cambridge Urban Area, the edge of Cambridge, and new settlements, recognising that that a range of sites will be required. However, ensure that an appropriate proportion of medium scale sites are allocated, such as site at Fen Ditton, to enable a broad mix of tenures and dwelling types, including affordable housing, providing flexibility ensuring housing requirements are met within the plan period.	210219 (Vistry Group)
Requests to avoid the Plan being of “very limited weight” upon adoption, Greater Cambridge should strive for a Local Plan that is in full alignment with the emerging national policies for decision taking and positively prepared in this regard.	208255 (Ashwell & Morden Landowner Consortium)
Concern growth is in the wrong direction of travel for our fen and Riverlands, soon to be subjected to sea level rises, not factored in? Would not leave 'Paradise' for the urban sprawl of Marleigh by Marshalls, densely-packed new-build, identikit passive units, the current City Council orchestrated - with questionable pride? The Cambridge Brand will have tarnished further by 2045. Build communities where there's a real need, not here in such a trumped-up and contrived fashion.	208872 (R Lambert)

Responder states Fulbourn wants more affordable houses. Notes land around Fulbourn that could be considered for development with no plans to build on it, other than Ida Darwin Site. Also need for green amenity land to the South of the village, noting an area to the North of Fulbourn train tracks that is not developed.	208728 (Cllr Matthew Morgan)
Responder highlights lack of identified sites around the Cambridge to Newmarket railway noting Dullingham and Six Mile Bottom, with double tracking and extra/enhanced stations as a project with potential to be funded if there is political support, noting the Cambridge Growth Company, and it is more likely if development is suggested there.	208729 (Cllr Matthew Morgan)
The scale of growth, and the density in proposed development sites is underwhelming. I think there is a lack of ambition for the growth of Cambridge. Mid Rise up to 10-15 Storeys might be considered near good transport links. We should make absolute most use of well-connected sites, otherwise valuable transport infrastructure is going to be underused.	208730 (Cllr Matthew Morgan)
Concern strategy does not cater for the needs of local communities across Greater Cambridge, such as Great Shelford. The vision sets out an appropriate aspiration, the policies do not facilitate the delivery of non-strategic sites that don’t require extensive infrastructure, which are required to provide the homes required in response to local communities housing needs. This will result in significant consequences on the ability of local communities accessing good quality housing and further perpetuates the existing affordability issues present in the area.	208898 (Nightingale Land and Hill Residential Ltd)
Land West of Beach Road, Cottenham: Objects to Development Strategy	208772 (Croudace Homes)

Ignores the sustainability benefits of homes in rural areas for community resilience and is flawed. Additional small sites should be allocated to ensure delivery rates early in the plan period in sustainable villages, including at Land West of Beach Road, Cottenham.	
Mingle Lane Site Regarding delays, local and national housing crisis and affordable housing need in Greater Cambridge, and connectivity to Shelford Train Station, apposes deletion of proposed allocation at Mingle Lane. Site development assists delivery of a number of benefits to the local community including market and affordable housing needs as identified in the recently made Stapleford and Great Shelford Neighbourhood Plan (SGSNP). The SGSNP was developed on the understanding that the Local Plan would allocate the site for development to meet the identified housing needs. Consequently, the site should be reallocated for development within the draft Local Plan.	208897 (Nightingale Land and Hill Residential Ltd)
Comments general Vision for Greater Cambridge and the seven Strategic Priorities are supported. Concern Development Strategy seen as misguided, reliance on new settlements and complex major development sites, reliant on infrastructure projects, overly optimistic delivery timescales of proposed draft allocations, and risk will fail to deliver the homes it needs within the plan period to support its economic ambitions. Suggest more balanced approach to spatial distribution needed recognising the role of	209964 (Granta Land Ltd)

established, sustainable settlements served by existing high-quality public transport infrastructure, and which reduces the reliance on the private car. Stapleford and Great Shelford highlighted as sustainable villages.	

Policy S/JH: New Jobs and Homes

Abbreviations

PC= Parish Council DC= District Council TC= Town Council CA= Combined Authority GC= Growth Company

Summary of issues arising from Draft Local Plan representations:

Support for the identified housing need noting it aligns with the National Planning Policy Framework's goal to boost housing supply. Support also for the aim to provide 73,300 jobs and a diverse range of local employment opportunities, and commitment to sustaining and expanding globally significant research, science and technology sectors and the innovation cluster.

Objections to identified housing and employment need or comments that they are too conservative and should be revised upwards to reflect the capacity of the Cambridge economy, proposed infrastructure developments, and to reflect the ambitions of the Local Growth Plan. Comment that the job figure will likely need to evolve to align with the Government's broader growth agenda whilst ensuring the vision can be achieved sustainably. Cambridge Growth Company would like to see the Plan more explicitly recognise the value of intensifying and expanding the identified innovation clusters to fully realise growth potential and agglomeration benefits.

Comments on employment include that the plan is predicated on the creation of 73,000 jobs and the major strand of this is the knowledge economy, that the evidence base underestimates the need for storage and distribution floorspace, and that forecast R&D office employment floorspace need is already met by supply.

Comments regarding the approach taken to jobs and homes forecasts including the lack of lack robust, up-to-date evidence on jobs, and support for the use of local data to best inform the modelling of jobs and housing growth, and particularly headroom for growth, and commitment to a diverse mix of housing types and tenures, including affordable housing. Comments that it does not reflect the evidence base, that there is increasing disparity between the jobs target and the housing target, and that the approach to commuting assumptions is not justified.

Suggestion that the figures should be treated as minimum employment space requirements and allow for appropriate flexibility, including to go beyond the High Growth scenario.

Comment that the plan should shift from a growth-led strategy to a resource constrained model, recognising the region's environmental limits, that planning for growth in workspaces that outpaces housing supply does not support the stated environmental and transport aspirations and more emphasis should be on limiting the number of workspaces so new homes have the intended effect of making homes more affordable. Comment that there needs to be stronger rural proofing to ensure neighbourhood targets, specialist housing and job growth are aligned with rural transport, digital connectivity and community infrastructure capacity.

Comments that the Statement of Common Ground is not clear how many houses will be built in neighbouring areas and whether there is any unmet need for neighbouring authorities to be considered. Comment from Huntingdonshire District Council that aligning housing figures with the government's standard method will avoid overburdening local infrastructure and resources, and potentially needing to seek assistance from neighbouring authorities to meet a portion of the enhanced housing figure. Comment from West Suffolk Council confirming it is not seeking to accommodate any housing need identified in Greater Cambridge. Essex County

Council comment that it is important there is acknowledgement of the cross boundary and strategic matters, in particular the opportunity provided for international connectivity by London Stansted airport, and to seek to improve connectivity.

Concern that new infrastructure may not be delivered in a timely manner given the speed of build out and to the extent that is required. Comment from Anglian Water that the scale of growth funded in their Business Plan does not sufficiently reflect the scale of growth pressures or the level of funding to address them. Comment there is a need for more housing and water for existing residents and that it cannot be met within climate targets.

Comments on housing include support for the focus on delivering a diverse mix of housing types and tenures, including affordable housing, comment that increasing supply should reduce house prices and make homes more affordable for people working in Cambridge but risks being undermined without legislation to prevent the purchase of accommodation for short term letting, and suggesting an appropriate mix of social, affordable and market housing. Objection that the policy is too prescriptive on the tenure for older person's housing and should support the full range of specialist housing across all tenures, and comments that there is insufficient provision for nursing and residential care spaces and that the necessary specialist housing will not be delivered within the plan period. Comment from Cambridgeshire County Council for further clarity regarding the relationship between the accommodation needs for older and disabled people included in the policy, and the County Council's demand profiles which include a much lower need. Request also for clarity between the overall housing requirement and the requirements for accommodation for specific groups and the source of the information for the accommodation needs of specific groups. Comment from Anglia Ruskin University that student accommodation need should reflect more up to date evidence.

Comments that the housing requirement for neighbourhood plans should be indicative and not a requirement, and comment from a developer suggesting an additional section should be added to include provision for housing in areas that are not neighbourhood

plan areas. Comment that there is no mechanism to be able to deliver the identified local affordable housing need. Comment that there is a discrepancy in the annual housing need between Policy S/JH and Appendix D.

Response to main issues raised in representations:

Iceni Projects for the Councils completed a Review of economic data, context and representations 2026 (REDCR 2026) to consider whether the most likely employment forecast identified in the Employment and Housing Need Update 2025 (EHNU 2025) for the draft plan remains robust for the Proposed Submission Plan. The focus of the Local Plan evidence has been. Having considered in detail datasets on sector by sector performance, Iceni's scenarios are considered realistic and embedded in past trends of known change, including periods of strong growth, but also taking into account periods of cyclical slow down – as being experienced at present. The Cambridgeshire and Peterborough Local Growth Plan and MCHLG Oxford Economics work cited by many respondents are noted. Their baseline outlooks provide useful reference points for the data review described above; their aspirational scenarios have been discounted for the purposes of Local Plan making evidence which is an exercise focused on wholly evidencable historical sector and economy wide data. In summary, the most likely forecast for jobs for the plan period identified at draft plan stage remains robust for the Proposed Submission Plan.

The REDCR 2026 also considered representations regarding industrial and warehousing land needs. The requirement for the industrial and warehousing space (317,000 sqm, rising from 200,000 sqm in previous work) has been developed considering a range of factors which are compliant with the Government's planning practice guidance and take a very positive approach to industrial needs. The finer grain interpretation of specific technical adjustments raised in a number of comments is a matter of professional judgement. In summary, the industrial and warehousing employment land need for the plan period identified at draft plan stage remains robust for the Proposed Submission Plan.

With regard to comments relating to the identification of the total housing need, the approach set out in the EHNU 2025 follows an approach to identifying housing need associated with jobs that has remained consistent throughout the plan-making process. In summary, the draft plan stage most likely scenario for employment remains robust; the June 2025 Standard Method calculation outcome would provide enough homes to support that most likely jobs outcome; and the up to date June 2026 Standard Method calculation outcome is very similar to the June 2025 calculation. Therefore, the Councils consider that the June 2026 Standard Method calculation represents Greater Cambridge's objectively assessed need for housing because it would support the most likely jobs outcome. Regarding commuting assumptions, the 2011 Census is used in the EHNU 2025, considering the issues at the time of the 2021 Census (pandemic enforced work from home). As a result, this means the Greater Cambridge modelling assumes a greater draw from other areas than the 2021 Census implies. This is the same approach taken as in previous iterations of the work. The Plan's Standard Method requirement already incorporates an uplift for affordability in its calculation, therefore further uplifts are not considered suitable.

The objectively assessed needs for jobs and homes identified in Policy S/JH are not maximum targets. Policy S/DS identifies sites for homes and employment land that provide significant headroom above our needs.

We note comments relating to taking a resource constrained approach. The Local Plan is required to identify and meet our objectively assessed needs for development. The Local Plan Sustainability Appraisal has considered the environmental, social and economic implications of the needs set out in Policy S/JH. A very significant evidence base supports the Proposed Submission Plan to ensure that it can be delivered, and to ensure that environmental impacts are mitigated, including for example addressing water supply and impact on nature sites. The Councils recognise that there can be tension between supporting continued economic growth and improving housing affordability. It would be inconsistent with national policy to seek to limit economic growth; our

identified housing need includes a housing affordability uplift to help address the housing affordability challenge. Delivery of sites identified in Policy S/DS, together with relevant thematic policies elsewhere in the plan, will support delivery of a significant number of affordable homes.

The Councils have continued to engage with Anglian Water since the draft plan stage regarding ensuring waste water treatment capacity to meet the development included in the Plan. See further responses to this issue and to other comments regarding delivery of infrastructure under Policy S/DS.

Based on regular engagement with relevant bodies throughout our plan-making process, the Councils have not asked neighbouring districts to meet their development needs; nor have we been asked to meet the development needs of other districts. Full details of our approach to cross-boundary issues including development needs are set out in our Duty to Cooperate Statement of Compliance and Statement of Common Ground.

Our Housing Needs of Specific Groups Update for Greater Cambridge (HNSG, 2025) considers the specialist accommodation needs of older people and people with disabilities. The two groups are considered together as: there is a clear link between age and disability, the population aged 75 and over is used in the modelling as a proxy for calculating the need from all ages of older people and people with disabilities, and some specialist housing provided can be used by both older and disabled people. The HNSG 2025 makes clear that the current and future demand for specialist accommodation is influenced by a host of factors, including the balance between demand and supply in any given area and social, political, regulatory and financial issues. Additionally, it highlights that the extent to which new homes are built to accessible and adaptable standards may, over time, have an impact on the demand for specialist accommodation for older people, as they often want to remain at home rather than move to care. The Local Plan therefore seeks to ensure that a variety of types of accommodation for older people and disabled people are

provided across Greater Cambridge. As well as meeting the specific identified needs through standalone developments for specialist housing and through provision within strategic sites, other policies in the Local Plan such as Policy H/HM and Policy H/SS, alongside Cambridgeshire County Council's proposed increased hours for domiciliary care and the use of technology enabled care, will help older people and disabled people to downsize or stay within their community. The supporting information to Policy S/DS provides a summary of how the accommodation needs of older people and people with disables will be met, and further detail is provided in Appendix 12 of the Development Strategy Topic Paper (2026).

The HNSG 2025 highlights that whilst the calculations undertaken to identify the accommodation needs of older and disabled people are compliant with national planning practice guidance, they potentially overstate the level of need. The study therefore also references Cambridgeshire County Council's demand profiles for older people and disabled people, both of which have been calculated using a different approach to assessing needs focussed on local data sets, informed by local knowledge, and based on population forecasts linked to dwelling stock estimates. These dwelling stock estimates take account of housing trajectories published in 2022, reflecting adopted Local Plan housing requirements. Whereas the specialist accommodation needs for older people and disabled people in the HNSG 2025 have been calculated taking account of population forecasts linked to the standard method of calculating local housing need.

The supporting information sets out the evidence base documents used to inform the requirements for the accommodation needs of different groups, and it also explains that the overall housing requirement identified in the policy addresses the needs of the total population, and that the needs for affordable housing and specialist housing for specific groups form part of this total need and are not additional to it. The accommodation needs of the different specific groups have been calculated within the context of the overall housing need (calculated using the standard method) as set out in the HNSG 2025.

Any proposals for self-contained specialist housing for older people and disabled people are required by Policy H/AH to provide at least 40% of the new homes on-site as affordable housing, unless off-site provision or a financial contribution is justified. The policy requirement has been amended to remove the specific numbers relating to market and affordable units, as the delivery of a mix of tenures is required through other policies within the plan.

Officers have continued to engage with Anglia Ruskin University (ARU) during 2026, and as a result of the information provided the identified need for student accommodation from ARU has been amended. The Councils' consideration of student accommodation needs, and the calculation of the updated need, is included in Appendix 13 of the Development Strategy Topic Paper (2026). Identifying a level of need within the Local Plan does not prevent ARU from seeking to increase the proportion of students living in purpose built student accommodation during the plan period, or from bringing forward proposals for additional purpose built student accommodation beyond their level of identified need. It also does not prevent student accommodation from being brought forwards in the second half of the plan period, for which the Councils are not seeking to identify a specific level of need due to there being a greater uncertainty in anticipated growth in student numbers during this period.

Our response to representations relating to the neighbourhood area housing requirement is included within the response to representations on Appendix D (now Appendix C) of the Local Plan. The housing requirements for neighbourhood areas are specifically set out in response to a requirement within national planning policy, and it is not necessary to set out housing requirements for all parishes as the Local Plan already includes a development strategy, allocations and policies for windfall developments that indicate the level of housing that is appropriate within a settlement or parish. Neighbourhood Plans are not required to plan for housing needs, and the neighbourhood area housing requirements are therefore not relied upon to meet the overall local housing need identified in the Local Plan. The proportion of the identified need 'distributed' to neighbourhood areas is already anticipated to come forwards as windfall developments across Greater Cambridge. If there are specific local housing needs

identified in a parish or settlement, these can be addressed through a Neighbourhood Plan, or windfall developments. The housing requirements for the 27 designated neighbourhood areas that are set out in Appendix D (now Appendix C) of the Local Plan are for the plan period of 2024-2045, and are not annual requirements. These housing requirements are a proportion of the overall housing requirement for Greater Cambridge within the plan period, and therefore will not add up to the annual housing requirement or the plan period housing requirement set out in Policy S/JH.

Table of representations:

Summary of issues raised in comments	
Support for the identified housing need, noting that it aligns with the National Planning Policy Framework's goal to boost housing supply based on local needs.	203045 (Cemex UK Properties Ltd), 204105 (G W Balaam & Sons), 211261 (Terra Strategic)
Support for requirement of providing a minimum of 48,195 homes and need for affordable housing.	211456 (Hayfield Homes Construction Ltd)
Support for the approach to employment: • Support for draft Policy S/JH, which aims to provide 73,300 new jobs and a diverse range of local employment opportunities. • We support the Plan's commitment to sustaining and expanding globally significant research, science and technology sectors, alongside its clear recognition that housing delivery must keep pace with job growth if Greater Cambridge is to remain inclusive and competitive. The scale of employment and housing growth identified in the Plan reflects Greater Cambridge's pivotal role in the UK economy. Planning positively for this growth is essential if the full benefits of its world-leading science and innovation base are to be realised.	204649 (Jaynic), 208131 (Albion City Development)
Objections to identified housing and employment need or comments that they should be revised upwards, including for the following reasons:	202364 (CLC Trust), 203307 (J Manning), 205140 Home Builders Federation, 201945 (KG Moss Will

Summary of issues raised in comments	Comments highlighting this issue
• The Central growth scenario of 73,200 jobs is seen as conservative and not reflective of the full growth capacity of the Cambridge economy – the higher growth scenario as acknowledged in the Employment and Housing Needs Update should be used in policy revisions. • Oxford Economics evidence points to substantially higher levels of job creation • The 2025 Employment and Housing Needs Update should be recalculated to include commuting patterns adjustment as per the 2023 Greater Cambridge Employment and Housing Evidence Update Employment Land, Economic Development and Relationship with Housing report • Restricting employment growth to historical trends fails to embrace the advancement technology brings. To do so in one of the most innovative clusters in world fails to meet Government's key priority of growing the economy. • The plan's employment target of 73,330 jobs to 2045 under-estimates historic growth and therefore the required industrial floor-space of 317,000 sqm is too low	Trust & Moss Family), 201967 (Shelford Investments), 202028 (Wimpole Associates), 202077 (J Francis), 202098 (Cambridgeshire County Council (Strategic Assets)), 202309 (CALA Group Ltd), 202364 (The CLC Trust), 202534 (Granta Land Ltd - Land West of Station Road, Meldreth), 202557 (Ely Diocesan Board of Finance), 202623 (British Land), 202648 (Granta Land Ltd - Land at Sheene Farm, Meldreth), 202663 (Granta Land Ltd - Land East of Station Road, Meldreth), 202747 (Martin Grant Land Limited), 203063 (Trinity College), 203075 (Granta Land Ltd - Land North of Mingle Lane and East of Hinton Way, Stapleford), 203147 (Christ's College), 203307 (J Manning), 203380 (Jesus College), 203404 (Jesus College), 203463 (Hopkins Homes), 203891 (Hill Residential (Fulbourn Site)), 203904 (Babraham Research Campus Ltd), 203912 (Abbey Properties Cambridgeshire Limited), 203921 (Emmanuel

Summary of issues raised in comments	Comments highlighting this issue
• Concern that assumptions re larger household size and increased commuting, compared to previous assessment of need, are not sustainable; larger household sizes embed affordability issues not being able to move out of parents' home; increased commuting lacks sustainability. • There is an increasing disparity between the jobs target and the housing target. Greater Cambridge needs to plan for a corresponding increase in housing delivery, because anything else jeopardises the continued economic success of Cambridge and the delivery of the required housing in the right locations. • Using previous commuting assumptions will result in increased numbers of workers commuting into the area. • The approach to commuting assumptions is not justified. • The provision of affordable housing is considered to justify an increased housing figure, especially given recent delivery records • Affordable housing target is too low and does not reflect demand. On some strategic sites provision is reduced in favour of providing infrastructure.	College (Wilberforce Road), 203925 (Hill Residential (Sawston Site)), 204027 (E W Pepper Ltd), 204108 (Railpen), 204118 (Emmanuel College (Long Road)), 204120 (Richborough), 204136 (Hill Residential (Hardwick Site)), 204153 (Tritax Big Box Developments), 204204 (R2 Developments Ltd), 204234 (Bellway Strategic Land), 204323 (Barratt Redrow), 204353 (Hill Residential (Great Abington Site)), 204361], 204361 (Wain Estates), 204397, 204414 (Bellway Strategic Land), 204451 (Brookgate Land Ltd and Network Rail Infrastructure Ltd), 204499 (Places for People), 204508 (Redrow South Midlands), 204536 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 204599 (SmithsonHill), 204634 (Urban & Civic and Hill Residential), 204797 (Quy Tech Ltd on behalf of landowners), 204831 (Pigeon), 204833, 210221 (Vistry Group), 204896 (St John's College Cambridge), 205000 (Endurance Estates), 205080 (Axis Land

Summary of issues raised in comments	Comments highlighting this issue
• The housing target is not consistent with national policy because upward adjustments for growth and affordable housing have not been considered. • Housing target should be adjusted upwards to take proposed infrastructure developments (e.g. EW rail, new busways and stations), economic growth ambitions and affordable housing needs into consideration; inadequate housing provision could be a barrier to growth. • Incorporate the additional growth ambition of the Cambridge Growth Company and Combined Authority • The proposed figures for job and housing needs should be regarded as minimums rather than maximums • Increase the housing delivery to a minimum of 61,000 new homes which is more akin with the likely housing needs given the planned employment growth. • Objects to plan expanding villages beyond the outer Green Belt, advocating for the inclusion of Gt Shelford sites to meet housing needs sustainably. • Critical of the lack of updated HELAA assessments for site 115766, which has constrained opportunities.	Partnerships Ltd), , 05140 (Home Builders Federation), 205240 (Cambridge Realty Limited), 205000 (Endurance Estates), 205080 (Axis Land Partnerships Ltd), 205084 (North Barton Road Landowners Group), 205140 (Home Builders Federation), 206216 (Granta Land Ltd - Land at Valley Farm, Meldreth), 207436, 207437, 207438 (Pioneer Group Ltd), 208326 (PX Land Ltd), 208397 (Ceres Property on behalf of land owner at Freisland Farm, Swavesey), 208700 (Guilden Morden Developments Ltd), 208770 (Croudace Homes), 201851 (Chivers Farms Limited), 208899, 208900 (Nightingale Land and Hill Residential Ltd), 209326 (B Homent, J Tee & R Smith), 208700 (Guilden Morden Developments Ltd), 209172 (Turnstone Real Estate Ltd), 204893 (Great Shelford, Ten Acres LLP), 204904 (St John's College Cambridge), 210312, 210313 (Russell Smith Farms), 211046 (Wates Developments (and Landowners)), 209032 (Marshall Group

Summary of issues raised in comments	Comments highlighting this issue
• Concern regarding compliance with NPPF para 23, additional sites are needed to meet housing requirements by 2045 and to include a reliable buffer of at least 10% and revisit of the 'Exceptional Circumstances' case to ensure sustainable sites are not overlooked. • welcomes the commitment to updated Green Belt Study requesting publication before Regulation 19 consultation. • Concern Plan does not currently provide sufficient land to meet the housing requirement, allocate College land.	Properties), 209033 (Marshall Group Properties), 211668 (SmithsonHill), 211679 (Newlands (Cambridge) Limited)
Whilst the Local Plan identifies some level of need within the villages of the District, the current development strategy makes no attempt to meet this need. From a review of the Evidence Base, it appears no assessment of the level of affordable housing need has been made for the Villages of the District. Therefore, the Councils have failed to assess the level of both market and affordable housing need.	209709, 209710, 209714, 209715, 206787 (Endurance Estates)
Cambridge City and South Cambridgeshire administrative areas should be substantially higher number of homes delivery than the minimum of 71,586 dwellings between now and 2050 given its position role as the International Life-Science and employment driver for the County and the Government's Case for Cambridge.	208384 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
The Plan allocates more housing than required to 2045. Even without Grange Farm, housing need would be met.	211715 (J Clifford)
Responder Objects to policy and requests the housing target is recalculated to include the previous commuting patterns adjustment, consistent with the adjustment made in the 2023 'Greater Cambridge Employment and Housing Evidence Update Employment Land, Economic Development and Relationship with Housing' Report. Requests the housing target includes some upward adjustments for growth ambitions, reflecting the Greater Cambridge City Deal and the Cambridgeshire and Peterborough Devolution Deal, and the Cambridge Growth Company.	211607 (Bloor Homes Eastern)
Whilst it is understood why the 2021 census information is not considered robust as it was influenced by the COVID-19 pandemic, it is not robust to use "Census 2011 commuting assumptions applied up to the population supported by the standard method, and 1:1 commuting assumptions above this" as the basis for justifying the housing requirement. Previous commuting patterns are as a result of historic under-delivery of housing relative to jobs growth. Using previous commuting assumptions will	211102 (Hallam Land Management)

Summary of issues raised in comments	Comments highlighting this issue
result in increased numbers of workers commuting into the area. Whilst some will use public transport, this will inevitably result in an increased number of workers using Greater Cambridge's constrained road system. The proper planning of the area would see a greater housing requirement identified, which can readily access existing public transport and cycle links (the Guided Busway in this instance) and proposed new employment opportunities. The proposed (inadequate) identified housing requirement risks increasing strain on key infrastructure whilst also driving up property values due to a shortage of supply relative to demand. As evidenced within the Case for Cambridge report, it is already the case that economic growth in the region is being held back by a lack of adequate housing supply relative to demand, which is evident when considering that South Cambridgeshire has one of the highest house price-to-earnings ratios in the Country.	
Questions assumptions in the plan regarding job growth in Cambridge and impacts of AI on employment, suggesting a phased development approach based on specific criteria being met first	205638 (A Brown)
Responder objects misalignment of job target with the housing target requiring potential employees to commute into Greater Cambridge to fill jobs leading to increased in-commuting likely by car, if public transport	211608 (Bloor Homes Eastern)

Summary of issues raised in comments	Comments highlighting this issue
options are not available or the delivery of transport infrastructure projects are subject to unconfirmed funding decisions and associated development.	
Responder objects to the Report concluding no adjustments being required to the housing target for the draft GCLP to address affordable housing needs and requests housing target include some upward adjustment to address affordable housing needs.	211609 (Bloor Homes Eastern)
Responder objects to flaws in the methodological approach to quantifying the relationship between need for jobs and homes; not take account of the latest projections. The approach to HRRs is flawed and bakes in historic housing shortages in the areas. Failing to recognise increases in households associated with extra economic activity and household growth will worsen affordability pressures, and there is no uplift for affordability in the methodology that would have any material impact on the ability of those groups – such as younger people and other concealed households – to better access homes at a price consistent with their incomes. The Plan is not sound as the evidence is flawed and likely underestimates the number of homes necessary to meet the housing needs associated with	211662 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
increased levels of economic activity and overcome barriers to investment necessary to achieve it, contrary to NPPF paras 61, 63 and 85 and 86 (d)	
Objects as the strategy represents only 'baseline' economic growth that would be expected if housing delivery were in line with the standard method. The Plan is not currently sound because it is not consistent with national policy (specifically paras 85-86) as required by NPPF para 36(d).	211663 (SmithsonHill)
Objects a supporting text at para 2.10 of the draft Plan states "growth of around 4,000 additional jobs per annum" which is not reflective of the EHNU, which shows (Table 3.7) the 'central' scenario being associated with 3,490 jobs per year and is therefore not in accordance with the GCLP's own evidence (were it to be accepted on its own terms) and is misleading. The Plan is not currently sound because it does not reflect its own evidence, as required by NPPF para 36(b).	211664 (SmithsonHill)
Objects to Policy as lack of housing relative to demand is likely to contribute less housing affordability. Affecting business and public services recruiting and retain workers, increase demand for affordable housing. Businesses may choose to locate elsewhere, stifling economic growth in Cambridgeshire in this way would also certainly undermine wider regional and national economic growth prospects.	211667 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
Objects to housing initiatives which it could be reasonable to argue that housing supply does not have a net positive effect on the availability of housing for existing residents of Greater Cambridge. The Councils should consider the extent to which new housing delivery in the trajectory will serve different market needs. This should consider existing and future housing needs of different groups, as well as growth scenarios (both scheme specific and general).	211675 (SmithsonHill)
Objects to the Plan seeking to place a restriction on the size of a logistics Unit, even though supply and demand for storage and distribution floorspace is acute in Greater Cambridge. The Plan is contradictory to Paragraph 32 and Paragraph 87 of the NPPF, the latter stating that planning policies and decisions should recognise and address the specific locational requirements of different sectors.	211683 (Newlands (Cambridge) Limited)
Comments paragraph 2.72 of the Plan states that additional new industrial/logistics floorspace will be facilitated through longer term provision at Cambourne, and through incorporating some industrial/logistics floorspace within other, unspecified mixed-use employment allocations. However, existing permitted employment floorspace is not for B2/B8 floorspace planned to be delivered at Cambourne.	211678 (Newlands (Cambridge) Limited)

Summary of issues raised in comments	Comments highlighting this issue
It is not clear what use classes are proposed to be delivered at any sites referenced at para 2.72 or will deliver any of B2/B8 need that has been identified. Clarity is required through the policy allocations as to the anticipated uses each employment allocation will be seeking to deliver if the approach is to be effective in ensuring the employment needs are met.	
• Concern Plan relies on larger schemes for development, and as such recommend: 15% should be the minimum buffer if North East Cambridge is not included, and the current growth assumptions are taken forward. Requiring an uplift of at least 4,096 homes not currently allocated; • 20% should be the minimum buffer if North East Cambridge is included, requiring an uplift of at least 2,445 currently unallocated homes.	211672 (SmithsonHill)
Comments it is important that GCSP consider whether economic factors suggest that population (and therefore housing) growth is even higher than the standard method indicates is needed, particularly in the context of NPPF paras 85-86. Noting ONS's population and household projections which post-date the	211657 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
2021 Census; the 2022-based sub-national population and household projections. These projections also reflect more up-to-date assumptions nationally about levels of future long-term international migration; a key influence on demographic change in Greater Cambridge. It would be prudent for GCSP to consider these new data sets.	
Comments the 'high' scenario should be adopted, aligning with the scale of the Government's ambition to 2050.	
Comments Stantec's evidence states the local requirement for B8 is considered to be 609,230 sq m. The Policy plans for a shortfall of more than 270,000 sq m when assessed against Stantec's assessment, which is considered to reflect the NPPF and PPG.	211680 (Newlands (Cambridge) Limited)
Comments states strategic need has not been planned for as there is no evidence of Greater Cambridge working with adjacent Authorities to deliver on the wider strategic need, and need of an economic sector (logistics) whose importance is emphasised at Paragraph 86(c) of the NPPF, has not been planned for.	211681 (Newlands (Cambridge) Limited)
Comments analysis of gross completions is considered to form a better indicator of actual demand, as the logistics market in Greater Cambridge experiences low vacancy levels, given the lack of supply.	211682 (Newlands (Cambridge) Limited)

Summary of issues raised in comments	Comments highlighting this issue
That 317,000 sqm floorspace figure underestimates the demand for industrial/warehousing floorspace in the region, and that additional land (comprising 609,760 sqm) should be allocated ensure that the logistics sector, mid-tech, manufacturing, and life sciences sectors can address local, regional and national demands.	
Concern the housing target is not consistent with national policy as upward adjustments for growth and affordable housing have not been considered. Notes the job target is not aligned with the housing target. A job target that is higher than the housing target requires potential employees to commute into Greater Cambridge to fill those jobs, leading to an increase in in-commuting to Greater Cambridge with most of the in-commuting would be by car, particularly if public transport options are not available or the delivery of transport infrastructure projects are subject to unconfirmed funding decisions and associated development.	211244 (Manor Oak Homes – Cottenham Site), 211252 (R Harvey)
Responder comments in the interests of ensuring Greater Cambridge exceeds expectations, this suggests greater weight should be given to the 'high' scenario in the EHNU as an aspirational yet realistic scenario and would a true 'step change' be a scenario associated with even higher housing and job growth.	211658 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
• Responder comments that there is no evidence that aligning the number of homes to jobs in the way assumed by the evidence will have the impact on affordability necessary for those in the 25-44 age group currently unable to afford homes to access them. There is no evidence around the supply-price-affordability relationship to support the idea that the statistical relationship of homes will enable the needs of that particular group to be met by simply limiting the increase in supply to the specific number of additional households in that group. • Additionally, the premise of the standard method is to provide a level of housing over and above the assumed projection of households (i.e. demographic change) to improve - or at least moderate - the worsening affordability of housing. All else being equal – including housing supply and population change - affordability worsens when incomes increase. This means that in a growing economy, even if the number of homes matched the population growth linked to the number of jobs, affordability would worsen unless the supply of homes is increased further to a sufficient extent that it impacts on prices. Matching the number of homes to the number of additional households driven by economic	211659, 211660, 211661 (SmithsonHill)

Summary of issues raised in comments	Comments highlighting this issue
growth misses. GCSP's approach provides no material uplift to housing supply that might be expected to improve affordability; and is likely to create a deterioration in affordability for younger and lower income households, rather than an improvement, failing to meet need and in businesses struggling to recruit due to problems of affordability for workers. • adjustment HRRs using assumptions from 2014-based projections and to go 'halfway' to the 2008-based projections are not meeting need a That starting point from which projections look forward bakes in significant problems of affordability and a mismatch between homes and housing need in Greater Cambridge; even in 2012, Cambridge had an affordability ratio of 9,5 compared to 7.6 in East of England and 6.6 in England as a whole (Source: ONS) b There is no benchmarking of the 'as is' position in Greater Cambridge in terms of its relative position on affordability, concealed households, household formation and what this means about the level of housing required to meet needs and address the historic problems that exist.	

Summary of issues raised in comments	Comments highlighting this issue
c The adjustment to HRRs only goes ‘halfway’ to the 2008 figure. It does not explain why it does not go ‘all the way’.	
Comments that the policy should treat the economic need figures as minimum requirements: • Allow for appropriate flexibility and a level of choice for different sectors. • The job figure will likely need to evolve to align with the Government's broader growth agenda whilst ensuring the vision can be achieved sustainably. • Reflecting the need for additional jobs as indicated by the Greater Cambridge Employment and Housing Needs Update, which projects a need for between 67,600 and 90,900 additional jobs. • Historical growth trends show that the Greater Cambridge economy expanded by nearly 4,000 jobs annually during its strongest growth phase, suggesting a potential for sustained job creation. • Technological advancements in life sciences are transforming the sector, necessitating a flexible approach to employment growth that accommodates innovation rather than restricting it to historical trends.	204945 (Lolworth Developments Limited), 204462 (The Royal London Mutual Insurance Society Ltd), 204451 (Brookgate Land Ltd and Network Rail Infrastructure), 210220 (Vistry Group)

Summary of issues raised in comments	Comments highlighting this issue
• concerned by the apparent dismissal of the higher growth scenario despite the study itself clearly accepting that this 'could be achieved or exceeded'.	
The Draft Local Plan's underlying evidence base underestimates the need for storage and distribution floorspace in Greater Cambridge, which is not aligned with the area's ambitious growth aspirations.	205277 (Newlands (Cambridge) Limited)
Comments regarding the approach taken to jobs and homes forecasts including the following: • Employment and housing growth assumptions lack robust, up-to-date evidence, especially the forecast of 73,300 additional jobs. • Plan is working on outdated statistics of business needs, particularly labs • The plan cites the Iceni report but it doesn't mention 73,300 jobs • Support for the use of local data to best inform the modelling of jobs and housing growth • The Local Plan's approach to housing need is broadly welcomed, particularly its use of local data, headroom for growth, and commitment to a diverse mix of housing types and tenures, including affordable housing	201178 (Save Honey Hill Group), 201326 (D Lott), 201499 (C Meads), 202428 (University of Cambridge), 203520 (Cambridge Ahead)

Summary of issues raised in comments	Comments highlighting this issue
Responder supports the increase in jobs being planned for in the Draft Local Plan to around 73,300 additional jobs and housing supply is increased to meet this need. Housing land identified in the Plan is insufficient.	211101 (Hallam Land Management
The plan is centrally predicated on the creation of 73,000 jobs and the major strand of this is the so-called knowledge economy. The report on which it is based was written in 2022 so three years out of date.	207346 (K Rhodes)
Update the Plan to reflect the ambitions of the CPCA Local Growth Plan, including key growth sectors. Given the Local Growth Plan ambitions, rapid economic growth, transport improvements (including the collaborative work on the Greater Cambridge Transport Strategy), and government support through Cambridge Growth Company, the Plan needs to provide for at least its High scenario (59,409 homes).	205239 (Cambridgeshire and Peterborough Combined Authority)
Concern that additional sites are allocated within the Plan in order to address the shortfall of mid-tech floorspace within the current version.	211481 (Trinity College)
In order to enable the Plan to be responsive to changing market conditions and planned or new measures to alleviate infrastructure constraints it is	203906 (Cambridge Growth Company)

suggested that the policy wording allows flexibility for housing and employment growth beyond the Local Plan High Growth trajectory.	
• Statement of Common Ground does not make it clear how many houses will be built in neighbouring areas • unmet need for neighbouring authorities has not been taken into account to date.	204268 (Croudace Homes), 205140 (Home Builders Federation)
Support for aligning housing figures with the government's standard method to avoid overburdening local infrastructure and resources, and potentially needing to seek assistance from neighbouring authorities to meet a portion of the enhanced housing figure.	201656 (Huntingdonshire DC)
West Suffolk council can confirm it is not seeking to accommodate any housing need identified in Greater Cambridge.	204914 (West Suffolk Council)
Recommends that to ensure that the emerging Local Plan is positively prepared and can be found sound, the Councils must work with Huntingdonshire and North Hertfordshire to ensure there is not an unmet housing need and to ensure that strategic cross-boundary matters are considered as part of the Local Plan.	209758 (Thakeham Homes Ltd)
Concern regarding the extent of the “need” for development in Greater Cambridge and if “need” is to assist the central government in meeting their targets so that they can demonstrate that they have met at least one of their	208713 (J and C Collins)

Summary of issues raised in comments	Comments highlighting this issue
manifesto promises. If the effect of recent immigration levels is part of the need for development in the area and may be the drive by the successive governments in this regard.	
73,300 jobs projection is 'optimistic' rather than 'central' given the current economic outlook. The approach might be better framed as catering for an aggressive projection of future requirements to mitigate the risk of underdevelopment.	201005 (M Colville)
Concern the Plan does not currently provide sufficient land to meet the housing requirement	211066 (Savills)
Concern the Plan underestimates needs and additional sites are required to be allocated, and whether the Plan is "…prepared positively, in a way that is aspirational but deliverable" (NPPF Para 16).	211422 (Gonville & Caius College
The forecast R&D office employment floorspace need is already met by supply.	204637 (R Turnbull)
Housing needs cannot be responsibly, realistically or sensibly articulated without parallel consideration of all of the necessary associated infrastructure.	201581 (J Neal)

Summary of issues raised in comments	Comments highlighting this issue
Concern that new infrastructure may not be delivered in a timely manner given the speed of build out and to the extent that is required.	202120 (Elsworth PC)
The plan currently doesn't allow for enough housing for any increase in local employment and is not sufficient to serve the employment currently in the area.	205172 (L Gardner)
While some new jobs will be created by the development at Cambourne North, it remains to be seen how many go to local residents and whether they will include the mix that the Plan hopes for.	207097 (Elsworth PC)
As there is not enough housing or water for existing residents, that will create a need to supply more of both, which can't be done without exceeding climate targets set by law.	205214 (A Copping)
Increasing supply of housing stock should reduce house prices and make homes more affordable for people working in Cambridge, however the initiative risks being undermined without legislation to prevent the purchase of accommodation for short term letting.	201918 (A Davidson)
The vast majority of migration will be in the social care sector, relatively temporary and relatively low paid (though hopefully sensibly paid). The projections for population growth deliberately avoid the impact of Government Policy towards immigration and we know that all political parties' attitudes towards immigration control are hardening significantly.	207342 (K Rhodes)

Summary of issues raised in comments	Comments highlighting this issue
The policy should stipulate “A minimum of 48,195 new homes meeting the needs of the total population of which at least 20 per cent must be social at a maximum of 60 per cent of market rents and a further 20 per cent affordable at a maximum of 80 per cent of market rents.”	208747 (Trumpington Residents Association)
The Local Plan must shift from a growth-led strategy to a resource-constrained model. This requires the plan to stop treating employment projections as inevitable targets and instead treat the region's environmental limits—specifically the depletion of the chalk aquifer—as the primary cap on development.	202732 (Cambridge Past, Present and Future)
Stronger rural proofing should ensure neighbourhood targets, specialist housing and job growth are aligned with rural transport, digital connectivity and community infrastructure capacity.	203143 (Cambridgeshire ACRE)
Objection to the policy’s prescriptive requirements on tenure for older person’s housing. Encourage the policy wording to be revisited to support the full range of specialist housing across all tenures, with proposals supported where they align with specific policies such as Policy H/SH. Suggest creating separate targets for housing for older people and housing for disabled people.	201944 (Anchor Hanover)

Summary of issues raised in comments	Comments highlighting this issue
Concern specialist housing for older people will not all be delivered in the plan period, due to phasing and locations are located as part of wider/ larger proposals, delivery lacks certainty.	211261 (Terra Strategic)
1500 new nursing and residential care spaces is not enough for this ageing population and nothing for the needs of the pre-nursing stage elderly who live alone.	204522 (C Forbes-Cable)
Concerned that the figure for student accommodation need is misleading. More recent evidence is provided, which seeks to better reflect the plan period.	203985 (Anglia Ruskin University)
Concern regarding data inconsistencies between the housing requirement in S/JH of 2,295 dwellings per year and the housing need in Appendix D of approx. 1,600 homes. There is a discrepancy of 695 houses in these two data sets. If extrapolated across the plan period this would imply a potential discrepancy of 13,900 homes.	208714 (J and C Collins)
Comments regarding the housing requirements for neighbourhood plans element of the policy, including: • the Plan to use “indicative housing figure” for neighbourhood plans (not “requirement”) • correct the Eddington census anomaly that inflated Girton’s baseline	202217 (Girton PC)

Summary of issues raised in comments	Comments highlighting this issue
If the policy is to retain a section setting out the housing requirement for neighbourhood areas, then an additional section should be added to include provision for housing in areas that are not neighbourhood plan areas. This could set out projected growth in other villages within the hierarchy and offer a greater structure to growth across the district.	204492 (Rosconn Group)
There is no mechanism to deliver the identified housing need for Stapleford and Great Shelford. Local evidence demonstrates an affordable housing need of 648 for this area. over the period 2023 – 2043.	208901, 208902 (Nightingale Land and Hill Residential Ltd)
Paragraph 3.43 of the Strategy Topic Paper explains this change by highlighting that Cambridge's current commuting ratio is below 1, meaning there is a greater number of employees who are in commuting to the region. Whilst this is acknowledged, this fact is arguably a demonstration of historic under-delivery of housing relative to jobs growth, rather than a coherent justification for a continued lower housing requirement moving forward. In light of this, it is therefore disappointing that Greater Cambridge are content to pursue only the minimum housing requirements, effectively shifting residual housing demands into neighbouring authorities, which risks embedding unsustainable commuting patterns and increasing pressure on existing infrastructure in and around the City.	209716 (Endurance Estates)
See comments made previously on the Themes.	202340 (P Deer)

Summary of issues raised in comments	Comments highlighting this issue
The Plan foresees 73,000 additional jobs in the area up to 2045, but only 50,000 new homes. This leaves a deficit of 23,000 homes. The planned deficit of 23,000 homes inevitably means that even more people who work in Cambridge and S Cambs will have to travel in from the hinterland, and a large majority of these people will travel by car, as they do now, making Cambridge and S Cambs' traffic problems and air quality even worse than they are now. The estimate of 73,000 new jobs may be an under-estimate because there is already 1 million square metres of additional employment space planned in the area by 2045, which I estimate could provide space for up to 83,000 new jobs. Plus the rise in homeworking since COVID means there will be jobs in excess of those located in formal, non-domestic employment space. Creating workspaces far in excess of the planned supply of housing will only exacerbate the housing shortage and further increase house prices and rents locally.	203277 (J Palmer)
Concerns the strategy proposed to meet the identified need is deliverable and about the location of new development, the majority to be delivered by new settlements to the north and west of Cambridge, ignoring growth in the villages east of Cambridge with access to the city and would benefit from services and facilities that will support Cambridge East.	211470 (Beechwood Estates Ltd), 211475 (G Robinson and Partners)

Summary of issues raised in comments	Comments highlighting this issue
Comments provision made for 48,195 new homes across a range of tenures. Which is existing adopted supply (37,865 units), plus 13,463 additional units planned for under this plan meeting the need plus a 6.5% (3,133-unit) buffer (i.e. 51,328 units in total, comprising of existing, adopted sites and draft allocations under this draft plan). Suggests the distribution of development could be made more sustainable. Over-reliance on larger sites to come forward and be built out within the plan period. Requires a more proportional breakdown to allow for organic growth in suitable settlements to ensure that there are appropriate levels of development in these locations. Allocate more smaller and medium sites for development to ensure that delivery momentum can be sustained in the short term.	208336 (Gladman Developments)
Concern there is a question of soundness if the plan is not effective in delivering housing (NPPF 2024 paragraph 36) due to increase in requirements of new standard method and this must be addressed.	208362 (Endurance Estates)
Respondent argues the Standard Method figures correlates with the job and housing projections, that adoption of these figures is appropriate. However, in accordance with the requirements of the NPPF this is not considered to be an appropriate strategy accounting for reasonable alternatives and other	208376 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
publicly available evidence. Suggests Policy S/JH is not justified and the DLP should not be considered sound and to revise the development strategy to align with the higher growth scenarios for Greater Cambridge.	
Responder requests clarification of data source used to determine housing units and bed spaces cited in the Paragraph 3c of Policy S/JH. Queries cross-referencing with County Council's demand profile? States their data, the projected need for residential and nursing beds for individuals aged 18–64 within Cambridge City and South Cambridgeshire is approximately 12 beds by 2041, appears to differ from the figures presented. States the difference is significant and recommend that the these are reviewed and confirmed before being published due to the risk of a) oversupply b) inappropriate type of supply of housing being developed as a result.	210542 (Cambridgeshire County Council)
Comments Paragraph 36 a) of the NPPF is clear that to be positively prepared, the Local Plan should, as a minimum, seek to meet the areas objectively assessed housing needs. This is the minimum level of growth that should be planned for and clearly is not in line with the growth ambitions set out at the national level or in the Local Growth Plan. The level of growth should be higher than the minimum level of growth as proposed using the Central level of growth or standard method housing and job figures.	208378 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
Responder states national policy is clear that meeting an area's objectively assessed needs should only be a minimum (i.e. Paragraphs 11b, 36a & 62 of the existing Framework and Policy PM2 1.b, Policy S1 1.a, and Policy PM14 2.a of the emerging Framework) and that Plans should be prepared positively. Additional housing should be considered and can be achieved through the Government's railway station policy the Plan strategy and the infrastructure implications associated with unlocking this growth should be factored in and reflected.	211072 (Ashwell & Morden Landowner Consortium)
Responder states Plan currently covers a plan period to 2045. The provision for 48,132 dwellings proposed over that period, therefore will deliver less than 50% of the government's lower aspiration of delivering 100,000 dwellings in the Greater Cambridge Area by 2050 or less than 33% of the housing required using the higher figure of 150,000 dwellings. Based on this, it is considered that the levels of job and housing growth targeted are not justified and are not an appropriate strategy taking into account the reasonable alternatives. Policy S/JH is considered unsound and requires amendment. Increase the level of forecast jobs and homes to be delivered the Plan to ensure alignment with the Government's planned growth for Greater Cambridge.	208379 (NIAB Trust)

Summary of issues raised in comments	Comments highlighting this issue
Responder recommends **a**llocation of additional small and medium development sites to provide greater flexibility and help mitigate against slow or non-delivery of strategic sites to enable delivery of necessary homes and jobs, and redress the current fall in housing land supply, as recognised at NPPF paragraph 73.	208386 (NIAB Trust)
Responder states a justification for adopting a higher growth scenario in the Plan to meet the government's growth targets, achieved through the allocation of further sites on locations where changes to the NPPF make it inevitable that they will otherwise come forward as speculative applications.	211471 (Beechwood Estates Ltd), 211476 (G Robinson and Partners)
Planning for growth in workspaces that races far ahead of the planning increase in housing supply does not support the stated environmental and transport aspirations, and in fact it makes it impossible to achieve them. Indeed, further growth in workspaces in the countryside, away from housing and train links, pushes in precisely the opposite direction. Rather than the current emphasis in the Local Plan on building as many new dwellings as possible, there should be more emphasis on limiting the number of new workspaces – so new homes have the intended effect of making homes more affordable, especially for young people.	203279 (J Palmer)
The Plan's commitment to accommodating employment growth and supporting the clustered nature of the Cambridge innovation economy is	208932 (Cambridge Growth Company)

Summary of issues raised in comments	Comments highlighting this issue
supported. CGC acknowledges that the draft Plan's employment growth projections are based on a 'central scenario' and are reflective of identified constraints. However, we would like the draft Plan to be clear that subject to resolution of those constraints, employment growth exceeding the Local Plan central scenario could be delivered within the Plan period and that policy wording should include sufficient flexibility to accommodate higher and accelerated levels of growth prior to 2045.	
CGC would like to see the Plan more explicitly recognise the value of intensifying and expanding the identified innovation clusters to fully realise growth potential and agglomeration benefits. Enabling an intensification /densification of cluster sites should where appropriate incorporate an element of housing, including innovative housing typologies, to help support their function. CGC also welcomes the draft Plan's support for a diverse range of commercial space to accommodate different stages of business and employment growth. CGC also supports the draft Plan's approach to meanwhile uses, circular economy principles and low-carbon development.	208933 (Cambridge Growth Company)
Regarding para 2.10 of the Draft GCLP central case as the 4,000 additional jobs per annum is not consistent with the EHNU 2025. The proposed industrial need requirement of 317,000sqm set out in paragraph 2.12 is considered to be an under-estimate of the overall	209173 (Turnstone Real Estate Limited)

Summary of issues raised in comments	Comments highlighting this issue
requirement if market signals are appropriately applied, particularly in respect of existing floorspace that will be displaced by mixed use allocations, the significant scale of aging industrial stock that may be lost/redeveloped, and the scale of suppressed demand. Responder recommends the policy and evidence base should be updated, including having regard to the revised additional job number as described.	
Recommend Councils consider the 'high' job growth scenario of c.4,300 jobs per year – if not even higher and the associated level of housing provision.	209694 (CEG Land Promotions Ltd)
The Plan's focus on delivering a diverse mix of housing types and tenures, including affordable housing, is supported as is recognition of models such as build-to-rent, Community Land Trusts, co-living and employer-led housing. Achieving a greater diversity of housing than historically delivered by the market should be a clear objective of the Plan and as appropriate made explicit for site allocations.	208934 (Cambridge Growth Company)
The plan provides for an additional 73,300 jobs over 21 years, a growth rate of 1.3% pa. The 73K additional jobs is consistent with the additional jobs supported by the standard method of assessing housing need, based on population growth and affordability uplift, adding in workers who commute into Greater Cambridge. However, the analysis uses 2011 levels of in-	208935 (Cambridge Growth Company)

Summary of issues raised in comments	Comments highlighting this issue
commuting, the most recent comprehensive data, so it is very likely to be undercounting current levels of in-commuting and therefore undercounting the jobs that would be supported by the standard method. However, it is acknowledged that there are no more up to date published data sources to evidence.	
The supporting Iceni Employment and Housing Needs Update acknowledges that the high growth scenario could be achieved or exceeded. For this to take place a step change in infrastructure investment and development would be needed to facilitate growth, notably in transport to connect in and move labour, as well as in wider services infrastructure and the expansion of both housing and commercial development programmes. In order to enable the Plan to be responsive to changing market conditions and planned or new measures to alleviate infrastructure constraints it is suggested that the policy wording allows for housing growth beyond the Local Plan High Growth trajectory.	208936 (Cambridge Growth Company)
Comments dependent on allocations that have not come forward from the adopted plans. No confidence in those sites, adopted in the 2018 Local Plans, will now come forward if there has been no movement on them since adoption.	208331 (Gladman Developments)

Summary of issues raised in comments	Comments highlighting this issue
The respondent objects to Policy S/JH, stating it should be considered alongside Policy S/DS, which they also oppose, as both policies are interconnected and impact future growth in Greater Cambridge. While supporting the objective of meeting housing needs, the respondent criticises the reliance on large sites for housing delivery, arguing it will hinder the necessary increase in housing supply. The respondent believes the draft plan's focus on Neighbourhood Plans is insufficient and limits growth opportunities, recommending more direct allocation of smaller and medium-sized sites. The respondent urges a review of the Housing and Employment Land Availability Assessment to identify deliverable sites near sustainable settlements to support local growth. They reference a report indicating that affordable housing is crucial for attracting skilled workers and supporting productivity growth in industrial clusters.	204492 (Rosconn Group)

Summary of issues raised in comments	Comments highlighting this issue
The respondent notes that Greater Cambridge has a significant affordable housing shortage, with demand outpacing supply, particularly for a diverse range of job roles. They argue that the proposed Grange Farm New Settlement will not address immediate housing needs, as it will take several years to deliver homes. The respondent suggests that their client's site at Land North of Pampisford Road is suitable for allocation, being a medium-sized greenfield site that can quickly contribute to housing supply. They conclude that Policy S/JH is unjustified and ineffective, stating it will delay housing delivery and does not align with the requirements of the NPPF.	
ECC acknowledges that “Greater Cambridge economy is nationally and internationally important”. For the Plan to be effective it is important that in developing the employment strategy there is acknowledgement of the cross boundary and strategic matters that must also be clearly articulated. In particular for the economy, as previously highlighted within the ECC	210474 (Essex County Council)

Summary of issues raised in comments	Comments highlighting this issue
response, the emerging Greater Cambridge Local Plan must acknowledge and appreciate the opportunity provided for international connectivity by London Stansted airport. Given the international significance of the employment clusters, and for the Local Plan to be effective it must have an appreciation of the proximity to London Stansted airport, and also seeking to ensure that surface accessibility to improve connectivity with Greater Cambridge is fully explored when developing the emerging Plan.	
The latest Plan confirms previous assessments of jobs and housing needs, but it does not reflect the reality that many new jobs in Cambridge and S Cambs are in biotech and IT fields, which are notoriously prone to downturns and uncertainty. It is not possible to predict accurately how many jobs and workplaces there will be in Cambridge and S Cambs in 20 years. Arguably, it would be better to focus on five-year time horizons, when forecasts of jobs, workplaces and housing needs are more reliable.	203291 (J Palmer)
Terra supports the provision of a minimum of 48,195 new homes in the period up to 2045 to meet the objectively assessed needs in Greater Cambridgeshire. It is noted that the current supply is cited as 37,865 with a requirement for 10,330 additional new homes to be identified as new allocations to meet the housing need.	211217 (Terra Strategic)

Summary of issues raised in comments	Comments highlighting this issue
Land at Oakington Road, Cottenham is sustainably located adjacent to the Development Extents of Cottenham and constitutes an appropriate medium size site for housing to come forward.	
LSH supports the requirement of providing a minimum of 48,195 homes over the Greater Cambridgeshire area. The Housing Needs of Specific Groups in Cambridge and South Cambridgeshire Report (August 2025) concluded that there was an annual need in Greater Cambridge for 2,309 dwellings, with paragraph 7.159 stating that there is an acute need for affordable housing in both local authorities (Cambridge City and South Cambridgeshire) and that it is clear that the provision of new affordable housing is an important and pressing issue in the area (para. 7.169).	211230 (Living Space Housing)
Concern for provision of specialist housing accommodation as housing needs of specific groups are accounted for within the overall housing requirement of 48,195 dwellings, the proposed housing requirement falls short of the Government's standard method requirement, the calculation of which does not evidence how it has included consideration of the housing needs of specific groups. There is no Housing and Economic Needs Assessment such that no evidence is provided identify how the housing needs of specific groups have	211274, 211275 (Woolsington One Ltd)

Summary of issues raised in comments	Comments highlighting this issue
been calculated, or the implication of this on the overall housing requirement for the Plan.	
Responder states minimal buffer for housing land supply across the plan period creates an unnecessary risk that Greater Cambridge will fall below the 5 years needed. The way to resolve this would be to include a greater number of short-medium sized sites.	210711 (Gladman Developments)
The Plan states land identified within New Sites totals 13,463, a substantial proportion of which comprises of large strategic allocations typically having greater infrastructure requirements unlike smaller sites that can be delivered more expediently.	211600 (LGH Hotels Management Limited)
Concern does the Plan period meets the NPPF requirement (set out at para. 22) for strategic policies to look ahead over a minimum 15 year period from adoption, and for policies to be set within a vision that looks ahead at least 30 years, where larger scale developments such as new settlements and significant urban extensions are proposed.	211038, 211051 (Wates Developments)
Concern the supporting text of the Plan acknowledges the need for flexibility to allow for potential achievement of higher job growth, but this has not been reflected in the wording of Policy S/JH itself. As such there is a potential risk of restricting job growth and failing to meet the economic objective of sustainable development included in the NPPF (para 8a).	211039, 211052 (Wates Developments)

Summary of issues raised in comments	Comments highlighting this issue
Concern strategy relies heavily on Northstowe to deliver homes. Must be matched by infrastructure delivery mechanisms for public transport upgrades, social and civic facilities, and timely delivery of healthcare facilities as assured by S106 planning obligations. Failure to deliver these in line with obligations jeopardises Northstowe's sustainability and ability to support future housing growth. Master developer must pursue a strategy leading to timely, visible, and quality infrastructure delivery, in conjunction with quality, affordable and desirable homes, improving delivery rates.	208074 (Northstowe Town Council)
Comments that the Plan only meets the minimal "objectively assessed need" leaves no headroom for the extra growth Government and industry partners are actively seeking to stimulate. A conservative outlook means the Plan could fall short of the Government's and Combined Authority's ambitions. If growth even partly approaches the higher national expectations, the planned employment land and floorspace would be insufficient to support it.	211487 (Trinity College)
Concern Policy S/JH identifies objectively assessed needs over the plan period for 73,300 additional jobs to support knowledge intensive sectors and provide a diverse range of local jobs. The Greater Cambridge Employment and Housing Evidence Update 2025, this figure equates to	211513 (Trinity College)

Summary of issues raised in comments	Comments highlighting this issue
317,000sqm of industrial and warehousing floorspace (Use Class B2/B8). Within the draft plan is only a supply of 29,000sqm demonstrating a significant shortfall of approximately 288,000sqm across the plan period.	
Land at Kingsfields (land north and south of A428) is well positioned to support the objectives of Policy S/JH and the wider spatial strategy of the Local Plan. Its relationship with the proposed EWR corridor represents a rare opportunity to align employment growth with nationally significant infrastructure investment, consistent with national policy objectives to support sustainable economic growth, productivity and modal shift. This representation is further supported by a Transport Written Representation prepared by Pell Frischmann, which demonstrates the suitability and deliverability of transport connections between the Land North of the A428 and Cambourne North and the central Cambourne. It is also reiterated that the employment land is capable of delivery in parallel with the A428 improvements and EWR proposals.	208277 (The Church Commissioners for England)
Responder comments the allocation Land north of A1307, Bar Hill (Slate Hall Farm) includes approximately 220,000 sqm of employment floorspace. The Council's decision to allocate this site for development misses an opportunity to allocate housing land for development at Bar Hill to provide homes in close proximity to major centre of employment.	211597 (LGH Hotels Management Limited)

Summary of issues raised in comments	Comments highlighting this issue
Land at Denny End Road, Waterbeach (HELAA Site: 56211) Responder states the Plan does not currently provide sufficient land to meet the housing requirement due to the continuing reliance on in-commuting; and strategic sites. Suggests the allocation of Land at Denny End Road, Waterbeach.	204927 (Savills)
Responder states that Forest City is a proposal to deliver 400,000 new affordable homes. Delivered through a development corporation model combined with a community land trust structure, enabling housing affordability and employment. Forest City is unlikely to be accommodated within the Local Plan at this stage, given its need to further develop its evidence base, however, we would hope that GCSP would not oppose the proposal.	208129 (Albion City Development Corporation Ltd)
Land West of London Road, Fowlmere Responder requests flexibility to support higher jobs growth to be incorporated in the Plan. To provide appropriate flexibility for unforeseen economic growth, a range of additional contingency site allocations should be included within the housing trajectory. Ensuring the Plan is positively prepared, justified and effective in accordance with the NPPF tests of soundness. This site offers a sustainable location for development and is	211040, 211053 (Wates Developments)

Summary of issues raised in comments	Comments highlighting this issue
immediately available, contributing to the Councils' short to medium housing delivery rates.	
The Local Plan supporting text also confirms that the Neighbourhood Plan areas can choose to meet or exceed the housing requirement but that the delivery of allocations already included in the GCLP cannot be used to meet the housing requirement of a neighbourhood area. The Stapleford and Great Shelford Neighbourhood Plan covering the area does not include any allocations/ the level of anticipated growth (c.134 net new homes) is considered to significantly underplay the role of the villages and the potential these highly sustainable settlements can play towards delivering the Vision for Greater Cambridge.	209971 (Granta Land Ltd)

Policy S/DS: Development strategy

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Broad support for the development strategy concentrating jobs and homes within urban centres, new settlements or in close proximity to proposed infrastructure, as the most sustainable locations helping to reduce the need to travel, promoting public and active travel, and have the least climate impact. Comment from Natural England and Anglian Water that the development strategy principles align with their strategic priorities and long-term ambitions.

Comment that the plan should align with the Cambridgeshire and Peterborough Spatial Development Strategy, including suggestion the plan period should be extended to 2050.

Objection that the strategy is too conservative in identifying insufficient jobs and homes for sustainable growth in Cambridge, does not align with the Government's growth agenda, and that the housing requirement does not align with jobs growth. Comment that the Plan does not provide enough housing land to meet the needs. Objection that the Plan is not meeting the need for specific sectors including large scale warehousing, mid-tech, agri-tech, and data centres.

Concern that the development strategy is locating housing away from employment sites with negative consequences, including increased pressure on transport corridors, with the suggestion that employment and housing must be planned together in mixed-use development to reduce the need for costly public transport extensions.

Objections that the strategy places an overreliance on a few large strategic sites for growth, which require uncertain new infrastructure, often without funding or consent, that risks delivery, that is contrary to the NPPF requirements for a proportion of homes on smaller sites and for enhancing rural community vitality, with the suggestion that there is justification for release of land from Green Belt, that a 20% headroom is included and that additional smaller sites should be allocated to ensure delivery early in the plan period and support small/medium housebuilders to enhance housing diversity and foster local growth. Comments that the housing trajectory is based on over simplistic delivery rates and is not credible, with historical data demonstrating slower delivery from strategic sites. Comments suggesting a diversified strategy with proportionate growth on the edge of Cambridge, in expanded existing settlements and development along transport corridors, with various sites promoted. Comments raising concerns with the scale, delivery and impacts of strategic sites including Grange Farm, Cambourne North, Cambridge East. Comments raising concerns with the anticipated delivery from windfalls, including the windfall allowance, and that the Local Plan is dependent on allocations that have not come forward in the adopted Local Plans.

Comments in support of not removing additional land from the Green Belt as it is unnecessary to meet development needs. Concern with the policy approach that development needs alone do not justify Green Belt release, that the strategy was determined ahead of the Green and Grey Belt review, and that updated evidence is needed including a review of grey belt. Suggestion that there should be targeted review of the inner Green Belt to take a holistic approach to sustainable development.

Concerns around adequate water supply and the lack of infrastructure to support the proposed development, including that the required infrastructure may not be deliverable through the development process alone. Concern that there is a lack of clarity over the timescales for delivery of strategic transport infrastructure, the need for sustainable transport alternatives to the private car including in the rural area, and raising concerns about the impacts of specific transport schemes such as Cambourne Station, East West Rail and CSETS. Comment that the Plan cannot be properly considered without the Greater Cambridge Transport Strategy.

Concerns that the provision of Gypsy and Traveller pitches within strategic allocations, regularisation of existing sites, household dissolution and enforcement action is likely to result in over-provision within the plan period. Additionally, concerns that the Local Plan does not include a roadmap or commitment to delivery within strategic sites, and that the burden is placed on optimisation and intensification of existing sites particularly through S/AMC/GT. Concerns that Smithy Fen is already out of proportion with the proposed number of pitches considered appropriate for new communities, and that adopted planning policies H/21 and H/22 have not been carried forwards.

Response to main issues raised in representations:

Support for the development strategy is noted.

This version of the plan is being produced ahead of the Spatial Development Strategy so cannot be informed by it. The plan period of 2024-2045 is in excess of the 15 years required by national planning policy, and is considered an appropriate time horizon to plan for, balancing providing certainty for the long term with the difficulty of forecasting development and other needs far into the future.

For both employment floorspace and housing the plan includes a flexible supply that provides headroom above the identified objectively needs, as set out in below, with further detail provided in the Strategy Topic Paper.

Anticipated supply from completions in 2024/25, existing commitments, the windfall allowance and new allocations is in excess of the housing requirement of 48,069 dwellings for 2024-2045 set out in the Local Plan. A headroom of 8.2% is provided. There are also a number of strategic sites that will continue delivering beyond the plan period. The Housing Delivery Study – Addendum (2026) sets out that there is no national planning policy requirement for headroom to be included over the plan period, but it is sensible to do so to provide resilience. It also highlights that with the requirement to review local plans every 5 years, a plan review can address any shortfall later in the plan period if it arises, and that Greater Cambridge has more organisations supporting the delivery of housing and infrastructure delivery tools at its disposal than the majority of local planning authorities across the country. The Cambridge Growth Company's explicitly stated role is to enable and accelerate key developments in and around Cambridge. As such this area will have the tools to accelerate housing delivery beyond the rates included within the housing trajectory, which would again add to the housing supply within the plan period. The headroom of 8.2% is therefore considered to be appropriate for Greater Cambridge.

Comments that the development strategy locates housing away from employment sites with negative environmental consequences have been considered. The development strategy directs development to the most sustainable locations to reduce commuting over long distances and enable travel by sustainable modes, whilst having regard to Green Belt purposes. The strategy focuses on strategic sites that have existing or proposed public and active travel connections to Cambridge and other key employment locations. The strategy includes significant mixed use development within and on the edge of Cambridge outside of the Green Belt

close to employment centres, in particular at Cambridge East, and also includes housing development close to employment locations away from Cambridge, including at Land adjacent to A11 and A1307 at Grange Farm.

The Councils have considered comments that the Plan is not meeting the need for specific sectors including large scale warehousing, mid-tech, agri-tech, and data centres. For large scale warehousing, the Council's evidence identifies a robust need for warehousing meeting Cambridge market needs. It would not be appropriate for the Greater Cambridge Local Plan to identify and apportion a need for strategic warehousing facilities serving national or regional markets that include but go beyond Greater Cambridge. The future Cambridgeshire and Peterborough Spatial Development Strategy (SDS) provides a credible prospect that a long term solution to the need for warehousing and logistics serving national or regional markets affecting Greater Cambridge and the wider Cambridgeshire and Peterborough area will be identified in the foreseeable future. Ahead of the SDS, emerging local plans in the area provide a positive approach in responding to evidenced needs for warehousing and logistics, including for warehousing and logistics serving national or regional markets where a need has been identified. Noting significant supply in the wider area and that the sub-regional and regional need is not confirmed, Cambridge City Council and South Cambridgeshire District Council consider that there is no case for immediately allocating additional supply in the emerging Greater Cambridge Local Plan that would address warehousing and logistics needs serving national or regional markets. For mid-tech, the Councils' Industrial and Warehousing Study 2024 explored this topic including engaging with mid-tech occupiers, identifying mixed views. The Proposed Submission Plan includes sufficient allocations in priority locations that meet the need identified in that Study. For agri-tech, whilst there are Agri-Tech strengths across the wider region, the concentration is less distinctive in Greater Cambridge and clustering is less apparent compared to other sectors. The Councils' evidence does not identify a need for an additional site in Greater Cambridge to enable the clustering of AgriTech businesses. For data centres, while the Councils' evidence does not explore this issue explicitly, very few representations have raised the need for this emerging use. The Councils consider that the

very significant amount of employment floorspace included in the Plan would provide opportunities for such uses to come forward in desired locations.

In response to objections that the strategy places an overreliance on a few large strategic sites for growth, the development strategy focuses on the most sustainable locations to create vibrant, self-sustaining communities with a range of facilities and services, supported by planned high-quality public transport, and delivering homes to meet the needs of a variety of groups. The strategy promotes effective use of brownfield land including development at Cambridge East on the edge of Cambridge, released by the vacation of the airport, as well as at consented new settlements that include significant brownfield land at Northstowe, Waterbeach and Bourn Airfield. Consented sites such as these are included in the strategy and will continue to build out during the plan period. The strategy also provides flexibility by directing development to a range of locations, including smaller village sites, to meet local needs and ensure a consistent supply of housing delivery.

In terms of the deliverability of the strategic sites included within the Plan, the Infrastructure Delivery Plan identifies the infrastructure requirements relevant to each of these, including identifying funding and delivery timings. The Housing Delivery Study – Addendum (2026) considered the certainty and timing regarding the key infrastructure that each strategic site relies upon, to inform its conclusion that the trajectory for each site and the trajectory as a whole is deliverable.

The Councils recognise that the proposed strategic allocations will have significant impacts. Equally, alternatives to the proposed strategy, for example dispersing development to South Cambridgeshire villages, has been evidenced to have transport impacts that could not be mitigated. The impacts for each site have been carefully considered through evidence and via engagement with relevant organisations, for example via the further exploration of transport, ecology and landscape impacts associated with Cambourne North. Drawing on this evidence, the Infrastructure Delivery Plan sets out for each strategic scale site the infrastructure

required to mitigate the impacts of development, and the allocation policies each include firm requirements to ensure that all impacts of development are addressed.

The Councils have carefully considered the approach to Green Belt in this Plan. Drawing on our evidence and consultation feedback, we do not consider that our development needs alone provide the ‘exceptional circumstances’ required in national policy to justify removing land from the Green Belt in this Local Plan, having regard to the identification of other sources of land supply that can meet needs sustainably without the need for Green Belt release. We have, however, identified site specific exceptional circumstances for releasing land from the Green Belt at the Cambridge Biomedical Campus and Babraham Research Campus. Whilst we do not consider it necessary to release Green Belt to meet the general development needs identified in this plan, we have updated our Green Belt study in accordance with the latest National Planning Policy Framework and Planning Practice Guidance to ensure it provides a robust assessment, including to identify grey belt land within Greater Cambridge.

The Councils recognise the significance of the water supply challenge in Greater Cambridge, and have explored this topic in depth with all relevant national and local partners. As part of the Proposed Submission documentation, a Statement of Common Ground regarding water supply has been agreed between these partners, confirming that, whilst water supply issues will need to continue to be carefully monitored, the Local Plan has appropriately considered water supply issues. There will be statutory water supply planning by way of the Cambridge Water’s WRMP29 which will consider water supply planning over a minimum 25 year horizon, including taking into account the Local Plan. Water Resources East will also be producing an updated Regional Water Plan. Subject to appropriate infrastructure planning and associated approvals, funding and delivery through these processes, water supply is not a barrier to delivering the level of development proposed in the Proposed Submission Local Plan.

Comments on transport have been considered. Transport evidence supporting the Proposed Submission Plan demonstrates that

the transport network can accommodate the sites included in the development strategy subject to the provision of appropriate mitigation. This mitigation is set out in the Infrastructure Delivery Plan. In addition, the draft interim Greater Cambridge Transport Strategy sets out proposed solutions to address the connectivity needs of Cambridge City Centre, and also all other strategic transport schemes required to deliver the strategic sites identified in the Local Plan development strategy. As such, the draft interim GCTS provides sufficient proportionate evidence at this Regulation 19 stage to support the delivery of the sites within the strategy. The CPCA is committed to approving a final GCTS in November 2026 to support the submission of the Local Plan for examination in December 2026.

A response to the representations received relating to the delivery of specific sites, including their lead-in times and build out rates, and relationship with the delivery of infrastructure is set out in the response to representations on Appendix D (previously Appendix E). The Housing Delivery Study for Greater Cambridge – Addendum (2026) sets out AECOM's recommendations for responding to the representations relating to housing delivery, including the windfall allowance, and it also sets out AECOM's review of the housing trajectory for the Local Plan, including considering the Councils' housing trajectories for the new allocations and the overall deliverability of the development strategy. Appendix 10 of the Development Strategy Topic Paper (2026) sets out how the Proposed Submission Local Plan housing trajectory has been created, the Councils' assumptions for the deliverability and developability of each new allocation, and detailed annual trajectories for each of the new allocations. The Housing Delivery Study – Addendum (2026) concludes that the Proposed Submission Local Plan housing trajectory is deliverable, and that there is a balanced mix of viable sites that can deliver across the plan period.

Actual completions and allocations are anticipated to deliver a significant proportion (just over 87%) of the housing requirement of 48,069 dwellings, with the remainder (just under 13%) anticipated to be delivered by windfall sites. There is a history of windfall delivery in both Cambridge and South Cambridgeshire and the policies in the new Local Plan do not seek to limit the delivery of

windfall sites compared to current or previous policies, therefore it is considered realistic that new homes will continue to be delivered on windfall sites. The Housing Delivery Study – Addendum (2026) confirms that the recommendations in the Housing Delivery Study (2021 and 2025) for the windfall allowance are realistic and reliable for use in plan-making in the Greater Cambridge area.

The Councils have considered each of the adopted allocations from the Cambridge and South Cambridgeshire Local Plans 2018 in light of paragraph 127 of the NPPF 2024, and the results of this assessment are included in Appendix 3 of the Development Strategy Topic Paper (2026). The Councils' overall conclusions on which sites should be allocated in the Proposed Submission Greater Cambridge Local Plan, taking account of all other evidence, are set out in Appendix 8: Review of sites to inform identification of allocations at Proposed Submission stage.

The Councils consider that completions in 2024/25, existing commitments, proposed new allocations, and the windfall allowance have a good prospect of delivering the objectives of paragraph 73a of the NPPF 2024, which sets out that at least 10% of the housing requirement should be on sites no larger than one hectare. An alternative approach of allocating specific sites to demonstrate compliance would require identifying large numbers of small sites in the rural area, that would otherwise be enabled to come forward anyway via the other policies in the plan, including for example Policy S/SH, and as assumed in our windfall allowance. This would significantly add to the plan making process and compromise the aims and principles of our development strategy, by directing a significant portion of growth to less sustainable locations where levels of car use would be higher, impacting on our response to the challenges of net zero carbon and Climate Act obligations. It would also likely result collectively in requiring large amounts of land to be released from the Green Belt as the majority of the larger and better served villages are located within the Green Belt. Information on the likely supply of homes on sites of 1 hectare or less is set out in Appendix 2 of the Development Strategy Topic Paper (2026).

The Accommodation Needs Assessment of Gypsies, Travellers and Travelling Showpeople (ANA, 2025) makes recommendations for meeting the needs of Gypsies and Travellers in Greater Cambridge, including through turnover on existing sites, regularising of sites that are not permanently authorised, additional pitch provision using existing sites, making pitches on existing sites available, sites becoming vacant through household dissolution, and new sites for permanent pitches identified either as standalone sites or associated with major development sites. Each of the recommendations included in the ANA in terms of potential sources of supply to meet the identified needs of Gypsies and Travellers have been considered by the Councils, and the results are set out in Appendix 11 of the Development Strategy Topic Paper (2026). Although it is anticipated that around 185 pitches will be delivered within the plan period, this is based on assumptions relating to: household dissolution, pitches being made available where they are currently occupied by non-travellers, and strategic sites delivering new sites within the plan period. It is important that there is flexibility within the supply to enable sites to be brought forward at the appropriate time to meet identified needs.

Amendments have been made to Policy H/GT to clarify the principles for the development of traveller sites within strategic sites, including in relation to their location within the site and their delivery. Policies H/21 and H/22 from the adopted South Cambridgeshire Local Plan have been carried forwards into Policy H/GT. Policy S/AMC/GT is intended to set out the principles for proposals relating to the reconfiguration of sites to ensure that they result in an improvement in health, safety and living conditions for Gypsy and Travellers. Within South Cambridgeshire, there are existing concentrations of Gypsy and Traveller sites within specific parishes. For each of these parishes, Gypsy and Traveller pitches make up 1.1% to 2.6% of the ‘dwellings’. Whereas, for strategic sites, the number of pitches would amount to between 0.24% and 1.2% of the ‘dwellings’ on the site.

Overarching

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for Development Strategy includes: • Broad support for the 7 strategic priorities. • excellent proposals and detailed intentions that are well communicated • Support for strategy, specifically the retention of the NEC allocation and policy support for employment-led development, site intensification, in a sustainable location. • We welcome this vision document with its focus on new sustainable sites on active travel routes. • For stated order of preference for future housing land-use and retaining and enhancing the Cambridge Green Belt • limited infill in rural villages where public transport is poor and car travel is the only realistic option • support for the growth ambition and strategic direction, and inclusion of additional headroom in both jobs and housing projections. • Support Cambourne North being identified as an integral part of the strategy to meet housing, employment and community needs and deliver sustainable development.	203570 (The Crown Estate), 201528 (Stapleford PC), 205079 (Y Dignon) 202820 (Cllr K Porrer), 203900 (Cambridge Growth Company), 211535 (Martin Grant Land Limited), 211103 (Hallam Land Management), 211081 (The National Trust), 211067 (Savills), 211063 (St John's College Cambridge), 211041, 211054 (Wates Developments (and Landowners)), 210222 (Vistry Group), 208937 (Cambridge Growth Company), 208380 (NIAB Trust)

• A strategy that includes a particular focus, and reliance, on strategic sites in Greater Cambridge is logical and supported in principle. • Supports the plan-led system in principle, and broadly supports the development strategy and approach to site allocations. • It is noted that the 'Overview' section of the supporting text, at para. 2.55 refers to a blended strategy to meet a variety of needs which responds to opportunities provided by different sources of supply. This general approach is supported. • It is supported that (at para. 2.55d) sites should be developed that can be well-integrated with existing communities to reinforce the distinctive character of the city, towns and villages, having regard to development at densities and in forms which make best use of land whilst creating well-designed, characterful places. • Part 1 is supported, it is considered appropriate that development should be focused within Cambridge City and on the outer edge of Cambridge, accounting for the global importance of Cambridge as the focus for growth.	
Support for the development strategy concentrating jobs and homes, within urban centres, new settlements, or in proximity to existing or proposed infrastructure: • Prioritising new homes in sustainable locations • Reduce the need to travel and enhance co-location benefits • Promoting public and active modes is the natural choice • Locations with the least climate impact • Integrating green infrastructure	201012 (M Colville), 201657 (Huntingdonshire DC), 201023 (K Mahoney), 201376 (Gamlingay PC), 208491 (Central Bedfordshire Council) 202612 (Ickleton PC), 204701 (Optimis Consulting Ltd), 202822 (Cambridge City

• Agree to developing sites at appropriate densities to optimise land use and create well designed places • Support for continued development of the Cambridge Biomedical Campus, intensification at Eddington, the Innovation District at Cambridge West, and the evolution of Cambourne with a new East West Rail station. • Support long term vision which will continue new homes, jobs and infrastructure beyond the plan period to help maintain a land supply and reduce need for development in less sustainable locations • Expresses clear support for the hierarchy of development set out in the policy. • Ickleton PC generally supports the Development Strategy for Greater Cambridge.	Council Liberal Democrat Group), 202609 (Ickleton PC), 204720 (Croudace Homes), 204139 (Richborough)
Support for spatial approach directing most new development to the northern part of the district, using brownfield sites and the A14 corridor, aligning with the jobs-led housing need and sustainable growth objectives	203256 (North Herts Council)
Supports plans to increase numbers of accessible/adaptable homes (e.g. via application of M4(2) building standards).	202079 (Great Shelford Village Charity)
Support for order of preference and approach to future land use for housing and the retention and enhancement of the Cambridge green belt.	203263 (Horseheath PC)
Allocated sites within the GCLP reflect a balanced approach to growth, ensuring that development: Is appropriately scaled to the size and function of settlements, Is supported by	205849 (Lolworth Parish Meeting)

infrastructure planning and mitigation, Responds to identified local and strategic needs, Protects the intrinsic character of rural communities. Lolworth recognises that planned development, when delivered in accordance with the Local Plan, can support sustainable growth while safeguarding the qualities that make villages such as Lolworth distinctive and viable.	
Concern that the development strategy is locating housing away from employment sites with negative consequences: • Housing growth becoming dispersed while employment remains concentrated around Cambridge, increases congestion, increasing pressure on transport corridors and making sustainable travel harder. Highlights the importance of providing safe, attractive routes for walking and cycling. • Location of housing delivery away from employment sites. Residential development to be in Cambridge close to existing infrastructure and sustainable transport options. • Highlights the need for employment and housing to be planned together to avoid increasing car trips, congestion and carbon emissions, and enable equitable access for households without cars. Supports mixed-use development and co-location of homes and jobs to enable walking and cycling and reduce the need for costly public transport extensions. Also raises concern that	201738 (T Burford), 201686 (B Le Gallez), 202506 (H Brown), 203145 (Cambridgeshire ACRE), 203335 (Great Wilbraham PC), 204500 (D Potts), 204701 (Optimis Consulting Ltd), 203663 (V Ashton), 203200 (A Hoare), 204632 (Max Fordham), 205280 (A Williams), 203311 (L Dassy), 204187 (Mr and J Johnson), 205122 (J Grantham), 202451 (A Brown), 203662 (T Preud'homme), 205028 (N Spenley), 204763 (R De Beaux), 204716 (Mothers CAN Cambridge), 204559 (R Hoadley), 204658 (R Humphrey), 205438 (A Kirchgaessner), 204506 (Redrow South Midlands), 209067, 211764 (Camcycle)

higher-density development and additional car infrastructure may reduce opportunities for open green space, private gardens and community spaces. • Comment on the need for clearer detail on the geographical distribution of planned employment, that plan actually supports the needs of employees, businesses/employers, and the desired economic growth. • Notes that the development strategy does not set out employment opportunities within out-of-town development areas, which risks forcing longer car-dependent journeys. • Notes limited growth directed towards the south and southeast of Cambridge. Raises concern that the RSC area has very limited proposed housing compared with east and north Cambridge, despite being a major employment centre. States that low supply inflates prices and harms local communities. Argues that development in/adjacent to existing settlements—particularly along transport corridors—is more sustainable and more popular than new settlements such as Grange Farm. Recommends allocating additional development in or near Rural Centres. • Concern strategy does not meet the needs of those living in villages, risk of concentrating growth benefits away from villages, still placing pressure on rural services and roads, little reference to cumulative impacts on village infrastructure, rural health access or digital connectivity. Limited attention to strengthening everyday service access within rural communities. Stronger rural	

proofing would include clearer safeguards for rural services, investment in village transport links and a stronger role for parish councils in shaping growth. Suggests importance of enabling plan-led and organic growth in villages to support rural community vitality and local housing needs, notes affordable and specialist housing. Recommendations for emphasis on proportionate growth in rural settlements. Calls for more explicit direction on job and housing needs in rural areas. • Recommends development of approximately 65 dwellings in a sustainable rural settlement is seen as a modest and valuable contribution to housing needs. • Sustainable development not achievable unless no more growth and concerns over the environment. Suggests businesses, housing, roads, people, should be directed elsewhere.	
Much of the Plan's transport discussion, and wider transport debate, is framed around commuting into Cambridge. This commuter-led framing creates two problems. First, transport systems designed primarily around peak commuting struggle to deliver viable and attractive services. Second, it overlooks the fact that the majority of trips are not made for work, but for everyday activities such as shopping, education, healthcare and social life. Access to local amenities plays a far greater role in shaping travel behaviour than access to distant employment alone, yet this is not sufficiently reflected in the spatial strategy.	209068 (Camcycle)

In Cambridge, it is possible within this Plan period to achieve sustainable mode share of up to 90% of trips if land use and connectivity are planned in a way that provides people with local needs and high-quality active travel and public transport, whilst correctly pricing the cost of car ownership. At present, there is a risk that overly cautious assessments and a reluctance to allocate housing in more challenging locations are constraining the Plan's potential to deliver sustainable development.	211763 (Camcycle)
It is considered that the proposed development strategy fundamentally conflicts with the strategic priority relating to wellbeing and inclusion. The wellbeing and inclusion strategic priority identifies the Council's intention to ensure that 'everyone benefits from the development of new homes and jobs'. However, it is evident that this priority will not be achieved through the implementation of the proposed spatial strategy whereby the vast majority of growth is proposed to be located within the area between the A11 and A14. Figure 8 of the Draft Plan (reproduced below) illustrates how a significant proportion of the region will not benefit from any jobs or employment growth, demonstrating that the rural area of the region will not see the benefits of new development.	211276 (Woolsington One Ltd)
Many of the proposed new workspaces will be on the Wellcome Genome Campus, which is located away from railway stations and housing. Even though the Wellcome Trust works hard to provide coaches from Cambridge to Hinxton, many of the people working there drive from Cambridge and elsewhere because this is more convenient.	203278 (J Palmer)
The Local Plan should:	211777 (Camcycle)

● Remove the Grange Farm allocation from the Plan ● Avoid substituting constrained urban or edge of Cambridge sites with remote or poorly connected locations ● Prioritise development in locations where sustainable travel can be the default from day one, without reliance on speculative or uncommitted transport mitigation.	
Objections that the strategy places an overreliance on a few large strategic sites for growth: • Objects to the strategy as fundamentally flawed in meeting identified housing and employment needs. • Raises concern that the strategy is overly dependent on major new settlements and infrastructure that is not yet confirmed, including the proposed rail link. States that locations do not have sufficient infrastructure to support additional growth. Concern re feasibility of significant infrastructure need and impact on delivery. • A number of these strategic sites have significant constraints which will likely result in significant delays to delivery. • NPPF Paragraph 23 emphasises the need for a clear strategy for land delivery to meet assessed needs. • A 20% buffer is recommended instead of the proposed 6.5% to ensure robust planning and adequate housing supply	201929, 201938,, 201946, 201936 (M Asplin), 202035 (Wimpole Associates Ltd), 202328 (Granta Land Ltd), 202365 (The CLC Trust), 201854 (Chivers Farms Limited), 207537 (Horningsea PC), 207535 (Home Builders Federation), 203138 (ESCO Prospect), 203309 (J Manning), 206213 (Granta Land Ltd - Land at Valley Farm, Meldreth), 206071 (Wimpole Associates Ltd), 203892 (Hill Residential (Fulbourn Site)), 203965 (Hill Residential (Sawston Site)), 204043 (E W Pepper Ltd), 203317 (W Bowden), 204087 (M Richmond), 202450 (I Morris), 202160 (H Fordham), 202627 (British Land), 203069 (Pegasus Group), 206079 (Wimpole

• Historically lead to delays in delivery rates, raises concern that relying on the same approach will not deliver the required scale or pace of development, and risk that housing need is not met. This will impact 5 year housing land supply. • Housing trajectory is based on over-simplistic delivery rates, and is not credible. Questions the realism of delivery assumptions, noting that current build-out at major sites such as Northstowe and Waterbeach is significantly below what would be required to achieve the target of 37,865 homes by 2045. Historical data shows a consistent delay in housing delivery from strategic sites, averaging 4.1 years longer than anticipated. • Concerns with over reliance on delivery at new settlements and delivery from windfall sites, with a significant decrease in housing provision within the Cambridge Urban Area and a reduction in the rural area. • Comments on over-reliance now placed on new settlements in meeting housing needs. 93% is made up of 5 sites. 44% of the proposed distribution in housing growth is now anticipated to come forward at the new settlements, compared to 23% in the adopted Local Plan and 18% in the previous Structure Plan. • Objects to the growth of Cambridge and expresses a preference for no expansion of the city. States that while sustainability, biodiversity and climate goals are supported, it is not realistic to accommodate the proposed level of growth while simultaneously reducing traffic and enhancing biodiversity.	Associates Ltd), 204971 (Martin Grant Land Limited), 202081 (J Francis), 202763 (Martin Grant Land Limited), 202766 (P Norman), 203157 (Christ's College, Cambridge), 202906 (The Trustees of the C Y Nutt Deceased Will Trust), 202887 (Northwest Biotherapeutics Capital Limited), 203342 (The Varrier Jones Foundation), 204720, 208771 (Croudace Homes), 204376 (Hill Residential (Great Abington Site)), 204439 (Wain Estates), 204434 (Bellway Strategic Land), 204640 (Urban and Civic and Hill Residential), 202536 (Granta Land Ltd), 204241 (Bellway Strategic Land), 204139 (Richborough), 204420 (Bellway Strategic Land), 203924 (Emmanual College), 204122 (Emmanual College), 204164 (Tritax Big Box Developments), 204275 Croudace Homes), 203390 (Jesus College), 203406 (Jesus College), 201940,

• Objects that the proposed level of housing growth is unsustainable in a predominantly rural county, stating that development would erode countryside gaps and overwhelm existing settlements such as Cambourne, and the need to address connectivity. Raises concern that recent new settlements lack community cohesion and adequate infrastructure. • Objects to scale of development, creates long term disruption, harms liveability, and is driven by development pressure rather than local need. • Recommendation for a diversified strategy with proportionate growth in expanded existing settlements and development along transport corridors to accord with NPPF which encourages development to be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. • strategy should plan for a higher level of employment and housing growth with a greater supply buffer given uncertainty over delivery of key sites. • Suggested that additional smaller sites on the edge of Cambridge in sustainable locations should be considered. • Suggested that additional allocations at strategic growth scale are added to Improve the pipeline supply in sustainable less constrained locations such as to the east of the subregion and at Six Mile Bottom. • Fails to allocate appropriate levels of development within settlements. Only 205 out of 13,463 homes identified for 2024-2045 will be in rural areas, suggesting	201947 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073, (J Francis), 202433 (The CLC Trust), 202554 (Ely Diocesan Board of Finance), 203576 (Horningsea PC), 204073 (South Cambridgeshire District Council), 206076 (Wimpole Associates Ltd), 203511 (ESCO Prospect), 202156 (R Lambert), 202913 (K Trudgeon), 204106 (Richborough), 206104 (Wimpole Associates Ltd), 209328 (St John's College Cambridge), 204511 (Redrow South Midlands), 208398 (Ceres Property on behalf of landowner at Freisland Farm, Swavesey), 204043 (E W Pepper Ltd), 205011, 208363, 208364, 208365, 211536 (Endurance Estates), 204850, 204868 (Great Shelford (Ten Acres) LLT), 204506 (Redrow South Midlands), 211107, 211108 (R Raywood, A Bradney and D Unwin), 204529 (Rosconn Group), 204956, 205002,

more flexibility in allocations to mitigate delays with strategic sites. Additional small sites should be allocated (various sites are promoted), including in the more sustainable villages to ensure delivery early in plan period. • Plan leaves ongoing pressure on surrounding villages through Green Belt evidence and promoted sites, despite the absence of formal allocations. • Crucial to identify small sites, including in grey belt, to increase supply of identified sites for housing, to support small/medium housebuilders, enhance housing diversity and foster local growth. • Ensure delivery of more homes earlier in the plan period. • Allocate more medium scale sites capable of delivering 150-250 dwellings. • Concern development strategy misses the sustainability benefits of homes in rural areas for community resilience and is flawed. Further small sites be allocated to ensure delivery rates in sustainable locations early in the plan period • New settlements are expected to deliver less than 40% affordable housing. • Justification for release of land from Green Belt to direct housing to sustainable locations, as significant need for housing and affordable housing. • Infill pressures already exceed the eight-dwellings-per-site limit, creating traffic and community concerns • Figure 12 shows distribution of growth with rural areas and windfalls 16%, compared to 23% in adopted plan and 30% in 1999-2016 plan. • Plan does not confirm with NPPF requirements:	211059 (Wates Developments), 205311 (Axis Land Partnerships ltd), 206352 (Grants Land Ltd – Meldreth)), 207996 (Cambridgeshire County Council), 201968 (Shelford Investments), 202099 (Cambridgeshire County Council (Strategic Assets)), 202558 (Ely Diocesan Board of Finance), 211610, 211611 (Bloor Homes Eastern), 211584 (Terra Strategic), 211583 (Mr & Mrs Smith), 211477 (G Robinson and Partners), 211472 (Beechwood Estates Ltd), 211410, 211411 (CALA Group Ltd), 210222, 210223 Vistry Group, 208903 (Nightingale Land and Hill Residential Ltd), 208381, 208382 (NIAB Trust)

○ Paragraph 73 - failing to deliver at least 10% of homes on sites no larger than one hectare, rather than relying on windfall developments. Current approach allocates 3.5% of the housing to small sites, which is below the NPPF's 10% target. ○ Paragraph 83 - strategy does not align with requirement to enhance rural community vitality, in reliance on windfall developments not planned allocations. ○ Current Green Belt release criteria conflict with NPPF 2024 paragraph 146 ○ Contradicts Dec 2024 NPPF and Feb 2025 PPG update which require a sequential approach prioritising grey belt for release, by failing to map this land the Councils bypass a national mandate to support village vitality (NPPF 83) and small-site delivery (NPPF 73). ○ Plan is premature on the basis it fails to have regard to emerging revised NPPF, in particular 20% of allocations should be on sites of between 1 and 2.5 hectares. ○ Objects as approach is problematic, regarding delivery timeframes, and inconsistent with key principles of the NPPF. Paragraph 72 of The Framework acknowledges the importance of strategic housing land supply comprising a sufficient mix of sites, regarding availability, suitability and economic viability.	

○ Paragraph 72a states that ‘land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved’. According to this data, 94% of all new dwellings proposed between 2024 and 2045 are allocated across only 6 sites, 3 of which are new settlements. The ‘Rest of the Rural Area’ comprises rural centres and group villages, a total of 48 settlements, and has only 3 sites allocated for a total of 205 new homes. The proportion of development attributed to major, strategic sites not only carries a huge risk to deliverability but is also inconsistent with The Framework. • Housing delivery assumptions for all of the strategic sites are reassessed, taking into account realistic annual housing delivery rates and the delivery of critical infrastructure required for those sites. • To Release Land from the Green Belt to meet development needs. • Make additional allocations are made in the more sustainable villages, including Fulbourn, Great Shelford, Sheene Farm, Meldreth • Revise sequential hierarchy of types of location to account for sustainability benefits of sites adjacent to villages. • Revise housing trajectory with realistic figures for delivery on major sites.	

The Draft Plan does not provide enough housing land to meet the 48,195 home target and the 73,300 job target: • A housing land supply buffer of at least 10% (ideally 15-20 %) is required. • It is evident that the housing land identified in the Draft Local Plan is insufficient to meet the real-world need in and around Cambridge for two further key reasons: the continuing reliance on in-commuting; and the reliance on strategic sites.	207904 (Barratt Redrow), 204355 (Barratt Redrow), 204139 (Richborough), 204929 (Places for People), 203890 (Hill Residential (Fulbourn Site))
It is considered that the strategic priorities for the draft GCLP would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development at the more sustainable villages including Fulbourn, Great Abington.	203890 (Hill Residential (Fulbourn Site)), 204340 (Hill Residential (Great Abington Site))
Concern the strategy will not deliver the needs of a growing population: • Green belt releases south-east of Cambridge are piecemeal and fail to represent a holistic approach to sustainable development. • Grange Farm is ill thought out, will become a car commuter settlement given its proximity to A11/M11 and ease of access towards London. It is unlikely the majority of new residents work in southern research cluster. Too small to deliver most services residents will need resulting in out-commuting. • Should deliver a comprehensive plan for south east of Cambridge, edge of Cherry Hinton, Queen Ediths, Biomedical Campus, with targeted review of inner green belt, including accessible natural greenspace.	202493, 202510, 202513, 202524 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust)

• Small targeted extension of Peterhouse Business Park would deliver new accessible rich countryside to support growing city.	
Suggests removing or discounting speculative development dependent on unresolved infrastructure funding, provide distinction between allocated and non-allocated supply, and adopt a more cautious, deliverability-led approach that protects Green Belt land, water resources, village character and transport networks	207537 (Horningsea PC)
A strategy should be underpinned by simple enduring design principles. It doesn't have to be complicated, stick to the 'Keep It Simple" mantra.	201920 (A Davidson)
Suggestion there needs to be greater focus on mixed-use zoning with specifics on how to achieve hyperlocal and interconnected employment and community amenities. Cambridge already has many scattered zones with residential areas desperately needing local leisure and shopping areas	205292 (P Colledge)
Comment that the plans do not provide adequate development opportunities in villages around Cambridge, particularly where transport hubs exist that could support housing for employment areas.	205244 (L Gardner)
Objects that the Newlands proposal would dominate the rural landscape, is inappropriate in scale/height, and would add around 4,500 daily vehicle movements at an already congested junction. States the development would serve national/regional distribution needs rather than local needs.	202838 (W Nichols)
Comments proposed allocations, both existing and proposed, are in locations where the required public transport does not currently exist and the delivery of which is outside the control of the Greater Cambridge authorities.	209966 (Granta Land Ltd)

Barratt David Wilson Homes and the North West Cambridge Consortium of Landowners object to Policy S/DS: Development Strategy, while broadly supporting it for carrying forward allocations from adopted plans, particularly Darwin Green. They note a minor observation regarding the policy wording, specifically that Darwin Green is not mentioned in part 2 (b) 'on the edge of Cambridge', unlike other carried forward allocations. The respondents request that Darwin Green be explicitly included in the policy wording under part 2 (b), as it is represented in Figures 8 and 9 referenced in the policy.	203015 (Barratt David Wilson Homes and the North West Cambridge Consortium of Landowners)
Policies S/DS and S/SH should be considered together, as S/SH outlines the settlement hierarchy that informs growth locations in S/DS. Fulbourn is identified as a Minor Rural Centre, which should accommodate growth due to its proximity to Cambridge and good transport links. The respondent suggests adding a sub-category for 'Well Connected Minor Rural Centres' to better reflect sustainability, including Fulbourn, Milton, Melbourn, and Waterbeach.	204929 (Places for People)

Land north and west of Wilbraham Road, Fulbourn is proposed as a strategic site to enhance housing supply and mitigate risks associated with delayed developments. Changes to plan: Part 1 of the policy should be revised to refer to 'Well Connected Minor Rural Centres' and include the allocation of land to the north and west of Wilbraham Road, Fulbourn as a sustainable mixed use allocation to delivery over 2,500 dwellings.	
The plan should align with the Cambridgeshire and Peterborough Spatial Development Strategy: • Combined Authority will produce a Spatial Development Strategy by 2028. Local Plan will be required to align with SDS and if not amended now will be immediately out of date. With Local Government Reorganisation this could be the last Local Plan to guide growth in Greater Cambridge area. Plan should deliver a development strategy which reflects and supports the approach being taken at both the national the regional level and ensures that the area can maximise the benefits and opportunities available at the local level. Plan period should be extended to at least 2050. • Plan period needs to be extended to 2050 to align with the Cambridgeshire and Peterborough Spatial Development Strategy and accounting for the number of strategic allocations within the plan, that will result in substantial growth after the plan period.	208396 (Ceres Property on behalf of land owner at Freisland Farm, Swavesey), 204106 (Richborough), 208377 (NIAB Trust)

• In accordance with the requirements of paragraphs 25 and 26 of the NPPF, it is critical that the emerging DLP is aligned to the Local Growth Plan and the emerging Spatial Development Plan for Cambridgeshire. • As a starting point, this should ensure that housing and employment growth is substantially increased to align with the objectives for Cambridgeshire & Peterborough.	
Comments in relation to the impact on the rural area and rural communities: • Concern that whilst increased housing and jobs are welcome regard must be given to existing landscape and infrastructure. There is a danger villages will be swamped. • Concern rural communities are not clearly visible within high level framing. Priorities around reducing car use and focusing development in well-connected locations could disadvantage villages unless matched with investment in rural transport, digital connectivity and local services. There is limited recognition of rural health inequalities, ageing populations and the role of parish councils and community organisations. Stronger rural proofing would ensure the strategic priorities explicitly address rural access, inclusion and infrastructure needs alongside urban growth. • Concern increasingly agricultural land is being taken, how that affects food production.	202282 (L Turton), 203140 (Cambridgeshire ACRE), 203336 (Great Wilbraham PC), 203617 (H Thomas), 201734 (R Stobbart), 205609 (Y Dignon)

• Concern plan sets out prioritisation for urban centres and the communities and rural communities, such as Great Wilbraham, are disenfranchised. If development in smaller villages is limited the Plan should include strategies for proactively working with villages to develop more sustainability and viability for residents, potentially services such as buses, schools or shops requiring extra support and are not, in themselves cost effective. • Concern Plan encouraging sparse rural development and so unsustainable development which increases transport related emissions, climate change, harming biodiversity, producing places far from amenities, not socially included and don't foster social inclusion. • Recommends focus on building dense human-scale developments near to the amenities people want such as in the city of Cambridge. • Concerns that development which encourages car use will harm carbon emissions, landscape and rural liveability. • Support for response submitted by Cambridge Sustainable Food	
Comments in relation to the environment, green spaces and biodiversity: • Comment that this section lacks adequate allocation for green spaces and wildlife and broadly runs contrary to that goal, leading to destruction rather than enhancement of green space within the city; this must be reconsidered with a much greater emphasis on large, healthy, biodiverse surroundings. • Suggests greater emphasis on access to nature and green spaces.	207151 (P Colledge), 202650 (S Berridge), 202156 (R Lambert), 203263 (Horseheath PC)

• Concern that development is not grounded in the environmental limits of the area, particularly the reliance on depleted chalk aquifers and associated risks to landscape, health, and environmental quality. • All development must be sustainable; we strongly support this basic tenet of the plan.	
We endorse the proposal as it strengthens Cambridge's role in the Oxford-Cambridge growth corridor, delivers mid-tech and advanced-manufacturing capacity and aligns with the employment and economic objectives set out in the Development Strategy.	203243 (Cambridgeshire Chambers of Commerce)
Comment that the Plan requires further work on critical issues such as travel and flooding, which have not been adequately addressed	207525 (P Deer)
Support for use of development of brown field sites and repurposing of empty buildings, less development of green belt and green spaces.	201156 (G Briscoe), 201682 (S Smith)
Comments that the strategy omits provision for attitudinal change towards affordable, sustainable, healthy, local food.	205079 (Y Dignon)
Comment highlights the long-term strategic potential of the Ashwell and Morden area, outside the Green Belt, well-connected by rail and suitable for sustainable growth and suggest it be explored for future housing provision	203257 (North Herts Council)
The general strategic approach of the Plan to develop new settlements and significant extensions to the largest settlements is consistent with NPPF and specifically NPPF 77, provided the development is supported by the necessary infrastructure and facilities	210982 (C Newell)

The strategic policy approach takes the pressure off the middle-sized and smaller villages of South Cambridgeshire which are rural and generally poorly supplied, with a high proportion of Conservation Areas and other designations and generally a closer relationship between the village and its rural surroundings. This proposed Plan prioritised approach also ensures sustainable housing is easier to implement once the infrastructure and facilities are provided.	210985 (C Newell)
Currently the planned provision of Infrastructure and facilities is questionable, especially in the supply of water and electricity and in the treatment of sewage, and especially their viability within the next 5 years when they are relying on a failing aquifer, depleted chalk streams and overburdened local facilities. The current Plan relies too much on a future Fens reservoir that is at a very early stage and the proposed re-purposing and intensification of extraction from Grafham Water, both of which are outside the Development Plans area and are likely to have significant impacts which are not made clear.	210986 (C Newell)
Concern plan does not provide clear modelling of how Section 106 and CIL contributions will be used to improve village connectivity	207997 (Cambridgeshire County Council)
Suggests the term “Rural Centres” is misleading – these settlements are close to Cambridge and well-served, they should not be grouped with larger hub villages; “Minor rural centres” function more like suburban areas	207998 (Cambridgeshire County Council)
Amend Policy S/DS to include:	211420 (Wilson Bowden Developments Limited)

1. The need for jobs and homes will be met as far as possible in the following order of preference, having regard to the purposes of the Cambridge Green Belt: "c) On the edge of Royston; “	
The North Herts Economic Strategy 2025-2030 notes that given the proximity of The York Way industrial area in Royston to Cambridge and London, every attempt should be made to forge wider and deeper links to the Cambridge Sub-Region (at page 17). Whilst the Plan now includes two new class B2/B8 allocations, this leaves the Cambridge supply effectively limited only to these two sites, such that possible investors seeking industrial floorspace are faced almost with a duopoly position. Provision of additional land for class B2/B8 floorspace as part of Royston’s cluster of ‘major advanced manufacturing and life sciences’, should be supported, both to meet North Hertfordshire objectives and address any Greater Cambridge shortfalls that may flow from the Local Plan.	211419 (Wilson Bowden Developments Limited)
Concern that the approach limiting development in villages will not support improvements to rural transport connectivity.	210999 (Cambridgeshire County Council)
Strategy Topic Paper which summarises the SA growth options assessed states that edge of Cambridge sites in the Green Belt, or urban extensions to Cambridge, would be likely to deliver more homes within the plan period than those away from Cambridge. Yet, the spatial strategy is allocating sites away from the edge of the city which	209696 (CEG Land Promotions Ltd)

evidence shows deliver more slowly in this geography. It also notable that the GCLP carries forward allocations in the urban area which have not delivered since the adoption of the previous local plans. There are well documented difficulties around the viable delivery of brownfield sites in the current economic climate so assumptions about their delivery should be realistic in this context.	
Greater Cambridge is vital to the economic aspirations of the UK, both now and in the future. However, to ensure that continues, the GCLP needs to respond positively to the concerns raised by a range of stakeholders which would threaten the delivery of sustainable growth in the area, which include: 1) the delivery of a quantum of housing that will enable the job growth expected across the wider Greater Cambridge region, including a wide range of sizes and tenures, to ensure that businesses can draw upon the necessary labour pool; and 2) the location of houses in areas which are accessible to and well supported by public transport links and can take advantage of the significant investment that is going into improving local infrastructure such as the delivery of Cambridge South station, East West rail and new guided busways.	209691 (CEG Land Promotions Ltd)
• Concern Policy S/2 (Spatial Strategy) should demonstrate a clear “brownfield first” approach, consistent with NPPF paragraphs 11 and 119, prioritising the reuse of previously developed land, empty homes, and under-used buildings. • Growth should not be directed to locations where inclusive access cannot be delivered.	208948 (CPRE Cambridgeshire and Peterborough)

• Development in areas lacking accessible pavements, crossings, or step-free routes risks excluding disabled people and conflicts with the Public Sector Equality Duty (Section 149, Equality Act 2010).	
Edge of Cambridge should be lower in the order of preference than Cambourne and new settlements.	201012 (M Colville)
S/PRIA/EG and EW Bridge and Underpass(es) cultural hub Project: • I support development within the designated PRIA of a Cultural Hub offering accessible programme. • The area surrounding the bridge and underpasses is lacking a sense of place. • Introduce community, sports and cultural programme and upgrades to the public realm to promote safety and identity. • Strengthen active transport N/S and E/W connections around the infrastructure for better connectivity, prioritising residents and visitors.	205237 (University of Cambridge)

Jobs and homes

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Supports Development Strategy and recommends that allocations, housing and employment growth identified, are a minimum requirement with flexibility allowing optimised levels of growth. Allocations identify options for expansion and extensions	203908 (Cambridge Growth Company)

where these can be supported in transport, landscape, and in green and other infrastructure terms.	
Supports target of 48,195 houses, with headroom of 30-69% above the incremental target of 10,330 homes, likely probability of meeting or exceeding the target.	201012 (M Colville)
Comments planned developments resulting in additional 17,950 homes after 2045, will help meet future expansion requirements and provides additional headroom.	201012 (M Colville)
Comments housing requirement is not aligned with jobs growth, increasing car commuting into Cambridge, and not meeting climate change strategic priority.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis), 202433 (The CLC Trust), 202555 (Ely Diocesan Board of Finance)
Concern over amount and location of jobs and homes: • Concerns over increased number of jobs and homes in Cambridge. Jobs needed elsewhere. • Concern over number of housing numbers. You say you want an additional 48,195 homes, Northstowe and Waterbeach provide 37,865 homes, and additional sites 13,460 homes. These add to 51,325 homes not 48,195. Cambourne North will provide 13,000 new homes, Cambourne 2350 and Grange Farm 6000. This is way more than 13,460. • Concern Plan does not provide analysis of employment growth to match its housing evidence, are homes and jobs are being planned together. Growth in	201223 (S Williams), 201500 (C Meads), 201699 (R MacDonald), 201992 (D Langley), 202861 (J Williams), 203197 (G Orwell), 204043 (E W Pepper Ltd), 204160 (Mr and Mrs J Johnson), 204908 (K Brightwell), 201499 (C Meads),

jobs only where equivalent new housing can be provided, within cycling distance and good public transport links. • Concern plan envisages housing growth over a wider area, with employment still focussed around Cambridge, leading to pressure on transport corridors, and making sustainability harder. Need detail of where employment will be located, that transport issues can be addressed. • Concerns housing becoming more dispersed and employment concentrated around Cambridge. • Concerns that the allocation of 10,330 homes between 2024 and 2045 is insufficient for sustainable growth in Greater Cambridge. • Concerns a lack of housing in smaller villages is a constraint on sustainable development, new households would need to relocate away from their communities. • Request to identify a broader range of housing sites in South Cambridgeshire's rural areas to promote sustainable growth and support local economies. • Concern housing distribution disregards the CPIER report's recommendations, reducing flexibility of housing delivery and limit market choice. • Comments commute from Cambridge satellite towns to the city centre challenging and residents of these towns are reliant on cars as public transport connections are poor	

• Travel to work when settlement is dispersed but employment is all within the city is an issue. • Dispersed growth increases pressure on transport corridors and reduces sustainability • Detail of where employment is planned across the geography requested • The report by Iceni (Greater Cambridge Employment and Housing Evidence Update) considers the central employment scenario was the best option, suggesting 66,600 new jobs. Yet your plan is for 73,300 new jobs. This is incorrect. You cite the Iceni report but it doesn't mention 73,300 jobs. Its higher growth scenario suggested 76,700 jobs, but says it's unlikely. Their range was from ~30k-78k and you do not explain why you've mis-cited the report and taken a very high estimate incorrectly. The number of houses needed is based on the number of jobs, so you have over-estimated the number of houses needed.	
Housing and employment supply figures are overstated and insufficiently robust.	203576 (Horningsea PC)
Concern on reliance on windfall sites for housing delivery, declining numbers suggest need for certainty in small and medium-sized site allocations.	201854 (Chivers Farms Limited)
Consider the undesirability of maintaining high windfall assumptions and instead allocate a greater number of sites. Promoting greater levels of delivery on allocations and lower levels on windfall sites would give Councils a greater level of control over development coming forward and would encourage plan-led development in line with the NPPF's ambitions. Windfalls are inherently uncertain, it is hard to plan the	211674 (SmithsonHill), 211045, 211046, 211058 (Wates Developments (and Landowners))

necessary infrastructure around such a significant scale of windfall development, especially if it comes forward in a piecemeal nature. High reliance on windfall sites is much more likely to lead to unsustainable village development than a strategy where the Council has control over ensuring village development is located where there is good access to a high quality public transport network and provides the required infrastructure.	
Objection that Policy S/DS identified housing and job needs are too conservative: • The allocation of 10,330 homes from 2024 to 2045 is insufficient for sustainable growth in Cambridge. • Do not align with the government's growth agenda for Greater Cambridge. • To match Oxford-Cambridge corridor. • Supporting text at Para 2.64 does not consider that development needs alone provide the exceptional circumstances to justify removing land from the Green Belt, however the ambitious growth context for Cambridge means that the Council needs to consider the potential release of Green Belt land. • Supporting text in paragraph 2.64 does not consider the potential for Green Belt land release, despite the possibility of new evidence changing this context. • Do not reflect the higher growth scenarios identified in the latest employment and housing needs update. • Requests site allocated to meet the increased demand.	203157 (Christ's College, Cambridge), 203390 (Jesus College), 203406 (Jesus College), 202035 (Wimpole Associates Ltd), 204043 (E W Pepper Ltd), 206075, 206103, 206095, 206092, 206070, 206100 (Wimpole Associates Ltd), 210311 (Russell Smith Farms)

• Plan assumes a 'central' rather than a 'high' scenario aligning more with a growth trend over the last 20 years than the higher growth of the last 10 years despite national aspirations for sustained economic growth in the area. • Needs identified through the draft Local Plan do not reflect Cambridge's potential and are not sufficiently ambitious.	
Comments strategic priorities of the Plan delivered only with higher housing requirement, an amended development strategy, and additional development on the edge of Cambridge.	205046 (North Barton Road Landowners Group)
Concern that the Plan does not address local housing needs adequately, particularly in terms of affordable housing, potentially exacerbating affordability issues in communities like Histon and Impington	207589 (Chivers Farms Limited)
Comment that Plan does not provide a clear spatial analysis of employment growth to match its housing evidence, making it difficult to assess whether homes and jobs are being planned together. Without either a better balance between housing and employment or a step change in direct, high-quality active travel and public transport connectivity, the spatial strategy risks locking in long-distance travel and car dependency for decades.	205229 (J Thomas)
Concerns as no recognition of self-and-custom-build housing as a strategic requirement, (statutory duty under the Self-Build and Custom Housebuilding Act 2015 and supporting national policy). As placed in policy (H/CB) and not spatial strategy, plan	201936 (M Asplin), 202086 (M Asplin)

risks not addressing the backlog on the self-build register. Strategy not positively prepared and compliant with national policy, PPG, or legislative requirements.	
Supports the development of specialist housing in sustainable locations but requests that planning decisions consider the existing number of specialist housing units in the development's locale to prevent overwhelming healthcare services and to maintain a balanced community demographic.	201547 (Stapleford PC)
Scaling up to meet aggressive housing targets can be achieved by a well architected hub-and spoke model.	201920 (A Davidson)

Employment provision

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comment that there is a lack of clarity how the employment floorspace will be distributed across the proposed allocations within the plan	208498 (Central Bedfordshire Council)
Concerned that the Plan cannot respond to the inherent creativity and unpredictability of business. Ensuring approach has some additional flexibility and responsiveness.	203887 (Histon and Impington PC)
The Policy direction facilitates the ability of Rural Centres and Minor Rural Centres to meet objectively assessed needs for jobs. The Site (Evolution Business Park, Milton Road) is strategically located between a Rural Centre and a Minor Rural Centre, with good access to nearby Milton Park and Ride and therefore represents a viable site to	206949 (Cambridge Realty Limited)

accommodate the development requirements of the Plan period. The provision of 73,300 additional jobs should be more aspirational and align closer with the vision-led test of the NPPF. Policy S/DS should recognise longer term targets for additional jobs and preferred development areas. Recognising these aspirational targets including reference to forthcoming development in suitably sustainable locations ensures that the Council's approach remains forward looking, avoids inadvertently constraining employment land within the Greater Cambridge area, consistent with wider national planning policy objectives.	
In terms of employment delivery, Endurance Estates suggest should consider a more flexible approach which recognises the loss of Industrial and Mid-Tech floorspace in recent years. The Evidence Base outlines a clear need for additional Industrial and Mid-Tech floorspace and references requirements for B8 floorspace locations on the SRN. This is supported, however in light of the high-level of demand, it is considered that a flexible approach to locations would be most appropriate. This should include, as a minimum, support for locations along other radial routes, including the A10 south of Cambridge.	209712, 209713, 209711, 209708, 209709 (Endurance Estates)
Policy fails to reflect the outcomes of the published evidence base in terms of the locational requirements of general industrial uses. Greater Cambridge Warehouse and Industrial Space Needs Report (2025) concludes that c.30% of the residual industrial land need is for sites on the urban fringe (for	209174 (Turnstone Real Estate Limited)

general industrial and MidTech uses, as well as last mile local distribution). However, the strategic employment allocations fail to identify sites that meet the identified locational requirements for general industrial operators, and are capable of being delivered in the short term to meet identified needs. The strategic sites identified in Policy S/DS generally fall into 2 categories a) delivery as part of a large mixed use allocations; or b) sites on the A14. The WISN explains the importance of this locational requirement for the general industrial and MidTech sectors, specifically those wholesale and trader counter operators, whose business model is based on being in close proximity to its customer base.	
In Cambridgeshire and Peterborough, the Agri-Food & Tech sector employs 3,500 people across 115 companies, generating approximately £1billion in revenue. Agri-Food & Tech businesses benefit from excellent land quality for farming, world-renowned academic institutions, a strong supply chain in terms of international food processing, food packing, distribution and logistics, and world leading R&D facilities. The Local Growth Plan projection maps predict growth of the agri-food and tech sector by £1.2bn by 2050 and expect to see employment growth in this sector of 7,700, a 57% increase from now. Sustainable sites which can be delivered early in the plan period,	208385 (NIAB Trust)

such as NIAB's sites at Park Farm, would support this ambitious level of growth in the agri-food and tech sector, and as such it is considered that they should be allocated in the DLP.	
The spatial distribution policy, identifying site allocation S/SHF for c. 240,000 sq.m of B2/B8 uses – i.e. 65 % of the total industrial and warehouse allocation provision in the GCLP – is supported. The strategic location and size of the allocation site provides flexibility and choice to the, historically constrained, Greater Cambridge market. There is no merit in policy S2e(i) prescribing units be limited to small-medium size. This would distort the functioning of the market, by limiting choice to meet business needs on the principal and largest employment allocation site.	204970 (Lolworth Developments Limited)
Trinity Hall consider that an updated version of adopted allocation M5 be added to chapter 3 of the Draft Plan to confirm that the site of 82-91 Hills Road and 61-63 Bateman Street is allocated for commercial redevelopment.	202773 (Trinity Hall)
Comment on impact of proposals for new large logistics and business sites between the A14 Swavesey J24 and Bar Hill J25 junctions, and major new housing at Cambourne North, Bourn and continued development of Northstowe, will impact both highway and water infrastructure around the Swavesey area.	203039 (Swavesey PC)
Selecting only 2 large sites to deliver the majority of Greater Cambridge's industrial and logistics space is considered to be ineffective. Through S/SHF approximately 70% of all Industrial & Logistics need will be delivered by one land promoter. This creates risk to the deliverability.	211687, 211689, 211690 (Newlands (Cambridge) Limited)

Location of large scale logistics schemes adjacent to the Strategic Highway Network, and away from residential locations can help to reduce congestion and emissions, and improve air quality and public health. NPPF Paragraph 110, Appeal decisions (APP/C3105/W/24/3352512) have emphasised that the operational needs of Logistics outweighs any perceived disadvantage from an accessibility perspective.	
Policy fails to reflect the outcomes of the published evidence in supporting the displacement of existing industrial land due to the emphasis on allocating large, complex sites. The Development Strategy delivers the majority of the employment requirements, in particular general industrial space, on sites off the A14 or as part of larger mixed-use site redevelopments, such as North East Cambridge or Cambridge East. The need for general industrial space to support the local economy is immediate and urgent, and the over reliance on large complex sites will cause further unacceptable and unnecessary adverse impacts to this sector. Furthermore, allocated sites such as North East Cambridge already contain existing general industrial floorspace. Whilst the policy aspires to deliver replacement space as part of any redevelopment scheme, there will inevitably be a period of time when the existing use is displaced pending its reprovision. During this time, it is important that	209175 (Turnstone Real Estate Limited)

opportunities exist in the right location to rehouse these employment uses to ensure that they continue to meet the needs of the local resident population, but that they do so in an efficient and sustainable manner that does not result in increased vehicular trips by the private car.	
The proposed Tritax development does not form part of the GCLP's spatial strategy and has not been identified as a suitable or necessary allocation through the plan-making process. Allowing a speculative, large-scale logistics development outside of the adopted or emerging plan framework would fundamentally undermine the integrity of the Local Plan system. The GCLP directs major employment and logistics development to locations that are: - Strategically planned - Well connected by appropriate transport infrastructure - Capable of accommodating such uses without unacceptable harm. The Tritax proposal does not meet these criteria in the context of Lolworth.	205850 (Lolworth Parish Meeting)
BRC object to the policy and request that point ii is reworded as below: Babraham Research Campus – a new employment-led mixed use allocation to support further growth of this existing world leading bioscience research and innovation campus and improve the health and wellbeing of future employees, residents and the local community through targeted environmental enhancements: including approximately	203462 (Babraham Research Campus)

48,000m2 employment floorspace for office and research & development and approximately 83 additional homes, supported by focused additional facilities that complement existing local services; Changes to plan: Please see comments above regarding rewording of the policy to reflect approximately 83 additional homes.	
Paragraph 87 of the NPPF identifies the importance of making provision for clusters and networks of data-driven, creative and high technology industries and the inclusion of new facilities and infrastructure that are needed to support the growth of these industries (including data centres). Cambridge is known as an area of excellence for science and technology sectors, including the large number of science parks located around the city and surrounding villages. It forms part of the Oxford-Cambridge Arc, which is a globally significant growth corridor, labelled as Europe's Silicon Valley. Major infrastructure projects such as the forthcoming East West Rail have added to the productivity and sustainability of the area. Therefore, it is considered that the construction of a data centre, or wider B2/B8 use on the Site would be in line with the requirements set out within national planning policy.	211515 (Trinity College, Cambridge)
We object to the employment allocations as listed in the policy (point 2). There is need to identify additional sites for employment development, including to the south of Cambridge. An additional site should be allocated to deliver a major Data Centre tailored to the needs of the AI boom, complemented by innovation-inducing	210314 (Russell Smith Farms)

infrastructure in agricultural technology to contribute the local community's talent pool and economy, whilst making a global presence for Cambridge in AI.	
Greater Cambridge needs to adopt a much more substantial housing supply buffer than the 6.5% currently proposed. As a result, Greater Cambridge should employ a housing land supply buffer of over 10% and preferably circa 15-20% above the identified requirement which, for the reasons set out under the Policy S/JH: New Jobs and Homes, also needs to be higher than the Standard Methodology figure.	211103 (Hallam Land Management), 211067 (Savills), 211063 (St John's College Cambridge)
The draft Local Plan illustrates within Table 4 that with the inclusion of capacity at North East Cambridge a 14.7% buffer, in excess of the minimum housing requirement, would be provided. However, with insufficient certainly over deliverability of this site it should be excluded from the calculation and therefore a resultant buffer of just 6.5% would remain. This is insufficient and therefore additional site allocations should be included at this stage in the plan making process to ensure the plan is effective (deliverable over the plan period) as required by the NPPF.	211044, 211057 (Wates Developments (and Landowners))
To encourage a more reliable delivery rate across the plan area we propose that additional sites are allocated to ensure the consistent delivery of dwellings to significantly boost the supply of homes as required by Paragraph 61 of the NPPF. Only 17 of these 19 sites are strictly 'new'. In total the 17 sites will provide 7,013 dwellings (equating to approximately 12.69% of the total supply). It is therefore clear that the Plan	211043, 211056 (Wates Developments (and Landowners))

continues to make provision for a very limited number of new sites. There is a heavy reliance on existing and previously identified sites rolled forward from the adopted Local Plans and many of these sites are on a large scale which also means they typically take longer to be brought forward.	
CGC is supportive of the Development Strategy identified in the draft Plan but recommends that the planned allocations and the housing and employment growth identified in each, are treated as the minimum requirements and that the allocations are flexible enough to allow for optimised levels of growth. Identification of options for future expansion and extensions of these allocations where these can be supported in transport, landscape, and in green and other infrastructure terms is supported by CGC.	208937 (Cambridge Growth Company)
Dernford Reservoir site Concern for shortage of large-scale plant science, indoor farming and agritech type uses in the southern Cambridge corridor, where Dernford Reservoir is located and no provision made for Data Centre uses. There is a significant need for this use type within the area, given the location of the site in close proximity to the large employment sites at; Granta Park, Babraham, Wellcome Genome and the Biodmedical Campus. Plan does not conform with the NPPF requiring Local Planning Authorities to identify suitable locations for data centres. The draft plan does not make any reference to data centres, nor identified within the accompanying Greater Cambridge Warehouse and Industrial Space Needs Assessment.	210310, 210315 (Russell Smith Farms)

Strategic and smaller scale development

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Concern large strategic site allocations predicted housing delivery rates are unrealistically high, and the delivery timetable for infrastructure to support these is uncertain.	201940 (KG Moss Will Trust & Moss Family), 201964 (Shelford Investments), 202073 (J Francis), 202554 (Ely Diocesan Board of Finance), 211410, 211411 (CALA Group Ltd). 205104 (Axis Land Partnership)
Concern over ability of strategic sites-focused development strategy to meet Housing and affordable housing needs; would approach support residents or services and facilities in those villages, and would not meet the great places, homes, connectivity and infrastructure strategic priorities services and facilities in those villages, or meet the great places, homes, connectivity and infrastructure strategic priorities.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis), 202555 (Ely Diocesan Board of Finance)
Comments strategic priorities would only be fully delivered with a higher housing requirement, an amended development strategy, and additional development at the more sustainable villages including Willingham, Fulbourn, Sawston, Hardwick, Great Abington, Bar Hill	203303 (J Manning), 203890 (Hill Residential (Fulbourn Site)), 203918 (Hill Residential (Fulbourn Site)), 204130 (Hill Residential (Hardwick Site)), 204346 (Hill Residential (Great Abington Site)), 211599 (LGH Hotels Management Limited), 211478 (G Robinson and Partners)

The plan should include a greater mix of smaller and medium sized sites: • Agrees identifying numerous small sites for development is impractical due to inadequate infrastructure in rural areas and potential negative impacts on green belt. • Concern plan does not allocate small and medium-sized sites needed for housing delivery and supporting small builders, despite their importance highlighted in the NPPF. The focus on large developments limits choice for prospective homeowners, and local residents to remain in communities. • To provide a realistic five year housing land supply, as these sites come forwards quicker • To enable a wide range of house builders to enter the market and provide a wider range of product and increase in local employment • Suggests a balanced approach including more allocations in rural villages to support local housing needs and prevent population imbalance. • Allows the SME sector to grown, delivering homes to increase the range of new homes available, and aligns with paragraph 73 of the NPPF.	201547 (Stapleford PC), 201854 (Chivers Farms Limited), 206215 (Granta Land Ltd - Land at Valley Farm, Meldreth), 204043 (E W Pepper Ltd), 211457 (Hayfield Homes Construction Ltd), 211518 (Endurance Estates), 211105 (Hallam Land Management), 211473 (Beechwood Estates Ltd), 211478 (G Robinson and Partners), 211532 (Hopkins Homes), 211231, 211579 (Living Space Housing), 201854 (Chivers Farms Limited), 211262 (Terra Strategic), 204102, 204144, 204145 (GW Balaam & Son)
The Development Strategy fails to accurately provide for rural and village growth to ensure sustainability and vitality of settlements, particularly sustainable large villages: • Minor Rural Centres are referred to as part of the development strategy but there are limited allocations – add growth at the more sustainable villages with a very good range of services and facilities, accessible by a range of modes of	211612 (Bloor Homes Eastern), 211604 (LGH Hotels Management Limited), 211584 (Terra Strategic), 211534 (Hopkins Homes), 211516 (Endurance Estates), 211415 (CALA Group Ltd), 211068 (Savills)

transport, and where there is an identified need for affordable housing for those with a local connection to the village. • Additional population helps in sustaining and improving the viability of existing services. • Growth within villages, including villages within the Green Belt, is essential to ensure they continue to be vibrant, inclusive communities with new opportunities for residents to stay in those communities. • Growth in villages should be better prioritised to ensure that those who wish to live in the rural areas are able to do so and that there is a variety of choice for the rural community. It is important that villages have adequate incremental growth to sustain the services they currently offer as well as offering appropriate additionality of services to avoid them becoming “sleeper villages". Plan makes allocations for just 265 homes on four sites adjacent to existing villages (Duxford, Highfields, and Melbourn). This is the outcome of a fundamental flaw in the framing of the hierarchy of locations within this policy, which reflects an approach to sustainability that gives predominant weight to environmental factors, notably transport emissions, to the detriment of the social sustainability of existing settlements.	
Supports rural area at the bottom of the preference list.	201012 (M Colville)
The proposed development strategy sets out where new homes and jobs identified in Draft Policy S/JH are to be provided to meet the visions and strategic priorities of the Plan. The strategy is reliant on previous allocations from the adopted Plans. New	211218 (Terra Strategic)

strategic scale allocations are proposed (a) within the Cambridge urban area; (b) on the edge of Cambridge; (c) at New Settlements; (d) In the Rural Southern Cluster and (e) In the Rest of the Rural Area. The remainder of the development needs are to be met at smaller sites within; a. Cambridge urban area; and b. the rural area, where further development is to be limited with allocations for jobs and housing focused on Rural Centres and Minor Rural Centres, and the settlement hierarchy policy providing for windfall development for different categories of village consistent with the level of local service provision and quality of public transport access to Cambridge or a market town. National Policy sets out a requirement for small and medium sized sites to be identified to accommodate at least 10% of the overall housing requirement on sites no larger than one hectare, unless it can be shown that there are strong reasons why the 10% target cannot be achieved.	
Concerns there are a number of risks with the development strategy. The proposed that 44% of housing target delivered at new settlements is very reliant on the delivery of the existing strategic sites, there is no evidence that delivery at these sites will increase above current rates. It is assumed that housing delivery at some of the strategic sites would be 300 dwellings per annum, but this rate has not been achieved at existing strategic sites in Greater Cambridge or delivered at these rates for a sustained period. The housing delivery rates at some of these strategic sites appear optimistic and not evidence based. The delivery of the proposed strategic sites at Cambourne North and	211245 (Manor Oak Homes – Cottenham Site), 211253 (R Harvey)

at Grange Farm are reliant on delivery of transport projects that are not approved, and where funding and delivery timescales are uncertain. Most of the existing new settlements will deliver less affordable housing than the policy requirement of 40%, due to these developments to also deliver significant levels of new transport and community infrastructure in initial phases The same for affordable housing delivery at Cambourne North and at Grange Farm. It is requested that the housing delivery assumptions for all of the strategic sites are reassessed.	
Concern that the Strategy lacks sufficient allocation of housing sites in existing settlements, which could enhance delivery speed and promote the vitality of these areas. Include new sites in sustainable village locations, which would provide local benefits, including affordable housing and support for existing services.	207189 (ESCO Prospect)
Concern that the scale of development deemed acceptable in Group Villages, (which includes Over), is too low. This restriction does not reflect Over's sustainability and capacity for further housing.	207191 (ESCO Prospect)
North East Cambridge should remain included in core numbers	201012 (M Colville)
Concern draft allocation not capturing the full capacity of the safeguarded land or the additional 131 ha of expansion land at Cambridge East, limiting transformative growth, jobs and homes.	209031 (Marshall Group Properties)
Responder questions soundness of Plan given lack of certainty of deliverability of NEC and Grange Farm within the Plan period and meet need, questioning whether further green belt release is required.	211444 (Gonville & Caius College)

Concern North East Cambridge is retained, as should no alternative funding become available ahead of the Regulation 19 stage later in 2026, it would be unsound to continue to include the site for allocation in the Plan.	203069 (Pegasus Group)
Support for Strategy for Cambridge Business Park at the heart of NEC and TCE is advancing proposals to comprehensively re-develop the site to deliver significant employment-led development and intensification of the site and is clearly aligned with the Development Strategy. Policy criteria 2(a)(i) sufficiently supports development in NEC in the event the CWWTP is not relocated away from the site, which is uncertain during the plan period.	203570 (The Crown Estate)
Concern Cambridge East allocation is it realistic given Marshalls has cancelled its planned move from Cambridge Airport, delivery trajectory is considered to be uncertain.	203069 (Pegasus Group)
Concern over omission of land at South West Cambridge, include to enhance strategic transport connections and support sustainable mixed use development	202440 (University of Cambridge),
Comments on the Cambourne Expansion: • Support the aspirations to substantially expand Cambourne. Concerns regarding accessibility along the A428 from southern Huntingdonshire, particularly St Neots, into Cambridge and its surroundings. • Concern of impact on the small villages north of Cambourne or the farming land which provides food for the existing population. • Concern that Cambourne and Northstowe have been unsuccessful at fostering sustainable communities with real centres and amenities.	201657 (Huntingdonshire DC), 201682 (S Smith), 205673 (M Meyer-Kelly), 202122 (Elsworth PC)

• Cambourne North is a new settlement, separated from the existing town by a trunk road and railway, and not an organic outgrowth of existing Cambourne. • There is also perhaps a sense of rectifying things that were not got right originally (e.g. the lack of a town centre). • Whether integration will be “supporting services and facilities” in anything but the long term seems unlikely.	
Comments on Grange Farm include: • Concern Grange Farm will provide homes with good transport links to London, encouraging commuters to take a large proportion of the accommodation, negating the intended good environmental outcomes. • Concerns in scale of delivery where the planned sustainable development of the south-east edge of Cambridge could replace some of what is proposed at Grange Farm, Abington to achieve a smaller and more appropriately sized development. • Concern site location and setting is within the least spoilt and most attractive landscape surrounding Cambridge and issues with development density and lack of identity. Recommends site be rejected from Development Strategy as alternate sites in far less sensitive landscape that are better suited to a 6000 house development. • Objects as development in/around Rural Centres is more sustainable than at Grange Farm (existing infrastructure, amenities, etc).	201894 (R Pargeter), 202526 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 203405 (B Reeve), 204160 (Mr and Mrs J Johnson), 203069 (Pegasus Group)

• objection to the proposed allocation under Policy S/DS at point “2.c. new settlements”, “ii. Land adjacent to the A11 and A1307 at Grange Farm • predicated on the Cambridge South East Transport (CSET) busway coming forward to make sustainable • questioned whether Grange Farm will be capable of delivering any new homes within the plan period • comments more appropriate to adopt an alternative Development Strategy which offers a more balanced approach to the distribution of growth, which recognises the role of existing sustainable settlements. • Comments significant doubt over the ability of the proposed allocations to deliver new homes within a timely manner and challenges the justification for the inclusion of Grange Farm within the Plan. Not planning positively to meet its identified needs as required by national planning policy (para 36).	
Concern the policy limits the size of development at ‘minor rural centres’ and lower tiers. The policy should not restrict the scale of growth for rural settlements, as this may affect the settlement's ability to maintain its existing facilities and support necessary growth. The Council should therefore consider the delivery of services and facilities alongside the planned strategic growth of settlements.	208340 (Thakeham Homes Ltd)
The strategy lacks justification and consistency with national planning policy, failing to consider suitable alternatives or deliver sustainable development. Support for the expansion of Cambourne, but the development framework should	203963 (Abbey Properties Cambridgeshire Limited)

include existing food retail uses at Caxton Gibbet, the EV charging car park and land to its east suitable for various uses. The boundary appears to follow the outline planning permission for Cambourne West without further review, which may not be appropriate. The concentration of allocations in the rural southern cluster limits opportunities in other rural areas, despite comparable transport links in locations like Girton, Oakington, and Over. A more dispersed growth strategy for villages would help sustain them and better utilise the infrastructure delivered across Greater Cambridgeshire. The approach aligns with Appendix D of the Local Plan regarding housing requirements for Neighbourhood Plans. Errors in the policy include unnamed Figures and unclear wording in part 2 c 2.	
Comments that large site allocations present an opportunity to deliver sustainable travel at scale, but priority must be given to walking, cycling, and public transport, embedded from the beginning.	207540 (R De Beaux)
Higher-density development can support sustainable travel, but only when it is paired with low car ownership and strong alternatives to driving. Dense schemes are too often	204716 (Mothers CAN Cambridge)

delivered alongside high levels of private parking, which consumes land, dominates streets and undermines walking and cycling. This also pushes up housing costs, forcing households without cars to subsidise parking through higher prices. The Plan should explicitly link higher density development to lower car ownership, avoid assuming one car per home, and require parking to be optional, generally separated from housing, and transparently priced. Without this, density will continue to be experienced as a problem rather than an opportunity	
The plan predominantly focuses on Cambridge, neglecting over 100 areas in South Cambridge, lacking a clear explanation of how growth in new towns and Cambridge will benefit South Cambs communities. There is no clarity on funding opportunities for infrastructure improvements, including the construction of new schools, doctors' facilities, and road repairs in the SC villages, despite recent big developments in Cottenham for instance	202784 (I Koutoudis)
Comments regarding The Wilbraham's: • Concern lack of development opportunities around the Wilbraham's. Residents would support land release from greenbelt, if enables refresh the population and try to protect the school from closure. Not opposed to high quality development and community led development schemes such as Community Land Trusts could be used. See having a funding stream and professional support for these types of projects as ways of providing new housing.	208725, 208726, 208727 (Cllr Matthew Morgan)

• Concern The Wilbraham's have been ignored in the Local Plan. Support for CIL to spread land value uplift more widely from the large developments favoured by the draft plan. Notes a cycle route to Fulbourn might be a very useful 106, or CIL project for the future for the Wilbraham's. Concern for small villages ability to refresh themselves and draw in new people or allow older residents to downsize and are not adequately reflected in the current local plan.	
Concern proposed green infrastructure opportunity areas unrelated to strategic development allocations that could support their delivery are unlikely to be delivered.	201941 (KG Moss Will Trust & Moss Family), 201966 (Shelford Investments), 202075 (J Francis)
The Housing Delivery Study Addendum (2025) cites particularly high annual build out rates, noting these have previously been achieved due to the continued economic growth within Greater Cambridge. However, it fails to advance any evidence that policy changes will have a material impact on the delivery of windfall sites and therefore it is unclear how this aligns with the requirements of the NPPF. The Councils should consider the potential of omission sites which could facilitate a more joined-up approach to development for the 7,225 homes currently anticipated on windfall sites.	209697 (CEG Land Promotions Ltd)
Land South of New Road, Guilden Morden (site reference 40563), Responder suggests the site should be deemed suitable, available and achievable for the preferred development type.	208672, 208668 (Guilden Morden Developments Ltd)

Supports the identification of the four strategies set out on page 16. Suggest feasibility of the strategies be tested after the assessment of all sites in both Call for Sites consultations, and concern in not including increased development at the Group Village scale, given the sustainability of the settlements within this tier is referenced throughout the evidence base and is not dependent on the presence of a train station. Recommend Policy S/DS be revised at part e, insofar as development in the wider rural area should be inclusive of all sustainable locations, regardless of being beyond the 'Rural Centre' or 'Minor Rural Centre' Tiers.	208674 (Guilden Morden Developments Ltd)

Green Belt, Grey Belt

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Supports the view that releasing greenbelt or grey belt land is unnecessary to meet development needs, and the importance of preserving the greenbelt for local landscape, nature, health, and recreation.	201547 (Stapleford PC)
Green Belt prevents communities in the environs of Cambridge from merging into one another and with the city. Those purposes are still relevant and justified localised extensions and brownfield sites are compatible in principle with the NPPF.	210983 (C Newell)

Comment that there is plenty of land beyond the Green Belt that is still undeveloped and the new towns and infrastructure being developed can address the forecast economic growth	205656 (M Foote)
The apparent early determination, in advance of the published Green Belt review, that there are no strategic exceptional circumstances to justify release of Green Belt land, and by extension grey belt release for strategic planning purposes, remains a concern.	202627 (British Land)
Objection to Policy S/DS; the supporting text claims the development need does not meet the 'exceptional circumstances' test for Green Belt release, despite NPPF 2024 allowing release where needs cannot be met otherwise. Wrongly treats the need for Green Belt release as 'exceptional'; the exceptional circumstances test should be reassessed given the higher growth evidence.	206093, 206096 (Wimpole Associates Ltd)
Since Cambridge received its £400 million government funding commitment, and with the city's rising profile through the OxCam Corridor project and its promotion as part of the UK's new Biotech "Silicon Valley", pressure on surrounding countryside has intensified dramatically. Private developers and investors are targeting land just beyond the Green Belt, not because it is appropriate or sustainable, but because it is less protected and easier to exploit. The impacts of this on small rural communities like ours are severe, cumulative and ongoing.	209117 (S Hepworth)
National policy does not facilitate the creation of local Green Belt purposes. The Cambridge Local Purposes do not align with the national purposes, particularly Cambridge Purpose 3. This relies on merging of communities (i.e. the necklace	203968 (Anglia Ruskin University)

villages), in contrast to the national purpose which applies to the merging of towns. It is therefore considered that the Development Strategy should rely on a full Green Belt review, assessing land against the applicable national purposes.	
Concerns that as policy states that development needs alone do not justify Green Belt release, and delivery of Policy S/NEC is contingent on relocating the CWWTP, which requires Green Belt land to be removed. The Plan fails to transparently identify and assess this consequential Green Belt impact. The Councils' position that Grey Belt need not be identified because Green Belt is not being released is inconsistent with the Plan's spatial strategy. This lack of transparency undermines soundness and prevents proper consideration of Grey Belt land in accordance with national policy.	202116 (M Asplin)
The Councils' claim in Para 2.64 - that they need not identify Grey Belt land because they make no Green Belt releases - is a fundamental contradiction. Policy S/NEC is "predicated" on a relocation that the made DCO confirms will take 34 hectares of Green Belt. NPPF 148 requires that any Green Belt release must prioritise previously developed and Grey Belt land. By suppressing the relocation's Green Belt impact, the Councils have failed to apply the mandatory sequential tests for Green Belt release, making the plan inconsistent with national policy (NPPF 36d).	202592 (Save Honey Hill Group)
Comments undeveloped Green Belt on the edge of Cambridge is the critical in meeting the fundamental objective of the Green Belt to prevent urban sprawl.	201184 (M Foote)
It is important for the Green Belt Assessment to be updated. An up-to-date Assessment is needed to provide a qualitative assessment of the purposes and functions of the	202736 (Cambridge Past, Present and Future)

Cambridge Green Belt, and given the current pressures and contexts, demonstrate its relevance to the setting of the historic city. The lack of an up-to-date Green Belt Assessment will undermine the plan.	
Objects to Policy S/GB as based on the 2021 Green Belt Assessment and omits Grey Belt criteria; an updated assessment and review of Green Belt boundaries are required. Sites in locations that are defined as grey belt should be strongly considered in order to increase the supply of homes.	206072, 206091, 206105 (Wimpole Associates Ltd)
Comment that the revised Green Belt Assessment has not been published and that the omission of a 'Grey Belt' analysis breaches Planning Practice Guidance; we recommend the assessment be updated to identify Grey Belt land.	206097, 206090, 206089 (Wimpole Associates Ltd)
The evidence produced in support of the GCLP demonstrates that the edge of Cambridge could be a sustainable location for homes and jobs, noting its accessibility to existing jobs and services. Whilst acknowledging that the Councils have to give consideration to the Green Belt, CEG considers that the approach to discounting sites based on Green Belt constraints has significantly hindered the plan's ability to take advantage of the most sustainable development opportunities. These sustainable locations are those which could do the most to help ease transport congestion and their associated environmental pressures by placing growth where there is a very viable alternative to the private car. This runs contrary to the strategic priorities related to climate change, wellbeing, great places and connectivity.	209692 (CEG Land Promotions Ltd)

Policy fails to recognise role of that Grey Belt land could play in assisting to meet employment needs. The Development Strategy Topic Paper (December 2025), in particular Appendix 4, explains why GCSP does not consider exceptional circumstances exist in this instance. However, the evidence base and Sustainability Appraisal consider a series of alternative development strategy approaches to meet identified needs, including use of Green Belt land on the edge of Cambridge. The Topic Paper concludes that Green Belt sites on the edge of the urban area could perform well, but explains that the main disadvantage of such an approach would likely be the significant harm to the Green Belt. However, this conclusion pre-supposes that such sites are Green Belt, rather than Grey Belt land.	211589 (Turnstone Real Estate Limited)
However, there is a danger that in some places the green belt is drawn too tightly around the edges of some villages and thus prevents small-scale appropriate developments that would enhance the environment and provide long-term rural resilience. A sensible, measured engagement should take place over the role of the green belt in relation to smaller village developments.	203071 (Little Wilbraham and Six Mile Bottom PC)
Comments on Green Belt release include: • Plan correctly states that development needs do not justify further Green Belt release, even with the existing headroom and post-2045 developments.	201012 (M Colville), 201184 (M Foote), 204642 (C Forbes-Cable),

• Two identified sites with exceptional circumstances for Green Belt release are unique and should not lower the bar for future releases. • Supports limited Green Belt release land on the edge of Cambridge to meet the general development needs identified in this plan and it is not necessary for you to identify grey belt land. • Supports conclusion it is not necessary to release Green Belt land on the edge of Cambridge to meet the general development needs identified in this plan and it is not necessary for you to identify grey belt land. • Support the idea of the green belt and your points regarding what the green belt is. However, there are sites that are allocated as green belt that are not in fact but already in the village envelope. These areas of green belt do not tick the boxes of your description of green belt, so I suggest they are released. We have one such site in the middle of a village. It was to be released in earlier stages of this plan but has been removed in this stage. The Walled Garden, Whittlesford CB22 CB280901. Please release it from greenbelt.	
Responder objects to approach to Green Belt release. CEG highlight that they support the expansion of the Biomedical Campus, but Cambridge has both a booming life sciences sector and tech sector and restricting the release of Green Belt to just enabling the expansion of one existing life sciences operator feels restrictive, and a limiting option in facilitating and realising the undoubted economic growth.	209693 (CEG Land Promotions Ltd)

Green Belt comments at Mingle Lane site: • Comments insufficient exceptional circumstances to justify releasing land behind Mingle Lane from the greenbelt. • Support for not including Mingle Lane (S/RHC/HW) in Plan. Housing need can be met by other new substantial developments proposed such as that at Cambourne together with new rural Southern Cluster sites such as those at Spicers, Hinxton and Babraham. • GCLP suggests at para 2.64 that the identified development needs alone are not considered to provide the 'exceptional circumstances' required in national planning policy to justify removing land from the Green Belt, this is based on the presumption that the proposed allocations will deliver as anticipated. • Strong support for retention of land between Mingle Lane, Stapleford and Hinton Way Great Shelford (S/RSC/HW) within the Green Belt, as it is important for the visual and social benefit to the community of both villages. There is no justification to release this land for development. • Concern that land at Hinton Way (Policy S/RSC/HW) is potentially being removed from Green Belt as this would cause irreversible damage and leave the neighbourhood open for developments which could ruin the quality of life.	201547 (Stapleford PC), 201579 (J Sennitt), 203069 (Pegasus Group), 207497 (A Scott)
NLHRL contend that the site S/RSC/HW is Grey Belt and given the Government's emphasis of directing homes where they are well related to rail services it should be reallocated for development. The Site Allocations Topic Paper states the Housing Land	208904 (Nightingale Land and Hill Residential Ltd)

and Availability Assessment considers the site as a deliverable option. At paragraph 6.67 it states that the decision to allocate the new settlement at Grange Farm now means that there is a significant allocation in this area and on the route of the Cambridge Southern Corridor transport improvements. It concludes that the Council considers sufficient sites have been identified without the need to release land from the Green Belt. The identification of Grange Farm, whilst located in the southern cluster does not specifically respond to the needs of individual settlements such as Great Shelford and Stapleford.	
Suggests the planned release of Green Belt land at the south of the Nine Wells site is an important green space that campus staff, visitors and hospital patients use increasingly.	201023 (K Mahoney)
Suggests Green Belt in the parish of Stapleford at the tip of the southern tentacle of sprawl heading towards London will be given additional protection to prevent further loss (given the recent hectares lost to development extending the village by over 10%)	201184 (M Foote)
Excluding this accessible site on Green Belt grounds is inconsistent with the Plan's objectives for sustainable rural communities	207434 (KWA Architects)
The development of area land registry ID:CB280901 complies with all outlined requirements and was initially included in the draft plan for Whittlesford but was subsequently excluded.	205412 (L Gardner)

The proposed development meets the criteria for existing infrastructure and transport networks without encroaching on rural green areas. It is a small-scale development that addresses current housing can be quickly built to meet current needs, while preserving the heritage environment with sensitive planning. The development would enhance access to green space for local residents.	
Comments on Parcel H05 include: • weak physical distinction from Horningsea, showing site is functionally part of the settlement rather than the open countryside. • backland garden enclosed by residential dwellings, with limited countryside views and dominant urbanising influences, making it unsuitable for Green Belt protection. • a limited or no contribution to Green Belt Purposes 1-3, release would have a minor impact on the adjacent Green Belt. • current Green Belt boundary is arbitrary, bisecting a single planning unit and lacking permanent, recognisable features as required by NPPF 149(e)-(f). • Aligning Green Belt boundary with Defined Development Extent would resolve the policy tension noted in paragraph 2.136 of Policy S/DE.	206080, 206081, 206082, 206083, 206084, 206085, 206086, 206087 (M Asplin)

• Sustainable location with active-travel links, a suitable small-site that could help meet the Council's 6.5 % shortfall in small sites. • Removing the parcel from the Green Belt would support the vitality of Horningsea village, aligning with NPPF paragraph 83 which the current Development Strategy fails to address.	
The Consultation Draft NPPF (2025) sets a clear intended direction of travel within Policy GB3(1a) which notes Green Belt boundaries should be altered through the preparation of Local Plans where this would enable the development of land around stations. Whilst until the Draft NPPF (2025) is adopted it will carry limited weight and the Greater Cambridge Local Plan is to be examined against the NPPF (2024), GCSP should consider the intended direction of travel for future policy and consider land (including Green Belt land) for allocation that is well connected to train stations.	211531 (Corpus Christi College, Cambridge)

Gypsies, Travellers and Travelling Showpeople, Residential moorings for boat dwellers, Other caravan dwellers, Specialist accommodation

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comment that the plan is likely to provide over and above the identified need for travellers within the plan period.	208494 (Central Bedfordshire Council), 207655 (Cottenham PC)

Comment that optimisation and intensification of the existing sites at Chesterton Fen Road and Smithy Fen is iniquitous and unfairly discriminates against all the residents of Cottenham (and Chesterton), including those residents on the Smithy Fen site, and will place an increased and unfair burden on the village.	207655 (Cottenham PC)
Careful consideration needs to be given to any planning at the Smithy Fen site.	203867 (J Welford)
Object to Policy S/AMC/GT, optimisation of Gypsy and Travellers sites. Smithy Fen is already overcrowded and unsafe. The site opposite is an eyesore on the countryside. Traffic levels are already high on a single track road with passing places. Local doctors are overstretched. Why does Smithy Fen need to grow when new sites like Northstowe and Waterbeach do not have Traveller sites.	208496 (L Gardner)
The proposed increase in Traveller settlements in South Cambs without justification, especially when Cambridge has more infrastructure and amenities, is extremely controversial. What is the contribution of such sites in the local community and economy? What is the necessity of intensifying Traveller sites in Milton and Cottenham, when these locations exceed appropriate size and are remote, leading to safety concerns for residents. The already proposed new settlements far exceed the ANA report requirements of 159 spots.	202784 (I Koutoudis)

Infrastructure

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
New healthcare infrastructure delivery is resource intensive, and funding constraints from the NHS are worsened by population growth from housing developments. New developments should proportionately contribute to the healthcare needs arising from increased population due to housing growth. Healthcare infrastructure should be prioritised in infrastructure delivery due to its strategic importance in supporting housing growth and sustainable development.	205050 (NHS Cambridgeshire and Peterborough Integrated Care Board)
The Local Plan has a role to make it clear that there is a requirement for development contained within the Plan to help fill funding gaps in the delivery of transport infrastructure. The GCP schemes, as already discussed, are heavily relied upon within the Plan. Whilst the GCP programme has funding, it is predicated on match funding for infrastructure and therefore developers benefitting from such infrastructure will be expected to contribute proportionately towards schemes that serve their sites. As a result, obligations for both infrastructure and for commuted sums for maintenance should be factored into the Infrastructure Delivery Plan and associated sites within it.	210516 (Cambridgeshire County Council)
The aim that development will only be allowed if it is accompanied by the right infrastructure that will deliver the range of supporting services, facilities and	210984 (C Newell)

infrastructure that workers, visitors and residents need is crucial to protect the three strands of sustainability	
Concern over the lack of infrastructure to support the proposed development: • Especially schools, medical facilities and qualified medics, community facilities, transport, and increase in people, vehicles, pollution. • Lacks clarity on the infrastructure required to support development on the edge of Cambridge (CSET and Busway identified as critical infrastructure in the Infrastructure Delivery Plan but not explicitly referenced within Grange Farm and the Cambridge Biomedical Campus expansion policies.	201172 (J Lambert), 207533 (S Berridge), 203894 (KWA Architects)
Notes the key importance of infrastructure coming forward in time to support new communities and being rigorously enforced.	202820 (Cllr K Porrer)
Concerns plan appears overly optimistic about infrastructure project timelines and lacks a clear funding strategy for necessary water infrastructure.	202214 (A Sykes)
Concern infrastructure required to support population growth may not be deliverable through the development process alone and will need significant additional investment from external sources. Such as healthcare infrastructure, noting that a replacement for Addenbrookes Hospital could require £2.2 billion. There is a concern that without adequate capacity, economic growth could lead to social and environmental decline, resulting in unsustainable development.	202897 (Cambridge Past, Present and Future)
Section 4.3 of the Infrastructure Delivery Plan (‘IDP’) sets out the priority projects. The Cambourne to Cambridge ('CtoC') bus link is identified in Table 4-1 as a strategic	203440 (Juniper Propco)

transport measure. It is unclear in its wording whether it is anticipated it will be delivered by 2035. Clarification should be provided regarding the anticipated timescales within which CtoC will be delivered. This may become clearer prior to the Regulation 19 version of the plan being produced	
Recommends Grampian conditions should be considered to ensure healthcare infrastructure is built in a timely manner.	202214 (A Sykes)
Concern Plan overlooks the post-16 education system that sustains that workforce. Families drawn by opportunity also prioritise high-quality 16–19 provision, and Cambridgeshire's specialist tertiary model—including institutions such as Hills Road Sixth Form College—needs to be brought into scope. Post-16 places require long lead-in times, suitable sites and coordination with the Department for Education therefore capacity cannot be flexed quickly. Without explicit recognition in policy, site safeguarding and proactive planning with providers, the proposed housing and jobs growth will become unbalanced, constrain parental choice and weaken the skills pipeline. To be deliverable, the Plan must treat post-16 education as critical infrastructure.	202854 (Hills Road Sixth Form College)
Comments regarding the Infrastructure Delivery Plan include: • Comments transport inadequate in South Cambridgeshire, noting Great Shelford, requires improvement alongside new projects, as highlighted in the draft Infrastructure Delivery Plan.	202214 (A Sykes), 202433 (The CLC Trust)

• Concerns that the draft Infrastructure Delivery Plan fails to mention need for a new acute hospital to meet the healthcare demands of the growing population. • Concerns over uncertainty in the infrastructure delivery timetable for expanded developments like Cambourne and Grange Farm	
Some flexibility will be needed to meet unexpected events, outcomes or dependencies on infrastructure projects which may or may not be delivered. Most notably, in August 2025 the Government announced that it will not be funding the relocation of the Cambridge Waste Water Treatment Plant (CWWTP) creating uncertainty as to whether Councils' vision for North East Cambridge can be taken forward. We appreciate the purpose of plan making is to have a "plan-led" system, building in as much certainty as possible as to where development and infrastructure should take place over the plan period. However, as the GCLP has already witnessed unforeseen events along the way can impact on the development strategy, and some key sites are dependent on major infrastructure being funded and implemented.	211423 (Gonville & Caius College)
The Plan's housing supply position indicates that, excluding the North East Cambridge allocation (which is surrounded by uncertainty given its reliance on the relocation of the Cambridge Waste Water Treatment Plant (CWWTP) and funding to do so which was withdrawn by Government in August 2025), the Councils are planning for only a modest level of flexibility above the identified housing requirement.	210224 (Vistry Group)

Should funding be secured to enable full delivery at North East Cambridge, this headroom would increase, but it remains contingent on factors outside the Councils' direct control.	
Para 2.79: Healthcare infrastructure and, in particular, the necessary new acute hospital must be included in this paragraph. GCSP should also consider whether Grampian conditions could be applied to a failure to build appropriate healthcare infrastructure. If not, some other mechanism will be needed.	210891 (Great Shelford PC)

Water supply, drainage, waste water and flood risk

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
When Anglian Water submitted our Business Plan to Ofwat in 2023, the framework was not designed to account for the pace and scale of growth outlined by the government in the "Realising the Full Potential of Greater Cambridge" statement, and the subsequent change to the standard method for calculating local housing need in the National Planning Policy Framework and Planning Practice Guidance updates (December 2024). This means that the scale of growth funded in our AMP8 Business Plan, does not sufficiently reflect the scale of growth pressures or the level of funding to address them.	209157 (Anglian Water Services Ltd)
It is noted that the preferred option for the spatial strategy is identified as a blended option, underpinned by development strategy principles. These principles align with	209159 (Anglian Water Services Ltd)

Anglian Water's strategic long- term ambitions to be resilient to the risk of drought and flood, a carbon neutral business, enabling sustainable economic and housing growth, and working with others to achieve significant improvements in the ecological quality of catchments in our region. We support the development management principle that necessary utilities should be supported in a sustainable way so that the environment is protected and enhanced. We consider this principle is fundamental to supporting sustainable and resilient growth, and to enable investment to be brought forward to address the considerable growth being planned for the Greater Cambridge area, whilst ensuring the environment is protected.	
Anglian Water notes that the Development Strategy for Greater Cambridge directs growth to the most sustainable locations, with the focus on the Cambridge urban area, Cambourne, other new settlements and the rural southern cluster which has strategic transport links and employment opportunities. Anglian Water recognises that nationally strategic infrastructure projects such as the A428 Black Cat to Caxton Gibbet upgrade and East West Railway are catalysts for sustainable connected growth across our region and together with three planned busways into Cambridge, have shaped the Development Strategy for Greater Cambridge. The key sites within the Cambridge urban area, and on the edge of Cambridge (a and b) includes North East Cambridge. It is noted that the policy (2.a.i) provides flexibility for	209158 (Anglian Water Services Ltd)

the type of development indicated for this site, as a result of the Government's withdrawal of funding for the Cambridge Waste Water Treatment Plant Relocation (CWWTPR) in August 2025, following Development Consent Order approval for the scheme in April 2025. Anglian Water considers that this flexibility for development of the site is important, because of the investment now required to address capacity at the existing Cambridge WRC. i./iii/v For new settlements, there is a considerable expansion at Cambourne North to link with a new proposed East West Rail station and the carried forward allocations at Bourn Airfield and Northstowe. The growth at Cambourne, has and continues to be considerable. Both Cambourne and Northstowe are within the Uttons Drove WRC catchment, which is being considered as part of our longer-term planning for the 2025–2030 asset management period (AMP8) and beyond. In line with PR24 adaptive planning principles and our ongoing discussions with Ofwat, we are reviewing growth forecasts across our operating areas and developing options on how to approach investment that can respond to uncertainty in the scale and timing of development. Any future investment at Uttons Drove would contribute to additional capacity and resilience within the catchment; however, it is unlikely that this alone would accommodate the full scale of growth currently proposed. Supporting later phases of development at these locations will therefore require a longer-term strategy, progressed through future	

planning and price review cycles as growth assumptions are refined and investment needs are confirmed.	
Comments that growth cannot happen until there is a water supply solution: • Assertion that there will be enough water for the expanded population is a joke. • New reservoirs are being built but there is uncertainty how these will be filled. • Concern the scale of growth is placing further unsustainable demands on water resources to detriment of already depleted chalk aquifer and degraded chalk streams, until Fens reservoir (late 2030s) and pipeline (2032) are in place.	201223 (S Williams), 202438 (A Fisher), 202484 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust)
Environment Agency notes: • in the policy's Supporting Information on "Ensuring a deliverable plan" mentions "is not anticipated to be completed in the housing trajectory accompanying the Local Plan until 2032" - We would recommend the statement "is not anticipated to" to be improved by including further information from developers of the strategic sites on their planned phasing. • Environment Agency recommends in table 2 highlights Allocations for the periods 'Homes 2024-2025' and 'Homes Post 2045'. We recommend this table be revisited and an additional column be added which details new local plan allocations for 'Homes 2024/25-2031/32' and 'Homes 2032/33-2045' (or any further breakdown, that reflects when water supply is planned to be available from other strategic schemes like the Fens Reservoir).	211127, 211128, 211129, 211130 (Environment Agency)

• Environment Agency are encouraged by the statement “Delivery and phasing plans will need to demonstrate engagement with the water industry, and respond the availability of water supply improvements.” and would recommend including this wording to this policy or to policy CC/WE. • Environment Agency recommends in paragraph 2.86 appears to be missing the word ‘waste’ before ‘water treatment works’, in the first sentence. We recommend being clear throughout the Plan when referring to Waste Water Treatment Works, to avoid confusion with Water Supply Treatment Works, which are commonly referred to as just water treatment works.	
We note the proposed new pipelines to alleviate the shortage of drinking water and the proposal to reduce extraction from the aquifer and particularly chalk streams, both of which we strongly endorse. However, it is our understanding that there is a delay in the availability of water from Lincolnshire using the new pipeline until after 2030. How will this gap be manged and what is the impact of this on the plan period?	203264 (Horseheath PC)
Questions where sewage works are to support this plan?	202282 (L Turton)
Concern over both lack of water and flooding which made worse by development over fields and flood plains.	202282 (L Turton)
Concern any increase in flooding due to A428 is being widened is taken into account.	201682 (S Smith)
Comments on environmental resources (green spaces and water) are at their limit. No credible solutions provided where the resources will come from, and what will be done to restrict demand and usage.	205438 (A Kirchgaessner)

We do not share the optimism expressed in Paragraph 2.84: Cambridge Water Supply Area Evidence prepared for GCSP does not highlight that the Grafham Transfer is a key dependency. Cambridge Water's WRMP24 refers, in relation to the Cambridge Water Recycling Centre effluent re-use scheme. The IDP states opportunities for a new surface abstraction from the River Cam. The Cam runs through the parish and this strikes us as unlikely. The evidence report also refers to water credits that the Government has said nothing publicly about since March 2024. It would surely be preferable to seek urgently to solve the problem identified in the evidence that water reuse and recycling for large new development sites may be an option.	210892 (Great Shelford PC)

Transport

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
In broad transport terms CCC supports the Local Plan and the associated development strategy. The transport evidence developed to date alongside the development strategy demonstrates that the Local Plan is deliverable in transport terms, if sufficient mitigation of the key development locations is provided. It is however important to state that all the strategic sites contained in the draft Local Plan require transport mitigation strategies to support their delivery. This mitigation includes stringent trip budgets which are to be agreed with CCC as Highway Authority. In addition, the transport infrastructure	210513 (Cambridgeshire County Council)

requirements for each of the strategic sites are significant, therefore deliverability and viability will be key considerations. CCC would re-emphasise that in transport terms, the strategic sites are heavily reliant on the GCP programme of works being delivered.	
The development of the Greater Cambridge Transport Strategy (led by the Cambridgeshire and Peterborough Combined Authority) will provide the transport Strategy to support the Local Plan. The Council is working with the CPCA to support this process. The draft Local Plan makes several references to City Access (e.g. Figure 13). This workstream has been superseded by the forthcoming Greater Cambridge Transport Strategy.	210514 (Cambridgeshire County Council)
In relation to the point made about viability and infrastructure requirements to ensure a development site is deliverable, it is essential to recognise that whilst CCC agrees that the Grange Farm site can be delivered in transport terms with sufficient mitigation, it is only deliverable if CSETS phase 2 is built as well as an extension to CSETS with grade separation over the A11 into Grange Farm, with bus priority across a new junction on the A1307. This is a significant and complex infrastructure requirement. Grange Farm would benefit from a detailed transport strategy to set out the full transport mitigation package, as is the case with Cambourne and other strategic sites.	210515 (Cambridgeshire County Council)
Comment that is important that the Greater Cambridge Transport Strategy is available as the plan progresses	207534 (East Cambridgeshire DC)
Comments regarding the Transport Evidence Report	211765, 211766 (Camcycle)

• Helpfully shows that development in Cambridge and on the edge of Cambridge generates far fewer additional car trips per home or job than remote new settlements, and has dramatically lower car mode share. • largely relies on 'predict and provide' modelling, testing conservative assumptions and then seeking mitigation, rather than exploring what could be achieved through stronger policy requirements and place-based design. • makes comparisons between sites such as Grange Farm, Waterbeach and Northstowe that do not reflect the different delivery mechanisms and constraints that will shape real-world travel behaviour	
EWR Co strongly support the Council's growth strategy (Policy S/DS) which is 'heavily informed' by the location of existing and proposed public transport schemes, including EWR. The EWR project will play a major role in helping the Councils achieve their ambitions for Greater Cambridge by 2045.	209085 (East West Rail Company)
Comments not sensible on the plan ahead of the Combined Authority's Travel Strategy	201902 (C Deer), 202118 (Elsworth PC)
Concern Plan cannot be properly considered without the Greater Cambridge Transport Strategy, given implications of substantially higher levels of commercial and private transport journeys and condition of local roads, and the Infrastructure Delivery Plan.	201913 (R Baker)
Recommendation for appropriate transport and travel modelling to mitigate potential negative impacts on travel towards Cambridge from Huntingdonshire.	201657 (Huntingdonshire DC)

Mitigation proposals should encompass various travel modes and maximise opportunities for Huntingdonshire residents and businesses to access public and active transport.	201657 (Huntingdonshire DC)
Ultra-fast and efficient public transport links from 'spokes' into the Cambridge (the hub) would minimise congestion and journey times.	201920 (A Davidson)
Recommends a future light rail network linking up larger villages and new towns with Cambridge and each other. Locating facilities close to stations.	202362 (A Carpen)
Concern at over-expansion of local economy and move toward sustainable transport.	201223 (S Williams)
Argues that public transport and active travel must be the starting point for all development, with properly designed, networked routes to avoid car dependency and ensure use.	201734 (R Stobbart)
Comments as new housing is out of Cambridge, but people work mostly in Cambridge, transport will be more stressed, and sustainable travel modes have not been consistently included. • The Plan should map where homes are built and where employment is located, to see the needs for transport. • Included more detail on supporting public and active transport between settlements and the city, between settlements and Policy for local amenity within settlements to assist with day-to-day travel within the communities • Add policy to support active travel within new communities and retrofitting to existing settlements.	201812 (J Baumberg), 201826 (T McKoewn)

The plan should have binding targets for the proportion of journeys walked/cycled and by public transport and for reduction in car ownership (and car dependency). Major developments should have targets for mode share and permeability.	202283 (A Lawrence)
Higher-density development should be linked to lower car ownership and strong alternatives to driving to support sustainable travel. Current dense developments often include high levels of private parking, which affects land use and increases housing costs for non-car owning households. The Local Plan should require parking to be optional, separated from housing, and transparently priced to ensure density is viewed positively.	204632 (M Fordham)
Reduce reliance on the private car: • Reduce the dependence on cars for village residents • Public transport to villages needs to be significantly improved	201894 (R Pargeter), 201023 (K Mahoney)
Recommends increased importance on sustainable transport. Privately-owned electric vehicles do not solve other problems; are expensive way to reduce carbon; are not a sustainable solution.	202283 (A Lawrence)
Comments strategy underplays the role that the existing public transport network can and should play in delivering sustainable development.	203069 (Pegasus Group)

States that the planned Cambourne rail station will adversely impact Boxworth, with inadequate road infrastructure likely to turn the village into a major access route, causing significant detriment.	202838 (W Nichols)
Comments in relation to the CSETS transport corridor scheme: • Supports improvements to transport corridors, pivotal to transport strategy, but concerns over the proposed CSET route, failing to use existing transport corridors and for cutting through Green Belt land. • Comment that the Better Ways for Busways has proposed an alternative to the CSET scheme utilising the existing transport corridor, with less environmental impacts, more accessible, and more cost efficient. • Proposed CSET busway is not compliant with upgrading EXISTING transport corridors. Abandon this hugely destructive and unnecessary scheme, instead improve the frequency and affordability of buses running on the existing roads. • Objection to CSET route and questions if multi-modal access road is needed if the Better Ways for Busways' alternative for a busway spur off the A1307 Hinton Way roundabout was adopted. • Figure 13: is potentially misleading. CSET proposals are still at Inquiry, it is not a committed scheme but a proposed scheme.	203087 (N Campbell), 210184 (Historic England), 204099 (A Baker), 207656 (K Foreman), 202617 (P Waters), 201547 (Stapleford PC), 203174 (D Morgan), 207533 (S Berridge), 204944 (C Arthurs), 204942 (O Arthurs), 204758 (M Fyfe), 204448 (N Pond), 203180 (D Morgan), 209022 (Hobson's Conduit Trust)
Questions proposed multi-modal access road from Granham's Road to the Cambridge Biomedical Campus (CBC), suggesting alternative busway spur from the A1307 Hinton Way roundabout be considered.	204107 (A Baker)

Concern Plan takes no account that by 2045 most vehicles will be EVs.	201902 (C Deer), 202118 (Elsworth PC)
Concern regarding transport improvements, with the draft Infrastructure Delivery Plan not acknowledging existing transport network condition needing to be addressed. While the development of Cambridge and CBC offers potential opportunities for residents of Great Shelford in employment and healthcare, the village carries many of the major transport routes in the South Cambridge area and bears the brunt of their ongoing development.	208089 (Great Shelford PC)
We have concerns about amount of growth on the northeast and eastern sides of Cambridge, and recreational pressure on our sites arising. It is acknowledged that the Local Plan is informed by the location of existing and committed public transport schemes and that a Transport Strategy is being prepared by the CPCA. However, the National Trust has the Wimpole Estate, Anglesey Abbey and Wicken Fen which are important heritage, greenspace and tourism facilities for its residents and visitors. Their importance to Greater Cambridge should not be undervalued. All three of these sites are poorly connected to the city and to the proposed strategic development sites, with very limited opportunities to access the sites by sustainable transport modes. This is an issue that the National Trust are very keen to address but cannot do this in isolation. We are keen to work with other stakeholders and partners to seek opportunities to improve these links.	211081 (The National Trust)
Comments on roads conditions, access, use and safety include:	202214 (A Sykes), 202282 (L Turton)

• Highlights problem areas: (A1301), level crossings, and poor road surfaces to enhance transport safety and accessibility for cycling. Concern over capacity of rural and major roads with increased usage.	
Concern for A14 congestion at peak times at M11 pinch point, and limited input from highways agencies on traffic impact of developments?	201322 (R Morley)
Concern no indication of the East/West railway is included as line of it is incorrect and therefore the local plan.	201682 (S Smith)
Concerns the environmental impact of the East West Rail's southern approach, regarding local wildlife and the Mullard Radio Astronomy Observatory.	202214 (A Sykes)
Concern that in villages car transport will have to remain a mainstay of local transport, and with move to electric vehicles, the plan needs to ensure that the electricity supply infrastructure is sufficient to meet this need.	201894 (R Pargeter)
Comments regarding CSET include: • Objection to CSET route as not within a public transport corridor. • Better Ways for Busways proposed an alternative route along A1307, which does not cross greenbelt land. • Offers additional evidence supporting the benefits of the proposed on-road route. Alternative route would be less environmentally destructive, improve accessibility for a range of users, and cost-efficient. Plan should be scrapped and a new plan created which looks at taking the busway alongside the road.	202620 (I Smith), 202684 (J Hunting), 203051 (C Schofield), 203126 (J Jasiewicz), 204085 (J Robinson), 208405 (M Cooper)

Strategic cross boundary matters

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Concern level of growth detrimentally impact on neighbouring areas to meet and deliver their own economic ambitions and growth aspirations.	208495 (Central Bedfordshire Council)
SCC understands from the settlement strategy and allocations that there is a low level of windfall and allocated growth in the area of South Cambridgeshire that directly affects our border. Our comments relate to highways and transport; minerals and waste planning, and education issues. Our officers would be happy to further engage with you as your plan progresses.	210629 (Transport 2000 Cambs & W Suffolk)
Given their proximity to Essex it is essential that Greater Cambridge councils work collaboratively with ECC and other partners, to ensure consideration is given to the cross boundary impacts and connectivity within Essex, in particular highways and transportation, Early Years and Child Care, Education and Adult Community Learning.	210471 (Essex County Council)
ECC notes that the Greater Cambridge Local Plan proposes “six new development strategy choices not considered for previous plans, which form geographically focused hybrids of the previously identified sources of supply”. ECC welcome joint working to ensure consideration is given and actively planned to ensure accessibility and connectivity to key services and facilities that will benefit Cambridgeshire and Greater	210472 (Essex County Council)

Essex residents, visitors and those investing in these localities. This is particularly important given ECC's role as a neighbouring infrastructure and service provider.	
Comments where opportunities to review any cross-boundary site allocations, Hertfordshire County Council should be invited to engage and contribute on matters relating to service provision across administrative areas to ensure there are comprehensive mitigation strategies	204034 (Hertfordshire County Council)
Responder questions Plan's discordance with approaches set out emerging Peterborough Local Plan and Huntingdonshire Local Plan points to a failure to cooperate and align with neighbouring local authorities, which must be addressed to enable the storage and distribution sector to thrive in accordance with market conditions, and the NPPF.	211686 (Newlands (Cambridge) Limited)

Document presentation / content

Summary of issues raised in comments	Comments highlighting this issue
Key elements of the evidence base underpinning the Development Strategy lack sufficient transparency at Regulation 18 stage, including the absence of recorded outcomes in Defined Development Extents Review Appendix C, and limited explanation of how site information has been interpreted in HELAA and Green Belt assessments. This restricts meaningful engagement on reasonable alternatives. The Council is requested to ensure that assessment outcomes and reasoning are clearly documented prior to Regulation 19 to support an effective and justified plan-making process.	202449 (M Asplin)

Figure 9, page 59 of the draft plan missing a symbol for the Cambourne North proposals? Four locations are identified but there are only 3 symbols on the map	208506 (Central Bedfordshire Council)
Concern Polices Map not showing defined green separation zones on the Policies Map (between Northstowe, Oakington and Longstanton), lack of clarity undermines the effectiveness of the Development Strategy. The Plan should explicitly designate and protect green separation on the Policies Map.	204372 (Cllr T Bygott)
A clear diagram showing the spatial and temporal distribution of employment growth, using the same geography and timeframes as Figure 12, is essential to assess whether homes and jobs are being planned in the same places and to properly understand the transport implications of the spatial strategy.	211767 (Camcycle)
Figure 13 - The figure is potentially misleading. The CSET proposals are still at Inquiry, it is not a committed scheme but a proposed scheme. We recommend that you amend status of CSET to proposed, not committed.	211976 (Historic England)

Objection sites

Summary of issues raised in comments	Comments highlighting this issue
Whilst we support the overall inclusion of sites at part e) of the strategy, we do not consider that sufficient sites in such locations have been considered as part of the evidence base and therefore included within the Plan. This is the case for the land opposite Brewery Road, as discussed in relation to the HELAA 2025 above. This site is	211270 (Mr & Mrs Smith)

within the Southern Rural Cluster, adjoining a Group Village (where one allocation is proposed) with good public transport links. Despite this, it was excluded from assessment within the HELAA 2025.	
Objection as an infill site in Whittlesford should be included in the Plan, walled Garden, Whittlesford CB280901 for 8 homes, as rural villages on the edge of Cambridge.	204433 (C Forbes-Cable)
Cambridge Science Park North Supports inclusion of Cambridge Science Park North as will generate around 3,500 skilled jobs and at least 460 training and apprenticeship places in science, technology and mid-tech sectors.	203242 (Cambridgeshire Chambers of Commerce)
The existing Cambridge Science Park is of national significance, the first of its kind, it has fostered collaborative working across the UK tech and life sciences sectors both within Cambridge and nationwide. It attracts top-tier global tech companies due to its enduring competitive global brand. It forms part of the Oxford-Cambridge Arc and the innovative growth corridor between London, showing its location as an area of high quality provision for the science and technology sector. Not only is there a high prevalence of research and development facilities linked to skilled manufacturing already at Cambridge Science Park, it is also home to some of th more exportable subsectors within this employment sector. Cambridge Science Park has considerably higher exportability than the national average in both high-tech and	211482 (Trinity College (CSP) Limited)

mid-tech sectors. Evidence to date would suggest that establishing standalone sites further out of the City do not work; If we do not provide these facilities in Cambridge, these companies may choose to locate operations outside of the UK altogether. There is every intention that the provision at Cambridge Science Park North (HELAA Reference 40096) will match and elevate Cambridge's global position.	
Cambridge Junction's future redevelopment and reprovision, and the detailed implications of the Draft Local Plan, have only become clear at Regulation 18 stage. In addition, the Create Cambridge Insights Report has only recently been completed and provides a new evidence base on cultural infrastructure need and delivery. This representation therefore responds to newly available information, site allocations and evidence.	204806, 204802, 204826 (G Shaw)
The Gt Shelford Site 115766 access assessment remains unchanged with a RED rating, but the respondent argues it should be upgraded to GREEN based on a full transport assessment, access is suitable for emergency services, sustainability, no harm to nearby heritage assets, low flood risk, indicating access is suitable for development, and re-evaluated to GREEN due to a reduction in proposed residential units. The respondent asserts it should reflect a more appropriate GREEN score based on the evidence submitted.	204933 (Great Shelford (Ten Acres) LLP)
The site at Land South of Shelford Road, Fulbourn, should be included in the Plan to enhance housing variety, as it is in a sustainable location with access to local facilities	204941 (Miller Homes)

and public transport on the edge of Cambridge Centre. The land adjoining Land South of Shelford Road Fulbourn site could also be included in the Plan for further housing development, promoting comprehensive development and a natural edge to the village.	
Suggests Grange Farm is not a sustainable solution for AvTech workers and given the Plan recognises IWM Duxford as an AMC, the Plan should recognise and make provision for housing for the new AvTech workers. Responder states Maarnford Farm is the last development parcel identified in Duxford, meeting some immediate housing need but will not address the medium to longer term need, including the AvTech workforce. Suggests a new masterplan led plan is required to facilitate sustainable growth in Duxford.	211426, 211427 (Gonville & Caius College)

Comments on the Housing and Economic Land Availability Assessment

Summary of issues raised in comments	Comments highlighting this issue
There are conflicts in the Urban Intelligence reports on Sites and factual errors should be corrected. The reports are not up to date regarding build-outs. The section Category of Settlement treats sites outside the settlement boundary as being the same as sites adjacent them. In policy terms they are very different and therefore it should be clear when a site is within the defined settlement development boundary and when in countryside. Flood Risk RAG zones do not agree with historic and/or current flooding	211930 (C Newell)

and previous Local Plan Flood Zones. Archaeology RAG Assessments should identify where excavations are partial and a full build-out would affect areas not assessed.	

Policy S/SH: Settlement Hierarchy

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was general support for the policy citing reasons including provides a clear structure for directing development and helps prevent speculative development in the least sustainable places. Others commented that boundary extents were too restrictive and limited growth in rural locations and smaller villages. Some considered the approach did not reflect draft National Planning Policy, some requested wording changes, whilst others questioned whether the policy was contrary to the current NPPF.
A number commented on the lack of a review of settlements' capacity.

Anglian Water asked that the policy make clear that that the requirement for adequate infrastructure to be able to be made available should be applied to growth at smaller settlements including Minor Rural Centres, Group Villages, and Infill Villages. The Environment Agency asked that "and areas of flood risk are avoided" be added to the policy.

Some comments queried the approach taken in the Settlement Hierarchy Study, including to revise the settlement hierarchy methodology to ensure consistent and transparent comparison between Group Villages. A suggestion was made for a more comprehensive review of settlements and their role within the wider settlement hierarchy, noting the relationship between settlements, and taking into account committed and proposed growth, improved connectivity and changing functional relationships.

A significant number of comments proposed amendments to the categorisation of specific settlements where they considered settlement to be suitable for a different tier due to scale, infrastructure, services or sustainability. The promoter of a site on the edge of Royston recommended designation within the hierarchy.

A possible draft Policy S/SH Discrepancy with the housing requirements is responded to in the responses to Appendix D.

Response to main issues:

Comments supporting the policy approach are noted.

The Settlement Hierarchy policy forms one part of the development strategy, which has carefully considered the approach to directing development to sustainable locations. National policy and the Local Plan including policy S/SH directs growth to those settlements which can support most growth sustainably. Rather than considering the capacity of each settlement, the Councils consider that the proposed policy approach provides a clear policy framework informing an appropriate response to planning applications ensuring that they can be considered on their own merits.

Some comments also referenced the draft NPPF proposal for flexibility at railway stations, suggesting greater account is taken of them in informing the hierarchy. The outcome of that consultation is not known. The location of railways stations is a factor in the scoring of settlements in the Settlement Hierarchy Study.

The policy has been amended to make clear that that the requirement for adequate infrastructure to be able to be made available should be applied to growth at smaller settlements, in response to Anglian Water's representation. The requirement to avoid flood risk was not added noting that this national policy requirement would be addressed via other policies in the Plan.

The Councils consider that the Settlement Hierarchy Study 2025 remains a robust and proportionate evidence base for informing the Proposed Submission Settlement Hierarchy policy. The categorisation of settlements in a particular hierarchy category within the Settlement Hierarchy Study is a matter of judgement, drawing on, but not being wholly defined by, the sustainability scoring. While the scoring itself did not account for the interaction of settlements, the rationale for categorisation of settlements did include this consideration where relevant. It is considered that adding specific scores for relationship with other settlements would form an overly complex methodology. The scoring itself is based on a rounded assessment of services and facilities.

The Councils have considered all settlement specific representations that were received during the Draft Plan consultation. However, based on review the Councils consider that the categorisation of settlements in that Settlement Hierarchy Study remains robust, and that there is no need for further modifications to any settlement's position in the hierarchy from that proposed at Draft Plan stage. Consideration of Royston's role in relation to the Greater Cambridge development strategy is addressed within the Strategy topic paper.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Comments supporting the policy includes: • broad support for policy	202613 (Ickleton PC), 201377 (Gamlingay PC), 202734 (Cambridge Past, Present and Future),

• provides a clear structure for directing development • helps prevent speculative development in the least sustainable places. • for group villages to have no more than 8 houses per scheme • appropriate Cambridge identified at top of the hierarchy • support for the Towns to have own position in the hierarchy • support for Cambourne defined as a town, along with Waterbeach New Town and Northstowe • inclusion of Great Abington and Little Abington in Group Villages • appropriate for Swavesey to be defined as a Minor Rural Centre • support for designation of Ickleton as an Infill Village. • growth to be directed to Great Shelford and Stapleford recognising position in hierarchy and the number of services and facilities within the settlement. • support for Willingham defined as a Minor rural centre • proportionate distribution of growth is important to ensure that settlements – both large and small – remain sustainable and that growth takes place in locations which can support it • support for Meldreth defined as a Group Village • support the proposed overall policy for minimal development in small villages in rural South Cambridgeshire in preference for larger new centres that are already being established	204142 (Richborough), 204167 (Tritax), 205121 (North Barton Road Landowners Group), 204577 (C Forbes-Cable), 201767 (C Blakeley), 203315 (J Manning), 210666 (Gladman Developments), 209134 (Meldreth PC), 208905 (Nightingale Land and Hill Residential Ltd), 203267 (Horseheath PC)

• Anglian Water is generally supportive of the approach set out in the policy, and the provisions setting out the parameters for growth in each settlement category. It is noted that for Cambridge, Towns and Rural Centres the policy is clear that development should come forward (without any limit imposed) "provided that adequate services, facilities, and infrastructure are available or can be made available as a result of the development". However, this same requirement is not included for growth at smaller settlements including Minor Rural Centres, Group Villages, and Infill Villages. • Anglian Water requests that this qualifying statement to demonstrate that adequate infrastructure is available, should be applied to all the settlement categories within the settlement hierarchy, so development proposals clearly address infrastructure capacity - this includes wastewater treatment capacity in the network and the receiving WRC (as evidenced by the Stage 2 Detailed Water Cycle Study). For small settlements (e.g. Tadlow) where we have WRCs with a descriptive permit i.e. Descriptive Works - our position statement indicates that proposals that seek to connect to our network will be objected to unless the developer can demonstrate there is sufficient capacity at the works, OR an onsite solution such as a package treatment plant is approved.	209162 (Anglian Water Services Ltd)

Alternatively, similar wording to Policy S/DE clause 1.c could be used for the smaller settlement categories to ensure "There is the necessary infrastructure capacity to support the development".	
Environment Agency requests changes to policy wording at the end of points 1 and 3: 'Residential development and redevelopment…. provided that adequate services, facilities and infrastructure are available or can be made available as a result of the development *and areas of flood risk are avoided.'*	211131 (Environment Agency)
Comments objecting to the policy include: • suggests policy classification lacks currency and, when combined with other draft plan policies, risks excluding sustainable small sites under one hectare, contrary to NPPF paragraphs 73 and 83 • argues policy sections (9) and (10) impose limitations on growth, policy is unjustified and ineffective, failing to deliver necessary growth and contradicting paragraph 36 of the NPPF. • inconsistent with key principles of the NPPF. Paragraph 72 acknowledges the importance of strategic housing land supply comprising a sufficient mix of sites. • NPPF (2026) directs development to sustainable locations, the current hierarchy fails to support.	201856 (Chivers Farms Ltd), 204454 (Cottenham PC), 204557 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 204618 (Papworth Everard PC), 202331 (Granta Land Ltd - Land at Valley Farm, Meldreth), 201948 (KG Moss Trust & Moss Family), 202366 (The CLC Trust), 201969 (Shelford Investments), 202538 (Granta Land Ltd - Land West of Station Road, Meldreth), 202651 (Granta Land Ltd - Land at Sheene Farm, Meldreth), 202667 (Granta Land Ltd - Land East of Station Road, Meldreth), 204056 (E W Pepper), 208680 (Guilden Morden Developments Ltd), 208773 (Croudace Homes),

• recommends change to policy reflecting the role of railway stations to reflect Government policy. Upgrade settlements with direct connections to high-quality public transport. • reassess hierarchy, include a new category for 'Well Connected Minor Rural Centres' including Fulbourn, Milton, Melbourn, and Waterbeach prioritising growth over less sustainable options • states potential to undermine the growth of rural communities • recommendations to assess settlements individually on sustainability, connectivity, and functional integration and then review hierarchy • indicative maximum scheme sizes are arbitrary and should be removed. Should be assessed on site context rather than fixed thresholds. • suggests removal of development without limitation on sites within the three Rural centres • requests limits on individual schemes in line with those specified in adopted Neighbourhood plan • states policy neglects sustainable opportunities at the Edge of Cambridge • states policy applies only to land within defined development extents creating ambiguity regarding the assessment of sites with strong ties to Cambridge	208785 (Granta Land Ltd – Land East of Station Road, Meldreth) 208809 (Granta Land Ltd – Land West of Station Road, Meldreth), 201955 (M Asplin), 201958 (M Asplin), 201963 (M Asplin), 202103 (Cambridgeshire County Council), 202559 (Ely Diocesan Board of Finance), 203049 (Cemex UK Properties), 203163 (Christ's College), 203315 (J Manning), 203393 (Jesus College), 204103 (G W Balaam & Son), 204125 (Emmanuel College), 204143 (G W Balaam & Son), 204173 (J Johnson), 204445 (Bellway Strategic Land), 204459 (Wain Estates), 204514 (Redrow Homes South Midlands), 204949 (Places for People), 205132 (Axis Land Partnerships Ltd), 203408 (Jesus College), 204244 (Bellway Strategic Land), 204398 (Hill Residential (Great Abington Site), 204566 (Rosconn Group), 204858 (Pigeon), 203982 (Abbey Properties Cambridgeshire Ltd), 201006 (M Colville), 202366 (The CLC Trust), 205024, 209746, 209747, 211523, 211522,

• revise the settlement hierarchy methodology to ensure consistent and transparent comparison between Group Villages. • considers the hierarchy inconsistent with the distribution of growth set out within the Development Strategy • Group villages not in the green belt should be elevated in the hierarchy • Permitting windfall development inside development extents disregards the sustainability of Rural Centres and prevents their growth. • discrepancy between draft Policy S/SH and the housing requirements outlined in Figure D1 of Appendix D • Local residents should have input • development adjacent to settlement boundaries should be allocated for • quantum of development which a settlement can support should consider the wider proximity to services not just services in Central Cambridge and Market Towns • Instead of the arbitrary 8km cycle distance, points should be awarded to settlements which benefit from the Greenways; their purpose is to allow non-motorised commuting to services and employment including in Central Cambridge • fails to recognise that there are services and job opportunities outside of Central Cambridge and the Market Towns	211521, 211520 (Endurance Estates), 211198, 211208 (R Raywood, A Bradney and D Unwin), 211586 (Terra Strategic), 211458 (Hayfield Homes Construction Ltd), 211048, 211060 (Wates Developments Ltd), 207022 (Mac Mic Land)

• suggests Waterbeach new town and Waterbeach to be considered as one complete settlement and (both) be at Town tier. • Papworth Everard should be a Group village as is no longer on a par with other Minor rural centres. • Horningsea should be reclassified as a Group village to reflect scale, characteristics and sustainability. • queries identification of Linton as a Minor rural centre • lacks evidence to support Over as a Group Village and not elevate to a Minor Rural Centre	
Objects to the settlement hierarchy on the basis that it restricts growth in villages such as Great Wilbraham, undermining their ability to remain viable and meet local needs. States this approach risks turning smaller villages into dormitory settlements, increases dependence on private cars and reduces freedom for non-drivers including children and older residents.	203338 (Great Wilbraham PC)
Suggests policy could set out how new and emerging settlements will be addressed during a future review	203414 (Lichfields)
Comments regarding lack of review of the capacity of settlements to accommodate additional development or development threshold limits remain relevant if no sites are available	203895 (Hill Residential (Fulbourn Site)), 203935 (Hill Residential (Sawston Site)), 202083 (J Francis), 211622 (Bloor Homes Eastern), 211613 (Bloor Homes Eastern), 204161 (Hill Residential (Hardwick Site))

States in naming the largest villages ‘Rural centres’ it’s unhelpful, they are not rural and this locks people out of planning discussions as is counterintuitive. Whereas Minor rural centres are rural in character.	203888 (Histon and Impington PC)
Concern infill villages not located on major transport corridors will remain without reliable and frequent public transport opportunities, affecting numerous villages.	203888 (Histon and Impington PC)
Suggests consideration of sustainability measures and infrastructure investments associated with the wider growth location should be more fully acknowledged in the settlement hierarchy assessment. (Linton site)	204837 (Vistry Group)
Redrow requests an assessment of the sustainability credentials of each settlement in the District, undertake a review of the capacity of the most sustainable villages in South Cambridgeshire—including Group Villages located close to Cambridge with strong transport links (Hauxton) - to determine whether additional development can be accommodated within existing development framework boundaries, allocate additional land at the edges of these settlements to ensure that growth is appropriately directed, sustainably delivered, and consistent with the Plan’s stated objectives.	204514 (Redrow South Midlands)
The respondent supports the proposed Policy wording • Bar Hill is designated as a 'rural minor settlement' with a role in providing services for a small rural area, having more facilities than most other settlements in Greater Cambridge. • Bar Hill's as a MRC, strategic location on the A14 is beneficial for the logistics sector, suitable location for industrial and logistics growth in	204167 (Tritax Big Box Developments)

Greater Cambridge, being outside the Green Belt and close to the city, unlike Histon and Impington and access to a local workforce and necessary infrastructure for industrial and logistics uses. • The respondent references key paragraphs from the NPPF 2024 and NPPF 2026 that align with the operational needs of the freight and logistics sector.	
Comments on the policy approach include • Suggests current approach does not align with the NPPF's direction to boost new housing supply, as noted in paragraph 61 and amending part 5 of Policy to allow residential development within defined extents and on adjacent land, provided adequate services and infrastructure are available • restrictive approach in smaller villages risks limiting opportunities to sustain rural communities. • policy focuses on limiting growth rather than enabling rural sustainability • scheme sizes make affordable housing delivery harder, support of local services or responding flexibly to local need. • Little reference to rural transport gaps, digital connectivity or the cumulative impact of small developments.	203149 (Cambridgeshire ACRE), 203149 (Cambridgeshire ACRE), 204708 (Croudace Homes), 204976 (Martin Grant Land), 211614 (Bloor Homes Eastern)

• Stronger rural proofing would allow more flexibility where schemes support affordable homes, local services and community led development.	
“Rural Centres” is a misleading term. These are among the least rural villages: they do not feel remote, lack strong rural characteristics, are close to Cambridge, benefit from good transport links, and are not shaped by a rural economy. The label is therefore unhelpful and should not be applied to the largest hub villages. “Minor rural centres” are more genuinely rural, although many function economically as suburban settlements, with high levels of commuting and, in some cases, their own science parks. Describing these places as rural introduces bias into policy discussions and planning decisions, obscuring their hybrid or suburban character. “Smaller villages”, by contrast, are distinctly rural, facing traditional rural challenges and displaying classic rural characteristics, yet they are not classified as rural under the current terminology.	211000 (Cambridgeshire County Council)
Settlement Hierarchy Study Update represents a proportionate review of the earlier assessment rather than a comprehensive reassessment of settlement roles and relationships between settlements. As such, it provides limited analysis of how committed and proposed growth, improved connectivity and changing functional relationships may influence the suitability of settlements.	210227 (Vistry Group)

It is considered that the approach taken through the update remains overly focused on existing services and facilities and does not sufficiently account for committed growth, proposed allocations, or the dynamic role that some settlements play within the wider spatial strategy. In particular, the assessment gives limited weight to the strong functional relationship between certain Group Villages and Cambridge itself. (Land at Fen Ditton)	
Concerns that new evidence and site-specific information only became available at Regulation 18, affecting the ability to comment earlier on settlement hierarchy implications.	204808 (G Shaw)
Comments on classification of Melbourn and Meldreth include: • suggests Melbourn and Meldreth to be considered as one settlement. • railway station serves both villages • villages of Melbourn and Meldreth should be designated as a Rural Centre • reiterates Melbourn and Meldreth function as a combined settlement with shared services, facilities and schools. Notes recent active travel upgrades strengthen links. • argues a combined or re-scored settlement should be designated as a Rural centre	206217 (Granta Land Ltd - Land at Valley Farm, Meldreth), 202331 (Lanpro)

Comments on classification of Melbourn: • Melbourn could be re-designated as a Rural Centre • Settlement Hierarchy Paper (2021) allocates 14 points, with high scores for shops and services and secondary school • Melbourn is the largest village in the south-west of the district • Greenway Scheme will provide better accessibility to Cambridge by sustainable modes • higher score than Rural Centres in terms of secondary school provision than Great Shelford and Stapleford, designated as a Rural Centre	211417 (CALA Group Ltd), 211061 (Wates Developments)
Comments for classification Great Shelford and Stapleford include: • Argues the classification as a single Rural centre undermines the distinct identities of the two villages and contravenes clause 1a of Policy S&GS 12 Neighbourhood Plan • Concerns raised regarding implications of permitting unrestricted residential development in a combined rural centre • They have a very different range of amenities and services; highlights a lack of amenities in Stapleford • Suggests that minor rural centre is a more appropriate classification for Great Shelford	201549 (Stapleford PC), 202674 (S Berridge), 2010894 (Great Shelford PC)
Comments regarding re-classification of Cottenham: • size suggests Rural Centre not Minor Rural Centre	207654 (Cottenham PC), 204454 (Cottenham PC), 211219 (Terra Strategic), 211232, 211580

• need for delivery of services and infrastructure due to Significant increase in housing. • concern of impact for long-term sustainability of the village • proposed change in settlement status is contrary to the level of services and facilities within Cottenham. • At appendix 11 Cottenham scored 15 points, higher than Gamlingay (scored 7) and Willingham (scored 9). Both of these settlements are also identified as minor rural centres. Settlements with varied scores and are identified as the same category village should not be the case.	(Living Space Housing), 211246 (Manor Oak Homes)
Comments regarding housing limits in Cottenham: Responder objects to indicative maximum scheme size of 30 dwellings, noting identified housing requirements for neighbourhood areas of 130 dwellings identified to be delivered at Cottenham between 2024-2045. How will this number of dwellings be delivered. The defined development extent for Cottenham as being drawn tightly around existing development at the settlement, with no development opportunities within the defined developed extent that would be sufficient to deliver the 130 dwelling neighbourhood area requirement identified by the Draft Plan.	211277 (Woolsington One Ltd)
Comments on classification of Willingham as a Minor Rural Centre. • There is no justification for the arbitrary figure of a maximum of 30 dwellings in MRC.	211263 (Terra Strategic)

• This limits the level of growth that the Minor Rural Centre and less efficient use of land contrary to national planning policy which requires proposals to make the most efficient use of land.	
It is strongly considered that the failure of the evidence base to consider all modes of transport and bus services within Fowlmere and its connectivity to the surrounding settlements represents a flaw in the overall settlement assessment. This has subsequently resulted in sites that are being promoted within Fowlmere not being properly considered for development and not being subject to an independent site assessment.	211048 (Wates Development Ltd)
Suggests review Fulbourn, a Minor rural centre, and include as a Rural centre due to its facilities and transport links.	204962 (Miller Homes)
Notes the inconsistency of retaining Group village development restrictions for Elsworth while a major development of over 13,000 homes is proposed within close by.	202123 (Elsworth PC), 202346 (P Deer), 201906 (C Deer)
Suggests designation of Bourn Airfield as a Rural Centre	203414 (Juniper Propco (Bourn) Limited)
Suggests Bassingbourn and Kneesworth should not be 2 settlement types as they are one settlement.	201373 (Gentian Development Ltd)
It is important that the hierarchy is applied flexibly and in a manner that supports the effective delivery of the development strategy. Opportunities such as Fen Ditton, which are capable of accommodating additional growth in a sustainable manner, can play an important role in contributing to housing delivery, particularly where they are of a scale that complements existing	210228 (Vistry Group)

services and facilities while supporting their long-term viability. (Land at Fen Ditton)	
Argues that Caxton should be identified as a Group Village due to its close proximity to Cambourne and the high level of services and facilities accessible by walking and cycling. States that these sustainability credentials justify an upgrade in classification.	204274 (LVA)
Land to the west of Cambridge Road, Melbourn We do not disagree with Melbourn's position in the Settlement Hierarchy and endorse its recognition as a sustainable location and able to accommodate additional residential growth. The approach proposed within Policy S/SH of the Plan, however, is that Minor Rural Centres will support an indicative maximum scheme size of 30 dwellings. It is evident that Melbourn is capable of accommodating larger sites, with the proposed allocation for 120 dwellings at land to the west of Cambridge Road (Policy reference S/RRA/CR), underlining this point.	211061 (Wates Developments)
Land at Swans Corner (HELAA Reference 208803) Whittlesford has a good range of services and facilities for a Group Village. It contains a primary school, village store, a post office and other community facilities. It also has bus connections to Cambridge and Saffron Walden and a train station providing good connections to Cambridge and London. In our opinion, Whittlesford is a suitable village for some growth and additional	211692 (native land)

residential development should be supported in the emerging Greater Cambridge Local Plan.	
Land at Mingle Lane, Great Shelford While we agree with the placement of Great Shelford and Stapleford within the settlement hierarchy, it must be remembered that this area has excellent access to Cambridge which will improve as part of future infrastructure initiatives such as the CSET busway and the new Cambridge South Station as part of the Cambridge Biomedical Campus which will be directly accessed from Shelford station. Given the recognition of the number of services and facilities available within the settlement, it is imperative that growth is directed to this location. The Land at Mingle Lane allocation should therefore be re-introduced.	208905 (Nightingale Land and Hill Residential Ltd)
North of Willingham Road, Over (HELAA reference 40323) Plan lacks sufficient residential sites in the north western quadrant of Cambridge, failing to acknowledge the need for housing for residents who work to the west. The site North of Willingham Road, Over meets the criteria for smaller site allocation, and the Plan lacks justification for not including such sites, indicating a potential failure to meet local housing needs.	203467 (ESCO Prospect)

A detailed assessment of smaller sites, including North of Willingham Road, Over, should be conducted to ensure at least 20% of allocations in the Local Plan are on sites of the appropriate size. Due to the significant size constraints placed on settlements it is not possible to deliver these as windfall sites.	
Land at Prospects Royston, previously Three Prospects Farm, land east of Royston, (HELAA ID 40511). Policy S/SH should be revised to identify land beyond the A505 at Royston as being in the second tier of the hierarchy, below the Cambridge urban area itself but above Cambourne and the other new settlements and on a par with sites on the edge of Cambridge as a location for strategic and sustainable housing and employment growth.	203331 (Wilson Bowden Developments Ltd)
Land at Girton Road, Girton (site ID 115170) • Responder states the higher growth scenario from the Greater Cambridge Employment and Housing Needs Update should be used in future policy revisions. • Allocation of small and medium sized sites is essential to meet housing requirements, as over-reliance on windfall sites is not a sound planning approach.	204361 (Wain Estates)

• site ID 115170, is one such site which is well-situated and well-connected to support sustainable transport, aligning with the Local Plan's ambitions for knowledge-intensive sectors.	
Land North of Pampisford Road is situated on the edge of Great Abington (Site Id: 115179) • Respondent requests removal of arbitrary limitations for the scale of development that might take place in Group Villages. • Or limits increased, as 8 is not justified and limitations applied to other settlements in the hierarchy removed also with all sites evaluated on their own merit against sustainability and the capacity of existing facilities and services to accommodate growth. • Limits on development are inconsistent with Government policy on promoting a step change in growth. • Where there is no neighbourhood area, the plan examines growth in those villages and directly allocates sites for development. Great Abington is a Group Village but not a Neighbourhood Area, and yet it sits adjacent to Granta Park, a major employment area, a sustainable location, can support economic growth at this employment site. The site is an ideal candidate for allocation through a change in policy.	204566 (Rosconn Group)
Land south of Hauxton Road in Little Shelford	211254 (R Harvey)

• The responder has promoted a site in Little Shelford. Little Shelford is defined as an Infill Village in the settlement hierarchy and has a reasonable level of services and facilities. Given the sustainability credentials of Little Shelford, it is felt that it would be more appropriate for it to be defined as a Group Village. • Concern there is no review of the capacity of settlements to determine available land within the development framework boundary, or the development threshold limits remain relevant. • Concern no major residential development opportunities within the development framework boundary of Little Shelford. Small scale would not deliver affordable housing or provide any meaningful support to existing services and facilities. Little Shelford affordable housing needs are not being met. • Amendments should be made to the development strategy to direct development to the more sustainable infill villages including Little Shelford to support existing services and facilities, deliver additional facilities, and meets identified affordable needs of villages.	
Land at west of North End, Bassingbourn (HELAA ID: 200809). • Important that small and medium size sites such as the site proposed, to meet the housing requirement of the area, compared to major sites and new settlements.	

A one size fits all approach to site allocation is inappropriate and does not allow individual characteristics and benefits of a site. The Framework is clear that sufficient allocations should be included in Local Plans, and the Plan fails to facilitate sufficient allocations in a range of sustainable settlement.	211201, 211200, 211210 (Rainier Developments & Strategic Land)
Concern the level of windfall allowance within the overall housing delivery figure for the Plan. Represents a significant proportion of the total housing to be delivered and is not guaranteed. Given the housing need figure for Greater Cambridge and reliance on large sites and new settlements to deliver the majority of the residual housing need, the Plan should allocate additional smaller sites to ensure the housing need is met and particularly within the short term.	211272 (Mr & Mrs Smith)
Support Cambridge Junction and Create Cambridge in asking that: • cultural infrastructure's ongoing revenue and organisational capacity needs are recognised, not just physical buildings • culture is embedded in cross-cutting outcomes (innovation, health, education, community resilience) • partnership frameworks between councils, cultural organisations and communities are referenced as delivery mechanisms aligning community infrastructure with lived cultural use.	204830 (G Shaw)

Concern ‘Rest of the Rural Area’ comprises rural centres and group villages, a total of 48 settlements, have only 3 sites allocated for a total of 205 new homes. • The proportion of development attributed to major strategic sites is a risk to deliverability and inconsistent with the Framework. • Regarding draft allocations, a ‘blanket approach’ has been taken, with maximum dwelling numbers given to all settlements below Rural centres.	211209 (Rainier Developments & Strategic Land)

Policy S/DE: Defined development Extent

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

A number of comments supported the approach to Defined Development Extents (DDE), citing reasons including their role in protecting the countryside, village character, and focusing development into sustainable locations.

Some comments proposed specific amendments where they considered the proposals map did not correctly reflect the existing position. Others proposed that the DDE should be amended to include their proposed development site.

Objections to the DDE policy considered the policy was too restrictive and should be more flexible. They were restricting growth in sustainable villages where development was needed. The DDE has not been changed significantly since 2004. Some considered the approach did not reflect draft National Planning Policy.

Response to main issues:

Comments supporting the role of developments and approaches to specific areas are noted.

Defined development extents identify which areas should be considered part of settlements for planning purposes so that it is clear where policies for the built-up areas of settlements give way to policies for the countryside. This is necessary to ensure that the countryside is protected from gradual encroachment on the edges of villages and to help guard against incremental growth in unsustainable locations. In the countryside development is generally restricted to uses that need to be located there. Making the policy more flexible or including areas of open land on the edges of settlements would undermine the development strategy, which seeks to focus development on sustainable locations responding to evidence including in relation to climate change and transport.

Some respondents argue that the current policy is restricting growth outside defined development extents in villages. The strategy and policy approach is to enable development in the most sustainable locations, working in conjunction with policy S/SH: settlement hierarchy. Therefore, defined development extents do play a role in directing growth to the most sustainable locations across Greater Cambridge. The plan has demonstrated how identified development needs are to be met.

There are a range of circumstances where development outside defined development extends will be supported, including affordable housing exception sites. Villages also have the opportunity to produce neighbourhoods plans if they wish to address specific local issues.

Some comments reference compatibility with national policy, and in particular the Draft NPPF 2025. Whilst as a legacy local plan the soundness of this local plan will be considered against the NPPF 2024, it is notable that the draft NPPF sets specific policy for development within and development outside settlements. The Defined Development Extents would therefore assist with the application of these policies. Some comments also referenced the draft NPPF proposal for flexibility at railway stations. The outcome of that consultation is not known. The location of railways stations has been a consideration when determining the development strategy.

Since the Draft Plan stage, a further review of the defined development extents was undertaken to ensure it remains up to date with the current extent of the built up area of the settlement where planning permissions have been largely completed.

A number of comments reference specific site proposals they have put forward for allocation. Whether the site should be identified for development has been reviewed through consideration of the development strategy, informed by evidence including the Housing and Economic Lond Availability assessment. It is not the role of a change to the Defined Development Extent to enable development of a site, that would be done through allocations. Changes have therefore not been made to bring in land which does not meet the definition.

In terms of specific policy wording changes, it is not necessary to widen paragraph 2c, as infrastructure examples sites in comments would be able to demonstrate their need for a countryside location.

Responses to representations which propose a change to the framework rather than to reflect an allocation:

- **Land west of Old North Road, Bassingbourn cum Kneesworth –** Updates to reflect consented and completed developments have been identified on the Proposed submission proposals map.
- **Caxton Gibbet food retail site, Cambourne** - This land falls outside the built up area of the village. It is a distinct site more closely related to serving the highway network, the proposed DDE in this location is sound.
- **Land off Ermine Street Caxton -** The defined development have been reviewed. Sites with planning consent have been added when they are complete or substantially complete. The site reference has yet to be built.

- **Between Brook Street and Brockley Road, Elsworth** - This area extends beyond the built up area of the village and is correctly shown as being outside the defined development extent.
- **Land North of Thriplow Road, Fowlmere –** The defined development have been reviewed. Sites with planning consent have been added when they are complete or substantially complete. The site reference has yet to be built.
- **South of Thompsons Meadow, Guilden Morden -** The planning committee report on 20/03151/REM– Land South of Thompsons Meadow, states 'There is also an undeveloped grassed area to be retained in the south east corner of the site which helps to mitigate the impact of the development on views into the site from the access along Thompsons Meadow and contributes to retaining a countryside and edge of village character. ' The countryside edge should be defined to the extent of the built up area, and the proposed DDE in this location is sound.
- **Howells Way, Hardwick** – DDE has been reviewed in this location to take account of the now completed development.
- **Land at Cottenham Road, Histon -** DDE define where policies for the built-up areas of settlements give way to policies for the countryside. This is necessary to ensure that the countryside is protected from gradual encroachment on the edges of villages and to help guard against incremental growth in unsustainable locations. In this location the low density of development means the area is distinct from the built-up area. The area has been recognised as green belt in successive local plans. There are no exceptional circumstances to remove the land from the green belt.
- **The Boundary, High Street, Horningsea -** Disagree. The land identified does not form part of the built up area of the village. The line identifies an appropriate distinction between the built up area and the countryside. The land has been identified as green belt, there are no exceptional circumstances for its release.
- **Horseheath Road and Bartlow Road Linton -** Whilst a number sites were granted planning permission where the tilted balance was applied because of a lack of 5 year housing supply at the time of their consent, when these developments are

complete (or substantially complete), the developments have been taken into account in preparation of the Proposed Submission policies map, reflecting that they now form part of the built up area of the village.

- **TPP Campus Melbourn –** The site is recognised as an Established Employment Area, outside the defined development extent. This is considered the appropriate response to the site.
- **Site Allocation S/RRA/CR, Land to the west of Cambridge Road, Melbourn –** The site is shown as an allocation on the proposed submission policies map. Once the built form is considered though the planning application process the DDE can be amended in a future review of the local plan.
- **Former Oakington Tomato Farm, Dry Drayton Road, Oakington –** this site is on the western edge of Oakington. Whilst it did have glass houses present, is open nature and separation from the village means that it would not fall within the definition of the defined development extent.
- **Land at Gog Magag Way and Haverhill Road Stapleford** - The Chalk Hill development referenced was a permitted as rural exception site, and remained in the green belt. There are no exceptional circumstances to release the Strawberry Feilds site from the green belt.
- **Hay Street, Steeple Morden –** The supporting text of the policy states that ‘Property boundaries shown on Ordnance Survey (OS) mapping have been taken into account in defining defined development extents. However, since there are many large gardens on the edge of settlements, the defined development extents sometimes cut across such gardens, especially (but not solely) if parts of those gardens relate more to the surrounding countryside than they do to the built-up areas. The 'cutting' of some gardens is regarded as a positive development management tool to limit the potential for further residential development in smaller villages with few facilities and little or no public transport’. The line in Hay Street remains appropriate.

- **The Walled Garden, Whittlesford -** This site is in the green belt, and correctly defined as being outside the DDE. Other sites have been identified to meet housing needs, and exceptional circumstances to release this land from the green belt have not been identified.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for Policy includes: • High bar for development outside of villages/rural centres • protection of open countryside • Protection from encroachment • prevents unsuitable development inside and outside of development extents. • Without policy small rural communities could quickly lose their character. • no new housing developments outside defined development areas, except for Parish-led Neighbourhood Plan allocations. • Intent to ensure development located in the most sustainable places • essential for controlling development around villages • principle of defining settlement boundaries around villages	201013 (M Colville), 201769 (C Blakeley), 201896 (R Pargeter), 202615 (Ickleton PC), 204974 (D Davies)

• potential rural exception sites would dry up as parcels of land at village edges would offer the prospect of making large profits if developed and proposals based on maximising developer profits would predominate. • should be no exceptions for green belt land	
Cambridge Science Park, Cambridge Support for inclusion of site within the Defined development extent.	203070 (Trinity College, Cambridge),
Protect rural views.	209678 (H Hale)
Welcome the reference to heritage in criterion 1b.	210086 (Historic England)
Hay Street, Steeple Morden Objection to boundary in Steeple Morden. Should follow a consistent settlement edge aligned with adjacent built form and include the application site.	202095 (R Wright)
Horseheath Road and Bartlow Road Linton Object, amend to NOT include the Horseheath Road and Bartlow Road developments as resulted from the lack of a Local Plan being in place in 2015-2018	201670 (Linton PC)
South of Thompsons Meadow, Guilden Morden Object as DDE should be extended to reflect development south eastern part of the settlement (planning permissions S/3077/16/OL and 20/03151/REM)	201811 (Peter David Homes Ltd)
Caxton Gibbet food retail site, Cambourne Objection to boundary extent at Cambourne, extend to include land up to the A428, encompassing the Caxton Gibbet food retail site and the EV car charging area.	204011 (Abbey Properties Cambridgeshire Ltd)

Land west of Old North Road, Bassingbourn cum Kneesworth (Site reference 210373) Comment Defined Development extent needs amending to reflect recent planning approvals.	201374 (Gentain Development Ltd)
Land North of Thriplow Road, Fowlmere Requesting review boundary for consented development 24/01254/OUT as outside the boundary, and for existing built development at The Triangle, Fowlmere which is outside of the DDE.	205574 (Mulberry Strategic Land)
Land off Ermine Street Caxton Suggests Caxton development extent be updated to reflect outstanding housing commitments at Land off Ermine Street, planning application reference 23/01335/OUT.	204304 (LVA)
Land at Cottenham Road, Histon Comments question why current boundary excludes a number of houses.	200988 (D Jessop), 201278 (G Mortimore), 202873 (S Catling), 201430 (S Chivers)
TPP Campus Melbourn TTP Campus should be designated as being part of the Melbourn DDE.	210721 (TTP)
The Boundary, High Street, Horningsea (site reference 59410) 2021 Green Belt Study confirms a "weak distinction" between Parcel H05 and the inset, yet the map bisects this single planning unit. As an enclosed backland garden plot, the site makes a limited contribution to Green Belt purposes. The DDE must therefore be corrected to follow the physical property line, supporting sustainable small-site delivery.	201995 (M Asplin)

Land at Gog Magag Way and Haverhill Road Stapleford Built up area of the village was extended to the east of Stapleford in the early 2000s by residential development at Chalk Hill and again in the 2020s by development of the Strawberry Fields residential care village.	201550 (Stapleford PC), 210895 (Great Shelford PC)
Between Brook Street and Brockley Road, Elsworth Questions Defined Development Extent in Elsworth not embracing parcel of my land where historically there was residential housing. This would entail a movement of the DDE nominally to the west.	201431 (R Woolf)
The Walled Garden, Whittlesford Should not be in the green belt as it is village central and surrounded by houses) has been taken out of this latest plan having been in earlier stages.	204628 (C. Forbes Cable), 205412 (L Gardner)
Site Allocation S/RRA/CR, Land to the west of Cambridge Road, Melbourn Object as Site Allocation S/RRA/CR is shown outside the settlement boundary, inconsistent with other areas such as Waterbeach New Town. It should be within the defined development extent.	204641 (Vistry)
Objections to policy include: • reformed NPPF (2026) emphasis for development in sustainable, well connected locations, which the current policy contradicts by restricting growth to defined boundaries. • minimal allocations, tightly drawn development boundaries and prescriptive limits on scheme size will constrain organic growth	202927 (The Trustees of the C Y Nutt Deceased Will Trust), 204129 (Emmanuel College (Long Road)), 204520 (Redrow South Midlands), 211524 (Endurance Estates)

• largely unchanged since the 2004 Local Plan, with minor adjustments • stagnation and potential loss of local services • regarding all countryside sites equally is unjustified • flexible, criteria-based approach is sought to support appropriate rural growth and a balanced distribution of housing across Greater Cambridge • boundary-based approach inflexible • fails to acknowledge sustainable sites that are functionally part of the urban area. • policy lacks a mechanism for positively assessing sites based on accessibility and their potential to support sustainable development • lack of review to consider whether boundaries remain appropriate or capable of accommodating future development needs of individual settlements. • Where constrained by the Green Belt current approach prevents any meaningful outward expansion, even in sustainable locations. • should be subject to a full review to accurately reflect the development potential and sustainability of individual settlements and where no capacity within existing boundaries, the Local Plan should allocate appropriate village edge sites in the most sustainable locations • fails to allow for well-connected windfall growth in villages on the basis set out above in relation to policy S/SH	
Anglian Water supports the policy requirement 1.c to ensure that there is the necessary infrastructure to support the development within defined settlement extents. However, it	209163 (Anglian Water Services Ltd)

is considered that this should be equally applicable to developments outside defined settlement extents but may still be adjacent to the settlement and/or our WRC catchments - e.g. Rural exception sites. The policy does not specifically reference the delivery of utility services /infrastructure in the countryside, which would include critical water and wastewater infrastructure to serve existing and future communities.	
Responder requests changes to policy wording at the end of points 1 and 3: 'Residential development and redevelopment…..provided that adequate services, facilities and infrastructure are available or can be made available as a result of the development *and areas of flood risk are avoided.'*	Anglian Water Services
Objects to policy and appendix are unsound as they (para 2.138) limit boundary changes largely to completed development. • This creates a circular methodology that constrains the identification of sustainable small sites, contrary to the NPPF requirement to proactively identify land to boost supply (paragraph 73) and support thriving villages (paragraph 83). • The blanket treatment of residential gardens is overly rigid, and the approach is premature in the absence of updated Green Belt and "grey belt" evidence, reducing flexibility and clarity at plan-making stage.	202005 (M Asplin), 204272 (R2 Developments Ltd)
Objection to Policy includes: • focusing development solely within DDEs is inconsistent with draft Policy S5 of the NPPF, which advocates for a more flexible approach to development locations	204272 (Pegasus Group), 204292 (R2 Developments Ltd), 211479 (G Robinson and Partners),

• hinder sustainable growth by restricting new homes in locations just outside these extents, despite their proximity to public transport. • approach does not align with the government's direction to boost housing supply as outlined in paragraph 61 of the NPPF • approach contradicts the NPPF's pragmatic direction towards allowing suitable development near existing settlements and transport infrastructure. • Locations near Foxton Railway Station cited	
Comments on the policy raise concerns that: • Boundary largely unchanged since 2004 boundary • inconsistent with proposed NPPF changes that advocate for a more flexible approach, allowing development on well-related sites. • suggests part 1 of policy to allow development on unallocated land well-related to defined development extents, aligning with the NPPF's pragmatic approach. • boundaries limit the opportunities for any development in villages • housing and affordable housing needs of these villages would not be met. • no support for existing services and facilities, or the delivery of additional facilities	202570 (Ely Diocesan Board of Finance), 203318 (J Manning), 204171 (Hill Residential (Hardwick Site)), 204411 (Hill Residential (Great Abington Site)), 204711 (Beechwood Estates Ltd), 204728 (Croudace Homes), 204985 (Martin Grant Land), 211247 (Manor Oak Homes), 211255 (R Harvey), 211615 (Bloor Homes)
Comments existing boundaries have largely not changed significantly since 2004. The current extent restricts development, not supporting existing services or allow for the delivery of additional facilities (noted Whittlesford, Swavesey, Fulbourn).	202368 (The CLC Trust), 204567 (Axis Land Partnerships and Executors of Norman Winfrid Moore), 203897 (Hill Residential (Fulbourn Site))

Objection to policy due to its inflexibility, not positively prepared or justified. Update to allow for flexibility in development outside defined boundaries to address unmet local housing needs.	205031 (Endurance Estates)
Concern that development boundaries drawn tightly around the existing settlements and excluding existing properties and built form. Question how the windfall allowance can be met, without relaxation of the Defined Settlement Extents, to enable smaller sites that are more immediately deliverable in the short term to come forward.	211273 (Mr & Mrs Smith)
Suggest policy would benefit from supporting information on how to interpret local character.	202735 (Cambridge Past Present and Future)
Defining development extents provides clarity, but the sharp distinction between inside and outside boundaries may limit flexible responses to rural housing and service needs. While Rural Exception Sites are supported, there is little recognition that small scale growth on the edge of villages can help sustain schools, shops and community facilities. The policy does not reference rural infrastructure constraints such as transport, drainage or digital connectivity. Stronger rural proofing would allow limited, well designed edge of village development where it meets local need and supports long term village sustainability.	203151 (Cambridgeshire ACRE)
Revise the wording of Policy S/DE to enable a more flexible approach to development outside of defined development extents. Draft Policy S/DE should seek to accord with draft Policy S5 of the 2025 NPPF. This would ensure that the Local Plan, upon adoption	208338 Thakeham Homes Ltd)

would not conflict with National Policy, but also widen the scope of where the principle of development would be applied allowed outside of settlements.	
Policy is not sufficiently flexible to allow for unallocated development that is located beyond the settlement boundary when there is a specific need for the development type.	208682 (Guilden Morden Developments Ltd)
The use of settlement boundaries should not preclude the ability of sustainable development opportunities from coming forward and should include a mechanism to ensure that development beyond settlement boundaries can come forward to respond to changes in circumstances over the plan period. Indeed, such an approach is currently being consulted by Government as part of the national decision-making policies and the policy should be modified to allow such flexibility with circumstances relevant to Greater Cambridge. Development should be directed to the more sustainable villages including Great Shelford and Stapleford to support existing services and facilities, deliver additional facilities, and meet identified affordable needs of villages.	208906 (Nightingale and Hill Residential Ltd)
The proposed policy based on settlement boundaries (or defined development extents) around settlements is supported. However, the proposed development strategy to restrict the number of dwellings in certain tiers of the settlement hierarchy and the low number of site allocations proposed for the rural areas will prevent sustainable development from being brought forward unless further sites are allocated for development and included within the settlement boundary. Will need to be drawn more flexibility if windfalls relied upon are to be delivered.	211049, 211062 (Wates Developments and Landowners)

Agree that policy S/DE should include the need for there to be the necessary infrastructure capacity to support the development. That should also apply to the other development areas outside defined development extents and where development is supported by other policies in this Local Plan.	211926 (C Newell)
West of Broad Lane, Cottenham site: policy approach to development outside the defined development extents should be relaxed adjacent to the defined development extents for housing where this is required to meet an identified neighbourhood area housing requirement as an amendment to policy text. Woolsington One Ltd's promoted site represents a suitable, available, and deliverable site adjacent to the defined development extent, can come forward in the early years of the Plan period contributing towards meeting the neighbourhood area housing requirement for Cottenham of 130 dwellings.	211278 (Woolsington One Ltd)
Land north of Gog Magog Way, Stapleford (site reference 45417) Support in principle but policy is not supported by sufficient allocations in sustainable locations such as Rural Centres. There are many sustainable locations adjacent to the development extents where an allocation/Green Belt release would not harm the purposes of the Green Belt.	204177 (Mr & Mrs J Johnson)
Madingley Objects stating extent is restrictive in Madingley, amend to include a limited number of previously developed small sites on the edge of the village. Better reflecting national	202444 (University of Cambridge)

policy, support the vitality of the village, enabling sustainable development without undermining character.	
Mingle Lane Great Shelford Objection requesting update to extent in Stapleford at its boundary with Great Shelford on Mingle Lane. Remove the one remaining parcel of undeveloped land in Stapleford at its boundary with Great Shelford on Mingle Lane from the development extent.	203057 (M Foote)
Land to the land South of Station Road, Harston (site reference 115742). Objection to restrictions on development outside defined extents, amend to include exceptions for limited infilling in the Green Belt.	203413 (Jesus College)
Land south of Church Street, east of High Street, Guilden Morden (site reference 40300) **Land off Swan Lane Guilden Morden (site reference 40304)** **Land at Town Farm Guilden Morden (site reference 40315)** **Land to the west of Brook End Steeple Morden (site reference 40294)** **Land to the southwest of Ermine Way Arrington (site reference 40292)** **Land to the east of Old North Road Kneesworth (site Reference 40299)** Objects as current extents are too restrictive in specific villages, limiting opportunities for growth. Need to identify land within and adjacent to village boundaries for sustainable growth to enhance community sustainability, enabling new facilities, amenities, and transport.	204068 (E W Pepper Ltd)

Land South of St Neots Road / West of Howells Way, Hardwick (site reference 40273) Objection due to lack of flexibility and justification, regarding the rigid settlement limits for Hardwick not accurately reflecting the built form (Paragraph 2.132 of S/DE), and policy is contrary to Para 83 of the NPPF – policy should identify 'Land South of St Neots Road / West of Howells Way, Hardwick' for residential development. Settlement boundary was changed with the inclusion of the new development at Meridian Fields, at the southern edge of Hardwick. It is not clear why this development has been included within the defined settlement boundary, whilst Capstone Fields (immediately adjacent to the Site) and other residential built form along St Neots Road has been excluded.	204885 (Pigeon)
Fen Ditton Currently defined development framework boundary for Fen Ditton means that limited development would take place in this village. There would be no support for existing services and facilities. It is very likely most development opportunities that did exist within Fen Ditton have been taken up by now, and any that do remain would be for one or two dwellings only. There are no opportunities within the settlement boundary for Fen Ditton to deliver major development of 10 or more dwellings where affordable housing would be required.	202088 (J Francis)

Fulbourn, Great Shelford DDE boundary means that limited development would take place in this village. The housing and affordable housing needs would not be met. There would be no support for existing services and facilities, or the delivery of additional facilities. The community aspirations (in the made Fulbourn Neighbourhood Plan) for open space, improvements to health facilities, and for additional green infrastructure would not be met.	201949 (KG Moss Will Trust & Moss Family), 201970 (Shelford Investments)
Land at Valley Farm Meldreth (site reference 130982) **Land West of Station Road Meldreth (site reference 131266)** **Land at Sheene Farm Meldreth (site reference 131267)** **Land East of Station Road, Meldreth (site reference 131268)** Objection states policy not consistent with the draft new NPPF policy S5 supporting development outside settlements where is within walking distance of a well-connected railway station. Meldreth station is well-connected in terms of draft NPPF policy S5 and recommends additional exception in para 2 for development close to well-connected railway stations that refers to the new NPPF following publication of the final version in summer 2026.	202332, 202539, 202654, 202688 (Granta Land Ltd)
Land North of Pampisford Road, Great Abington (Site reference 40539) Objection, policy does not support the 'organic' growth of smaller settlements.	202927 (The Trustees of the C Y Nutt Deceased Will Trust)
Girton, Oakington, and Over Objection to boundary extent at Girton, Oakington, and Over amend to include Call for Site ID 115392 and additional sites from the Call for Sites in 2026.	204011 (Abbey Properties Cambridgeshire Ltd)

Emmanuel College: Long Road, Cambridge Object as the current boundary-based approach of Policy S/DE is seen as inflexible, failing to acknowledge sustainable sites that are functionally part of the urban area. The policy lacks a mechanism for positively assessing sites based on accessibility and their potential to support sustainable development.	204129 (Emmanuel College (Long Road))
Histon and Impington (Glebe Way Histon (site reference 40192)) Concern for promoted sites which are on the edge of a settlements. Histon and Impington defined development framework boundary for means that limited development would take place in these villages, housing and affordable housing needs would not be met. There would be no support for existing services and facilities, or the delivery of additional facilities.	202107 (Cambridgeshire County Council (Strategic Assets))
Cambridge Science Park North Concern as Policy S/DE does not align with NPPF S5. Draft Policy S5 (principle of development outside settlements) sets out the requirement for only certain forms of development to be approved outside of settlement boundaries. This includes development for housing and mixed-use which would be “within reasonable walking distance of a railway station which provides a high level of connectivity to jobs and services”. Footnote 26 expands the use of the term ‘railway stations’ to include underground, tram and light-rail. The Cambridge Guided Busway is authorised through the legal mechanism of a Transport and Works Act Order (TWAO) and so it is considered that the guided busway would fall under the footnote definition.	211484 (Trinity College (CSP) Limited)

Meldreth Concern as Policy S/DE does not align with NPPF S5; Meldreth railway station is well-connected in terms of draft NPPF policy S5. Suggests update to the settlement and green belt boundaries to include their properties within the village. Explicit exceptions should be added to Policy S/DE for sites that are close to a well-connected railway station given proposed changes to national planning policy.	206218 (Granta Land Ltd - Land at Valley Farm, Meldreth), 202668 (Granta Land Ltd- Land East of Station Road, Meldreth)
Land South of Shelford Road, Fulbourn (site reference 51610) DDE should be amended and land allocated. Site is beneficial for completing the village edge, contributing to a clear and logically defined development extent.	204965 (Miller Homes)
Great Wilbraham Great Wilbraham development extent leaves almost no potential sites and prevents further housing even though of a scale, density and character appropriate to the village. Noting that developments outside these extents may be allowed where it would support other polices in the plan; we argue that an explicit reason might therefore be to help make local communities sustainable. A small village such as Great Wilbraham does not have the finances or manpower to undertake a Neighbourhood Plan. The Council should be obliged to work with us to assess need and develop a plan.	203346 (Great Wilbraham PC)
North of Royston - Three Prospects Farm - Land to east of A505 and south of A10, Melbourn (Site Reference 40511) DDE should be revised to include an ‘edge of Royston’ allocation, or at least a reserve/safeguarded site for mixed-use development.	203325, 203328 (Wilson Bowden Developments Limited)

Hauxton Do not seek a direct amendment to the wording of Policy S/DE itself, but that defined development extents should be subject to a full review to ensure they accurately reflect the development potential and sustainability of individual settlements	204520 (Redrow South Midlands)
Land North of Pampisford Road, Great Abington (site reference 40256) Reliance on Neighbourhood Plans limits growth opportunities. Plan should allocate more small and medium-sized sites. Development extents are tightly drawn, limiting growth potential within settlements and undermining the viability of existing services. Failure to deliver necessary growth renders plan unsound.	204545 (Rosconn Group)
Land north of A14 Bar Hill (site reference 40121 and 40244) Objects to the wording of Policy S/DE, suggesting modifications are necessary to enable sustainable employment development on suitable land, including areas outside defined development extents. Wording is inconsistent with National Planning Policy. Assumption that land outside defined extents is unsuitable for development lacks justification. Modifications to the policy should be made to support the logistics and freight sector.	204174 (Tritax Big Box)
Support Cambridge Junction and Create Cambridge in asking that genuinely affordable cultural production space is required, and safeguards usable creative space from being diluted.	204835, 204815 (G Shaw)
Former Oakington Tomato Farm, Dry Drayton Road, Oakington (no site reference) Oakington Defined Development Extent should be amended to include the tomato farm which would allow this land (which is previously developed and accommodates two	211740 Homes England

dwelling houses) to come forward for development should it not be required for use to support the development of Northstowe.	
Land at Bartlow Road development, and The Land at Horseheath Road (no site reference) The windfall sites north east and south east of the village of Linton are problematic developments approved due to lack of a 5-year housing supply. They are shown incomplete on the village inset map and have incomplete boundaries. They therefore do not comply with the Plan criteria under Policy S/7 Page 11 Paragraph 30 and should not have been included in the defined development extent.	211929 (C Newell)

Policy S/GB: The Cambridge Green Belt

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Whilst some representations supported use of the local Green Belt purposes, others challenged that they were inconsistent with updated national Green Belt policy and that grey belt should have been identified and reviewed before determining the development strategy, and that the policy should make explicit reference to the grey belt.

Comments argued that exceptional circumstances existed for further Green Belt release. Some questioned the impact of Green Belt on the development strategy and that it channels development away from Cambridge and should be removed. Many representations said that a comprehensive review of the Green Belt should be carried out to identify grey belt and further sites for development should be identified in sustainable locations in these areas of lower contribution Green Belt land. There were comments that the updated Green Belt evidence should have informed the Draft Plan and been published then. There were several comments that purpose 1c of Policy S/GB is inconsistent with the second purpose in NPPF paragraph 143 in that it refers to communities and not towns and should be amended which could affect the implementation of grey belt policy at the planning application stage.

There was support for more ambition for the beneficial use of Green Belt land such as for amenity space and biodiversity. Some comments proposed adding new areas of Green Belt land (including at Cambourne and Great Shelford).

Representations questioned whether national policy had been followed when identifying the Green Belt release that the draft plan does propose. Comments supported land being maintained as Green Belt in a number of locations, including the West Fields and around Fen Ditton and Horningsea. Mingle Lane Great Shelford received support for maintaining the site as Green Belt (following its removal from the plan between the preferred options and Draft Plan stage), whilst another comment proposed that the allocation be reintroduced.

Little Wilbraham, Great Wilbraham, and Six Mile Bottom Parish Councils considered that the Green Belt was too tightly drawn to give flexibility for some development in villages. Clearer reference was requested to show how essential rural development, including farm diversification and local needs housing could come forward.

There were a large number of representations from developers and landowners identifying sites as grey belt and that they were suitable for development, many of which were accompanied by supporting information.

Response to main issues raised in representations:

A Cambridge Green Belt Assessment was published to accompany the First Proposals in 2021. An update to this study, the ‘Greater Cambridge Green Belt Assessment Review following changes to National Policy and Guidance’ (2026), has now been produced and is published to accompany the Proposed Submission Local Plan. The updated study has carefully considered changes to national planning policy and guidance, and considered issues raised in representations to the Draft Local Plan.

The study confirms that the long established Cambridge Green Belt purposes provide a locally-specific application of the NPPF purposes, delivering a more helpful structure for the analysis of variations in the role of Green Belt land than provided by the more generic NPPF purposes. The city has a Green Belt because of its historic character and all three Cambridge purposes form elements of NPPF Purpose D. The Study also considers how grey belt should be applied in a Cambridge context. It reviews parcel by parcel contribution to Green Belt purposes, highlighting areas that could provisionally be considered as grey belt where they do not make a strong contribution to Green Belt purposes.

Paragraph 146 of the NPPF establishes that where it is necessary to release Green Belt land for development, plans should give priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The plan making process has not identified exceptional circumstances for Green Belt release to meet general needs. As such, the identification of the location of grey belt land within Greater Cambridge does not affect the Councils' position regarding the identified preferred development strategy. This is considered in depth in the Strategy Topic Paper and its Appendix 4. The Strategy Topic Paper also shows how the plan making process (including Sustainability Appraisal) has considered the merits of alternative strategies that would involve Green Belt release.

The updated Green Belt assessment provides further clarification about the relationship between the Cambridge Green Belt purposes and the national Green Belt purposes set out in the NPPF. Cambridge only has a Green Belt because of its historic character, and as such the Cambridge purposes are a locally specific application of NPPF purpose D: to preserve the setting and special character of historic towns. The Cambridge purpose which refers to 'communities' (part 1c of the policy) is therefore referring to preventing the necklace of villages surrounding Cambridge from merging into one another and with Cambridge, which is one of the factors defining the special character of Cambridge and its setting.

The supporting text of the policy has been updated to reference the Green Belt Study Review in relation to grey belt. It is not necessary for the policy to repeat national policy regarding the application of Green Belt / grey belt for development management.

Justification has been identified for the release of Green Belt land at Cambridge Biomedical Campus and at the Babraham Research Campus. Outside those areas exceptional circumstances for other Green Belt release has not been identified. Proposals for new Green Belt to be designated would have to meet NPPF (2024) paragraph 144. Given the location of Cambourne relative to Cambridge, it is not considered there is a case to extend the Green Belt.

Whilst a draft allocation was identified at Mingle Lane in Great Shelford in the First Proposals, reasons for its removal from the Draft Plan were provided. There remain no exceptional circumstances for its release. A representation proposes adding to the Green Belt in this location, however the boundary is considered to be correctly drawn.

In terms of comments received protecting or promoting particular sites in the Green Belt, the selection of sites for allocation has followed a rigorous process in the HELAA. The HELAA takes a 'policy off' approach to the Green Belt and considered all sites whether they are in the Green Belt or not. The consideration as to whether a site is suitable for release from the Green Belt is part of the wider plan making process and whether there are exceptional circumstances for this. Further detail about this process is set out in the Development Strategy Topic Paper and its Appendix 4: Revised Greater Cambridge Local Plan Green Belt considerations review (2026). More detailed responses to comments on the Green Belt Assessment and in relation to whether a site is considered to be grey belt can be found in the Greater Cambridge Green Belt Assessment Response to comments from Site Submissions Update and Draft Local Plan Consultation (2026) and also in Annex 1 of Appendix 4 of the Development Strategy Topic Paper.

Table of representations:

General

Summary of issues raised in comments	Comments highlighting this issue
Support the protection of the Green Belt and its purposes.	201014 (M Colville), 201021 (I Crowson), 201298 (N Campbell), 201551 (Stapleford PC), 201728 (Histon & Impington PC), 201916 (A Davidson), 202736 (Cambridge Past, Present and Future), 204986 (D Davies), 204642 (C Forbes-Cable), 221927 (C Newell), 211082 (The National Trust), 210896 (Great Shelford PC)
Welcome the 3 key purposes of the Cambridge Green Belt being set out in the policy. Welcome the reference to a compact city and historic core.	210087 (Historic England)
The Local Plan should be more ambitious in providing amenity space in the Green Belt.	201280 (F Samuel)

We strongly support this policy and, as a rural parish, particularly value clause 1c. However, we are disappointed that clause 1 of the policy does not explicitly pick up on supporting para 2.145. Despite our parish being surrounded by Green Belt, we have very limited access to it or links between our green spaces; hence, the Stapleford and Great Shelford Neighbourhood Plan (Policy S&GS 19) proposes multiple new off-road routes and linkages between existing routes. It is wrong that such a basic need as access to green spaces for recreation, health and wellbeing remains aspirational unless facilitated by major development. The policy should also explicitly support the enhancement of the beneficial use of Green Belts currently in the supporting text.	201551 (Stapleford PC), 210896 (Great Shelford PC)
The policy should include explicit reference to Grey Belt, consistent with the NPPF, and identify Grey Belt land within Greater Cambridge.	201857 (Chivers Farms Limited), 202038 (Wimpole Associates Ltd), 204487 (Wain Estates)
Policy S/3 (Green Belt) must be fully aligned with Section 13 of the NPPF, which affords strong protection to Green Belt land. The Green Belt supports biodiversity, food security, climate resilience, and public health, including access to nature for disabled people.	208950 (CPRE Cambridgeshire and Peterborough)
The Green Belt is important for biodiversity and the Local Plan needs to include language that can protect it from development. The term 'exceptional circumstances' needs tightening up.	201916 (A Davidson)
Do away with the Green Belt or buy the land from private owners and prohibit crop fields and plant trees everywhere. If it's not accessible by residents, it's not a real green belt. I'd rather see the city grow, and no farms, which should be forbidden.	205494 (C Campos)

Paragraph 2.142: Does designated sites include designated heritage assets? If so, this should be made explicit with the addition of the word heritage. We recommend that you add reference to designated heritage sites.	210185 (Historic England)
The end result of the Green Belt is simply to move development further from Cambridge resulting in worse located developments for everyone. It would be better to build high quality dense, liveable suburbs (Eddington is a fairly good example) close enough to the city for people to feel part of it, and to cycle to most of their destinations, benefit from the amenities that already exist	203630 (H Thomas)
Support the inclusion of the national Grey Belt definition in the supporting text. The inclusion of Grey Belt within the NPPF and corresponding Planning Policy Guidance is a vital tool for identifying low-contribution land that should be prioritised for sustainable delivery.	202071 (M Asplin)
Policy S/GB is unsound because it does not demonstrate alignment with the February 2025 PPG, which advises authorities to identify grey belt land to inform Green Belt review. The Plan states that grey belt identification is unnecessary, yet provides no alternative explanation of how national guidance has been applied. There is a risk that lower-contributing land is overlooked. The Development Strategy also appears to have been concluded before updated Green Belt evidence is published, raising concern that the evidence base has not fully informed the plan at Regulation 18 stage. A comprehensive review of the Green Belt should be carried out to identify further sites for development in sustainable locations that can be delivered without harm to the purposes of land being designated as green belt. We would expect Greater Cambridge to update its Green Belt assessment, which currently dates from 2021, to reflect this updated policy and identify potential grey belt areas.	202071 (M Asplin), 202021 (M Asplin), 204246 (Bellway Strategic Land), 202038, 206077, 206088 (Wimpole Associates Ltd), 205095, 206788 (Endurance Estates), 208777 (Croudace Homes), 204990 (Martin Grant Land), 211447 (Gonville & Caius College)

We object to draft Policy S/GB: The Cambridge Green Belt on the basis that none of these purposes are as listed at paragraph 143 of the NPPF. Having regard to the merging of places paragraph 143 makes it clear that the purpose of the Green Belt is 'specifically to prevent neighbouring towns merging into one another' as opposed to 'communities in the environs…'. It is notable that the policy does not refence Grey Belt, nor does the policy allow for any consideration of need or Green Belt review over the plan period. Notwithstanding, that Green Belt release has been considered acceptable to facilitate development at East Cambridge and Cambridge Biomedical Campus. We object to Policy S/GB: The Cambridge Green Belt on the basis that further green belt release is required to meet additional need for employment floorspace.	210316 (Russell Smith Farms)
Purpose 1c in Policy S/GB is inconsistent with the second purpose in NPPF Paragraph 143 i.e. it refers to communities and not towns and should be amended. Consistency with national policy is one of the soundness tests for local plan policies. The reference to communities rather than towns could have implications for how inappropriate development in the Green Belt is assessed and the implementation of grey belt policy at planning application stage.	202369 (The CLC Trust), 203898 (Hill Residential (Fulbourn Site), 202108 (Cambridgeshire County Council (Strategic Assets), 202572 (Ely Diocesan Board of Finance), 204283 (Croudace Homes), 204455 (Bellway Strategic Land),

	205136 (North Barton Road Landowners), 201950 (KG Moss Will Trust & Moss Family), 201971 (Shelford Investments), 204182 (Hill Residential (Hardwick Site), 204530 (Redrow South Midlands), 209967 (Granta Land Ltd), 204990 (Martin Grant Land), 211616 (Bloor Homes Eastern)
The Development Strategy Topic Paper indicates that the identified need for jobs and homes can be met without using Green Belt land, but a revised Green Belt Assessment is needed to inform the Draft Local Plan. There is a call for additional housing and job allocations to meet a more aspirational growth level, suggesting that full weight cannot be given to the Green Belt without considering its release. The omission of Grey Belt references in Draft Policy S/GB is challenged, highlighting the NPPF's and PPG's requirement to identify Grey Belt land in Green Belt Assessments. Draft Policy S/GB is viewed as inconsistent with national policy, requiring a revised Green Belt Assessment, consideration of higher growth targets, and inclusion of Grey Belt in the Local Plan.	204246 (Bellway Strategic Land), 204487 (Wain Estates)

The PPG is clear that where local authorities seek to review and alter Green Belt boundaries it is expected that authorities identify grey belt land to inform this work and prioritise development in accordance with paragraphs 147 and 148 of the Framework.	208907 (Nightingale Land and Hill Residential Ltd)
It is not evident though that the Councils have given sufficient weight to the climate crisis and housing crisis we now face (which were not material factors when the green belt policy was originally established), and these are exceptional circumstances which would justify a more flexible and permissive approach to grey belt release in particular. We understand that the Councils are undertaking a Grey Belt review which is due to be published after the Draft Local Plan consultation. It will be important to ensure that this review is published and the opportunity provided for it to be reviewed and commented upon in advance of the finalisation of the Proposed Submission Consultation (Regulation 19) scheduled for Summer / Autumn 2026.	209329 (St Johns College Cambridge), 211533 (Hopkins Homes)
We understand that the Councils are undertaking a Grey Belt review which is due to be published after the Draft Local Plan consultation. It will be important to ensure that this review is published and the opportunity provided for it to be reviewed and commented upon in advance of the finalisation of the Proposed Submission Consultation (Regulation 19) scheduled for Summer / Autumn 2026.	211064 (St John's College Cambridge)
There is some inconsistency with the wording of the 5 purposes stated in NPPF 143 a-e. The LP policy should also be expanded to include safeguarding the countryside from encroachment. The explanation should be clarified to limit exception sites to affordable housing.	211927 (C Newell)
The policy would benefit from clearer reference to how essential rural development, including farm diversification and local needs housing, can be accommodated without undermining Green Belt purposes, ensuring protection of openness alongside the vitality of rural communities. Strict application	203154 (Cambridgeshire ACRE)

without rural nuance could restrict modest community facilities, rural employment or affordable housing that supports village sustainability.	
The council appears not to have applied the NPPF-required hierarchy (previously developed land, grey-belt, other Green Belt) when considering releases and has not provided sufficient evidence of exceptional circumstances to justify additional Green Belt releases.	205874 (British Land)
Despite our parish being surrounded by greenbelt, our access to it is limited. It is wrong that such a basic need as access to green spaces for recreation, health and wellbeing remains out of reach. Green Belt should stay as Green Belt (or preferably made 'greener' by making it more biodiverse). We have just had a huge development built on what used to be actual strawberry fields but I can't see this on the map. I don't think there has been a thought to how this new development impacts on the local health services (or lack thereof) either.	202677 (S Berridge)
The Cambridge Green Belt aims to provide a green buffer around the city and villages to prevent urban sprawl. There is concern that the green belt is too tightly drawn around some villages, hindering small-scale developments. Small-scale appropriate developments could enhance the environment and contribute to long-term rural resilience.	203071 (Little Wilbraham and Six Mile Bottom PC)
We strongly encourage GCSP to approach the grey belt assessment with an open mind, to reassess existing assumptions in light of the newly defined concept of the ‘grey belt’ in the revised NPPF, and to explore the potential of such sites positively and strategically. Careful consideration of opportunities in grey belt areas has the potential to enable denser and more sustainable development, supporting wider social and environmental objectives of the draft Plan.	203521 (Cambridge Ahead)

Welcome the commitment to an updated Green Belt Study but request that the findings be made available before the Regulation 19 consultation.	204910 (Great Shelford (Ten Acres) LLP)
It is noted that no Green Belt study has been undertaken at this stage to inform the Draft Local Plan. This is a fundamental gap in the evidence base that needs to be addressed prior to Regulation 19.	211525 (Endurance Estates)
It is considered that upward adjustments are required to the housing target, the development strategy should direct development to the more sustainable locations including on the edge of Cambridge, and there are exceptional circumstances to release land from the Green Belt	205136 (North Barton Road Landowners)
National policy does not facilitate the creation of local Green Belt purposes. The Cambridge Local Purposes do not align with the national purposes. The fact that Local Purposes have applied previously does not justify their continued application in light of changes to national context. A Green Belt review is warranted to assess land parcels against the relevant national Green Belt purposes.	203970 (Anglia Ruskin University)
The final part of Policy S/GB which states ", and having regard to the Cambridge Green Belt purposes set out above" appears to be unnecessary text.	204019 (Abbey Properties Cambridgeshire Limited)
Exceptional circumstances exist at a strategic level to justify amendments to the Green Belt by virtue of the need for the Greater Cambridge Local Plan to identify additional suitable and sustainable sites for development to meet identified needs, and subsequently directing appropriate growth to sustainable villages. The draft Greater Cambridge Local Plan currently fails to give grey belt any consideration in informing the proposed Development Strategy. Therefore, it is clear that the Greater Cambridge Local Plan needs to be informed by a full assessment of the Green Belt in light of the Government's introduction of grey belt and emerging national planning policy.	208323 (PX Land Ltd), 209327 (B Homent, J Tee and R Smith), 210300 (Northwest Biotherapeutics Capital Limited)

Object to building on any more of the protected green areas of our city. Due to the enormous numbers of new houses being built on green belt sites encircling the whole of the city that should make it a priority to preserve the few green spaces within the city for mental health for all who dwell in the city and nature including bee and wildlife corridors.	208479 (H Belle)
Thakeham supports and endorses to the Government's desire to see land which does not contribute fully to the purposes of Green Belt (grey belt), make a meaningful contribution to housing supply. Whilst draft Policy S/GB is considered to align with National Policy, the Council should ensure that consideration is given to promoted sites within the Green Belt that can come forward to meet the Local Housing Need, whilst not strongly contributing to purposes a), b) or d) of the Green Belt.	208339 (Thakeham Homes Ltd)
Policy S/GB of the draft GCLP sets out the Green Belt policy for Cambridge. Paragraph 143 of the NPPF sets out the five national purposes for Green Belts. The second purpose listed in Paragraph 143 states "b) to prevent neighbouring towns merging into one another;". The third purpose for the Cambridge Green Belt in Policy S/GB states "1c. prevent communities in the environs of Cambridge from merging into one another and with the city". Purpose 1c in Policy S/GB is inconsistent with the second purpose in NPPG Paragraph 143 i.e. it refers to communities and not towns. Consistency with national policy is one of the soundness tests for local plan policies. The reference to communities rather than towns could have implications for how inappropriate development in the Green Belt is assessed and the implementation of grey belt policy at planning application stage. **Changes to plan:** It is requested that Purpose 1c in Policy S/GB is amended to refer to towns and not communities. The amended text should be as follows: prevent towns in the environs of Cambridge from merging into one another and with the city.	211248 (Manor Oak Homes)

Areas of Green Belt

Summary of issues raised in comments	Comments highlighting this issue
If/when it is necessary to release less critical parts of the Green Belt for development, compensatory improvements and countryside enhancement/biodiversity enhancement should be concentrated in the more critical remaining parts of the Green Belt especially those that already have existing enhancement initiatives that can be joined up to landscape scale such as the Magog Hills south of the town.	201185 (M Foote)
It is important that the Green Belt around Fen Ditton and Horningsea is maintained. It is so important for residents from all over Cambridge as part of the Green lungs of Cambridge and important recreational space.	207352 (L Woolfenden)
The Green Belt boundary is too tight around Great Wilbraham village, mainly following property boundaries. The nearest properties in Fulbourn are 1.5 miles from the edge of Great Wilbraham. Some development on plots within the relatively open structure of the village is very far from the 'ribbon development' which the Green Belt is designed to prevent.	203349 (Great Wilbraham PC)
We would like to explore the possibility of having a green belt with statutory status and of sufficient depth between Cambourne North and the villages in order to better protect the villages against coalescence.	202126 (Elsworth PC), 202350 (P Deer)
It is important to maintain the Green Belt, in particular, the West Fields to retain decent walks and the clear views from Red Meadow Hill towards Cambridge	202425 (Residents Association of Old Newnham – RAON)

A key purpose of the Green Belt is to maintain physical separation and open countryside between settlements. There is still a small area of open undeveloped rural land at the boundary between Great Shelford and Stapleford that is not currently assigned as Green Belt. The policy map showing the Green Belt should be updated to include this parcel since it is vital, since, it alone, will serve the purpose of preventing the urban sprawl completely connecting the two settlements.	203068 (M Foote)
There are sites that are allocated as green belt that are not in fact but already in the village envelope. These areas of green belt do not tick the boxes of your description of green belt so i suggest they are released. We have one such site in the middle of a village. It was to be released in earlier stages of this plan but has been removed in this stage. The Walled Garden, Whittlesford CB22 CB280901. Please release it from greenbelt.	204642 (C Forbes-Cable)
Support for small-scale development where infrastructure exists, provided it does not harm surrounding rural areas or increase the risk of village merging. The site land registry CB280901 in Whittlesford was previously included in the local plan for sensitive development but has been removed in the latest plan despite it meeting the criteria of sustainable sensitive development.	205473 (L Gardner)
Retain land in the Green Belt subject to Policies S/CBC & S/SEA/CBC, as there is a surplus supply of Offices/R & D floorspace identified in the Employment & Housing Needs Assessment and the loss of 22 hectares of Green Belt is not justified. There is a need to mitigate the loss of Green Belt, both from the loss of Green Belt in the adopted Local Plan at CBC, & for the 22 hectares to be deleted from the Green Belt. NPPF Green Belt Policy requires	204790 (R Turnbull)

measures to enhance opportunities for recreation. This should be achieved by increasing the area of Wandlebury Country Park & the Gog Magog Country Park towards Stapleford and between CBC and Great Shelford.	
The respondent supports the government's reforms of the NPPF regarding the modernisation of green belt policies, specifically the identification of 'grey belt' land for potential development. The respondent argues for greater flexibility in permitting development on low-quality green belt land to boost housing supply, highlighting Histon and Impington as a sustainable location due to its transport connectivity.	204990 (Martin Grant Land)

Sites

Summary of issues raised in comments	**Comments highlighting this issue**
West Fields Strongly support the decision not to develop the Green Belt land known as the West Fields and to retain this important part of the Green Belt, which allows views from the west.	208486 (C Johnson), 203282 (J Palmer)
Mingle Lane – Site S/RSC/HW Strong support for the land marked S/RSC/HW on the Greater Cambridge Local Plan to be retained as Green Belt. The existing Greater Cambridge Local Plan had identified this land as being suitable for release from the Green Belt, but that the consultation in 2021 showed unanimous objection to this release - the only voices in favour were from the land owner and the developers and their representatives.	208497 (R White), 208499 (H White), 208882 (C Bendelack)

The extensive allocations for new housing in other areas of South Cambridge, including Cambourne, Grange Farm, Bourne, Hinxton and others render the need for this exceptional release of Green Belt redundant. Release of this Green Belt would also destroy the natural environment it was instituted to protect. In our garden, backing onto the area, we routinely have visits from deer, foxes, badgers, squirrels, sparrow hawks, green woodpeckers and many other species, all of which would suffer from the proposed developments.	
Cambridge Biomedical Campus The Landowners' proposed southern entrance to the CBC should be humble, unobtrusive and carefully landscaped so as not to add to the Very High Harm the CBC would be doing to the Green Belt. We are strongly opposed to a prominent gateway being created in this location. If agreed, it should be unobtrusive and blended into the landscape of Cambridge City edge. Great concern at the open-ended position the CBC has taken on this crucial matter - by, we propose, making it abundantly clear that if a further extension of the CBC into the Green Belt were to be agreed in the 2025-2045 Greater Cambridge Local Plan, it would be conditional on a CBC Landowners' contractual commitment to make no further bids in the future for yet more land to be taken out of our precious and diminishing Green Belt. Unless the Landowners agree to that condition, the proposed Phase 4 addition to the CBC should not be agreed.	208745, 208746 (Trumpington Residents Association)
Mingle Lane – Site S/RSC/HW NLHRL have land interests in Great Shelford (land at Mingle Lane) and are promoting the site for residential development for approximately 110 dwellings. The site was originally identified as a	208894, 208907 (Nightingale Land and Hill Residential Ltd)

preferred option for development at the ‘First Proposals’ stage of the GCLP under site reference “S/RSC/HW” accommodating approximately 100 dwellings. Nightingale Land have acquired additional land to the north that could increase the development potential of the site to approximately 190 dwellings. The site has subsequently been removed from the current consultation following the identification of land at Grange Farm. The site meets the Grey Belt criteria and sustainability of the site remains unchanged from the Council's initial identification of the site. The site should be reintroduced as an allocation.	
Site 59410 Exceptional circumstances exist to justify removal of the Green Belt designation from the remainder of site 59410. The Council’s 2021 Green Belt Study identifies a weak physical distinction from Horningsea, limited countryside views, and only minor harm arising from release, with the site making a limited contribution to Green Belt purposes. The current boundary is arbitrary, bisects a single enclosed planning unit, and undermines design-led outcomes. Correcting the Green Belt boundary, alongside inclusion within the DDE, would create a clear, permanent and defensible boundary, support sustainable small-site delivery, address identified supply shortfalls, resolve acknowledged policy tension, and provide long-term certainty.	202036 (M Asplin)
Site 115407 Advocate for a site-specific exception for Site ID: 115407 for commercial and recreational use. Recent consultation indicates strong community support, with 71% of residents backing the proposal for high-quality recreational space.	201728 (Histon & Impington PC)

The strategic release of this Green Belt parcel should be seen as a net benefit to the community. The site is well positioned for sustainable development due to exceptional connectivity via Guided Busway routes and surrounding bus services. We advocate for consolidated, high-impact employment hubs similar to the Cambridge Science Park, rather than smaller developments. Proposal includes a dedicated Country Park and diverse employment opportunities, offering greater long-term community value than its current designation.	
Woodcock Close, Impington Concerns are raised regarding the dated Green Belt Assessment and the lack of commitment to review Grey Belt sites, which are becoming increasingly relevant in planning policy. It is recommended that the Plan Policy (S/GB) explicitly references Grey Belt and includes the identification of Grey Belt land within Greater Cambridge, aligning with NPPF requirements. To ensure the Local Plan's longevity, a revised Green Belt Assessment should be conducted in accordance with Appendix E of the NPPF 2025.	201857 (Chivers Farms Limited)
Rectory Farm - 2025 Call for Sites Ref 222cfe Grey Belt Land should be identified within the revised Green Belt Assessment and Draft Local Plan. The Council needs to properly consider the inclusion of well-performing sites in the Grey Belt such as Land Adjacent to A1303 and M11, Rectory Farm.	202038 (Wimpole Associates Ltd)
Site 40271 Land East of Balsham Road in Fulbourn This site would meet the definition for grey belt land, as set out in Chapter 13 and Annex 2 of the NPPF and in Section Id.64: Green Belts of the Planning Practice Guidance. The site does not strongly contribute towards Green Belt purposes (a), (b), or (d). The promoted development would not lead to the unrestricted sprawl of a large built-up area, it would not result in the coalescence of neighbouring	203898 (Hill Residential (Fulbourn Site))

towns, and it would not affect the setting and special character of a historic town. The site is not designated as a protected area, other than being within the Green Belt. Fulbourn provides a range of services and facilities and employment opportunities, and is accessible by sustainable modes of transport. A Landscape Capacity and Grey Belt Assessment (tor & co, February 2025) was included with the updated Call for Sites submission in March 2025. It is considered that this would fall within the definition of grey belt land, and should be released from the Green Belt to meet development needs.	
Evolution Business Park and associated land, Milton Road, Cambridge submission To realise the Site's potential to expand its employment generating capabilities as an Established Employment Area, it should also be released from the Cambridge Green Belt, especially as it comprises previously developed land. Given the Site's existing built form, it does not make a positive contribution to the purposes of the Cambridge Green Belt and should duly be released to facilitate future development of the Business Park.	206951 (Cambridge Reality Limited)
GTSA Site, Great Shelford 115766 Concerns are raised regarding compliance with NPPF paragraph 23, suggesting that additional sites are necessary to meet housing needs by 2045. The respondent advocates for a higher buffer in the growth strategy to support local jobs and meet housing needs, particularly for specialist and older persons' housing. This should be met on smaller non-strategic sites in a highly sustainable location such as Gt Shelford	204910 (Great Shelford (Ten Acres) LLP)
Cambridge South Cambridge South represents a unique opportunity to deliver housing to meet a broad range of needs but specifically those of the Biomedical Campus in line with national policy. It is	208212, 208215 (Pigeon Land & LIH)

eminently deliverable; unencumbered by existing uses or landownership complications. It's clearly defined physical boundaries mean it is a clear grey belt site, which can be planned as a sustainable extension of the city. Sites on the edge of Cambridge have a track record of delivering high quality development. Cambridge South would be the next success story and there are demonstrable exceptional circumstances to justify its release from the Green Belt. It is considered that Cambridge South complies with these criteria and would (under the draft NPPF) therefore not represent inappropriate development in the Green Belt. Whilst it is against the 2024 version of the NPPF that the dGCLP is being prepared, the draft is already a consideration and will become even more material when it is adopted. Any spatial strategy that involves the consideration of Green Belt land would be remiss not to consider the implications of grey belt and of the draft NPPF's definition of what would not be inappropriate development in the Green Belt and the more near-term impact on development management this will have.	
Land north of Long Road, 'Darien Meadow' The Site is currently designated as Green Belt, but recent national policy changes regarding 'grey belt' have not been incorporated, leading to a flawed assessment. The site is grey belt land for decision-taking purposes. The Development Strategy Topic Paper indicates a future Green Belt Assessment, but this should have informed the Draft Local Plan due to significant policy changes.	204131 (Emmanuel College (Long Road))

To ensure the Plan is sound, a revised Green Belt Assessment should be published, higher growth scenarios considered, and grey belt land identified for sustainable development.	
Land west of Duxford Road The site should be allocated for development in the emerging Plan as it meets the criteria for grey belt land as per the Planning Practice Guidance (PPG, February 2025); the submitted Landscape and Visual Assessment demonstrates that Land west of Duxford Road does not contribute to the purposes of the Green Belt, thus supporting its classification as grey belt land. The site is not affected by Footnote 7 designations, confirming its eligibility for grey belt classification and potential for development.	204283 (Croudace Homes)
Foxton The government's reforms to the NPPF in December 2024 modernised green belt policies, allowing development on low-quality 'grey belt' land, which may include the respondent's client's site at Foxton. There is a need for greater flexibility in permitting homes on sites near well-connected rail stations, as the client's site meets these criteria and has good cycle connectivity to employment areas. A thorough green belt review is essential for the Local Plan process to ensure the development strategy for Greater Cambridge is based on an accurate assessment of land contributions to green belt purposes. Draft Policy S/GB diverges from the NPPF, particularly in criterion c), which aims to prevent merging of communities around Cambridge, whereas the NPPF focuses on preventing merging of neighbouring towns.	204306 (R2 Developments Ltd)
Land at Girton Road, Girton	204487 (Wain Estates)

Please see attached a Green Belt Study for Land at Girton Road, Girton, which details how the site is classified as Grey Belt due to its weak contribution to Green Belt purposes. The study indicates that development on this site would not significantly impact the gap between Girton and Histon.	
Comberton The respondent highlights that the government's reforms to the NPPF in December 2024 allow for development on low-quality 'grey belt' land, suggesting their client's site at Comberton may qualify. They argue for greater flexibility in permitting homes on sites near Minor Rural Centres to support the government's aim of boosting housing supply.	204498 (Beechwood Estates Ltd)
Land east of Hauxton The respondent argues that the land east of Hauxton should be released from the Green Belt, as it is categorised as 'grey belt' and makes a limited contribution to Green Belt purposes, thus supporting the deliverability of the emerging GCLP. Redrow highlights that the proposed site can address unmet housing needs and is well-connected to local services, schools, and transport corridors, making it suitable for development. The Green Belt and its purposes should be subject to review around Hauxton.	204530 (Redrow South Midlands)
Quy Tech site, Stow-cum-Quy The respondent objects to draft Policy S/GB, stating it does not align with the National Planning Policy Framework (NPPF) and fails to consider Grey Belt land or the need for Green Belt review. It is argued that the Quy Tech site does not significantly contribute to the purposes of the Green Belt, as	204809 (Quy Tech Ltd on behalf of landowners)

it would not lead to urban sprawl or the merging of towns, and would not impact Cambridge's historic setting. The respondent suggests that the development of the Quy Tech site would have the least impact on sensitive Green Belt land compared to other nearby sites, advocating for its removal from the Green Belt.	
Land South of Shelford Road, Fulbourn, site 51610 / 115137 in the HELAA. Policy S/GB and the Green Belt Assessment (2021) conclude that there is no need to release the green belt, as 'exceptional circumstances' are not present. The new site allocations are deemed unsustainable as they are located far from Cambridge Centre, potentially increasing reliance on private cars, conflicting with NPPF paragraphs 110 and 115. The Sustainability Appraisal 2025 notes that development beyond the green belt may lead to increased vehicle travel due to poor proximity to existing services and jobs. The respondent argues that Land South of Shelford Road, Fulbourn qualifies as Grey belt under NPPF paragraph 143, and its release would not affect neighbouring towns or historic character, warranting its allocation for smaller sites.	204973 (Miller Homes)
Teversham The respondent indicates that the client's site at Teversham may be classified as 'grey belt' due to its poor performance against green belt purposes, suggesting it could be suitable for development. The	205054 (G Robinson and Partners)

respondent argues for greater flexibility in permitting development on grey belt land to support the government's aim of increasing housing supply, highlighting the site's connectivity to Fulbourn and Cambridge. A thorough green belt review is recommended as part of the Local Plan process to ensure the development strategy for Greater Cambridge is based on an accurate assessment of green belt contributions. The respondent points out a divergence in Policy S/GB, specifically criterion c), which should be amended to align with the NPPF by preventing communities in the environs of Cambridge from merging with the city. A further recommendation is made for a comprehensive review of the green belt to identify additional sustainable development sites that do not compromise the purposes of green belt designation.	
Site 40509 on Babraham Road The Green Belt assessment underpinning the Local Plan is not sufficiently robust. Site 40509 on Babraham Road has been excluded solely due to its Green Belt designation, despite being adjacent to an allocated site, close to a proposed transport hub and located within a highly sustainable village. Evidence shows the site does not contribute strongly to Green Belt purposes and that any landscape harm could be mitigated. The assessment also fails to reflect the delivery of CSET, which would make the site infill. As a result, less suitable sites are allocated, contrary to the Plan's sustainability objectives.	203905 (Waterbeach Instruments Ltd)
Land off Beach Road, Cottenham It is clear that the Greater Cambridge Local Plan needs to be informed by a full assessment of the Green Belt in light of the Government's introduction of grey belt. Given that the previous assessment of	208777 (Croudace Homes)

land off Beach Road, Cottenham concluded that it does not strongly contribute to any of purposes (a), (b), and (d), there is a strong case that the land should be designated as grey belt, and thus suitable for development.	
South East Cambridge It is considered that the approach taken by Greater Cambridge is fundamentally incorrect, including failing to consider the potential for Grey Belt sites to accommodate growth. As both the NPPF and PPG identify clearly, a full Green Belt review should be undertaken in authorities where Green Belt release is required to fulfil development needs. The development of some Green Belt sites on the edge of Cambridge such as South East Cambridge would lead to more sustainable forms of development through shortened commuting distances and prevalence of public transport options than strategic growth options beyond the Green Belt. Therefore, the approach taken on Green Belt land is currently incomplete, including failing to consider the availability of Grey Belt land on the edge of Cambridge.	209690 (CEG Land Promotions Ltd)
South of Oakington Road, Cottenham The respondent believes that a revised Green Belt Assessment should have been completed and published as part of the consultation process, as it may change the context for considering Green Belt land release. The omission of 'Grey Belt' references in Draft Policy S/GB is challenged, as the NPPF mandates its identification in Green Belt Assessments, and the respondent recommends its inclusion in the Local Plan. Draft Policy S/GB is inconsistent with national policy and calls for a revised Green Belt Assessment,	203172 (Christ's College)

consideration of higher growth targets, and inclusion of Grey Belt land. The respondent suggests that the Council should engage more effectively with Green Belt issues to form a sustainable spatial strategy and considers the inclusion of well-performing Grey Belt sites essential. The respondent points to a specific site, South of Oakington Road, Cottenham, as a low-impact Green Belt land that should be released to support sustainable development in line with NPPF guidelines.	
Land East of Bridge Road, Impington The respondent considers that the site is Grey Belt and also in a sustainable location and that there are exceptional circumstances to justify the alteration of the Green Belt to include the release of sites such as Land East of Bridge Road, Impington. Survey work and engagement is being undertaken to demonstrate the deliverability of safe, convenient access to the Site.	210440 (Barratt Redrow)
South West Cambridge (HELAA Ref. 52643) It is widely accepted that Cambridge is tightly bound by Green Belt which constrains new development and expansion of the city. The NPPF guides that Green Belt boundaries should only be altered in exceptional circumstances, any changes to Green Belt boundaries should endure beyond the plan period. The priority for the release of land from the Green Belt should be previously developed land, grey belt land, and then other Green Belt locations. The need to promote sustainable patterns of development should also be considered when deciding on land to be released from the Green Belt. This approach would limit the need to travel, offer a choice of transport modes, reduce congestion and emissions, and improve air quality and public health.	206825 (North Barton Road Landowners Group)

It is considered that exceptional circumstances exist to release land from the Green Belt through the Greater Cambridge Local Plan process, which are related to housing and affordable housing needs and economic growth.	
Sites at Park Farm, Histon Section 13 of the NPPF requires Green Belts to be reviewed as part of the plan making process and encourages the use of previously developed land and grey belt where this aligns with the promotion of sustainable development and the development strategy. Paragraph 155 confirms the circumstances where the development of homes, commercial and other development in the Green Belt should not be regarded as inappropriate and paragraph 156 sets out the Golden Rules which apply to land proposed for release from Green Belt for housing. The NPPF also indicates that significant weight should be given to development proposals which comply with the "Golden Rules" set out for grey belt development. The amendments introduced by the revised NPPF to Green Belt policy, and particularly the assessment of Grey Belt, mean that this site can now be positively assessed.	208387 (NIAB Trust)
Land at Fen Ditton We would highlight that there is currently not an up-to-date Green Belt Assessment provided within the Local Plan evidence. These representations set out the findings of a Green Belt Review, which demonstrates that Land at Fen Ditton performs weakly against the purposes of the Green Belt set out within draft Policy S/GB and that its consideration as Grey Belt would not undermine the overall integrity or function of the Cambridge Green Belt.	210229 (Vistry Group)

Changes to plan: Release Land at Fen Ditton from the Cambridge Green Belt and incorporated within the settlement boundary of Fen Ditton through its allocation.	
Cambridge Science Park North (HELAA Reference 40096) A Green Belt Review has been undertaken for the land promoted as Cambridge Science Park North (HELAA Reference 40096). The Green Belt Review highlights that the site could be considered "grey belt" land. Consideration is needed for the exceptional circumstances that exist to release Green Belt land for allocation as part of the Local Plan, particularly to meet the sub-region's mid-tech floorspace needs.	211485 (Trinity College (CSP) Limited)
Swans Corner, Whittlesford (HELAA Reference 208803) We consider that 'exceptional circumstances' exist to justify a review of the Cambridge Green Belt boundary through this Local Plan process, and the subsequent release of land adjacent to Swans Corner. Please refer to the maps within the accompanying attachments for further clarification. We consider that the National Planning Policy Framework (NPPF) has changed policies that affect the Green Belt. Local planning authorities are now required to meet their objectively assessed housing needs. The Green Belt boundary should be consistent with the overall development strategy and with the principles of sustainable development.	2011691 (native land)
The extent and removal of Green Belt land at Babraham Hall should be reviewed as it does not provide space for development that could not be accommodated elsewhere with less impact on the openness, countryside and environment.	211931 (C Newell)

Policies Map

Summary of issues raised in comments	Comments highlighting this issue
The draft Policies Map is incorrect in that it does not accurately depict the greenbelt boundary to the east of Stapleford. The map needs amending to show land removed from the greenbelt and now occupied by Strawberry Fields retirement care village on Haverhill Rd, Stapleford.	201551 (Stapleford PC)

Green Belt Assessment

Summary of issues raised in comments	Comments highlighting this issue
The purposes in the Greater Cambridge Green Belt Assessment do not address the fundamental aim in para 142 of the NPPF to "to prevent urban sprawl by keeping land permanently open". The methodology does not include a harm assessment for village of Stapleford but seems to have "merged" it with our neighbouring village of Shelford which is one of the outcomes that the methodology is seeking to prevent.	201168 (M Foote)
This policy is supported by a 2021 harm assessment methodology that is flawed because it is based on some Cambridge specific purposes alone and does not reflect the national planning policy framework. We welcome the fact that this methodology is currently under review and due to be re-issued this year (2026)	203091 (M Foote)

Attached document provides a detailed critique of the current methodology including the apparent omission of the village of Stapleford in its harm assessments.	
The NPPF (2024) introduced a clear duty for Grey Belt land to be identified when undertaking Green Belt Assessments for the purposes of determining applications; reinforced within the Planning Practice Guidance (PPG) (Para 001 ref.001 64-001-20250225). The direction of travel towards authorities being required to identify Grey Belt land within local plans is further evidenced within the Consultation Draft NPPF (2025)(GB2[3]) and at Appendix E where the criteria for undertaking Green Belt Assessments is outlined. To ensure the longevity of the Local Plan, it is recommended the revised Green Belt Assessment is undertaken with regard to Appendix E of the NPPF 2025.	201857 (Chivers Farms Limited), 202038 (Wimpole Associates Ltd)
The revised Green Belt Assessment should have informed the Draft Local Plan and been published as part of the Regulation 18 Consultation.	202038 (Wimpole Associates Ltd)
It is important for the Green Belt Assessment to be updated or this will undermine the plan. An up-to-date Assessment is needed to provide a qualitative assessment of the purposes and functions of the Cambridge Green Belt, and given the current pressures and contexts, demonstrate its relevance to the setting of the historic city.	202736 (Cambridge Past, Present and Future)
Current Green Belt Study is out of date and not representative of the current position in terms of policy (noting the introduction of grey belt) or in terms of growth targets which underpin the Local Plan. The revised Green Belt Assessment has not been published for consultation in support of the Local Plan and as such the GCSP's approach to allocating and discounting sites for release within the Green Belt is unclear.	201688, 205873 (British Land)

It is understood that a revised Green Belt Assessment will be published after the Regulation 18 Consultation closes, however this should have informed the Draft Local Plan and been published as part of the Regulation 18 Consultation. Also, the omission of any reference to 'Grey Belt' within the Draft Policy S/GB is challenged. The NPPF (2024) introduced a clear duty for Grey Belt land to be identified when undertaking Green Belt Assessments for the purposes of determining applications; reinforced within the Planning Practice Guidance (PPG) (Para 001 ref.001 64-001-20250225). Identifying Grey Belt land within the revised Green Belt Assessment and Draft Local Plan is hence both a policy requirement and crucial to ensuring the Local Plan promotes sustainable patterns of growth (as required by the NPPF). The Council needs to properly consider the inclusion of well-performing sites in the Grey Belt. For example, Land to the South of Station Road, Harston (ref: 115742) was assessed within the Council's Green Belt Assessment (2021) which supported First Proposals (2021) Draft Local Plan (Parcel HS9). Changes to plan: To ensure that the Plan is sound will require: - The publication of a revised Green Belt Assessment to support the Local Plan - A consideration of higher growth targets and subsequent review of the Green Belt / Grey Belt where necessary. - The identification and inclusion of the Cambridge Grey Belt within the Local Plan to guide development to sustainable Grey Belt sites.	203419, 203397 (Jesus College)
LSH agrees with this Policies alignment with National Policy within the NPPF relating to Green Belt release on sites that accord with the Golden Rules. As previously stated above, the Greater Cambridge Green Belt Assessment Final Report August 2021	211233 (Living Space Housing)

reviewed this site for Green Belt release and it was concluded that the site makes limited contributions to the overall Green Belt and could be potentially released with minimal impact.	

Policy S/MO: Monitoring

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the need to monitor annually.

Comments were made mainly from Savills, in regard to the review of the Local Plan in relation to housing and economic floorspace land supply, and whether an earlier trigger point is needed where there are issues with land supply. It is an issue that there are not specific enough outcomes of non-compliance with the trigger points set out in the policy.

Concerns were raised in relation to climate change and holding developers to account, and there is a gap regarding renewable energy generation and space heating demand. In a similar vein, Biodiversity Net Gain and aspirations for higher standards also need to be properly monitored and enforced over the lifetime of development.

Concerns were also raised about the timely delivery of infrastructure and the monitoring of infrastructure delivery is sufficient so that it is delivered prior to the completion of homes. Concerns were also raised about the lack of rurally specific impacts.

Concerns were raised from local residents, Create Cambridge and Cambridge Junction about making sure cultural provision is reflected in the monitoring of delivery of the Local Plan.

Further responses objected to the wording of the policy because it lacks clarity on how monitoring outcomes will inform decision making.

Further comments were made about the lack of monitoring of affordable housing and the allocation of new sites being an action to mitigate this.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The Monitoring policy and Appendix F Monitoring Framework have been reviewed to ensure it remains relevant and an accurate reflection of the strategy and content of the Local Plan at the Regulation 19 stage. Appendix F Monitoring Framework sets out how monitoring outcomes will inform decision making and reviews of local planning policy going forward. The indicators in the monitoring framework apply to rural and urban areas, the monitoring of homes, employment, greening and infrastructure will be consistently completed across rural and urban areas.
- The policy itself remains unchanged after a review of comments because the review approach taken in this policy remains sound in the context of any changes to the Local Plan. The policy has been reviewed by officers for clarity, and this has resulted in some minor changes for grammar.
- Appendix F Monitoring Framework has been updated to reflect any modifications to policy wording that have arisen from the updating of policy. This includes urban greening, 20% biodiversity net gain, accessible open space requirements for residential and commercial uses, and cultural provision. Infrastructure delivery will be monitored through the IDP and with third party stakeholders delivering the infrastructure to ensure these are made in a timely manner.
- Modifications to Appendix F Monitoring Framework have been made following representations from local residents on the need to monitor space heating demand and renewable energy generation. In response to Create Cambridge, local residents and Cambridge Junction, cultural provision has been included as a monitoring indicator.

- Parishes will not be included in the review of monitoring indicators directly as this is the responsibility of the Local Planning Authority. However, there will be an opportunity to comment and engage with the outcomes of the review of the Local Plan through consultation on responses to the reviews, such as consultation on new policy and processes. Affordable housing is monitored in indicator M25E, and the review of the Local Plan will include a Call for Sites where appropriate.

  Windfall housing is monitored through the annual update to the housing trajectory which informs the number of completions of homes which is monitored in the monitoring framework.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Inclusion of Parishes in the review of the monitoring indicators.	202351 (P Deer), 202128 (Elsworth PC)
Create Cambridge are asking that creative Industries data is disaggregated from the Cultural Sector in future monitoring, that assumptions about resilience and commercial success are tested separately for cultural infrastructure and that use of the Create Cambridge Insights Report is included as evidence.	202062 (H Chamberlain), 202150 (Cambridge Junction), 202316 (Cambridge Junction), 202320 (Cambridge Junction / Create Cambridge), 202205 (H Tam), 202398 (J Webber), 202418 (T Shaw),

	202467 (K Jones), 202691 (T Altmann), 202721 (W Townsend), 202764 (Cambridge Junction / Create Cambridge), 202790 (S Lee), 202889 (Cambridge Junction), 202892 (Cambridge Junction), 202942 (R Terry), 202966 (T Flinders), 203367 (N Ellis), 203447 (S Ashworth), 203479 (L Heap), 203548 (D Lever), 203637 (University of Cambridge), 203856 (N Yeni), 203877 (University of Cambridge), 204416 (New International Encounter), 204719 (A Giarlis), 204856 (L Matthews), 205007 (Wysing Arts Centre), 205068 (University of

	Cambridge), 205128 (H Paterson), 205217 (J Walsh), 205329 (A C de Azevedo Lamha), 205366 (L Howse), 205372 (N Oakley), 205419 (Cambridge Junction / Create Cambridge), 205427 (A Seiglow), 203121 (The Arts Theatre Cambridge), 204188 (Cambridge Junction/Create Cambridge), 204188 (Cambridge Junction / Create Cambridge), 202330 (Cambridge Junction / Create Cambridge) 202892 (Cambridge Junction)
Timely provision of infrastructure, usually available before dwellings are occupied, is critical to successful placemaking and should be a priority. Monitoring must be backed up with resourced enforcement if infrastructure is not brought forward as agreed.	202826 (Cambridge City Council Liberal Democrat Group)

The monitoring set out for Policy CC/NZ is insufficient. It is missing space heating demand, on-site renewables and lifecycle carbon requirements.	202878 (M Cleminson), 202611 (C Pointon)
The monitoring approach is clear, but it does not specify how rural impacts will be tracked. There are no explicit measures for rural service access, transport availability, digital connectivity or delivery of rural exception housing.	203155 (Cambridge ACRE)
Monitoring must ensure that the positive intentions in e.g., Policy BG/TC (such as the 30% minimum gain in tree canopy) is properly supported, monitored and properly enforced over the lifespan of the long-lived trees.	201664 (J Neal)
The respondent objects to the wording of Policy S/MO, stating it requires modifications to ensure effectiveness and adaptability to changing circumstances. Policy S/MO lacks clarity on how monitoring outcomes will inform decision-making, risking its effectiveness in addressing delivery shortfalls or unforeseen constraints. It is requested that Policy S/MO is modified to clarify how monitoring outcomes will be used to inform decision-making during the plan period; and explicitly acknowledge the need for flexibility where monitoring identifies delivery risks or shortfalls.	204183 (Tritax Big Box Developments)
Support for annual monitoring.	204643 (C Forbes-Cable)
The respondent strongly objects to Draft Policy S/MO, citing a lack of specific consequences and timeframes for unachieved housing and employment policies. The respondent acknowledges Appendix F (Monitoring Framework) but finds the wording of Policy	205039 (Endurance Estates)

S/MO insufficiently specific regarding triggers and consequences for policies not being achieved. The respondent criticises the current wording as subjective, and it implies a judgement from the Council on the timeliness of policy implementation.	
How can we avoid developers rowing back on environmental standards? The council has strict monitoring and policy control standards and environmental standards are central to that.	210303 (Rustat Neighbourhood Association)
• The respondent objects to the policy wording, stating it requires modifications to ensure effectiveness and adaptability to changing circumstances. • The respondent cites NPPF 2024 Paragraph 86 (e) and NPPF 2026 Policy E1, emphasising the need for flexibility in planning policies or commitment to action when development delivery falls behind anticipated trajectories or relies on limited large sites. • Policy lacks clarity on how monitoring outcomes will inform decision-making • The absence of a clear mechanism for responding to delivery issues may hinder development, risking the Local Plan's objectives and economic growth. • The respondent argues that Policy does not adequately link monitoring outcomes to corrective actions, undermining effectiveness. • requests Policy be modified to clarify the use of monitoring outcomes in decision-making and to acknowledge the need for flexibility in response to delivery risks.	204183 (Tritax Big Box Development)
• Requests the Monitoring Framework includes specific indicators related to rights of way condition, connectivity and user satisfaction. • Delivery mechanisms are clearly identified for the implementation of access improvements, including collaboration with parish councils, landowners and user groups.	208170 (Cambridgeshire Local Access Forum)

Food access and affordability ● % of households within a 10-minute walk of a “healthy food retailer” (define locally: e.g., supermarket, greengrocer, community food hub, market at least weekly). ● Number of neighbourhood centres with a weekly fresh-food offer (street market, community market or equivalent). ● Change in density of hot food takeaways within 400m of schools (or other agreed buffer), and net change in A5 uses in priority areas. ● % of major developments delivering “affordable food space” (e.g., low-rent unit(s) or peppercorn concession for social enterprise/community food).	208196 (Cambridge Sustainable Food)
Community food infrastructure and resilience ● Number and floorspace (sqm) of community food assets delivered (community kitchens, food hubs, social supermarkets/co-ops, shared storage/cold chain). ● Number of community kitchens with certified/compliant fit-out suitable for training/enterprise (food hygiene compliant, accessible).	210966 (Cambridge Sustainable Food)
Local production and land ● Area of BMV agricultural land (Grades 1, 2, 3a) safeguarded vs lost (net). ● Hectares of peri-urban land under active food production (commercial or community-supported) within Greater Cambridge (net change). ● Area of edible/fruit tree planting delivered (e.g., number of fruit/nut trees).	210967 (Cambridge Sustainable Food)
Skills, health and inclusion ● Number of school/community settings with food growing + cooking facilities delivered through	210968 (Cambridge Sustainable Food)

development contributions. ● Accessibility KPI for growing spaces: % of new food-growing sites meeting inclusive design standards (accessible paths, raised beds provision, adapted plots).	
Circular economy: waste prevention and redistribution ● % of new non-residential food premises with compliant food-waste separation and storage (designed-in, not retrofitted). ● Tonnes of edible surplus redistributed locally per year (through accredited/community partners), and/or number of redistribution partnerships enabled by plan-led space. ● % of major developments providing on-site or neighbourhood-scale composting provision (where appropriate), with a management plan	210969 (Cambridge Sustainable Food)
Local economy and enterprise ● Number of food enterprises supported in neighbourhood centres (start-ups, co-ops, social enterprises) and survival rate at 24 months where the Plan provides affordable workspace. ● Proportion of public-sector/community anchor procurement spent locally or a proxy such as number of anchor institutions participating in local/sustainable food procurement initiatives.	210970 (Cambridge Sustainable Food)
“Systems” Indicator - to prove the Plan is delivering a joined-up food offer. ● % of strategic sites / major allocations delivering a Food Systems Delivery Plan (a short, standardised plan covering access, community assets, growing space, waste, and local enterprise), secured through condition/S106.	210971 (Cambridge Sustainable Food), 210977 (Y Dignon)
Food access and affordability ● % of households within a 10-minute walk of a “healthy food retailer” (define locally: e.g., supermarket,	206966 (Y Dignon)

greengrocer, community food hub, market at least weekly). ● Number of neighbourhood centres with a weekly fresh-food offer (street market, community market or equivalent). ● Change in density of hot food takeaways within 400m of schools (or other agreed buffer), and net change in A5 uses in priority areas. ● % of major developments delivering “affordable food space” (e.g., low-rent unit(s) or peppercorn concession for social enterprise/community food).	
Community food infrastructure and resilience ● Number and floorspace (sqm) of community food assets delivered (community kitchens, food hubs, social supermarkets/co-ops, shared storage/cold chain). ● Number of community kitchens with certified/compliant fit-out suitable for training/enterprise (food hygiene compliant, accessible).	206967 (Y Dignon)
Local production and land ● Area of BMV agricultural land (Grades 1, 2, 3a) safeguarded vs lost (net). ● Hectares of peri-urban land under active food production (commercial or community-supported) within Greater Cambridge (net change). ● Area of edible/fruit tree planting delivered (e.g., number of fruit/nut trees).	210973 (Y Dignon)
Skills, health and inclusion ● Number of school/community settings with food growing + cooking facilities delivered through development contributions.	210974 (Y Dignon)

● Accessibility KPI for growing spaces: % of new food-growing sites meeting inclusive design standards (accessible paths, raised beds provision, adapted plots).	
Circular economy: waste prevention and redistribution ● % of new non-residential food premises with compliant food-waste separation and storage (designed-in, not retrofitted). ● Tonnes of edible surplus redistributed locally per year (through accredited/community partners), and/or number of redistribution partnerships enabled by plan-led space. ● % of major developments providing on-site or neighbourhood-scale composting provision (where appropriate), with a management plan	210975 (Y Dignon)
Local economy and enterprise ● Number of food enterprises supported in neighbourhood centres (start-ups, co-ops, social enterprises) and survival rate at 24 months where the Plan provides affordable workspace. ● Proportion of public-sector/community anchor procurement spent locally or a proxy such as number of anchor institutions participating in local/sustainable food procurement initiatives.	210976 (Y Dignon)
Appendix F – Monitoring Framework The actions set out in Appendix E are not quick delivery options, unlike allocating more sites which fall under the SUE threshold.	208367 (Endurance Estates)
While the monitoring monitors specialist housing uses, the monitoring also fails to monitor the delivery of affordable housing which should be rectified. Again, there should be levers in the local plan which can be pulled to create a timely difference in housing delivery. Sites which are in the Green Belt which come forward as Grey Belt sites have to have a higher percentage of affordable housing and therefore	208368 (Endurance Estates)

allocating sites at a more modest scale would enable there to be clear and specific delivery of new affordable housing.	
Mid-term changes to the Local Plan and additional Local Plan allocated development sites seem to be proposed. That potentially redefines windfall sites as strategic sites and goes beyond the scope of a monitoring process. Site allocation should go through the proper Local Plan procedure with due public consultation.	211932 (C Newell)

Consultation Statement

Appendix 7: Response to Representations - Site Allocations

Greater Cambridge Local Plan

Published as part of the Proposed Submission Local Plan - Regulation 19 consultation (August 2026 - September 2026)

GREATER CAMBRIDGE SHARED PLANNING

Summaries of Representations: Site Allocations

Cambridge Urban Area

Cambridge Urban Area Introduction

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There were comments offering broad support for allocation of sites in the Cambridge Urban Area, abut also concern about the impact of growth, such as on traffic. Historic England made extensive comments on the plan, highlighting areas that they supported, but also areas for improvement. A number of comments provided support for Cambridge Science Park North, a development proposal submitted through the local plan process for an expansion of the Science Park north of the A14. Other comments highlighted wards and streets where there was potential for improvement or policy. This includes areas around Chesterton, and around the Elizabeth Way roundabout. There was reference to facilities and the need for improvements such as for arts, sports, youth, leisure. Health facilities were also highlighted. Proposals to deliver an eastern entrance at Cambridge Central Station were welcomed, and the opportunity to densify development in that area were highlighted. Anglian Water sough recognition of their assets in the areas proposed for development.

Response to the main issues raised in representations

Comments are noted. Through plan preparation the plan has sought to identify sites which are suitable for development, but also migration measures required in order to ensure that developments will be sustainable. Heritage issues have been addressed though policy, and a series of evidence studies considering heritage impact appraisal, and consideration of tall buildings for example. Relevant policies have been reviewed in light of comments received. The Science Park North proposal has been considered, there is not considered to be exceptional circumstances to release the land from the green belt, including taking account of the economic land supply available. A range of services facilities and needs were highlighted in comments. The Proposed Submission local plan will be supported by an updated Infrastructure Delivery plan and informed by specific studies looking at Cultural and community infrastructure needs. The area policies proposed around the eastern entrance of the station have been considered in light of proposals.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
I strongly believe that this plan should conform with the 2024 legislation regarding Grey Belt. I believe the Council should NOW either designate Grey Belt sites or invite proposals for sites which may be regarded as such. I am told that the plan is too far in its creation to take this on board. But if neither of the above is done then planning of this kind will be confused, resisted or stymied until 2045/47.	201025 (J Green)

St Matthews Centre, Sturton Street, Cambridge (HELAA Reference 59405) Would be a disaster for this community. Site 115524 was given an Overall Score of 'Red'. The exclusion of Site 115524 must be permanently enforced. It would destroy the only public park in North Petersfield and protected open-space, as demonstrated by five recent planning refusals	201269 (J Sanderson), 201427 (J Bradley) 205180 (C Dunbar) 205704 (J Neal) 201863 (J Brightman)
Cambridge Science Park North We support the creation of approximately 3,500 skilled jobs and at least 460 training and apprenticeship opportunities at Cambridge Science Park North, which will strengthen the city's innovation ecosystem and provide high-value careers for local people. We welcome the development's well-balanced environment that integrates work, learning, leisure and wellbeing, demonstrating a commitment to inclusive growth that benefits residents, employees and future generations. The construction and delivery of the development present opportunity to employ local people, support apprenticeships, and strengthen links between education providers, employers, and the local supply chain. This aligns closely with our aim at Constructed Pathways in supporting individuals into skilled employment and ensuring that major developments deliver lasting benefits for local communities and people.	201594, 201595, 201596 (Constructed Pathways)
Cambridge Science Park North We strongly support the Cambridge Science Park North development because it will create a wide range of employment, training, and education opportunities in the growing mid-tech and advanced manufacturing sectors. Cambridge Science Park North represents an ambitious and forward-thinking project that will strengthen education and skills development through meaningful	201597, 201598 (Cambridge Regional College)

partnerships with local schools and colleges. The inclusion of a dedicated STEM educational hub within the plans is especially exciting. This facility will provide learning and event space to inspire the next generation of innovators, offering practical experience and engagement with emerging technologies. Such opportunities are vital to ensuring that young people across the city and region are equipped for the jobs of the future.	
Cambridge Science Park North As an organisation that works closely with employers, education providers, and local partners, we see first-hand the importance of creating the right conditions for businesses to grow and for people to access meaningful, skilled employment. The proposals for Cambridge Science Park North respond directly by supporting mid-tech and advanced manufacturing activity, strengthening supply chains, and helping to retain talent, investment, and economic value within Greater Cambridge. Overall, we believe that the proposals for Cambridge Science Park North strike the right balance between innovation, sustainability, and inclusivity.	210710 (Cambridgeshire Chambers of Commerce)
Cambridge Science Park North Cambridge Science Park North represents an ambitious and forward-thinking project that will strengthen education and skills development through meaningful partnerships with local schools and colleges. The inclusion of a dedicated STEM educational hub within the plans is especially exciting. This facility will provide learning and event space to inspire the next generation of innovators, offering practical experience and engagement with emerging technologies. Such opportunities are vital to ensuring that young people across the city and region are equipped for the jobs of the future.	201598 (Cambridge Regional College)

Cambridge Science Park North Support for Cambridge Science Park North allocation.	201880, 205960, 205961, 205962, 205963, 205964 (Histon and Impington Community Land Trust), 210085 (Constructed Pathways), 210411 (Cambridge Regional College), 210710 (Cambridgeshire Chambers of Commerce)
I would like to begin by welcoming the ambition, evidence base and overall direction of the Draft Greater Cambridge Local Plan. The emphasis on sustainable growth, net zero commitments, and the integration of transport, housing and place-making is positive and necessary for a city under sustained pressure. This feedback is intended to be constructive and to highlight a strategically important inner-city area that currently feels under-recognised, despite its central location and imminent change. West Chesterton Ward is an overlooked neighbourhood but is highly strategic. Elizabeth Way is recognised but needs stronger ambition to improve this area. Chesterton Road has significant potential for increased footfall and activity.	201702 (A Rahman)
The strategic area between Elizabeth Way, Sandy Lane, Humberstone Road, Montague Road, St Andrew's Road and Chesterton Road has been omitted. New homes are planned in Sandy Lane	208021 (S Stickley)

CB4 1HZ, but do not appear on the local plan and this will impact the strategy for active travel and green space in the area.	
There should be a reference to the planning of a new roundabout at the junction of East Road/Newmarket Road and Elizabeth Way bridge to address congestion and potential conflicts between pedestrians, cyclists, and vehicles. If a new roundabout is implemented without current underpass access, it should utilise Walnut Tree Ave for cycle and pedestrian access, linking to riverside cycleways. Clarification is needed on how the new roundabout will connect to Newmarket Road and the new cycle/pedestrian link between East Road and Sun Street, which is part of Anglia Ruskin plans. There are currently no cycleway road markings near 73 Newmarket Road/Tyre Repair workshop at the roundabout, nor clear signage directing towards Walnut Tree Ave.	201843 (T Jewell)
Concerns raised around traffic pressure and over-reliance on reducing car usage with no clear alternatives.	202355 (E Tse)
Support for policies in the Cambridge Urban Area.	202827 (Cambridge City Council Liberal Democrat Group)
Support sites in Cambridge but more are needed.	203580 (H Thomas)
Arts, sports, youth, leisure and other community facilities need to be given more prominence in your plan including how these will be connected by walking/cycling routes and/or public transport.	203603 (S Berridge)
New buildings should be aesthetically pleasing in keeping with the city's architectural heritage and must adhere to existing height restrictions. There should be affordable housing in the city centre	203603 (S Berridge)

especially with particular consideration given to key workers and lower paid earners such as cleaners.	
Beautiful open spaces should be maintained and new green areas for recreation and wildlife created throughout. Everyone should be able to access nature easily.	203603 (S Berridge)
Support for the plan – but supports higher densities around stations.	204070 (J Shoemaker)
Planning policies must facilitate the delivery of essential healthcare infrastructure and involve consultation with the NHS to support estate transformation. Site allocations should consider future healthcare requirements while avoiding overly prescriptive approaches to ensure appropriate healthcare mitigation decisions.	205056 (NHS Cambridgeshire and Peterborough Integrated Care Board)
Site allocations lacking an explicit requirement for on-site health facilities should include wording that references the need for financial contributions for health and infrastructure mitigation, aligning with the IDP approach.	205066 (NHS Cambridgeshire and Peterborough Integrated Care Board)
Proposal that Petersfield is a Nature Recovery from the Ground Up ward.	205308 (J Neal)
Support for proposals to deliver an eastern entrance at Cambridge Central Station to unlock higher-density development to the east and south-east and support for further densification of research and employment development around Cambridge North, the Science Park, and the Business Park.	208034 (Railfuture East Anglia)
Concerns raised about cleanliness of the city, toilets not being open, and critical of expensive redevelopment of Guildhall, Market Square and Corn Exchange.	208761 (E Diaz)
We welcome the inclusion of proposals to deliver an eastern entrance at Cambridge Central Station to unlock higher-density development to the east and south-east. We support further densification of	208034 (Railfuture East Anglia)

research and employment development around Cambridge North, the Science Park, and the Business Park.	
We welcome the preparation of HIAs for many of the site allocations in the Plan. There are a few sites where there is no HIA. We appreciate that some of these are policy areas. In those cases, we would suggest that the policy should still include reference to nearby heritage assets and potential mitigation measures and enhancements that will be sought in the policy areas. There do not appear to be HIAs for two University Sites in Cambridge – Mill Lane and the Museums sites. We appreciate there may be a reason for this but would nonetheless recommend that an HIA should be prepared for each of these sites.	208921 (Historic England)
We welcome that many of the policies refer to heritage as well as potential mitigation and enhancement measures identified through the HIAs. However, as currently drafted, some of the policies are quite vague and generic, some of the policies do not currently include all of the recommendations including diagrams from the heritage impact assessments, some of the policies are imprecise about what further evidence may be needed, when and why. Therefore, the policy wording could usefully be further tightened and strengthened to ensure that robust policies are in place that will promote opportunities where these heritage assets can be used to support sustainable growth (including heritage-led regeneration) and secure the benefits of positive placemaking within the historic city and wider sub region;	208922,208924, 210186 (Historic England)
We welcome the preparation of HIAs for many of the site allocations in the Plan. There are a few sites where there is no HIA. We appreciate that some of these are policy areas. In those cases, we would suggest that the policy should still include reference to nearby heritage assets and potential	208921 (Historic England)

mitigation measures and enhancements that will be sought in the policy areas. There do not appear to be HIAs for two University Sites in Cambridge – Mill Lane and the Museums sites. We appreciate there may be a reason for this but would nonetheless recommend that an HIA should be prepared for each of these sites.	
We welcome that many of the policies refer to heritage as well as potential mitigation and enhancement measures identified through the HIAs. However, as currently drafted, some of the policies are quite vague and generic, some of the policies do not currently include all of the recommendations including diagrams from the heritage impact assessments, some of the policies are imprecise about what further evidence may be needed, when and why.	208922 (Historic England)
In terms of heritage policy wording for sites, we recommend: i.use the phrase 'Conserve or where appropriate enhance…' ii.mention specific heritage assets. iii.specify appropriate mitigation and enhancements as identified through the HIA. iv.refer to the HIA (with hyperlink). v.use Concept diagrams to illustrate key site considerations/ recommendations For larger sites, or where there are very complex heritage issues, we would expect to see a policy requirement for masterplanning informed by both the Council's HIA and also a further, more detailed, heritage impact assessment as well as Historic Landscape Characterisation and Landscape Character Assessment. We welcome the inclusion of a criterion relating to archaeology where needed.	208924 (Historic England)
Matters including asset encroachment (Policy WS/HS) and utilities infrastructure (see our comments relating to Policy GP/QD) should be a consideration for any site allocation where we	209164 (Anglian Water Services Ltd)

have existing assets, or where the site is in close proximity to our operational sites and should therefore avoid the need to introduce separate clauses within any of the affected site allocation policies. Anglian Water can provide a list of assets within the proposed site boundaries, if this would be helpful to the Councils. The following sites have sewer pumping stations located within or adjacent to the site and as 'above ground' assets this will be land within Anglian Water's ownership, and may have implications for site layout and design:• S/C/CLT: Clifton Road Area; • S/CE: Cambridge East; • S/CBC: Cambridge Biomedical Campus; • S/CB: Cambourne Town Centre; • S/ED: Eddington; • S/NEC: North East Cambridge	
HE welcomes the ambition in paragraph 3.1.2 to 'enable Cambridge to accommodate growth of the highest quality whilst protecting and enhancing the historic environment and the key public spaces which are an important part of what makes the city so special to local people'.	210186 (Historic England)

Policy S/AMC/NEC: North East Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was general acknowledgement that the policy context for the NEC area would need to change as a result of the removal of Housing Investment Funding for the relocation of the Cambridge Waste Water Treatment Plant (CWWTP), including its impact on the ability of the NEC area to support the quantum of homes previously allocated.

There was strong support for the recognition of the NEC as an important area for business innovation and employment, with a number of NEC landowners and developers noting that this position should be retained in any revised policy as it was not dependent on relocation of the CWWTP. Several landowners and developers raised issue with the proposed quantum of commercial floorspace for NEC, perceiving this as a potential “cap” on development, and the requirement for outline permissions if bringing forward an application for only part of a strategic site.

There was support for the requirement to improve public transport routes and active travel to and around site, prioritising walking and cycling. However, resident and community groups raised concerns with the practicality of using a trip budget to manage vehicle numbers, the ability to manage congestion and on-site parking, and rail capacity.

The comments of residents, community groups, and Historic England also highlight potential impacts of NEC growth on neighbouring areas. This included impacts on Fen Ditton and Milton Country Park; on the general cityscape, sensitive landscapes and heritage assets/features; on local social infrastructure and services; and on residential areas as a result of

parking displacement.

The same groups also highlighted what they considered were omissions from the policy, including provision for a cultural venue and an alternative to the Fen Road level crossing.

A number of landowners and statutory undertakers raised concerns that the policy did not go far enough to protect safeguarded uses.

Response to the main issues raised in representations:

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

The revised policy continues to promote NEC as an innovation district through an "Area of Major Change" designation, responding positively to the general support for intensification and diversification of development in the area whilst reflecting the level of uncertainty around its precise development capacity and what constraints may apply. It acknowledges that the CWWTP is likely to remain on site during the plan period but highlights significant development opportunities within the wider NEC area for additional high-quality commercial floorspace and ancillary uses and, where conditions allow, housing, making efficient use of brownfield land within the City. The revised policy recognises the importance of NEC in contributing to Greater Cambridge's future economic growth through provision to intensify commercial floorspace within the existing science and business parks for research, innovation and knowledge-based industries.

The indicative commercial floorspace capacity has been removed, with the onus placed on applicants to demonstrate compliance with the trip budget and that their proposal will not have adverse impacts on the road network, taking into account cumulative

impacts arising from existing or planned development. A specific policy requirement has been added to ensure the effectiveness of transport mitigation measures will be monitored and can be enforced.

- A further requirement has been added to ensure that all development within NEC coordinates measures to prevent parking displacement.
- The representations regarding potential impacts on the wider area would appear to reflect the more significant housing quanta of 8,500 homes proposed for NEC in the Regulation 18 consultation. More modest housing provision (c.650 units) is now expected within the plan period and will likely take the form Build-to-Rent that generates a lesser need for supporting social infrastructure.
- The infrastructure needs of NEC, reflecting the revised development mix and quanta, will now be accounted for within the updated Infrastructure Delivery Plan for the Greater Cambridge Local Plan, and the policy retains explicit requirements to ensure that these needs are met on-site through development proposals or enhancing off-site capacity and accessibility.
- While there is no policy requirement for provision of a city scale cultural venue within NEC, there is still a policy expectation for community, cultural, retail and social spaces aligned with the vision for the innovation district and to ensure that the broader design ambitions for the area are realised, reflecting the desire to active ground floors and avoid the closed, campus-style layouts that have tended to dominate the area in the past.
- More explicit references to safeguarded uses have been added to the policy, reflecting that a range of uses highlighted already benefit from safeguarding in the Cambridgeshire and Peterborough Minerals and Waste Local Plan 2021. The need to apply the agents of change principle to ensure the operation of these uses are not prejudiced is also retained. In response to other comments made around safeguarding land, the policy should be read alongside all policies of the Local Plan as a whole, noting in particular that Policy I/SG sets out various infrastructure projects (including East West Rail) which are subject to safeguarding to prevent conflicts between development proposals and existing or planned infrastructure.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
General support for the vision for NEC as proposed in the policy	210230 (Vistry Group), 211500 (Trinity College Cambridge, DP9)
Concerns raised re feasibility of residential allocation and associated measures following the withdrawal of funding for the relocation of the CWWTP.	201179 (Save Honey Hill Group M Starkie), 202573, (Save Honey Hill Group M Starkie), 202582 (Save Honey Hill Group M Starkie), 202597 (Save Honey Hill Group), 202967 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust, M Baker), 201481 (L Woolfenden), 201485 (Fen Ditton Village Society),

	201847 (H Warnock), 202130 (M Asplin), 203581 (Horningsea PC, E A Williams), 205491 (J Pratt), 202739 (Cambridge Past, Present and Future, S Nicholas), 203584 (The Crown Estate, WSP), 204278 & 211502 (Trinity College Cambridge, DP9), 205471 (L Cotton), 208762 (Heatons, on behalf of Tarmac Trading Ltd), 209165 (Anglian Water), 209970 (Granta Land Ltd), 210231 (Vistry Group), 211591 (Places for People)
Please see our comments in relation to Policy S/JH and Policy S/DS. We note that paragraph 3.1.3 sets out the Councils' intention to continue engagement with relevant partners to confirm a refined position for the site. Anglian Water recognises that our current position and strategy to invest in the existing Cambridge WRC, because of the withdrawal of funding for the CWWTPR, and in the absence of	209165 (Anglian Water Services)

alternative funding being secured, will have a significant bearing on the site allocation and future updates to the spatial framework. We will continue to liaise with the Councils as we progress our plans to increase dry weather flow capacity of the WRC and enable growth across the Cambridge WRC catchment to come forward	
Support for continuing to explore funding for the CWWTP relocation and retaining the residential allocation for NEC; include explicit support for co-living and build to rent; safeguard relocation site as least to end of DCO period.	203523 (Cambridge Ahead, E Pritchard), 204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure), 210069 (Mrs Veronica Cox)
Concerns around the effective discounting of land within the CWWTP Consultation Area for residential purposes	203324 (Save Honey Hill Group, M Starkie), 204761 (Fen House Property Ltd, I Litterick)
Concerns around lack of feasibility evidence for dismissal of on-site consolidation option for CWWTP and lack of consideration of this option as an appropriate strategy; this is contradictory when the strategy justifies protection of the green belt on the grounds that these needs can be met elsewhere, yet delivery of this site is reliant on green belt development.	202589 (Save Honey Hill Group, M Starkie), 202591 (Save Honey Hill Group, M Starkie), 202593 (Save Honey Hill Group, M Starkie), 202594 (Save Honey Hill Group, M

	Starkie), 202598 (Save Honey Hill Group, M Starkie)
Investment in CWWTP will be required as it remains on site and other measures, e.g. Waterbeach pipeline.	209165 (Anglian Water)
Support for recognition of the NEC as an important area of business innovation and employment, not dependent on relocation of the CWWTP	204278 (Trinity College Cambridge, DP9); 204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure), 205491 (J Pratt)
Concerns around business space quanta and potential cap on development	203391 (St John's College Cambridge, Savills), 203584 (The Crown Estate, WSP), 204278 & 211501 (Trinity College Cambridge, DP9), 204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure), 210077 (The Crown Estate)

Support for flexible approach to development of Milton Road Garages site and that policy should take recent planning decisions into account	204718 & 210714 (Brockton Everlast Inc, Savills)
Concern that the policy does not do enough to safeguard all the existing mineral infrastructure within NEC in line with NPPF: Paragraph 223 (part e) of the NPPF (2024) and the Minerals and Waste Local Plan	208762 (Heatons, on behalf of Tarmac Trading Ltd); 210544 & 210599 (Cambridgeshire County Council)
Policy should refer to the requirement for the site specific FRA to include hydraulic modelling of the watercourses within the site to inform site layout and design levels, development should prioritise areas less vulnerable to flooding.	211184 (Environment Agency)
Specific reference to Agent of Change principle should be included re new development near any existing critical infrastructure	208762 (Heatons, on behalf of Tarmac Trading Ltd)
Concerns re intensive development of NEC area impacting local landscape and sense of place.	201179 (Save Honey Hill Group)
Land required for the relocation of the CWWTP is not identified on the policies map.	201179 (Save Honey Hill Group M Starkie), 202597 (Save Honey Hill Group M Starkie), 202109 (M Asplin), 203581 (Horningsea PC)
Comment re plans for a cultural venue as part of redevelopment; support for Create Cambridge's involvement.	202141(Cambridge Junction, M Ridler), 202308

	(Cambridge Junction, L Mills), 204170 (Cambridge Junction / Create Cambridge, M Burman), 202323 (Cambridge Junction / Create Cambridge, S Yusuf), 205403 (Cambridge Junction / Create Cambridge, E Hine), 202754, 202872 (Cambridge Junction, R Tinkler), 202874, (Cambridge Junction, B Groisman), 202424 (Kettle's Yard, S Biller); 204686 (NEUBAU Architecture, B Lenz); 204399 (New International Encounter, L Elmer); 203027 (The Arts Theatre Cambridge, V

	Beechey); 203631 (University of Cambridge, Z Svendsen), 203871 (University of Cambridge, J Fritsch), 205048 (University of Cambridge, L Sheerman); 205004 (Wysing Arts Centre, R Cooper); 202057 (H Chamberlain), 202199 (H Tam), 202387 (J Webber), 202412 (T Shaw), 202461 (K Jones), 202686 (T Altmann), 202716 (W Townsend), 202783 (S Lee), 202932 (R Tarry), 202973 (T Flinders), 203341 (N Ellis), 203437 (S Ashworth), 203485 (L Heap), 203536 (D Lever), 203851 (N Yeni), 204700 (A Giarlis), 205081 (H Paterson), 205137 (J

	Walsh), 205299 (AC de Azevedo Lamha), 205318 (N Oakley), 205331 (L Howse), 205393 (A Seiglow)
Support for improved and more cohesive active travel network to and around site, including upgraded river crossing; walking and cycling as routes to public transport	201809 (J Baumberg), 202003 (D Langley), 202304 (R MacDonald), 202646 (A Lawrence), 203707 (T Preud'homme), 204596 (D Potts), 205405 (A Williams), 205422 (S Nuttall), 205475 (P Colledge), 205481 (R De Beaux); 204278 (Trinity College Cambridge, DP9), 207601 (Natural England, C Duerden)
With or without the Hartree proposal, the Cambridge North development area represents a step change in intensity and movement demand. However, the current planning framework lacks a coherent transport-led spatial strategy. Movement through the Cambridge North station area is already compromised, with a loss of segregation and lack of coherent surfacing that risks bringing pedestrians	211769 (Camcycle)

and cyclists into unnecessary conflict. Beyond that there are bottlenecks such as the shared-use path at Moss Bank, which is three metres wide and already functioning as a critical failure point. This constraint is not adequately acknowledged in the Plan or in the previously issued North Cambridge Area Action Plan, despite the scale of growth proposed. More fundamentally, the river crossings are insufficient. Without a new or significantly improved bridge, high levels of cycling to and from Cambridge North will not be achieved. The Local Plan should treat a new or substantially upgraded river crossings as essential infrastructure.	
Need for alternative to the Fen Road level crossing, including safeguarding land for future infrastructure	202830 (Cambridge City Council Liberal Democrat Group, K Porrer), 203726 (W Clements), 204625 (R Robertson), 202646 (A Lawrence), 202739 (Cambridge Past, Present and Future, S Nicholas)
Concerns regarding traffic issues: volume & HGV traffic, parking provision, impact on surrounding areas and the practical applicability of the trip budget.	201225 (S Williams), 204625 (R Robertson), 202338 (H Brown), 202646 (A Lawrence), 203584 (The Crown Estate, WSP),

	204278 (Trinity College Cambridge, DP9), 204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure), 203833 (A Chan)
Concerns re feasibility of car free zones, minimum cycle parking standards, EVCP requirement	204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure)
Support for trip budget approach, noting the position is being reviewed and updated.	210579 (Cambridgeshire County Council)
Remove requirement for outline planning applications	204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure)
Support for requirement for outline planning applications, but object to reference to outline covering the whole site misleading given the impracticalities of preparing this across multiple landowners and sites.	210083 (The Crown Estate), 211511 & 211512 (Trinity College Cambridge, DP9)

Concerns around rail capacity, especially given lack of proposed connection to East West Rail.	202739 (Cambridge Past, Present and Future, S Nicholas)
EWR Co has identified the requirement for land within the North East Cambridge site to construct and operate the new railway. This includes new railway infrastructure, a construction compound and a Maintenance Delivery Unit (MDU). Land required for EWR within the North East Cambridge site is included in the EWR safeguarded area. To avoid a conflict between the proposed North East Cambridge allocation and the EWR Safeguarding Directions, EWR Co requests that draft Policy S/NEC is amended.	211906 (East West Rail)
Proposal for enhanced bus service serving NEC area	203777 A Chan
Support for illustrative spatial framework, clarify that it is not prescriptive	204278, 211496, 211497, 211498, 211499 (Trinity College Cambridge, DP9), 204863 & 204873 (Bidwells on behalf of Brookgate Land Ltd and Network Rail Infrastructure)
Concern that design requirements should include landscape buffer to transition between NEC and river/fenland; site should reflect countryside rather than urban location.	202739 (Cambridge Past, Present and Future, S Nicholas); 210088 (Historic England)

Concern that roof terraces and cafes cannot always be opened up to the public – should not be a blanket requirement.	211505 (Trinity College Cambridge, DP9)
Concerns around surrounding open spaces - Fen Ditton, Milton CP at capacity; green spaces should be for year round use and not roof terraces/courtyards; concern re requirement for roof terraces to be public	202739 (Cambridge Past, Present and Future, S Nicholas), 204278 (Trinity College Cambridge, DP9)
Support for providing green and blue infrastructure and sustainable connections along the river Cam and into the Wicken Vision Area.	211076 (The National Trust MEE Planning Team)
Concern that development within NEC could impact neighbouring Conservation Areas: HIA should be included in evidence base and policy, along with reference to the nearby CAs and river.	210088 (Historic England)
Paragraph 3.1.2 - HE welcomes the ambition to 'enable Cambridge to accommodate growth of the highest quality whilst protecting and enhancing the historic environment and the key public spaces which are an important part of what makes the city so special to local people'.	211978 (Historic England)
Figure 17 - There are 4 heritage assets shown on this figure. These are not designated heritage assets. Are they non designated heritage assets? Review and amend accordingly.	211979 (Historic England)
Support for removal of some hedgerows/vegetation to facilitate crossing points over the First Public Drain	210081 (The Crown Estate)
Objection to 20% BNG on site requirement	204278 & 211507 (Trinity College Cambridge, DP9)
Concern around high demand for secondary schools; suggestion to safeguard land as contingency	201701 (J Skinner), 201356 (R McDonald), 202338 (H

	Brown), 205481 (R De Beaux), 210587 (Cambridgeshire County Council)
Support for investment in leisure facilities, for example a swimming pool, rowing channels, a new country park within walking distance	203590 (A Carpen), 202338 (H Brown), 201777 (Eastern Region Rowing Council, R Moseley), 205481 (R De Beaux), 207601 (Natural England (C Duerden)
Identifies inconsistencies in active travel and car parking provisions, as well as concerns regarding biodiversity gains and access to nature spaces, potential nuisance impacts and lack of secondary schooling and nursery provision, despite there being an acknowledged shortage of places in North Cambridge.	210840 (Hannah Brown)
Wording regarding healthcare facilities; contributions specified for emergency services.	205059 (NHS Cambridgeshire and Peterborough Integrated Care Board), 207507 (J Lawson on behalf of Cambridgeshire Fire and Rescue Service), 205072

	(NHS Property Services Ltd on behalf of NHS Cambridgeshire and Peterborough Integrated Care Board
Clarity required around potential to infill sites to rear of Lovell Road	201319 (N Upstone)
Water supply - no plan for filling proposed new reservoir	201847 (H Warnock)
We broadly welcome the allocation of this strategic brownfield site. It offers an exciting opportunity for regeneration in a highly accessible, sustainable location. It will be important that the policy ensures the protection and enhancement of the historic environment including the conservation areas, river corridor and wider city scape. We appreciate there are still some uncertainties about the site and the funding for the relocation of the Cambridge Waste Water Treatment Plant. However, we acknowledge the approach being taken to retaining the draft allocation whilst not relying on the housing numbers to meet the need. Whilst there are no designated heritage assets within the site, there are several Conservation Areas nearby including Riverside and Stourbridge Common, Fen Ditton, Baits Bite Lock and Horningsea as well as their associated listed buildings. The River Cam, the meadows and its setting are an important part of the wider setting of the City. Development within this area therefore has the potential to harm the significance of these assets through development within their settings. We recognise that a the HIA for North-East Cambridge has been prepared. However, this does not	210088 (Historic England)

appear to have been included as part of the evidence base for this Plan. It is important to include this as part of the evidence base. Furthermore, it is important to incorporate the recommendations of the HIA into the Policy. This includes recommendations such as increased landscaping along the eastern boundary. The HIA should also be referenced in the policy. We welcome criterion 7c. There is currently no reference to nearby conservation areas and the River. This should be included in the policy. There should also be a new criterion requiring careful consideration of impacts on the Conservation Areas and River as well as views into the City and an appropriate urban edge. We continue to have concerns about potential increases in heights in North-East Cambridge in both the existing Science Park and also the land to the east of Milton Road. We remain concerned about impacts on views from Ditton Meadows and the Conservation Areas as well as wider views approaching the City from the north-east and east. Heights must be carefully managed through appropriate criteria in the policy.	
Existing buildings near the station are incongruous with the surrounding countryside views and do not act currently as community spaces despite reliance in the policy on the space, highlighting a need for better integration. Additionally, the urban/rural fringe is not clearly defined, which could lead to planning inconsistencies.	210838 & 210839 (Hannah Brown)
Figure 17: There are 4 heritage assets shown on this figure. These are not designated heritage assets. Are they non-designated heritage assets? Review and amend accordingly; Paragraphs 3.1.6 and 3.1.24 seem to be the same. Delete duplicate paragraph	210187, 210188 (Historic England)

The University supports the general direction of the policy to densify the site and make the best use of the available land. There are a number of detailed comments in relation to the policy wording which are attached in a table with comments set against the relevant policy/paragraph numbers. There is inconsistency across the plan of naming the site. Eddington should be used for all references to the site.	202528 (University of Cambridge – M Parsons)
Reflect hybrid planning permission 22/02771/OUT. Retaining CWWTP should not prejudice other parcels. Should make explicit reference to build to rent and co-living tenures being acceptable. Removal of specified quantum of employment floorspace. Remove restriction to Class E(g) and defer to definition in policy J/NE. Remove requirement for car-free zones near to hubs or centres as this is incompatible with the allocation. Remove requirement to exceed minimum cycle parking standards. Replace existing trip budgets with information included within the North East Cambridge Transport Position Statement 2025 Add 650 parking spaces at Chesterton Sidings. Allow for the reprovision of 425 Network Rail Spaces Remove EVCP requirement as this doubles up on building regulations. Allow for development to progress without being halted by parking displacement. Remove requirement for outline planning applications. Condition design codes and Stewardship strategies. Spatial framework- should be clear this is not a prescriptive tool, remove heritage asset at Chesterton Sidings, remove local centres as this is not referred to in other retail policies.	Bidwells (204863)
National Highways will object to any structures placed within the highway boundary and recommend this is reflected within the policy moving forward. In principle, National Highways are supportive of upgrades or new crossings for the A14, such as Jane Coston Bridge and underpasses, to assist with	209005 (National Highways)

the wider connectivity requirements, subject to the correct structural and safety assessments completed and appropriate agreements ensuring ongoing maintenance and required funding are met. For the overall trip budget to be met, it is crucial individual sites do not exceed their trip budget, and breaches are controlled appropriately to reduce trips back in accordance with the agreed budgets. National Highways would need to understand the impact of this development and the cumulative impact on the A14 junction 33 should the trip budget not be met and ensure appropriate mitigation measures are secured as part of the plan making process.	
The current car dependency of Science Park is problematic due to long commuting distances and inadequate public transport coverage, particularly for those commuting from eastern settlements and outskirts of Cambridge.	203777 (A Chan)
A network of highway-running buses is needed, well connected with the local bus network, to create viable public transport alternatives to driving.	211023 (A Chan)
Proposal for two bus interchange on the A14, one at the busway crossing and another at the Milton crossing, utilising existing routes for better transfer options and potentially fostering express or orbital bus services.	211024 (A Chan)
Suggestion of bus gates in Milton to restrict through traffic while allowing bus access onto the new bus-only Milton crossing, aimed at reducing A10 congestion and improving local traffic flow. Suggestion of moving the Milton park and ride further out after implementing the above.	211025 (A Chan)
Concern at requirement for development to be within 5 minutes walk of high quality public transport and active travel routes, which may not always be achievable. Notes that people are generally willing to walk further than this.	211508 (Trinity College Cambridge, DP9)

Amend Policy S/NEC and the Policies Map to explicitly identify and justify the 34ha Green Belt land take required for the CWWTP relocation.	202577 (Save Honey Hill Group)
Amend Policy S/DS to resolve the internal contradiction with Policy S/NEC by clarifying whether development needs can, in fact, justify Green Belt harm in this instance. Relying on a project that requires VSC for Green Belt harm while the Local Plan claims such circumstances do not exist for general development is internally inconsistent and unsound under NPPF 36(d).	202582 (Save Honey Hill Group)
Policy S/NEC: North East Cambridge (8,350 dwellings/ 22,545 population) (p.103): Under the subheading 'Uses' Section 4 – add a new criterion g. as follows; "g. Contributions to fire & rescue, police and ambulance facilities provision/ funding"	207474 (James Lawson Planning on behalf of Cambridgeshire Constabulary)
Suggestion that policy amended to reflect that the proposed new district centre is contingent on relocation of the CWWTP.	210078 (The Crown Estate), 211503 (Trinity College Cambridge, DP9)
Suggestion that the policy should be less prescriptive around location of medium to higher density development and tall buildings.	210079 (The Crown Estate)
Concern that the trip budget specified is out of date, dating from preparation of the AAP in 2021 and do not reflect the latest plans for the area.	210080 & 210082 (The Crown Estate), 211506 & 211509 (Trinity College Cambridge, DP9)
Lack of detail on the vernacular and density of buildings, which is important for high-density development at an edge of city site. Lack of clear, quantifiable floor space allocation for community,	210837 (Hannah Brown)

retail, open space and active space (contrary to the defined floor spaces for commercial and industrial use).	
Reference to design character drawing on industrial heritage should be reviewed as this does not apply equally to the area west of Milton Road.	211504 (Trinity College Cambridge, DP9)
Objects to prescriptive limits on car parking spaces and restrictions on through traffic from Milton Road to Kings Hedges Road.	211510 (Trinity College Cambridge, DP9)

Policy S/LAC: Other site allocations in Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Concerns were raised about Policy S/LAC, citing excessive reliance on large strategic allocations for meeting identified housing needs. The NHS requested that policies set out explicit requirement on-site health facilities and financial contributions. Concerns from Anglian Water were expressed about specific sites' impacts on sewer pumping stations. Concerns were raised from National Highways about not having a cumulative impact assessment to ensure the impact on the SRN is appropriately managed and mitigated. In particular, the impact on the SRN including junctions on the M11, A11 and A14.

Response to the main issues raised in representations

Since the Draft Plan stage Policy S/LAC has been removed to streamline the plan and ensure that each site stands on its own merits. Comments have been noted and amended on corresponding policies.

The development strategy has been informed by evidence which sets out that the impact of larger sites rather than incremental development has less carbon impacts and reduces impacts on villages across Greater Cambridge. This model also makes the delivery of infrastructure easier to deliver as it is supported by a sufficient critical mass. Therefore, justifying the allocation of larger strategic allocations to meet housing needs.

In response to Anglian Water, for these sites the sentence has been added to say that development should not preclude operation and maintenance of sewer pumping stations located within or adjacent to the site. In response to the NHS, the IDP will set out the contributions for healthcare on specific sites, this is not duplicated for every site, and financial contributions are required on all proposals depending on scale it is therefore not included in policy wording. In response to National Highways, a transport assessment will be undertaken on major planning applications to understand the impact on the local road network, and the wider transport strategy will identify and manage issues across the wider transport network. Additional transport modelling has also been carried out on the local plan to inform mitigation requirements.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Suggest amendment to Part 2a of the policy replacing "make the development acceptable" with "achieve an outstanding standard of development". Supporting information to be similarly amended.	202741 (Cambridge Past, Present and Future)
Matters including asset encroachment (Policy WS/HS) and utilities infrastructure (see our comments relating to Policy GP/QD) should be a consideration for any site allocation where we have existing assets, or where the site is in close proximity to our operational sites and should therefore avoid the need to introduce separate clauses within any of the affected site allocation policies. Anglian Water can provide a list of assets within the proposed site boundaries, if this would be helpful to the Councils. The following sites have sewer pumping stations located within or adjacent to the site and as ‘above ground’ assets this will be land within Anglian Water’s ownership, and may have implications for site layout and	209164 (Anglian Water)

design: • S/C/CLT: Clifton Road Area; • S/CE: Cambridge East; • S/CBC: Cambridge Biomedical Campus; • S/CB: Cambourne Town Centre; • S/ED: Eddington; • S/NEC: North East Cambridge.	
The College objects to Policy S/LAC, citing excessive reliance on large strategic allocations for housing needs, which risks timely delivery due to infrastructure dependencies. A more balanced approach is recommended, with additional housing land allocated across various sites to reduce delivery risks and ensure timely housing provision. The College requests reconsideration of land at Wilberforce Road for allocation. Concerns regarding the site's suitability include landscape impact and loss of protected open space, but the College argues that development can be designed to minimise harm.	203930 (Bidwells on behalf of Emmanuel College (Wilberforce Road))
The respondent notes that the current wording of the policy should be amended to correct the reference to Cambridge Retail Park from an allocation to a designation, as it is included as a designated Public Realm Improvement Area (PRIA).	204121 (Bidwells on behalf of Railpen)
The respondent highlights that the indicative dwelling or floorspace capacity for site allocations may vary and should be determined through a design-led approach.	204121 (Bidwells on behalf of Railpen)
The respondent objects to proposed Policy S/LAC, citing excessive reliance on a few large strategic allocations for housing needs, which poses risks to timely delivery due to complex infrastructure requirements. A recommendation is made for a more balanced approach that includes additional housing land across various sites, sizes, and locations to reduce delivery risks and ensure timely housing provision. Nomination of sites along Lond Road for intensification.	204134 (Bidwells on behalf of Emmanuel College (Long Road))
Site allocations lacking explicit requirements for on-site health facilities should include wording for financial contributions towards health and infrastructure mitigation, aligning with the IDP approach. Early engagement is essential to deliver the infrastructure in the IDP.	205078 (NHS Property Services)

This policy identifies site allocations within the city centre. Whilst National Highways do not offer specific comments on these sites due to the distance from the SRN, National Highways suggest these sites are included in a cumulative impact assessment to ensure the impact on the SRN is appropriately managed and mitigated. In particular, the impact on the SRN including junctions on the M11, A11 and A14.	209007 (National Highways)

Policy S/C/SMS: Garages between 20 St. Matthews Street and Blue Moon Public House, Cambridge (now Garages at St Matthews Street and Norfolk Street)

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Concerns were raised about density and impacts on trees. An objection was raised by Historic England to better reflect the heritage assets within and close to the site boundary. The requirements from the HIA should also be incorporated onto the site including requirement for archaeology assessment.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The capacity for the site has been considered in the local content of two to three storeys. The surrounding terrace to the south of the site has a dwellings per hectare of 70 and the homes to the north of the site has a dwellings per hectare of 92. This would make 12 dwellings in this location acceptable in the local heights context.
- The protection of trees is set out in Policy B/TC to protect the retention of trees. Any future planning application will need to comply with this policy and provide an arboricultural assessment to assess the impacts on trees.
- The policy has been amended to mitigate impacts against heritage assets. The policy has been amended to include contextually appropriate materials, local context heights and also the addition of an archaeology assessment requirement to address comments made by Historic England.
- The name of the policy has been amended to more accurately reflect the location of the site.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Questions if the site has capacity for 12 homes.	202532 (J Neal)
Point 1A any future development must do much more than simply “retain and incorporate the existing mature tree”: it must ensure the tree’s RPA (Root Protection Area) is entirely undamaged, and that the space under and around that important tree remains fully available for future public enjoyment.	202532 (J Neal)
Whilst there are no designated heritage assets within the site boundary, the site lies adjacent to the boundary of the Mill Road Conservation Area and close to the grade II Listed Church of St Matthew. Development within this area therefore has the potential to harm the significance of these assets through development within their settings. We welcome the preparation of the HIA. While some of the recommendations of the HIA are included in the policy wording, reference should also be made to contextually appropriate materials, local context heights and also the addition of an archaeology criterion.	210089 (Historic England)

Policy S/C/HTR: 137 – 143 Histon Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The Cambridge Investment Partnership (CIP) supports the allocation of this site and the site capacity. Comments were made by CIP to ensure the design is co-ordinated with development on the ATS part of the site. The protection of trees wording should be reviewed to ensure it does not inhibit the development of the site.

An objection was raised by Historic England to better reflect the heritage assets within and close to the site boundary. The requirements from the HIA should also be incorporated onto the site including requirement for archaeology assessment.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- Support noted from CIP.
- The policy has been amended to mitigate impacts against heritage assets. The policy has been amended to include contextually appropriate materials, local context heights and also the addition of an archaeology assessment requirement to address comments made by Historic England.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
CIP controls all of site bar ATS site, application should reflect planning application for 70 units.	204205 (Carter Jonas on behalf of the Cambridge Investment Partnership CIP)
It should be noted that the CIP application is not comprehensive development as ATS site has not come forward but the application has been designed in a way to combine the two sites.	204205 (Carter Jonas on behalf of the Cambridge Investment Partnership CIP)
Whilst there are no designated heritage assets within the site boundary, the Castle and Victoria Conservation Area lies adjacent to the site. Development of the site has the potential to impact upon the Conservation Area and its setting. We welcome the preparation of the HIA. While some of the recommendations of the HIA are included in the policy wording, reference should also be made to contextually appropriate materials, local context heights and also the addition of an archaeology criterion.	210090 (Historic England)

Policy S/C/HGH: Henry Giles House 73-79 Chesterton Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the allocation.

Comments were made in relation to strengthening the wording around the retention of trees and the use of similar styles to the surrounding local architecture and improving active travel connections.

The site promoter commented that the capacity of the site should be reviewed.

Historic England commented that the site is an especially sensitive location and development should be contextually appropriate materials, local context heights and the addition of an archaeology criterion.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- Support noted.
- The approach to the design of the site has been set out to reflect the local character and massing. In response to the increase of capacity, there is potential for a higher capacity to be accommodated where further evidence can be developed to ensure impacts on neighbouring buildings / heritage assets are managed. This has included revisions to the policy to set out the need for development to respond to the local context including, contextually appropriate materials, local context heights and also the addition of an archaeology criterion.
- In response to Historic England, the suggested amendments have been made.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
It is proposed that the policy is strengthened in relation to design and character on Chesterton Road to reflect the style of those between Carlyle Road and Alpha Road; removing "where possible" to ensure full retention of the silver birch tree on Carlyle Road; and requiring, rather than encouraging, active travel links from Chesterton Road through to Grasmere Gardens.	203770 (Cambridge Green Party)
Formerly the site of Sir Horace Darwin's Cambridge Scientific Instrument Company, the architectural style should demonstrate clear historical links with early scientific instruments *or* take inspiration from The Tivoli / 1930s Art Deco era.	203772 (A Carpen)

Support for the site allocations. Request for review of capacity to be increased because the site is highly sustainable.	203929 (Twenty5Planning Limited on behalf of the TT Group)
The site lies within the Castle and Victoria Conservation Area, adjacent to the Central Conservation Area and fronting the river, the of the river opposite Jesus Green. Although we have no objection to the principle of redevelopment on this site, this is a sensitive location with the potential to impact on the historic environment. We welcome the preparation of the HIA. While some of the recommendations of the HIA are included in the policy wording, reference should also be made to contextually appropriate materials, local context heights and also the addition of an archaeology criterion.	210091 (Historic England)
TT Group support the continued proposed allocation of this site. The attached representations demonstrate that the quantum of development should be revised and uplifted to optimise the delivery of this highly sustainable site, in accordance with the NPPF and PPG.	203929 Telereal Trillium Investment Properties

Policy S/C/HRC: Horizon Resource Centre, 285 Coldham's Lane

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the site allocation from all representators including Cambridgeshire County Council who own the site and Historic England. The policy was supported as is with no amendments.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The policy is supported by those who commented on the policy and following a review no changes are required to this policy. A minor editorial change has been made for clarity of expression.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Support for site allocation.	202115 (Carter Jonas on behalf of Cambridgeshire County Council)
There are no designated heritage assets within the site or nearby. No comments	210092 (Historic England)

Policy S/C/PDC: Cambridge Professional Development Centre, Foster Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the allocation of this site Cambridgeshire County Council with no amendments and Historic England, with some minor amends relating to heritage. Historic England confirmed that there are designated heritage assets within the site and have requested an amendment to the HIA.

Comments were made by a local resident to ensure that the walkability, access to local facilities, access to green space and management of surface water flooding were considered in the development. The respondent suggests focusing on larger open spaces further out for development instead of this site, which is bordered by established residents.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to comments raised by a local resident about the density of the site and impact on existing buildings and character. The site allocation has been subject to further testing at the Regulation 18 stage which has informed a reduction of units onsite to reflect neighbouring densities around the site. This review has concluded that 40 dwellings is suitable in this location and achieves an appropriate density for its setting.
- In response to comments raised about concerns about flood risk, any development on the site will be required to comply with Policy CC/FM Managing Flood Risk. Surface water flooding implications will be managed through the development management process. As a site allocation, this allocation has been reviewed in the Local Plan's Strategic Flood Risk Assessment. The site is not within Flood Zone 2 or 3.

- In response to Cambridgeshire County Council comments made about an increase on capacity on this site back to the previously adopted version of this site allocation, a further review of the site has been undertaken and it is the view of the Council's that 40 dwellings is more suitable in this location and is reflective of the local character.
- In response to local resident's comments raised about protected open space, the boundary of the Protected Open Space has been reviewed to include the playing fields adjacent to the site only as it is a more accurate reflection of what constitutes open space. This will also allow for the design of the scheme to utilise the full site allocation.
- In response to Historic England, the HIA has been revised to reflect the removal of this site allocation from the historic core.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Support for site allocation.	202112 (Carter Jonas on behalf of Cambridgeshire County Council)
Suggestion to increase capacity to 67 dwellings.	202112 (Carter Jonas on behalf of Cambridgeshire County Council)
Concerns raised about allocation of site and impact on walking, access to local facilities and recreation including green spaces.	201022 (D Wilson)
Concerns raised about the density of the site and impact on existing buildings and character.	201022 (D Wilson)
Concerns raised about runoff and potential flooding issues.	201022 (D Wilson)
Respondents suggested that larger open spaces would be more suitable for development.	201022 (D Wilson)

Whilst there are no designated heritage assets within the site, the site lies very close to the Trumpington Conservation Area. Any development of the site has the potential to impact the significance of the conservation Area through development within its setting. We welcome the preparation of the HIA. We question paragraph 1.10 of the HIA – the site is not far removed from Cambridge but lies within the city limits. Maybe more accurate to say removed from the historic core. Criterion 1 reflects the recommendations of the HIA.	210093 (Historic England)

Policy S/C/PPS: Police Station Parkside

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the site allocation.

Comments were made by the Police and Crime Commissioner as the site promoter about modifying wording around

Concerns were raised from Historic England about building heights and strategic viewpoints. The Cambridge Liberal Democrat Group commented on cycle provision and car free development onsite, as well as retention of existing buildings.

Further responses were made from a local resident about strategic viewpoints.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to the Cambridge City Council Liberal Democrat Group, to provide flexibility for the re-design of the site to facilitate its redevelopment the wording has not been revised. The provision of cycling parking will apply to the planning application on this site and these standards are set out separately in development management policy
- In response to a local resident comment, Strategic Viewpoint E Limekiln Road has been included in Point D as well.
- In response to the Police and Crime Commissioner, the retention of trees onsite is a clear ambition for the Councils' therefore it has been left in the policy with no amends. The discussion of the removal of any trees will be assessed through

the development management process using development management Policy BG/TC: Improving tree canopy cover and the tree population. The wording of point d has remained unchanged as the impact on strategic views is important to protect and the degree to which these are unacceptable will be demonstrated by evidence provided at the development management stage and assessed by the Councils'.

- In response to Mothers CAN Cambridge, the suggestion that the site should be car free, the Policy I/EV: Parking and Electric Vehicles sets out standard for car parking for development, it will not be duplicated in the site allocation. Due to the City Centre location, the predominate means of travel for residents of this development is likely to be public and active travel.
- In response to Historic England, the policy has been reviewed to include other Strategic Viewpoints and Strategic Viewpoint E Limekiln Road has been included as well. The policy has been amended to include the HIA recommendation that development is limited to approximately 4 residential storeys.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Support for the site allocation.	202832 (Cambridge City Council Liberal Democrat Group)
Respondent has set out that the site coming forward should enhance and improve the current building and that this should be reflected in the policy wording.	202832 (Cambridge City Council Liberal Democrat Group)
Development should not impact on views from Lime Kiln in South East Cambridge.	203774 (A Carpen)

Provision of existing cycle parking should be retained and any new cycle requirements be in addition to what is existing.	204175 (Cambridge City Council Liberal Democrat Group)
Support for flexibility of uses defined in the policy.	204175 (Cambridge City Council Liberal Democrat Group)
The criteria set out as 1. a. to d. and 2. are generally supported.	204175 (Cambridge City Council Liberal Democrat Group)
The policy should consider whether there are circumstances where harm to a heritage asset might be outweighed by a public benefit.	204178 (Savills on behalf of Police and Crime Commissioner for Cambridgeshire)
Minor wording suggestions are needed for clarification of ask in the policy.	207777 (Savills on behalf of Police and Crime Commissioner for Cambridgeshire)
Site boundary should be revised to reflect land ownership.	204178 (Savills on behalf of Police and Crime Commissioner for Cambridgeshire)

Supportive of protection of existing trees.	204727 (Mothers CAN Cambridge)
The development should be car free with no parking permits for residents.	204727 (Mothers CAN Cambridge)
There are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. The HIA recommends that height is limited to 3-4 storeys. This should be specified in criterion g to add greater clarity regarding height.	210094 (Historic England)

Policy S/C/NCA: North Cambridge Academy, 108, Arbury Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the site allocation including from Cambridgeshire County Council who supports the policy with no amendments. North Cambridge Academy were also supportive of teh principle of the allocation.

Comments were made in support of the Community User Agreement and for development of sports facilities by local residents.

Concerns were raised about impacts on local views and on parking by local residents. Concerns were also raised about open space designations within the site allocation and need for flexibility in policy wording to achieve the optimal layout by the Meridian Trust.

Further responses from Historic England raised concerns about building heights being reflected in the policy to respond to the SA.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The site allocation has been reviewed in the context of the representations made. The protected open space is retained onsite as there will be sports pitches proposed onsite. The proportion of affordable housing will be set by development management policy H/AH Affordable Housing and policy H/HM Housing Mix. These policies will ensure that the development provides a mix of housing to meet the identified need.

- A Heritage Impact Assessment (HIA) has been prepared to support this site allocation to identify any potential impacts on the surrounding local character and heritage assets around the site. The mitigation measure proposed is a building height of 3-4 storeys and further Heritage Assessments to be undertaken to support any future planning applications.
- The number of units has been tested as suitable in this location. The HIA has suggested that the development has the potential for 3-4 storeys and therefore 40 dwellings can be delivered on this site.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The number of units proposed is too high and there is not sufficient local infrastructure to support them.	201287 (M Jordan)
The cumulative impact of development in the local area so should be looked at.	201287 (M Jordan)
Support for site allocation.	202211 (Carter Jonas on behalf of Cambridgeshire County Council)
Support, the development of new sport facilities at North Cambridge Academy will be good for the school, the area, and the city. The plan to make the facilities open to the public after school hours is excellent.	202165 (M MacGinley)
Concerns raised about the draft allocation proposals map showing protected open space over significant areas of the site allocation.	202147 (LSA Planning on behalf of Meridian Trust)
Concerns raised about the flexibility of the site allocation.	202147 (LSA Planning on behalf of Meridian Trust)
A proportion of the new housing should be identified as key worker (above and beyond the affordable housing requirements) and linked to North Cambridge Academy staff needs.	202744 (Cambridge Past, Present and Future)

Concerns raised about overlooking and impacts on historic views, specifically of the historic chimneys of the Museum of Technology.	202446 (G Dawes)
Support requirement for a Community Use Agreement for sports facilities.	205426 (A Williams)
There are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. The HIA recommends that height is limited to 3-4 storeys. This should be specified in criterion g to add greater clarity regarding height.	210095 (Historic England)
The respondent supports the principle of mixed-use development for approximately 150 dwellings and sports facilities but seeks clarity on the draft allocation proposals map. The outlined site boundary appears to coincide with the respondent's original submission, but the designation of Protected Open Space over a significant portion of the site raises concerns about flexibility for development. The design of sports facilities should consider safeguarding measures for pupils and ensure functionality for community use outside school hours. The respondent highlights the need for careful consideration of pedestrian and vehicle access related to the sports facilities and residential development. There is a request for flexibility in the overall site allocation to achieve an optimal layout for the mixed-use development, particularly concerning the northern part currently designated as open space. The respondent requests the removal of the open space designation from the northern part of the site to facilitate flexibility for the development.	202147 (Meridian Trust)
Sport England supports, in principle, the ambition for North Cambridge Academy to develop as a mixed-use sporting hub, providing enhanced sports facilities and adequate replacement playing field is provided alongside residential development. As the allocation involves the loss of playing field land, it	209215 (Sport England)

must clearly demonstrate compliance with paragraph 104 of the NPPF. Sport England supports the policy requirements for: • Expansion of the existing sports hall; • Provision of a new 3G pitch, four tennis courts and a MUGA; and • A Community Use Agreement securing public access outside school hours. For examination soundness, the policy should explicitly require that any loss of playing field is replaced by provision that is equivalent or better in quantity, quality, accessibility and management arrangements. Recommend that replacement facilities are delivered in a timely manner and secured through appropriate planning conditions or obligations.	
This representation has been prepared on behalf of the Meridian Trust and Cambridgeshire County Council, (hereafter referred to as 'The landowners"), in relation to their land interests with regard to the draft allocation S/C/NCA: North Cambridge Academy. The landowners are supportive of the principle of the new draft allocation that includes approximately 150 dwellings, sports and recreation. The overall site boundary that is outlined in black appears to coincide with our original submission that outlined the site in red. It would appear that the entire site within the black line as shown above, is shaded pink and then part of the overall site allocation is overlain with green hatching that designates this area as Protected Open Space. If correct, this latter designation forms the majority of the overall allocation.	202149 (LSA planning-North Cambridge Academy)
The sports facilities need to be designed in a manner that they will function with the existing school in respect of safeguarding and security measures for pupils and work effectively outside of school hours for the community. Care will be needed to ensure appropriate pedestrian and vehicle access can be provided along with other associated works for these facilities and the residential development. The	202505 (LSA planning-North Cambridge Academy)

policy clearly sets out what is expected to be delivered at points 1a and b in terms of sports facilities, but the current land use designations reduce the flexibility of where these facilities and the housing could be located.	

Policy S/C/ER:1-99 Ekin Road and 1-8 Ekin Walk

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made in relation to the need for Council housing including ensuring homes meet high energy efficiency standards.

Concerns from Historic England were raised in relation to reflecting the recommendations from the HIA regarding building height that is limited to 3-4 storeys and adding greater clarity around this expectation in policy.

Further responses were made by Cambridge Investment Partnership as the Site Promoter to support the approximate amount of homes onsite, impact on protected open space, to have flexible building heights to allow for Building Regulation changes, to remove unacceptable impacts on views and to protect and / or enhance the open space.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The policy has been revised to set out that building heights should be limited to approximately 3-4 storeys to address Historic England comments about needing to specify a building heights to mitigate impact on skyline and representations made by Cambridge Investment Partnership for flexibility on building heights to allow for Building Regulation impacts.
- Cambridge Investment Partnership also asked for wording to protect and / or enhance the Protected Open Space. The wording has not been revised to protect the open space, however the assessment of impact on open space will be assessed through the planning application process using Policy BG/PO: Protecting open spaces.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for site allocation.	204206 (Carter Jonas on behalf of Cambridge Investment Partnership)
A planning application has recently been submitted for the site under 26/00039/FUL. There are some suggested policy amendments needed to reflect some more specific details of this application.	204206 (Carter Jonas on behalf of Cambridge Investment Partnership)
The respondent supports the requirement to protect and enhance the protected Open Space but suggests rewording to 'protected and/or enhanced' due to the land being highway.	204206 (Carter Jonas on behalf of Cambridge Investment Partnership)
The respondent supports the aspiration for appropriate building heights but recommends revising the wording to allow for necessary increases in height to meet modern construction standards. The wording around protection of skylines and conservation areas should be amended for clarity.	204206 (Carter Jonas on behalf of Cambridge Investment Partnership)
The wording around protection of open space should be amended to reflect that some of this land is adopted highway.	204206 (Carter Jonas on behalf of Cambridge Investment Partnership)
Land at Ekin Road, Cambridge, (CIP) submitted on 12 January 2026 - planning application (reference 26/00039/FUL): Most council homes exceed the "Cam Standard" for energy efficiency and climate resilience; the development will have green roofs, play areas, and social spaces. When combined with	201537 (G Kalombo)

nearby East Barnwell developments, there will be 254 new homes in Abbey ward (198 council homes total), a net gain of 97 council homes across both sites.	
There are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. The HIA recommends that height is limited to 3-4 storeys. This should be specified in criterion g to add greater clarity regarding height.	210096 (Historic England)

Summary of issues arising from Draft Local Plan representations:

There was broad support for the allocation of the site from Historic England.

Comments were made by a local residents on the need for more innovative design in proposals for the site.

Further responses were made by Cambridge Investment Partnership to reflect the capacity of the latest proposals for the site.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The proposals for the site are designed to complement the existing character and have been designed in accordance with the HIA.
- The site allocation has been revised to reflect the most recent proposals onsite in terms of capacity. This is to reflect representations from Cambridge Investment Partnership.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The design should make provision for detailing and artistic imagination.	203775 (A Carpen)

Support for site allocation.	204209 (Carter Jonas on behalf of Cambridge Investment Partnership)
The site owner would like to increase the site capacity to 68 new homes, an increase of 36.	204209 (Carter Jonas on behalf of Cambridge Investment Partnership)
The respondent supports retaining mature trees but suggests that part (a) be amended to allow for justified tree removals through an Arboricultural Impact Assessment.	204209 (Carter Jonas on behalf of Cambridge Investment Partnership)
There are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. We welcome criterion c.	210097 (Historic England)

Policy S/C/HPC: 1-78 Hanover Court, 1-49 Princess Court and Garage at Newtown Garages

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the site allocation from Cambridge Investment Partnership. Comments were made by Historic England who welcomed the preparation of the HIA, the criterion that reflected the findings of the HIA and the identification of heritage assets in the policy wording.

Further responses were made by Cambridge Investment Partnership to reflect the capacity of the latest proposals for the site. Cambridge Investment Partnership also supports the part a and part d of the policy. Part b should be modified to allow for tree removal, and part c should be removed.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- Support is noted from Historic England.
- In response to the Cambridge Investment Partnership, the retention of mature trees is retained as wording in the policy as the retention of trees is a key policy for the Local Plan to maintain and enhance urban greening. The removal of any trees will be negotiated through the planning application process, and development will be assessed against Policy BG/TC: Improving tree canopy cover and the tree population.
- In response to the Cambridge Investment Partnership, the capacity of the site allocation has been revised to reflect the latest planning application for 165 homes.

- In response to the Cambridge Investment Partnership, Point 1c has been retained in the policy, relating to the electricity substation, to reduce impacts on residential amenity and outlook.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Support for site allocation.	204211 (Carter Jonas on behalf of Cambridge Investment Partnership)
Support for flexibility on uses using the wording approximately and for the design considerations set out in policy.	204211 (Carter Jonas on behalf of Cambridge Investment Partnership)
Support for the retention of trees but suggests rewording to allow for justified removals through an Arboricultural Impact Assessment.	204211 (Carter Jonas on behalf of Cambridge Investment Partnership)
Reference to electrical substation should be removed.	204211 (Carter Jonas on behalf of Cambridge Investment Partnership)
Support is expressed for part (d) on archaeological investigation, with a request to amend it to include a desk-based assessment as the first step.	204211 (Carter Jonas on behalf of Cambridge Investment Partnership)

The site is located within the New Town and Glisson Conservation Area and close to a number of listed buildings including the grade I The Church of Our Lady of the Assumption and the English Martyrs and Grade II* Wanstead House and numerous GII listings. Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. We welcome the preparation of the HIA. We welcome the criterion which reflect the HIA.	210098 (Historic England)

Policy S/C/GER: Former Garage Block, East Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by Historic England who welcomed the preparation of the HIA, but felt that its recommendations should be brought out more clearly into the policy including the wording around the building heights limit of 3 storeys in point e.

Concerns were raised by a local resident about the development being in keeping with the local character, especially the adjacent residential area and streetscape along East Road.

Further responses were made by Cambridge Investment Partnership to include justification for tree removals through an Aboricultural assessment, and suggested addition to point g to require development proposals fronting East Road to respond to its existing and emerging context.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- To address comments relating to building heights from Historic England, Point e has been amended to include - Development heights must be a maximum of 3 storeys. This is in direct response to Historic England's comments to ensure the policy wording reflects the HIA and adds greater clarity on the acceptable heights in this location.
- In response to comments from local residents and Cambridge Investment Partnership, Point g - Development proposals fronting East Road to respond to its existing and emerging context. has been added in direct response to a local resident's comment and a comment from the Cambridge Investment Partnership to ensure the design of the

development fits in with the adjacent residential area and streetscape along East Road.

- In response to the Cambridge Investment Partnership, the retention of mature trees is retained as wording in the policy as the retention of trees is a key policy for the Local Plan to maintain and enhance urban greening. The removal of any trees will be negotiated through the planning application process and development will be assessed against Policy BG/TC: Improving tree canopy cover and the tree population.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Concerns raised about the design of the building and impact on residential area. The adjacent properties are only two storeys, and therefore there is a risk of overlooking and dominating the setting from any tall buildings.	204221 (R Robertson)
Support for site allocation.	204215 (Carter Jonas on behalf of Cambridge Investment Partnership)
The design of any building proposed for this site must primarily fit in with the adjacent residential area to the south and not the streetscape of East Rd. So much of the adjacent housing is only two storey there is a risk it would be badly overlooked and dominated if a tall building was allowed to be built on the garage site.	204221 (R Robertson)

Support for the retention of trees, but suggests rewording to allow for justified removals through an Arboricultural Impact Assessment.	204215 (Carter Jonas on behalf of Cambridge Investment Partnership)
It is suggested that the policy reflects the requirement for the development proposals fronting East Road to respond to its existing and emerging context.	204215 (Carter Jonas on behalf of Cambridge Investment Partnership)
Whilst there are no designated heritage assets within the site, the site lies close to the Mill Road Conservation Area and St Matthews Church (GII listed). Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. We welcome the preparation of the HIA. The HIA recommends that height is limited to 3 storeys. This should be specified in criterion e to add greater clarity regarding height.	210099 (Historic England)

Policy S/C/SH: 1-33 Stanton House, Christchurch Street

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support from the Cambridge Investment Partnership for the allocation of this site. Parts a and b of the policy are supported. It is suggested that the policy wording be amended to say that there is capacity for approximately 29 homes, resulting in a net loss of 5 units, including suitable replacement sheltered accommodation. This is due to a needed for general needs housing as well as replacement sheltered accommodation.

Comments were made by the Liberal Democrat Group to make it clearer that the impacts on the existing terraced housing and flats on Christchurch and Napier Streets should be considered.

Further responses were made by Historic England relating to the HIA. The HIA recommends that 'Development at a scale similar to the local prevailing building height and existing buildings on site should be appropriate. Site is not considered appropriate for tall landmark buildings' and this should be included in the policy. Historic England welcomed the preparation of the HIA and confirmed that there are no designated heritage assets within the site and the site lies adjacent to the Kite Conservation Area and Christ Church (grade II).

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to the Liberal Democrat group, the supporting text has been revised to make it clearer that the impacts on the existing terraced housing and flats on Christchurch and Napier Streets should be considered.
- In response to Cambridge Investment Partnership, the support is noted and the capacity of the site has been reworded to

address the suitable replacement sheltered accommodation issue.

- In response to Historic England, the supported is noted and the recommendation from the HIA has been included in the policy wording.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The impacts on the existing terraced housing and flats on Christchurch and Napier Streets should be considered.	202834 (Cambridge City Council Liberal Democrat Group)
Support for policy.	204216 (Carter Jonas on behalf of Cambridge Investment Partnership)
Support for flexibility in wording but reference should be made to sheltered accommodation.	204216 (Carter Jonas on behalf of Cambridge Investment Partnership)
Whilst there are no designated heritage assets within the site, the site lies adjacent to the Kite Conservation Area and Christ Church (grade II). Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. We welcome the preparation of the HIA. Criterion 1a is quite vague in relation to building heights. Given the heritage sensitivity of the site, greater clarity is needed regarding building heights. The HIA recommends that	210100 (Historic England)

‘Development at a scale similar to the local prevailing building height and existing buildings on site should be appropriate. Site is not considered appropriate for tall landmark buildings’. This should be included in the policy	

Policy S/C/SCL: Land South of Coldham's Lane, Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support from local residents to see the long awaited site come forward.

Comments were made on the site allocation in relation to building heights in this predominately residential location and the impact on local character.

Comments were made on the site in relation to the impact on Cherry Hinton brook chalk stream and the concerns raised by the Environment Agency.

Comments were made by residents to improve the cycle routes between David Lloyd and Brookside.

Comments were made by Stantec on behalf of Mission Street and BGO Propco Newton Ltd questioning the archaeological requirement as this was not an issue with the planning application.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to local residents concerns about heights, the planning application for this site has now been approved and it was assessed for its impacts on local character and on balance the decision is that this site is suitable for this density and the proposal has been found acceptable.
- The impact of development of the chalk stream has been mitigated through the development management process with conditions, as recommended by the Environment Agency. This will mitigate the impacts on Cherry Hinton brook and other environmental concerns.
- The cycle route between David Lloyd and Brookside and surrounding cycle network improvements are beyond the

scope of this site allocation and planning application to be able to improve.

- In response to Stantec regarding archaeological impacts, point 1c has not been removed from the policy to ensure that the DBA is considered should another planning application come in.
- In response to Historic England, the latest version of the HIA has set out the revised viewpoints to be Viewpoint F, these are equivalent to the Viewpoint 7 and 10 mentioned in policy which have been rationalised. No changes are required to the policy wording.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The building height is too tall and should be more reflective of local context.	201226 (S Williams)
Concerns raised about impact on the Cherry Hinton Brook.	201245 (S Williams)
Objection to policy due to over congestion on the Tins Pathway.	202697) (M Downs)
Objection to the policy due to access and safety.	203771 (C Bone)
Significantly-improved developer-funded active travel routes should be designed in and built, and amenities should be expanded to enable local residential access. Provision should be made for a new rail/light rail stop on the railway line.	203829 (A Carpen)
The cycle paths around the site should be improved.	202634 (A Lawrence)
Support for the development of the site.	202634 (A Lawrence)
The requirement for a desk based archaeological assessment should be reviewed in the context of the EIA.	204039 (Stantec on behalf of Mission Street and BGO Propco Newton Ltd)

Policy S/AMC/SCL fails to take the following matters into account: The site proposed for the country park is severely constrained Opportunities for public access have not been addressed. The part of the site previously ear-marked for public access is subject to flooding. Local water courses and bodies are vulnerable to pollution from toxic land fill. There is insufficient emphasis on the protection of flora and fauna. Management issues have not been given sufficient attention.	204669 (J McGill)
Concerns raised about biodiversity, safety, access and drainage and contamination.	205152 (H Anderson)
Development within this area therefore has the potential to affect the significance of this asset including through development within its setting. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. Criterion c refers to building heights of no taller than 6 storeys. In the absence of a Heritage Impact Assessment this is inappropriate and should be deleted. This needs to be explored through an HIA and masterplanning. Delete reference to 6 storeys.	210120 (Historic England)
here are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. We welcome reference to St Andrews church. Part of the HIA refers to viewpoint 7 and part refers to viewpoint 10. The policy itself criterion 1b refers to Viewpoint F. Please check and clarify which viewpoint it is.	210101 (Historic England)

Policy S/C/BRN: Land at Barnwell Road and Newmarket Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for this site allocation from Cambridge Investment Partnership. They suggest that the wording need to allow for justified tree removals with an Arboricultural Impact Assessment and replacement planting.

Comments were made by a local resident that there should be a larger community centre and community halls and that there should be shared provision of facilities.

Comments were made by Historic England to confirm that there are no designated heritage assets within the site or nearby and to welcome the preparation of the HIA. Historic England have asked for clarification of the correct naming of viewpoints.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- A Community Facilities Strategy and Cultural Strategy has been prepared to support the Regulation 19 Local Plan and this has identified where there is a need for these facilities based on existing provision and anticipated growth. These studies have concluded that this is not a priority in this location.
- In response to Cambridge Investment Partnership, their comments are noted and the retention of mature trees is retained as wording in the policy as the retention of trees is a key policy for the Local Plan to maintain and enhance urban greening. The removal of any trees will be negotiated through the planning application process, and development will be assessed against Policy BG/TC: Improving tree canopy cover and the tree population.
- In response to Historic England, their comments are noted and the Viewpoints are correctly labelled as per the latest evidence base. In response to heights, half of this site has permission and the heights will be tested for the remainder of the site for sensitivity through the development management process.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Support for site allocation.	204220 (Carter Jonas on behalf of Cambridge Investment Partnership)
CIP plans to develop remaining land in future applications, although detailed designs are not yet prepared.	204220 (Carter Jonas on behalf of Cambridge Investment Partnership)
The policy should be more flexible about the wording regarding tree retention and removal.	204220 (Carter Jonas on behalf of Cambridge Investment Partnership)
Provision should be made for a much larger community centre and community halls given the densification of the housing in the area.	203776 (A Carpen)
There are no designated heritage assets within the site or nearby. We welcome the preparation of the HIA. Part of the HIA refers to viewpoint 11. The policy itself refers to Viewpoint M. Please check and clarify which it is. Is it one in the same? What height is considered suitable for this site?	210102/ 210103 (Historic England)
Sport England notes that planning permission (23/04687/FUL) has been granted for the redevelopment of this site. The Local Plan should outline that sport facilities (bowls green and tennis court) as part of the planning permission will be replaced, in accordance with condition 59, as required by planning	209216 (Sport England)

permission 23/04849/FUL. Outlining this demonstrates that the loss of these sports facilities have been assessed against paragraph 104 of the NPPF and that replacement mitigation provision has been secured.

There are no designated heritage assets within the site or nearby.	210105 (Historic England)
Sport England objects to the part loss of playing field at this site. The Orchard Park SPD (2011) identified the playing field to remain as public open space. With this said, the planning permission referenced 22/01632/FUL resulted in the loss of the playing field. Sport England cannot find a record of being consulted on that planning application despite being a statutory consultee for development affecting playing fields. Furthermore, having reviewed the Officer's Report, there is no consideration	209217 (Sports England)

afforded to paragraph 104 of the NPPF. If a future planning application were submitted, the Local Planning Authority should accord with the statutory requirement to consult Sport England.

- In response to Historic England, comments are noted and no policy changes have been made in response as the policy wording reflects the heritage assets in this location.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Part of this site lies within the Mill Road Conservation Area. Any development of the site has the potential to impact upon the significance of the Conservation Area. We welcome criterion 1a, 1b and 1c.	210106 (Historic England)

Policy S/C/CJ: Cambridge Junction and Cambridge Leisure, Hills Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Respondents asked for Safeguard the Junction to be safeguarded into the future. It is essential that there is no deterioration in the nature and standard of facilities. Temporary provision for all cultural functions must be secured before any demolition or displacement reprovision is delivered as an early phase; no gap in provision. Any future Junction is at least equivalent in standard and capacity, including audience, back-of-house, technical capability, servicing. Need more meeting rooms. Long-term operational/financial viability should be assessed. Avoid creation of conflicts with sounding uses. Must ensure that these or equivalent leisure uses are re-provided at the same level within the development proposals.

One comment stated that the Cambridge junction site is very new and would have a high carbon footprint to replace.

Historic England advise that whilst there are no designated heritage assets within the site, the site lies close to the New Town and Glisson Road Conservation Area. Any development of the site has the potential to impact upon the significance of the Conservation Area through development within its setting.

Landsec said they were is continuing to explore development options for the Cambridge Leisure site, both in respect of its existing property assets and also the possibilities for the site, either as a standalone regeneration project (allowing future integration with

neighbouring sites for regeneration purposes) or as part of a broader regeneration scheme on the eastern side of Cambridge Station. They ask for the policy wording to be made more flexible.

Other comments included consider impact of building height on surrounding areas e.g. Rustat Avenue, and the need local retail provision.

Response to the main issues raised in representations

The policy and supporting text note the cultural importance of The Junction and that, where it is appropriate, temporary venue spaces and meanwhile uses should be provided during the construction phases. This is considered to be a reasonable approach in order to strike a balance between the retaining an important local and sub-regional facility and the practicality and feasibility of it remaining operational throughout the construction process of a comprehensive redevelopment. The policy contains a requirement that any reprovision of this use must support the enhancement of it as a live performance and cultural venue.

The policy identifies the importance of the commercial leisure offer at Cambridge Leisure and seeks to retain this as part of the redevelopment of the site.

The Local Plan contains policies regarding the reuse of existing buildings and materials and so this is not repeated in this site allocation policy.

The policy has been updated to provide further criteria in relation to building heights and the impacts of development on nearby heritage assets. Additionally, the policy and indicative spatial framework identify some support for retail provision in this area, particularly around the proposed railway station entrance.

The comment from one of the existing long leaseholders is noted. The policy seeks to strike a planning balance between providing flexibility and a clear expectation for future development proposals.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The Cambridge junction site is very new -- 20 to 30 years old. You cannot pretend you care about the climate crisis and at the same time wilfully knock down existing buildings just because you fancy it. The carbon footprint of concrete is huge. There will be huge opposition to this particular 'development', based on opinions I have already heard from people I have told about it. Why don't you practice designing/approving buildings that will have a long sustainable life -- you clearly didn’t do this the first time round, on this site?	201227 (S Williams)
Limit height of development next to Rustat Avenue developments. All have south-facing balconies to enjoy sunlight. Incentivise supermarkets (Aldi/Lidl/or something else) to take up retail space in Leisure Centre. Currently only expensive convenience stores, so have to drive to get food. For flats, incentivise developers offering residents their own management companies from the start. Go without Estate Management Companies from developments as much as possible to save flat owners the pain. Work to support public access from one side of train station to the other (EWR). Consider removing listing status Cambridge station. It's old, at capacity and of limited value.	201652 (T Foets)

We have suggested amendments to the policy wording for robustness and to more sufficiently safeguard the Junction in the future. It is essential that there is no deterioration in the nature and standard of facilities provided by the Junction. Policy wording should be amended to better recognise the Junction as "a locally and regionally important venue". We suggest the addition of 'that meet the needs of the venue' after 'a range of flexible spaces' within the second sentence. Design and layout requirements for this allocation must also avoid conflicts between the Junction and neighbouring uses in line with the NPPF's "agent of change" principle.	202013 (The Theatres Trust)
I support Cambridge Junction: • Temporary provision for all cultural functions must be secured before any demolition or displacement reprovision is delivered as an early phase; no gap in provision • any future Junction is at least equivalent in standard and capacity, including audience, back-of-house, technical capability, servicing • long-term operational/financial viability assessed alongside spatial design delivery governed through a structured process (CJ/Council governance, RIBA stages, shared brief before developer engagement) • Agent of Change applied so residential development doesn't restrict Junction operations • I cannot support this allocation unless continuity, equivalence and viable delivery mechanisms are secured.	202131, 202745 (Cambridge Junction), 202190 (H Tam), 202452 (K Jones), 202676 (T Altmann), 202709 (W Townsend), 202774 (S Lee), 205275 (N Oakley), 202857 (Cambridge Junction), 202981 (T Flinders), 202994 (Arts Theatre Cambridge) 204996 (H Paterson), 205263 (AC de Azevedo Lamha), 205339 (A Seiglow), 202286, 202291,

	205347 (Cambridge Junction), 202377 (Kettle's Yard), 202379 (J Webber), 202389 (T Shaw), 202918 (R Tarry), 204438 (A Neenan), 204660 (NEUBAU Architects), 204892 (Wysing Arts Centre), 203862, 203640, 202804 (University of Cambridge), 203843 (N Yeni), 203471 (D Lever), 203468 (L Heap), 203423 (S Asworth), 203316 (N Ellis), 204358 (New International Encounter), 204681 (A Giarlis), 205289 (L Howse), 204805 (L Matthews), 204150 (Cambridge Junction) , 202007 (H Chamberlain), 205012 (University of Cambridge),

	205090 (J Walsh), 204822 (G Shaw)
The Junction is an amazing venue providing a wide and varied menu of arts events. It should be supported to develop and grow, but without losing its unique ethos. The size of the concert space is great	202595 (M Salters), 203596 (P Tribble)
Could bullet 1c be revised to ensure that the same amount of equivalent leisure space be retained as follows: Redevelopment of the existing commercial leisure units (including cinema, bowling alley and food and beverage outlets) must ensure that these or equivalent leisure uses are re-provided at the same level within the development proposals;	202835 (Cambridge City Council Liberal Democrat Group)
Cambridge Junction is part of Arts Council's National Portfolio of organisations receiving regular, core funding from us. The organisation has strong impact both regionally and nationally. We see the redevelopment of this site as a fantastic opportunity to improve facilities and provision which would benefit both audiences and creatives alike. We would advocate strongly that new plans ensure that the organisation is able to thrive both artistically, financially and in terms of expanding reach.	205045 (Arts Council)
Re The Junction, could a revamped/replacement facility take architectural inspiration from the railway history of the railway sheds it was built on. Furthermore, the site needs to have a significantly greater number of meeting rooms and rehearsal spaces. Provision for The Junction could involve working with Hills Road Sixth Form College to help meet some of its needs for independent study spaces, which could help sustain the venue.	203825, 203769 (A Carpen)
Whilst there are no designated heritage assets within the site, the site lies close to the New Town and Glisson Road Conservation Area. Any development of the site has the potential to impact upon the	210107, 210108, 210109 Historic England)

significance of the Conservation Area through development within its setting. We welcome the preparation of the HIA. We welcome criteria m, n and p. The HIA recommends that height is limited to roughly 6 storeys. This should be specified in criterion n to add greater clarity regarding height.	
Landsec is continuing to explore development options for the Cambridge Leisure site, both in respect of its existing property assets and also the possibilities for the site, either as a standalone regeneration project (allowing future integration with neighbouring sites for regeneration purposes) or as part of a broader regeneration scheme on the eastern side of Cambridge Station. The emerging planning policy within the Draft Greater Cambridge Local Plan must flexibly and proactively facilitate these objectives in the interests of good plan-making. Landsec is generally content with the broad intent and direction of travel that the draft policy adopts, but some areas remain where alteration to the policy wording are requested. In particular, it is suggested that there needs to be more flexibility in certain areas of the policy wording to be more adaptable to the rapid nature of change in market and economic conditions, particularly in respect of historical main town centre uses. Detailed wording changes are provide din individual representations.	209176, 209177, 209178, 209179, 209180, 209181, 209182, 209183, 209184, 209185, 209186, 209187, 210304, 210305, 210306, 210307, 210308 (Landsec)

Policy S/C/CLT: Clifton Road Area

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Universities Superannuation Scheme Ltd support the aspiration for regeneration for a mix of uses but suggests modifications to the draft allocation to ensure it reflects a deliverable, commercially robust proposition. The allocation needs be flexible to accommodate market changes over a 10 15 year horizon, as development is unlikely before 2030. The uncertainty surrounding the scope, form and programme for the delivery of an eastern entrance to Cambridge Station and the implications of this for the Site. The site could likely deliver 150 build to rent homes.

Historic England advise there are no designated heritage assets within the site, the site lies adjacent to the New Town and Glisson Road Conservation Area. The site is also close to the GII listed Railway Station. Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. The policy should be mor specific regarding building heights.

Cambridge Past Present and Future consider the eastern station entrance essential. Othe comments included the Junction is important for cultural life and should be supported. New buildings should reflect the area's old railway history, taking inspiration from the old railway sheds that were on the site. Another comment questioned the long term future of the area as an industrial site.

Rustat Neighbourhood Association fed back from a meeting where they discussed the site. The aske for more resident input on planned EWR entrance and other issues. Station drop offs could impact on area by pocket park entrance, research is needed. Another representor raised this point, and apart from disturbance to residents in Rustat Avenue whose flats overlook the Pocket Park, there will almost certainly be traffic issues at the Davy Road / Rustat Road junction which need to be anticipated and accommodated.

Response to the main issues raised in representations

The policy provides flexibility to enable a wide of suitable land uses to come forward through the comprehensive redevelopment of the site. Since the consultation on the draft Local Plan, East West Rail have consulted on their project and provided some further details on the likely timescales of the new station entrance being delivered.

The number of homes likely to be delivered on the USS land is noted.

The policy has been updated to better reflect local heritage assets and the likely impacts of tall buildings in this location. The NPPF is clear that Local Plans should not prescribe architectural forms for development, however, the policies in the Local Plan do outline a requirement for context led development.

The possible impacts of station drop off on local communities is noted and reflected in the policy wording.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
I'd like to voice support for the policy of retaining the existing retail outlets when/if the Clifton Road area is redeveloped	201935 (I Rudy)
Whilst there are no designated heritage assets within the site, the site lies adjacent to the New Town and Glisson Road Conservation Area. The site is also close to the GII listed Railway Station. Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. We welcome the preparation of the HIA. We welcome criterion g. The HIA recommends that height is limited to 1-2 storeys. This should be specified the policy criteria to add greater clarity regarding height. We welcome the inclusion of a Spatial Framework at Figure 39. We welcome reference to the Holford Plan in the supporting text.	210109 (Historic England)
What are the functions that the city/tradespeople need that the site's firms currently provide? e.g. Builders' merchants and component suppliers? Can clear provision be made? See the recently built homes on the old Water Works? Please put in standards to prevent such lazy, poor quality architecture and building designs being used. Cambridge deserves better. New buildings should reflect the area's old railway history, taking inspiration from the old railway sheds that were on the site. They should be of a type that is considerably more aesthetically pleasing than what Brookgate has built in the Cambridge Station redevelopment - and visibly so.	203778 (A Carpen)
The Junction is essential for cultural life in Cambridge, providing a venue for diverse age groups to engage in arts and social activities. The respondent emphasises the importance of the Junction in	205330 (N Saad)

encouraging youth participation in arts and music, highlighting its role as a positive alternative to social media and street corners. The respondent advocates for continued funding and support for Create Cambridge, recognising its significance in the local cultural landscape.	
Rustat Neighbourhood Association met with c 30 residents on 17 January 2026. Agree need to retain retail and leisure facilities. Densification implies building up. Do not build up where blocks light for existing residents on Rustat Avenue/Road. Housing for residents/families required. Mixed use site has different needs: Many students and visitors as well as residents. How will site cater for all? Water scarcity and holding developers to environmental standards a key concern. Interface with planned EWR entrance on Clifton Road/Gloria Carpenter Park not well developed. Requires more resident input. How will Local Plan interface with other Plans/consultations. The plan for a new railway bridge coming into Clifton Road and accessible via the Gloria Carpenter parklet requires considerably more detailed thinking through to avoid detrimental impacts on existing and envisaged residents in the Rustat Road area. “Drop off” is problematic as people often need to wait in their cars for arrivals. Residents are concerned that people will drop passengers off in Rustat Road by the Pocket park entrance (opposite Davy Rd). There needs to be an impact study of projected outcomes in different scenarios. There are concerns about congestion and bike-safety at the Clifton Rd/Cherry Hinton Rd junction. There are concerns regarding the pollution and noise impacts that would arise from the proposed development of the site. Impact assessments required. Any bike parking at the Eastern entrance must be fully secure to prevent theft. he grade-II listed station building and new footbridge must be designed to protect heritage character.	201484, 205774, 205775, 205776, 205777, 205778, 205779, 205780, 205781, 205783, 205784, 205785, 210303 (Rustat Neighbourhood Association)

More regular consultation with residents is needed.	
I fully support the redevelopment of the Clifton Road area. There is considerable scope to make better use of the site by mixed-use and by intensification along the lines of the policy document. any building at the Cherry Hinton Road end should be no taller than two stories, probably rising to three stories as gardens get larger. Given the overall growth plan for Cambridge and South Cambridge and especially the proposed housing development of the Cambridge airport site to the east, the need for a new station entrance is compelling and will have real benefits for rail passengers. Will come with very substantial traffic and people flows in the area of the proposed new entrance. Needs to be a thorough traffic assessment on this, and the implications need to be incorporated into the site master plan. Apart from disturbance to residents in Rustat Avenue whose flats overlook the Pocket Park, there will almost certainly be traffic issues at the Davy Road / Rustat Road junction which need to be anticipated and accommodated.	201520, 205799, 205800, 205801, 205802, 205803 (R Crabtree)
Support the aspiration for regeneration for a mix of uses. Suggests modifications to the draft allocation to ensure it reflects a deliverable, commercially robust proposition. We recommend the allocation be flexible to accommodate market changes over a 10-15 year horizon, as development is unlikely before 2030. The relationship between existing, to be retained and proposed uses within the Site and wider area. The high likelihood of the Royal Mail depot remaining fully operational in its current location, which reduces the developable area of the Site and maintains physical, amenity and viability challenges for the remainder of the draft allocation. The uncertainty	209233, 209234 209235, 209236, 209237, 209238, 209239, 209240, 209241 (Universities Superannuation Scheme Ltd)

surrounding the scope, form and programme for the delivery of an eastern entrance to Cambridge Station and the implications of this for the Site. The initial Site review indicates the opportunity to deliver approximately 150 Build to Rent (BTR) residential homes. Support the principle of an active travel-based approach to the new station entrance. However, we consider that the broad parameters for a station entrance should be established at the Site Allocation stage so as not to place unnecessary constraints on the development of the wider site supportive of the future phases of the Chisholm Trail, but policy requirement currently unreasonable, needs flexibility. Requirement for reprovision of all existing floorspace unreasonable.	
Just wanted to question the long term existence of Clifton Road industrial estate, Royal Mail still makes sense but everything else a little less. Residential zones have already encroached which sometimes does cause noise pollution friction, and it seems like a good spot for future housing development. Since COVID commercial activity seems to have slowed a little since ARM left and I think ANSYS/Synopsis will follow suit soon. Otherwise, though pls carry on, very happy with more development. If you ever need a counter-protest for Davy Road let me know as I am extremely YIMBY on Coleridge.	202430 (S Potts Tamman)
This policy is tentative about an eastern access to the station (“any possible future new eastern entrance”). An eastern entrance is essential for the continued safe functioning of the station and to open up opportunities to reconfigure the main station forecourt. Figure 39 is inaccurate and too schematic to be helpful in shaping future development. This policy should set out principle and parameters for the components required for an eastern entrance to the station, including detail on pedestrian routes, cycle parking, a taxi rank, bus stops, and traffic management on Clifton Road, Rustat Road, Davy Road and Fanshawe Road.	202778 (Cambridge Past Present and Future)

Policy S/C/SRW: Station Road West

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the site allocation from Brookgate Land Ltd and Network Rail Infrastructure Ltd

Comments were made by local residents in relation to the architectural design and considering the railway history of the site.

Comments were made by local residents and Cambridge Past, Present and Future in relation to improving pedestrian access, decluttering the public realm and reducing car dominance.

Comments were made by Historic England confirming that there are no designated heritage assets within the site and welcoming the preparation of the HIA and requiring the policy to consider wider Strategic Viewpoints.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The connectivity of the site with the wider area for pedestrians to gain safe access to the station is an important ambition and wording has been included in the policy to reflect this and ensure that pedestrian access and experience is prioritised.
- The HIA has set out the key considerations for design to reflect the local character and designated heritage assets and the wording in the policy has been reviewed to reflect the recommendations of the HIA.
- In response to Historic England, comments are noted and the wording for not impacting negatively on Strategic Viewpoints has been included.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Concerns raised about impact of the Grade II Listed Railway Station.	201228 (S Williams)
A more detailed vision for the station is needed to manage the transport interchange, congestion and heavy flow of people including reducing the dominance of cars outside the station entrance.	202796 (Cambridge Paste, Present and Future)
The design of the station should be more imaginative and reflect character of railway history in the area.	203830 (A Carpen)
Support for the allocation of the final undeveloped parcel as part of wider CB1.	204832, 204839 (Brookgate Land Ltd and Network Rail Infrastructure Ltd)
The policy should reflect the relevant planning applications and be more flexible to respond to economic circumstances.	204832, 204839 (Brookgate Land Ltd and Network Rail Infrastructure Ltd)
The location is highly sustainable for build to rent and co-living.	204832, 204839 (Brookgate Land Ltd and Network Rail Infrastructure Ltd)
The quantum of development should be context led.	204832, 204839 (Brookgate Land Ltd and Network Rail Infrastructure Ltd)
Active travel access needs to be improved to the station.	207459 (A Carpen)

Whilst there are no designated heritage assets within the site, the site lies adjacent to the New Town and Glisson Road Conservation Area. The site is also close to the GII listed Railway Station. Any development of the site has the potential to impact upon the significance of these heritage assets through development within their settings. We welcome the preparation of the HIA. We welcome criterion1a, 1b and 1c. The HIA refers to several viewpoints. The policy only refers to Viewpoint E. We recommend including the following wording: '…should not negatively impact Strategic Viewpoints particularly Viewpoint E Limekiln Road.	210110 (Historic England)
Support for the allocation of the final undeveloped parcel as part of wider CB1. Need to consider 21/00264/FUL and 18/1678/FUL for development that has previously been considered acceptable on site. Inappropriate to outline a fixed quantum of floorspace. This should be context-led and be capable of responding to changing economic circumstances. Failure to acknowledge that a hotel was previously considered acceptable. Need to recognise the highly sustainable location for build to rent and co-living. Overall, the Site should be allocated for mixed use development. Conflicting requirements on height and massing. Point (b) prescribed height, whereas point (a) states it should be context-led. Therefore, suggest removing point (b). Subjectivity around 'negatively impact on strategic viewpoint E' should be amended to 'have regard for Strategic Viewpoint E'. Redline boundary should be amended to remove railway tracks.	204832 (Brookgate Land Ltd and Network Rail Infrastructure)

Policy S/C/BJH: Betjeman House, Hills Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the site allocation from Pioneer Group Ltd. Pioneer Group Ltd also commented that the allocation should be modified to reflect the site allocation and be renamed Botanic Place.

There was broad support from Historic England who confirmed there were no designated heritage assets and that they welcomed the policy wording criterion under point 1a, b, c and d.

Comments were made by local residents in support of the demolition of Betjeman House.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to Pioneer Group Ltd, the policy has been renamed Betjeman House, Hills Road (Botanic Place)
- In response to Historic England, comments are noted and no changes have been made in relation to this comment.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The policy should reflect the current live planning application.	207455 (Pioneer Group Ltd (Railpen))
Support for the site allocation.	207455 (Pioneer Group Ltd (Railpen))

The site is no longer residential and should be non-residential and reflect the planning permission for 54,000 sqm of floorspace for commercial class E.	207455 (Pioneer Group Ltd (Railpen))
Support for demolition of Betjeman House and replacement with lower density development.	201229 (S Williams)
This site is located in the Glisson Road and New Town Conservation Area, lies adjacent to the grade II* Botanic Gardens, a registered park and garden and close to the grade II listed War Memorial and milestone. Development within this area therefore has the potential to affect the significance of these assets through development within their settings. We welcome the preparation of the HIA. We welcome criterion1a, 1b,1c and 1d. We appreciate the site is under construction but welcome the reference to the scenario should the permission not be completed. We welcome the reference to the retention of the Flying Pig House.	210111 (Historic England)

Policy S/C/OPM: Old Press/ Mill Lane

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by the University of Cambridge raising concerns about the conflicting policy wording around heritage assets.

Comments were made by Historic England to reflect the assets onsite and to complete an HIA for this site.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to the University of Cambridge, the boundary has been amended to reflect the suggested change.
- In response to Cambridge Past, Present and Future, the support for criterion 1a and 1b is supported. The Pitt Building has been amended to be included in the boundary. The wording around heritage assets has been amended to address these comments.
- In response to Historic England, amendments have been made to the policy to reflect the amendments suggested. HIAs are not prepared for site allocations that existed in the Cambridge Coty Council or South Cambridgeshire District Council Local Plan. This is the same across the Local Plan and therefore the HIA has not been revised. Furthermore, the development on this site is underway and close to completion.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue

The University requests that the site allocation boundary (red line) is amended to remove the University Centre and other smaller properties to avoid confusion due to changes in land ownership.	202445 (University of Cambridge)
If the University Centre is removed from the allocation, the key principles relating to access, public realm and active frontages would continue to be adequately addressed through other policies.	202445 (University of Cambridge)
Concerns raised about treatment of heritage assets and their protection.	202797 (Cambridge, Past, Present and Future)
The University requests that the site allocation boundary (red line) is amended to remove the University Centre and other smaller properties. The inclusion of the University Centre adds unnecessary complexity to the allocation. Its removal would allow the policy to focus on providing greater clarity and deliverability for a site that is now in separate ownership.	202445 (University of Cambridge)
There are a number of designated heritage assets within the site boundary including part of the Central Conservation Area and a number of listed buildings including Cambridge University Centre, The Mill Public House, The Mill The Mill Bridge and Paved Surround, Mill Haven - West House and Mill Haven - East House, Cambridge University Press (Pitt Press), Telephone Kiosks, 1 Mill Lane, House Adjoining Number 74 on The North, 74 Trumpington Street, 8-11 Little St Marys Lane, Number 1 Little St Marys Lane including gas lamp and Emmanuel Church all listed at grade II. The site is adjacent to other listed buildings including Little St Mary's Church (grade II*), Pembroke College and Pembroke College Chapel both listed at grade I, St Botolph's Church also listed at grade I as well as numerous grade II listed	210112 (Historic England)

buildings. This is a highly sensitive location in terms of heritage. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. There does not appear to be a Heritage Impact Assessment for this site. An HIA should be completed for this site. Paragraph 3.1.103 states that there are no grade I, GII* or GII buildings within the site. However, there are a number of GII listed buildings within the site and there are highly graded assets nearby. Paragraph 3.1.103 therefore needs to be amended to correctly recognise the presence of designated heritage assets. Amend criterion a as the Pitt building is within the site. Also, there are other highly graded nearby assets (Pembroke, Little St Marys and St Botolph's) that need to be listed.	
The College welcomes the allocation for a student accommodation-led scheme. We are uncertain whether the Old Press/Mill Lane site qualifies as a "university or college campus site" under Affordable Housing policy H/AH and believe it should be treated as such.	208236 (Kings College)
It is also not clear why the site area includes Little St Mary's Lane etc when the southern portion of the site has already been developed by Pembroke College and so the impact of any development on this residential street has already occurred. The College suggests the plan is amended to exclude this. It is also not clear why the site plan is different from that for Policy S/PRIA/OPML (or indeed why separate policies are needed).	208237 (Kings College)
As the implication of S/C/OPM is that the room capacity will be determined by the acceptability of detailed proposals, it seems unnecessary to specify 256 rooms. If a number is considered desirable,	208238 (Kings College)

then ‘around 260 rooms’ would make more sense. The phrase ‘for university related sites’ seems unnecessary / unclear and should be deleted.	
Restricting uses to those in only subsections a), b) and c) of Class E is unnecessary. Other Class E uses may be equally suitable.	208239 (Kings College)
As a consequence, we would suggest the following revised wording for bullet point 2: Allocation to provide mixed use student accommodation (approximately 260 student rooms) and faculty buildings, commercial business and service in Class E and other ancillary facilities. Site capacity to be subject to detailed proposals. In point 1) limb b) is unnecessary as a Heritage Impact Assessment is required by Policy GP/HE and the Council’s validation requirements anyway. Our experience from other schemes is that the phrase ‘active frontages’ in limb c) can be taken by members of the public to mean retail units. As active frontages can also sensibly include building entrances / designs which ensure natural surveillance of the street, the expectation should be clarified by providing a definition of ‘active frontages’ (this would also relate to policy J/FD 2 where a similar aspiration appears).	208240 (Kings College)
We would also comment as follows on the supporting information to the policy: The last sentence in paragraph 3 appears incomplete and so the meaning is unclear. Although the aspirations are understood, there is duplication with the PRIA policy. However, to say that redevelopment must ensure that safer streets etc are created is unacceptably onerous when works will be carried out in the public highway etc over which the College has no control. Replacing the word ‘must’ with ‘should take reasonable opportunities’ would suffice. The landscape etc aspirations in paragraphs 5 and 6 are similarly understood but could be in conflict with the desire to retain aspects of	208241 (Kings College)

the site's formerly industrial character which was a feature of discussions during the development of the 2018 Masterplan.	
This policy should reference the requirement for a sequential approach to be taken to the site layout, with more vulnerable development located within areas at lowest risk of flooding where possible. A site-specific Flood Risk Assessment (FRA) will need to demonstrate that safe access and egress is available and there will be no displacement of water or loss of floodplain storage. The site assessment recommends that habitable floor levels are set above the maximum fluvial flood level with a suitable freeboard. There are likely to be opportunities to reduce flood risk as part of this development, such as by integrating water storage areas into the landscaping, use of SuDS and reducing the built footprint in the floodplain.	211177 (Environment Agency)

Policy S/C/NMD: New Museums, Downing Street

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by the University of Cambridge raising concerns about the existing SPD and how it is outdated and what this means for future development.

Comments were made by Historic England to reflect grading of the heritage assets onsite and to produce an HIA for this site.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The SPD will remain in place once this Local Plan is adopted until a new Local Plan comes in under the new system and is updated, which will be after 5 years. It will remain a material consideration in decision making. There are elements of this SPD that have been superseded by policies in the Local Plan. The Local Plan policies will take precedence and apply, this includes policies relating to environmental standards. The core principles of the SPD have been reflected in policy.
- In response to Historic England, amendments have been made to the policy to reflect the grading of the heritage assets. HIAs are not prepared for site allocations that existed in the Cambridge Coty Council or South Cambridgeshire District Council Local Plan. This is the same across the Local Plan and therefore the HIA has not been revised. Furthermore, the development on this site is underway and close to completion.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
The current policy approach relies on the NMS Site SPD, which is outdated and does not fully align with current or future site aspirations. Sustainability objectives in the SPD are outdated compared to more ambitious targets in the Local Plan. If the site remains in the Local Plan, a more flexible approach should be adopted, requiring a Development Framework with the first planning application.	202435 (University of Cambridge)
There are a number of designated heritage assets within the site boundary including part of the Central Conservation Area and a number of listed buildings including the Cavendish Laboratory of Experimental Physics, Mond Laboratory, The Arts School, The Laboratory of Physical Chemistry, and the Zoological Laboratory all listed at grade II. The site is also surrounded by numerous listed buildings including Corpus Christ (grade I), Pembroke (grade II* and grade II) and St Benet's Church (grade I) Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. This is a highly sensitive location in terms of heritage. There does not appear to be a Heritage Impact Assessment for this site. An HIA should be completed. The recommendations of the HIA should be included in the policy wording. Include St Benet's Church in criterion 1b.	210113 (Historic England)

Policy S/PA/CC: Cambridge City Centre

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the designation from Historic England, Pioneer Group Ltd,

Comments were made by local residents to manage impacts on and acknowledge the physical constraints of Cambridge's historic core.

Comments were made by Cambridgeshire County Council for a typo and to increase cycle parking provision.

Further responses were made by local residents to designate the Riverside areas.

Comments were by made by the NHS about healthcare provision.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- Support for the designation is noted.
- Eastern gate has not been added to point 4 because it has a more unique vision than a mixed use allocation.
- In response to Cambridgeshire County Council, the typo has been included. The provision of cycle parking is included under promotion of sustainable modes of transport.
- There are no current plans for the Lion Yard Central Car park to be redeveloped.
- The ARU campus does not have a specific designation as there is already development coming forward around this area and it is covered in part by the wider Eastern Gate designation.

- The Riverside does not have a policy designation because it is covered by policy BG/RC River Corridors which sets out policy to protect and enhance the river setting.
- Healthcare provision is dealt with by the IDP, and the requirements for healthcare provision set out in the relevant site allocations.
- The Historic Core of the City of Cambridge has been accounted for in the Skyline and Tall Buildings Strategy and the in HIAs developed for each site allocation to provide mitigation and design measures to manage the impact on the local designated and non-designated heritage assets.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
We support this policy but would like to see policy 1c revised to make specific mention of the historic skyline, our suggestion would be: “preserve or enhance heritage assets and their setting, the historic skyline, open spaces and the River Cam”. It could be argued that the historic skyline is ‘setting’ but this is not clear and therefore is open to interpretation.	202798 (Cambridge Past, Present and Future)
The draft policies map identities the City Centre designation as a ‘Policy Area’. However, it proves extremely difficult to review the boundaries using this tool, particularly given the number of designations in this central location. It is considered that any final policies map should provide clear distinctions and colour coding for the various ‘Policy Areas’ so it is easier to read the map, including an ARU campus designation.	203958 (Anglia Ruskin University)

Riverside should be designated a PRIA because: (i)It is a key link in the City's sustainable transport infrastructure, as the entry point to central Cambridge for three Greenways; (ii)It is a unique stretch of accessible urban riverfront that connects three green spaces and combines distinctive heritage assets with unspoilt river views; (iii)Work is underway with GCP to realise the area's potential as a vibrant destination with city-wide benefit; (iv)It sits alongside Eastern Gate Opportunity Area and close to four Areas of Major Change, surrounded by development proposals with major implications for the area.	204425 (Riverside Area Residents Association)
I believe that Riverside should be added to the list of areas for PRI for redevelopment or improvement. It is a beautiful city-wide asset, providing a riverfront promenade between 2 commons and a nature reserve and a number of important historic sites, some pre-dating the university itself. The improvement of this area should be captured in the Local Plan, so that plans which are taking place anyway by the GCP, and others, can be mindful /in accordance with the policies in the Local Plan. I have included a request for this under GP/QP	205006 (A Sheedy)
Site allocations lacking explicit on-site health facility requirements should reference the need for financial contributions for health and infrastructure mitigation, aligning with the IDP approach. Engagement with Council Officers during early plan preparation is welcomed, along with the opportunity to contribute to the Infrastructure Delivery Plan. An additional assessment by the ICB in Stage 2 of the IDP process will provide targeted evaluations of key site allocations and health infrastructure needs, offering more detail for each site allocation.	205086 (NHS Cambridgeshire and Peterborough Integrated Care Board)
The policy takes no account whatever of existing pressures on, and the physical constraints of, Cambridge's historic core. The policy also takes no account whatever of chaos caused within limited	205295 (J Preston)

public realm whenever major developments are proposed. Existing cycle parking cannot cope with current demand let alone that already in the pipeline, pavements are cluttered with Voi scooters, and the Council's idealist vision of cafes around the Market Square is belied by takeaways and delivery mopeds. The policy is totally premature and unjustified in the absence of thorough analysis of existing issues and of the capacity of the centre to absorb any more growth.	
The Lion Yard Central Car Park should be a key site for repurposing (if not full redevelopment). If 50,000 homes are planned for Greater Cambridge area, where will be the additional amenity space be for residents & visitors in the city centre? A paradigm shift is required to reduce vehicular traffic and associated health issues arising from pollution, plus road safety. A sustained modal shift away from private vehicles can be encouraged by reducing central parking to essential users only. Car Park floors can be repurposed as residences, offices, shops, eateries and even rooftop green spaces, improving the public realm.	205313 (North Newtown Residents Association)
Whilst we consider the policy to unnecessarily duplicate wider policy, the overall approach to encouraging development within the City Centre, and specifically at Fitzroy/Burleigh Street/Grafton Area, is supported.	207439 (Pioneer Group Ltd)
Support for policy.	210114 (Historic England)
We support the policy that is proposed. However, could an additional note be added to Supporting Information that the City Council is embarking on a placemaking project to develop a city centre vision which will be wider than planning policy but may suggest direction to achieving goals reflected in this	204190 (Cambridge City Council Liberal Democrat Group)

policy, and that city centre development coming forward should have regard to this project as it develops.	
I support this policy - I would add one point. In point 4 - add the Eastern Gate Public Realm Improvement Area. The Western end of Newmarket Road before the Elizabeth Way roundabout also presents an opportunity for mixed-use intensification.	202910 (M Cleminson)
Page 162, paragraph 3.1.117 Typo - The city centre has therefore had to evolved to ensure it remains a vibrant place to visit.	210521 (Cambridgeshire County Council)
An important issue for the city centre is the lack of public cycle parking. This policy should include the need to increase the amount of public cycle parking as part of new development wherever possible.	210585 (Cambridgeshire County Council)

Summaries of Representations: Sites Areas of Major Change

Policy S/AMC: Areas of Major Change

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Support from Historic England to the criteria requiring a new, strong landscape framework that is guided by and incorporates existing positive landscape and townscape features and heritage assets. Broad support from Anglian Water, but clarity was sought on what the reference to water management was referring to. Cambridgeshire County council suggested adding reference to Rights of Way Improvement Plan (ROWIP).

Pioneer Group are concerned rather than supporting development the policy places additional controls, conflicting with the aspiration for growth in these areas. Railpen also considered a number of the requirements disproportionate.

Response to the main issues raised in representations

The responses have been considered and the representations considered on the individual Local Plan policies.

The policy wording has been revised to be more positively prepared and has been streamlined to avoid duplication with other Local Plan policies. The policy name has also been amended to make it clear that this policy will only apply to Areas of Major Change within Cambridge and therefore not those within South Cambridgeshire. It is also clear that it will only apply to larger schemes, where a comprehensive and coordinated approach is often required to maximise positive planning outcomes. Whilst specific plots or sites within an Area of Major Change are likely to come forward at different points in time, the intention of the policy is to avoid piecemeal development and ensure that overall, these areas are supported by the necessary supporting infrastructure that may be more than what is expected to be delivered by an individual proposal. It also emphasises the need for a joined up approach with relevant public bodies, who may be responsible for the delivery of said infrastructure.

Reference to water management features has been added to the supporting text to provide greater clarity. Reference to the Rights of Way Improvement Plan (ROWIP) has been added to the Supporting Information.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Areas of Major Change should be considered as areas of opportunity in which development is actively supported and encouraged. As demonstrated by the wording "Excluding very minor development, development proposals within AMCs will only be permitted in the following circumstances..." it is considered that the policy seeks to negatively control development contrary to the presumption in favour. This will unnecessarily restrict the opportunity of the very change the AMCs are designed to facilitate. The policy seeks to establish controls which are not necessary and which increase the burden	207440 (Pioneer Group)

of planning policy upon development viability. This fundamentally conflicts with aspiration to see growth in these areas. Wider requirements of the AMC policy are picked up elsewhere within the emerging Plan and should therefore be deleted. See attached proposed revisions to the policy	
Anglian Water supports this strategic allocation policy which requires that the necessary infrastructure to support the development has been secured and a phasing strategy is in place where the phased provision of infrastructure is required - this is consistent with Policy I/ID. We agree with clause 4, that the redevelopment of these areas of major change, should protect existing assets including “water management”. However, the supporting text should qualify what this term encompasses. These sites also offer the opportunity to improve the public realm, achieving betterment through provision of SuDS and water reuse.	210190 (Anglian Water Services Ltd)
We welcome criterion 4b.	210115 (Historic England)
The respondent supports coordinated development but believes the criteria in Part 2 (a)-(c) impose unnecessary requirements that could hinder deliverability and flexibility of development sites. The policy does not consider that sites are at different stages of development, as exemplified by the Beehive Centre, which already has planning permission and extensive coordinating documents. The requirement for a site-wide masterplan and coordination documents is seen as disproportionate, especially for less complex sites where phased development is appropriate.	203196, 203909 (Railpen)
Page 165, paragraph 4a could refer to the Rights of Way Improvement Plan (ROWIP): https://www.cambridgeshire.gov.uk/residents/travel-roads-and-parking/transport-plans-andpolicies/rights-of-way-improvement-plan. Rights of Way Improvement Plan should be referenced where connectivity/community & social inclusion is discussed. Often there is a reference to ensuring facilities	210512 (Cambridgeshire County Council)

and developments are connected better by active travel (walking, cycling, wheeling etc.) but there is already a network that can be built upon or improved for this.	

Policy S/AMC/AS: Abbey Stadium

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Cambridge United supports the designation of the Cledara Abbey Stadium as an Area of Major Change and is supportive of the Draft Policy's recognition that development on the site would be supported. There main concern was that the policy needs to be flexible in order to make the best use of the site. They recognise that the movement of people on match days can be disruptive and are committed to working with stakeholders through a through a Matchday Management and Travel Plan.

Comments were made by multiple representations to raise issues about congestion and traffic, and by local residents and about the environmental impacts of development. Further responses were made by Sport England about meeting standards for the Football Association. Historic England gave views about how the policy should consider local heritage impacts.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to concerns about congestion, a requirement for a Transport Mitigation Assessment has been added into the policy area.
- The environmental impacts of the development will be managed by the development management policies which set out

requirements for biodiversity under BG/BG and urban greening under BG/UGF, as well as open space provision under BG/EO.

- In response to Historic England, the suggested changes have been made.
- A HIA has not been prepared for this site because it is a policy area, where the policy guides the form of development, but not proposing allocation of specific development.
- In response to Sport England, a sentence has been added to the supporting text to reflect the need for proposals to meet the standards of the Football Foundation and Cambridgeshire Football Association.
- Broad support from Cambridge United Football Club for the policy is noted. The policy supports potential non-match day uses at the stadium and does not preclude redevelopment of the stadium coming forwarded through a phased approach. Part 1 (a) of the policy notes that subsequent planning applications should support the delivery of the vision and it does not require a single application.
- Noting the existing active travel and public transport that serve the site and wider area, the policy requires, at the planning application stage, for a Transport Assessment to be prepared which would consider transport impacts and mitigation measures in more detail, depending on the scale and nature of the proposal. Therefore the policy does not prescribe specific transport interventions but does note that highways, active travel and public transport enhancements are likely to be necessary and will need to be taken into account as part of the preparation of the Transport Assessment.
- All development proposals should be context led and mitigation measures should be identified and implemented where necessary. This is supported by a suite of policies across the Local Plan including within the Great Places chapter. Given the relationship between the greenspaces in the City and the adjacent built form, it will be important that any redevelopment of the stadium is context led and supports the Plans aspirations for high quality design.
- Any development proposals that result in the loss of protected open space or any other designations are covered by other policies in the Local Plan and so are not repeated here.

- There has been no specific proposal identified by the football club for an alternative stadium location, nor confirmation that the club are actively seeking to relocate. The plan therefore does not identify a site allocation for a new stadium elsewhere. A future development proposal to relocate the stadium would need to be considered on its merits against the policies set out in the Plan, including those that relate to sports and culture. If the stadium was to relocate, then it is at this stage that the open space designation would be considered as part of future plan reviews. It would be premature to remove the protected open space designation at this stage.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Football stadium is a source of traffic and anti-social behaviour.	200985 (C Campos)
The sites impact on environmental regeneration, and open space should be considered and there are further opportunities for biodiversity.	202811 (Cambridge Past, Present and Future)
Objection to the absence of specific reference to the Grade I listed Leper Chapel in the policy.	202811 (Cambridge Past, Present and Future)
Impact on traffic on match days should be considered. Traffic solutions away from residential areas should be considered.	202914 (M Cleminson)
Concerns raised about lack of capacity for more access routes to the site.	204639 (S Schwitzer)
The site is located adjacent to the Riverside and Stourbridge Common Conservation Area, as well as a number of grade II listed buildings and close to the Grade I Leper Chapel. Development within this area therefore has the potential to affect the significance of these assets	210116 (Historic England)

including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. Criterion j should refer to a heritage impact assessment (not historic). It should also refer to the grade I listed Leper Chapel.	
Can we please ensure that developments to the Abbey Stadium are mindful of how clogged up parking can get in Riverside on match days. Please can they be sensitive to the pressures placed on neighbouring areas and find solutions to parking issues away from residential areas.	202914 (M Cleminson)
Sport England supports the principle of this policy. To ensure that the redevelopment of the stadium and the improvement of the sporting facilities are fit for purpose, we request that the supporting information includes a requirement for the design of the proposals to meet the standards of the Football Foundation and Cambridgeshire Football Association.	209218 (Sport England)
Pleased that civic leaders have given their public support to Cambridge United's vital role in Cambridge. However, Cambridge United is capacity constrained. At the moment we are able to meet fan demand but on current trends that will likely soon become a bigger challenge. Over the last 10 years there has been a 31% increase in attendance, and the occupancy has been over 90% in the last two seasons. In this context, the Club would like the Draft GCLP to provide planning policy support for the Club to improve the Cledara Abbey Stadium, potentially in phases, to increase the capacity and facilities on matchdays, but also to ensure that the stadium is used on non-matchdays as an	209104 (Cambridge United Football Club)

important facility for the local community. However, if, as seems likely, the Cledara Abbey Stadium cannot be improved in a way that is financially viable, to safeguard the Club's long-term future, the Club will work with the Council and others to identify potential alternative sites to ensure that its current capacity does not constrain both the Club's and the city's wider ambitions.	
The Club supports the designation of the Cledara Abbey Stadium as an Area of Major Change and is supportive of the Draft Policy's recognition that development on the site would be supported. However, to be effective and to facilitate the improvement of the stadium, the policy needs to be flexible. The Club is concerned about the restrictive nature of some elements of the draft Policy. There is a need to add more flexibility to the draft Policy to ensure that the Club can make the very best use of the site in a way that is viable and sustainable. See proposed wording for policy in Appendix A of the accompanying attachment. The key aim of any potential stadium redevelopment would be to increase the capacity and number of fans able to attend games, while also enhancing the matchday experience through an improved hospitality offer, and encourage wider non-matchday use by the local community. These aspirations should be explicitly referenced and supported in the wording of the draft Policy.	209105, 209106 (Cambridge United Football Club)
Comment on criterion a). While a masterplanned vision for future development on the site is appropriate, there needs to be recognition that a degree of flexibility is required, and that this masterplan may not be delivered all at once, owing to viability and time constraints. As such, while reference to a wider masterplanned vision of the site is understood, there should recognition and allowance for flexibility built into the criterion to allow a phased development.	209107 (Cambridge United Football Club)

Comments on criteria b) - e). Cledara Abbey Stadium is already well served by existing transport infrastructure, and the Stadium also has access to Park & Ride services and is well connected to the wider transport system via established pedestrian and cycle routes. It is recognised that the movement of people on matchdays can cause disruptions. The Club would, therefore, be committed to bring forward further measures as part of any planning application to address this issue. However, it should be recognised that there are wider factors that impact the highways network, and any impact associated with the Club is typically restricted to a limited period of time on matchdays (circa. 25 days per annum). Therefore, rather than a blanket policy requiring any redevelopment to solve issues that go beyond the Club, we believe a nuanced approach should be taken. The Club believes that improvements to matchday traffic can be made through soft interventions and would commit to delivering these through a Matchday Management and Travel Plan associated with a redeveloped stadium (and the associated capacity uplift). These interventions would focus on promoting active travel, encouraging behavioural change to reduce private vehicle use at peak times, and improving overall travel planning for supporters. The Club would also commit to working proactively with the local authority to manage and enforce appropriate parking controls in the surrounding area, ensuring that matchday operations minimise impacts on nearby residential streets and deliver a more sustainable and coordinated transport strategy.	209108 (Cambridge United Football Club)
Comment on criterion f). The Club want to protect all trees on the site, but that simply might not be possible were the stadium to be improved. This should be explicitly recognised. The reality is that the	209109 (Cambridge United Football Club)

stadium is adjacent to open space. Tree planting will not 'soften 'the impact. Seeing the stadium from the open space will not be a surprise to anyone as it has been there for nearly 100 years.	
There is also a greater need for flexibility in the policy wording in relation to where development can take place, and the policy boundaries. Draft Policy S/AMC/AS explicitly recognises that the Cledara Abbey Stadium site is constrained to the west and south (through ecological assets, open space and allotments). However, there is little flexibility in the policy wording that allow encroachment into these areas if, on planning balance, the benefit of ensuring delivery outweighs the harm (which would be mitigated or compensated wherever possible). If there is limited encroachment on land that is protected by other Plan policies, the encroachment must be justified in accordance with those policies, and this does not need to be re-stated in the Policy. However, it should be recognised in this allocation that improving the Abbey Stadium and safeguarding the long-term future of the Club and its role in Cambridge will be given significant weight in assessing the impact of development.	209110 (Cambridge United Football Club)
The design led approach should not seek to limit development, but to make the best use of the site and ensure operational requirements of the Club can be fulfilled.	209111 (Cambridge United Football Club)
The Club's stated preference to date is to remain at a redeveloped Cledara Abbey Stadium. However, given the many and obvious constraints, the Owners and Board recognise that this might be neither financially viable nor deliverable. The Club is open-minded about relocation to a site elsewhere. In this situation, the Club would like to work in partnership with the Council and others to help identify an appropriate alternative site that meets both the Club and the city's needs. The Abbey Stadium is the	211868 (Cambridge United Football Club)

only home Cambridge United has ever known and, whilst securing the Club's future and maximising the moment of opportunity the city is now in may require a move, we know this is a very sensitive and emotive issue. Should a defined allocation not be forthcoming, it would be helpful to include a broad statement of support for the Club's relocation (in the correct circumstances) either within draft Policy S/AMC/AS, or within a bespoke policy that explicitly deals with the Club's relocation within the Plan. This would be in line with Paragraph 98 of the NPPF, which requires Councils to plan positively for the provision of cultural facilities.	
Should the Club find an appropriate alternative site, and develop a new football stadium on it, it would be appropriate for the current site to be redeveloped for residential or commercial use. In such a scenario, the need to protect the pitch as open space would fall away. As such, to make best use of the land (which is brownfield) the draft policy should recognise the development potential of the site should the Club find an alternative site. This approach would be consistent with paragraphs 104 b) and 124 of the NPPF. It is recommended that the Policies Map is amended to remove the protected open space designation and ensure the site's future development potential is not compromised if the Club needs to relocate.	211869 (Cambridge United Football Club)
Page 116, paragraph 1e should refer to Newmarket Road Park & Ride rather than Newmarket Park & Ride.	210522 (Cambridgeshire County Council)

Policy S/AMC/BC: Beehive Centre

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by local residents critiquing the allocation of the land for lab uses as the sector is in decline, and the development does not protect surrounding communities from loss of light. Comments were made by Historic England to make more specific reference to heritage assets. Cam Skate sought reference to community and leisure uses.

Further responses were made by local residents about overheating and urban heat island effects.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The redevelopment of the Beehive Centre is not an allocation of the Local Plan, they have already gained planning permission. The implications of it will be reflected in this area of major change to ensure mitigations are enabled for the public realm, pedestrian experience and suggested uses.
- Suggested amendments have been made to address comments from Historic England and Cambridge Past, Present and Future with respect to heritage assets.
- Pedestrian and cyclist movements have been reflected in the policy wording to ensure there is connectivity and safety for local residents in this area. Active travel is a priority for this area due its central location.

- Reference to the Transport Strategy has been tidied up in the policy wording in response to Cambridge, Past, Present and Future.
- Point 4b has been amended to address comments made by Cam Skate.
- Suggested changes from Railpen have been made where it is considered these provide greater clarity on the Councils' vision for this area.
- The urban heat island effect is managed by policy C/SD and S/DC which set out requirements to demonstrate how overheating is managed through the Sustainability Statement and how overheating is managed in buildings and the public realm through the cooling hierarchy.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Whilst there are no designated heritage assets within the site, the site lies immediately adjacent to the Mill Road Conservation Area. Any development of this site has the potential to impact upon the heritage assets and their settings. We understand that there is no HIA for this as it is a Policy Area. We welcome criterion 4 but recommend the addition of the word 'height'. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. We appreciate that the site has been granted planning permission by the SoS. However, the policy needs to be robust, should the permission not be implemented and alternative proposals come forward for the site.	210117 (Historic England)

The respondent expresses concern that the anti-car sentiment in planning policies has not been fully considered, particularly for car owners who commute and have independent children. They argue that restrictions on car use will lead to a less happy community, as cars enable 70% of residents to maintain their quality of life. The respondent believes that issues attributed to cars are symptoms of a larger problem, namely that the area is not a high-density city like London and cannot support a large population.	202705 (D Whant)
They suggest that if growth is necessary, it should occur in surrounding villages and towns, supported by a network of transport hubs. The respondent feels that Cambridge has lost its appeal due to development that has not considered long-term consequences.	202705 (D Whant)
The use of vitality and viability is unclear. The clarity of the policy needs to ensure the site's strategic role and planned evolution of the site.	203421, 203928 (Railpen)
The area is currently not very cyclist or public transport friendly. I would suggest better coordination between the retail park, beehive centre, and Tesco. Move shops to sites along Newmarket Road and parking to the back, so people could seamlessly access the shops from the bus stop instead of having to walk through an exposed parking lot. This is also a less historically sensitive area of Cambridge, so I support densification to provide much needed housing or office space.	203794 (A Chan)
More attention to urban heat islands and how areas of significant development work alongside existing housing must be a key factor here. The Beehive should never have been allowed to cause the impact that it did at outline planning and the Local Plan must protect homes especially those not in conservation area. The east especially shouldn't be taken advantage of - many communities use bikes but lack safe access due to urban sprawl and the retail park.	205340 (B Smith)

This is not a comprehensive statement that does enough to protect Silverwood Close from the loss of light and overwhelm by the planned buildings presented at the outline planning stage. I object most strongly to this, in part it's an enormous waste of land that would suit housing very well since lab-space is on the decline, and there is no protection to neighbouring residential buildings with clarity of height, noise and proximity to boundaries.	205388 (B Smith)
Frustration exists regarding the redevelopment of the Beehive, which lacks a residential component; a policy requiring mixed-use development for larger projects is suggested to address the city's housing needs.	207392 (Cambridge Past, Present and Future)
Whilst there are no designated heritage assets within the site, the site lies immediately adjacent to the Mill Road Conservation Area. Any development of this site has the potential to impact upon the heritage assets and their settings. We understand that there is no HIA for this as it is a Policy Area. We welcome criterion 4 but recommend the addition of the word 'height'. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. We appreciate that the site has been granted planning permission by the SoS. However, the policy needs to be robust, should the permission not be implemented and alternative proposals come forward for the site.	210117 (Historic England)
No mention of community, sports, leisure, culture or creative hubs within the policy which we see as integral to supporting the vitality of this area given its city centre location.	210563 (Cam Skate)

Policy S/AMC/EB: East Barnwell

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the policy area from the Cambridge Investment Partnership.

Historic England confirmed that there are no designated heritage assets near the site.

Comments were made by Sport England to set out that under the 23/04687/FUL sports provision was re-provided.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- Support noted.
- No comment noted from Historic England.
- In response to Sport England, the suggested amendments have been made.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
There are no designated heritage assets within the area or nearby. No comments.	210118 (Historic England)
Support the principles.	203403 (Cambridge Investment Partnership)

The East Barnwell area includes the site allocation S/C/BRN. For clarity, we advise you refer to the planning permission 23/04687/FUL and explain that the permission included the replacement of the sports provision to be lost as part of the planning permission 23/04849/FUL. This would demonstrate that the loss of these sports facilities has been assessed against paragraph 104 of the NPPF and that replacement mitigation provision has been secured.	209219 (Sport England)

Policy S/AMC/FBG: Fitzroy/ Burleigh Street/ Grafton Area

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There is broad support for the designation from ARU.

Comments were made by the Cambridge Liberal Democrat Group to include more reference to leisure provision.

Comments were made being critical of the negative preparation of the policy area, providing a shopping list of requirements rather than positive proposals.

Further responses were made by local residents about concerns about the urban heat island effect.

Historic England made representations to reflect more of the heritage assets in the policy wording.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- The policy area is drafted in a way to establish which land uses support the vision for the area and what the constraints are and what is needed to support development in this area. It is not worded to prevent development but support sustainable development in this location.
- Leisure provision is covered by policy point 1A.
- The suggested amendments from Historic England have been made.
- The urban heat island effect is managed by policy C/SD and S/DC which set out requirements to demonstrate how

overheating is managed through the Sustainability Statement and how overheating is managed in buildings and the public realm through the cooling hierarchy.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The site contains several designated heritage assets including the Arts Theatre Workshop and Store listed at Grade II* and 17 Fitzroy Street and 38 Newmarket Road both listed at garde II listed. Part of the Kite Conservation Area is included in the Policy Area. There are also numerous listed buildings nearby. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. We welcome criterion 1b, 7b and 8. The Policy should make more reference the role of heritage in the re-vitalisation of retail areas. See our Heritage Led Regeneration Toolkit | Historic England for further suggestions	210119 (Historic England)
Leisure use is missing from this policy so please add the following to Grafton Shopping Centre Point 4 “Retention of significant public leisure use".	202842 (Cambridge City Council Liberal Democrat Group)

Can this policy make reference to Fitzroy and Burleigh Streets' purpose as a focal point for local services to the immediately surrounding Kite community as well as an extension to the city centre. Please add that there should be priority given for retention of convenience shopping and larger anchor stores which serve both audiences	202842 (Cambridge City Council Liberal Democrat Group)
ARU supports this policy and development opportunities at the Grafton Centre. ARU particularly supports the specific reference to the site being suitable for uses associated with ARU's East Road campus. It would be an opportune area for further ARU based development, reinforcing the perception of an East Road campus and interconnectivity across the multiple hubs.	203991 (Anglia Ruskin University)
The policy is constructed in a negative manner. Rather than establishing a baseline that development within the AMC is acceptable, it establishes a shopping list of requirements, many of which conflict with the requirements of existing and emerging national policy.	207441 (Pioneer Group Ltd)
The policy fails to recognise the existing permission or flexibility in the use class order.	207441 (Bidwells on behalf of the Pioneer Group)
The site is at risk of heat island affect due to impact of labs proposed around the Grafton Centre. Concerns about the prevalence of science labs in the City Centre and impact on community and safety in the public realm.	208877 (R Lambert)
Can this policy make reference to Fitzroy and Burleigh Streets' purpose as a focal point for local services to the immediately surrounding Kite community as well as an extension to the city centre. Please add that there should be priority given for retention of convenience shopping and larger anchor stores which serve both audiences. Leisure use is missing from this policy so please add the following to Grafton Shopping Centre Point 4 "Retention of significant public leisure use".	202842 (Cambridge City Council Liberal Democrat Group)

Policy S/AMC/SCL: South of Coldham's Lane

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by local residents on impact on green infrastructure, chalk streams, connectivity, parking and safety.

Comments were made by Historic England requiring an HIA and requesting further detail on the heritage asset within and adjoining the site.

Comments were made by Friends of Cherry Hinton Brook about active travel connections, enhancing biodiversity and water safety around the country park.

Further responses were made by Cambridgeshire County Council regarding the impact on local pits.

Response to the main issues raised in representations

The Councils' response to the matters raised in the draft Local Plan (Regulation 18) consultation includes:

- A review of the policy structure and configuration to reflect the distinct four areas of the site allocation that are emerging through wider changes to the context of Cambridge East with the introduction of new Cambridge East Station, and setting out a clearer vision for where the biodiversity needs to be protected and enhanced on local wildlife sites and which parts of the site are suitable for redevelopment.
- In response to Historic England, amendments have been made to the supporting text to highlight the heritage assets adjoining the site
- In response to Cambridgeshire County Council, the policy wording has been revised to highlight the LNRS and show which areas have importance for green infrastructure and wider ecological enhancements and connection to wildlife corridors.

- In response to wider comments about restrictions to parking and selling food. Selling food is covered by licensing and is not the role of the Local Plan site allocation. The issues relating to parking will be picked up by a Transport Assessment supporting any future planning application and a policy I/EV: Parking and electric vehicles.
- In terms of comments relating to density, the building height has in this location has been informed by evidence in the HIA and also by the local character.
- In terms of concerns around impacts on chalk streams, policies in the wider plan include policies to require water supply and water quality consideration at the planning application stage.
- In terms of active travel and connections, wording has been added to the policy to improve connections between Tin's Lane and Coldham's Common and wider active travel connections.
- In response to Misson Street & BGO Newton Ltd, the policy has been restructured to better reflect the latest proposals.
- In response to concerns about site contamination including impacts on soils, wording has been added to the policy to ensure the mitigation of these issues.
- In response to Historic England, the wording has been amended to reflect the nearby heritage assets. A HIA has not been provided for this site as it is a site allocation from the Cambridge City Council Local Plan, and this is consistent across the Local Plan.
- The policy area has been restructured to make clear that there should not be impacts on the City Wildlife Site and protected open space. A separate section has been set out for this area to set out the requirements for ecological enhancement and recreation. Public access and safety has been added into the masterplanning section as well as flood mitigation to address representations from Friends of Cherry Hinton Brook. Active travel connection to Cherry Hinton, Coleridge and Romsey has been added to point 3g to address representations from Friends of Cherry Hinton Brook. In response to concerns raised about water safety, point 3f has been added to address concerns about public safety and water access in the Country Park.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**

Mill Road Conservation Area slightly overlaps this policy area along Burnside. Development within this area therefore has the potential to affect the significance of this asset including through development within its setting. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. Criterion c refers to building heights of no taller than 6 storeys. In the absence of a Heritage Impact Assessment this is inappropriate and should be deleted. This needs to be explored through an HIA and masterplanning. Delete reference to 6 storeys.	210120 (Historic England)
I object, I live very close to the start of the Tins pathway. An entry point here would be very difficult because the path is already quite busy. It would be impossible for any more cars to be using Burnside which is single file traffic. The last thing this area needs is a kiosk selling snacks. Changes to plan: Absolutely no parking. and nowhere selling food.	202697 (M Downs)
These ?20 metre high buildings are going to be cheek by jowl with houses on Wolsey Way and our garden on Orchard Estate. We will only a few feet away. They are much too high to be so close to a residential area and will dwarf the rest of the built environment. Local residents are not being kept informed on the results of the drilling tests, to see if it is even safe for foundations to be drilled. You have a rare chalk stream several metres downhill from this site. It is obvious the leachate will end up in the water.	201230 (S Williams)

Significantly improved developer-funded active travel routes should be designed in and built, and amenities should be expanded to enable local residential access. Provision should be made for a new rail/light rail stop on the railway line.	203829 (A Carpen)
We object to the proposed development of the lakes area because we do not feel sufficient thought has been put into the following: - access - the busy corner of where The Tins meets Brookfields and Burnside is already dangerous at peak times with all manners of transport and is an inappropriate site for the main entrance. - safety - since the plans were originally submitted a young person has drowned in the lakes. 24 hour access to the area without monitoring / security does not seem sufficient to prevent further accidents.	203771 (C Bone)
The application of a maximum storey height on buildings is inflexible when assessed in the context of other emerging spatial strategies and projects including East West Rail. The draft policy is also inconsistent with other parts of the draft Plan, including Policy S/C/SCL, and also with planning permission 23/04590/OUT. We propose that S/AMC/SCL paragraph 2c) should be amended.	204031 (Mission Street &BGO Propco Newton Ltd)
Policy S/AMC/SCL fails to take the following matters into account: The site proposed for the country park is severely constrained. Opportunities for public access have not been addressed. The part of the site previously ear-marked for public access is subject to flooding. Local water courses and bodies are vulnerable to pollution from toxic land fill. There is insufficient emphasis on the protection of flora and fauna. Management issues have not been given sufficient attention.	204669 (J McGill)
I do not think that the new plans for S/AMC/SCL South of Coldhams Lane take into account the detailed comments and recommendations made by local groups and individuals regarding the previous 2018 Local Plan. There are still many aspects which are vague and not showing how concerns will be	205152 (H Anderson)

addressed. Maintaining biodiversity, safety (including site supervision), future management, access (including vehicle parking and road safety), pollution and drainage issues are not properly outlined and could therefore open to misinterpretation if these plans go ahead.	
FCHCB have significant concerns about the policy for this AMC, as outlined in our full statement. For the urban country park: 1. Any public access must be strictly supervised, to avoid repetition of the 2024 fatality. 2. Access to the country park should prioritise active travel, given constraints on vehicle access and parking. 3. Proposals for governance and management to date need full revision 4. The risk of pollution of Cherry Hinton brook and the lakes from leakage/run-off from the land-fill site (containing highly toxic materials), must be made clear, along with the need for protection of the wildlife, evidenced by the designation of the area as City Wildlife Sites.	204667 (Friends of Cherry Hinton Brook)
Point 1a. Add: retain as much biodiversity and green space as possible, since this parcel of land is designated as both City Wildlife Site and protected open space.	210441 (Friends of Cherry Hinton Brook)
Point 1c. Reword first sentence of this point as follows; "In the area to the south-west: deliver a new urban country park through enabling periodic, highly supervised public access that will ensure the safety of all visitors whilst maintaining the important biodiversity and ecosystems of this wetland area. "	210442 (Friends of Cherry Hinton Brook)
Point 2a. Add after 'public access' the following phrase "... (covering both safety of the public and protection of wildlife) ....".	210443 (Friends of Cherry Hinton Brook)

Point 2d. Add to last sentence: .... streams, "as well as the variability in rainfall and water table levels which are having a major impact on drainage and periodic flooding of associated residential areas (such as Burnside and Brookfields)". This is important as the current proposal for the main entrance to the country park is in an area prone to flooding and immediately adjacent to the brook.	210444 (Friends of Cherry Hinton Brook)
We propose an additional Point f, since the proposal does not address access from the south of the AMC: "Ensure a safeguarded active travel access route from Cherry Hinton, Coleridge and Romsey wards and the city centre, to help to eliminate traffic congestion and parking in associated residential areas to the south of the Area of Major Change".	210445 (Friends of Cherry Hinton Brook)
In relation to the Supporting Information section: This recognises that “Outline planning permission was granted in January 2025 for offices, research and development, along with delivery of a country park.” but fails to mention the numerous issues that have been raised since then, including (a) that 72 conditions have to be met before the application for the northern parcels of land can go further because the construction is proposed for a location that is a toxic land fill site, and (b) that the area proposed for public access and a country park is highly dangerous (evidenced by the 2024 fatality in the lakes). It is irresponsible of the Local Plan to imply that this area would be suitable for unlimited public access and what most people would consider a normal country park. We request that the Supporting Information section provides more information and appropriately flags up the constraints of this location. We have provided our objection to the 2024 planning application as an uploaded separate document.	210446 (Friends of Cherry Hinton Brook)

Recommend the wording of the policy be expanded to include strengthening of the important wildlife corridor and delivery of Local Nature Recovery Strategy priority habitat and to take note of local wildlife sites.	210610 (Cambridgeshire County Council)

Summaries of Representations: Sites Public Realm Improvement Areas (PRIA) in Cambridge

Policy S/PRIA: Public Realm Improvement Areas (PRIA) in Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Two main areas were highlighted by comments seeking further policy development in the plan.

The Elizabeth Way Bridge and Underpass(es) cultural hub project was highlighted as an opportunity for public realm improvement, making the area more accessible for active travel but also opportunities for cultural provision.

The Riverside Residents Association and others highlighted the Riverside Area Vision, proposing that the area needs careful planning and investment to make it safe and attractive for both pedestrians and cyclists, especially given predicted traffic increases from converging Greenways. Development should be supported if it aligns with the Riverside Vision and emerging thinking on the area's future potential as a strategic asset for the City as a whole.

Another comment welcomed the Mill Road policy area.

Anglian Water and Cambridgeshire County Council considered the policy should reference sustainable drainage. Historic England welcomed the aims of the Policy. Cambridge Past Present and Future considered it needed to be supported by a heritage strategy. Cambridgeshire and Peterborough Combined Authority highlighted the need to consider impacts of the policy on the functioning of the transport network. There were also comments highlighting the need to support active travel.

Railpen suggested amendments of the policy, proposing that developers could prepare and submit steering documents to guide the development of an area that could be taken account of in planning applications.

Response to the main issues raised in representations

Comments regarding specific PRIAs have been addressed under these individual policy areas and therefore are not address here.

The supporting text of the policy now makes reference to the historic environment and should be read alongside the relevant policies in the Great Places chapter of the Local Plan.

The policy does not prioritise place making over vehicle movement, especially at junctions, as suggested by the representation. The policy is clear that a context led approach is required for development proposals in these locations, which reflect the needs of the area. This may include transport and movement as well as placemaking matters such as the quality of the public realm and the improvement of existing shop fronts.

SUDs and water management is not specifically referenced in the policy as this is covered by other policies within the Local Plan. However, the broad principle of the representation is noted and broadly supported elsewhere in the plan.

The policy has been amended to reflect that facilities and amenities should extend beyond the provision of shops and services. However, part 3 of the policy continues to require a policy framework to guide overall change in these areas as a ‘steering document’ is not a commonly recognised term.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
S/PRIA/EG and Elizabeth Way Bridge and Underpass(es) cultural hub Project: Support development within the designated PRIA of a Cultural Hub offering accessible programme. The area surrounding the bridge and underpasses is lacking a sense of place. Introduce community, sports and cultural programme and upgrades to the public realm to promote safety and identity. Strengthen active transport N/S and E/W connections around the infrastructure for better connectivity, prioritising residents and visitors. Encourage movement along desire lines to and across the river, for local wards Petersfield, Market, Abbey and Chesterton.	201990 (Skateboard Cambridge CIC) 204004 (L Cooke) 203880 (B Greig) 202564 (J Neal) 204049 (A Giarlis) 203135, 201833 (NEUBAU Architecture Ltd (B Lenz, Architect)

	204242 (Cambridge Junction / Create Cambridge) 205237 (University of Cambridge) 201800 (NEUBAU Architecture Ltd)
I support the development within the PRIA of a cultural hub offering an accessible programme. I oppose demolition of the underpass. RIBA guidance puts avoiding demolition as the number one way to improve sustainability of development. This is due to embodied energy and intensive energy and CO2 output required for demolition works. Therefore, I support the regeneration of the underpass into a cultural hub, using inventive architectural interventions. This would strengthen active travel and improve safety due to increased footfall. I would also improve place making and community.	204329 (K Fisher)
Riverside is a vibrant connected urban riverfront destination with city-wide benefit that celebrates Cambridge's relationship with water. Riverside unites Stourbridge Common and Midsummer Common through an elegant inclusive promenade that enhances community life, local heritage and ecological sustainability, and makes walking and cycling joyful experiences. We recommend that Riverside becomes its own Public Realm Improvement Area, focusing on Environment & biodiversity, Connectivity, Character, Heritage & identity, Safety & accessibility and Vehicular movement & parking.	203766 (Cambridge Green Party)
Riverside is a vibrant connected urban riverfront destination with city-wide benefit that celebrates Cambridge’s relationship with water. Riverside unites Stourbridge Common and Midsummer Common	204631 (M Cleminson)

through an elegant inclusive promenade that enhances community life, local heritage and ecological sustainability, and makes walking and cycling joyful experiences. It should become a PRIA focusing on Environment & biodiversity, Connectivity, Character, heritage & identity, Safety & accessibility and Vehicular movement & parking The existence of a Heritage Trail covering both Riverside and the Eastern Gate should be noted – highlighting the historical and cultural importance of both these areas. Please see attached information.	
The Riverside Area Vision sets out objectives for character, identity and heritage, connectivity, creating places that are safe, accessible and inclusive with three activation spaces and integrate the environment and enhance biodiversity. It needs careful planning and investment to make it safe and attractive for both pedestrians and cyclists, especially given predicted traffic increases from converging Greenways. We propose a community-driven review to shape a future Riverside Area Vision which highlights opportunities to make the area a vibrant attraction for Cambridge residents and visitors. Suggest - Proposals within the Riverside Area will be supported if they align with the Riverside Vision and emerging thinking on the area’s future potential as a strategic asset for the City as a whole.	211845, 211846, 211847, 211848, 211849, 211850, 211851, 211855, 211856, 211858 204440 (Riverside Residents Association)
I propose that Riverside should be designated PRIA for the following reasons: 1. It is a key link in the City's sustainable transport plans, as the entry point to Cambridge for three Greenways. 2. its unique stretch of urban riverfront that connects three green spaces and combines distinctive heritage assets with unspoilt river views. 3. Work is underway with GCP to realise the area's potential as a beautiful destination with city wide benefit.	204980 (A Sheedy)

The changes that are planned need to align with local plan policies and the only way to ensure this is to include it in the Local Plan.	
I welcome the draft policy for Mill Road and strongly support its focus on protecting independent shops and creating a safer, low-traffic, people-centred environment. These measures are essential to maintaining the area's distinctive character and supporting its long-term vitality. However, with the traffic filter now in place for several months and no accompanying public realm improvements yet delivered, I urge the Council to begin implementation promptly. Early action on pavements, crossings and streetscape upgrades would show commitment to the plan's aims and start bringing real benefits to residents and businesses.	200984 (F Sanchez Garcia)
I support The Cambridge Cycling Campaign submission. New developments must include adequate links to the surrounding area and links should be part of the Cambridge wide infrastructure without making longer journeys tortuous and complex. Provision should account for future growth in active traffic, climate change strategies and future developments	205009 (A Brown)
The public realm improvement areas should also offer the opportunity to achieve betterment through provision of SuDS and water reuse. Such measures are not implicit in the policy or subsequent site-specific policies, and we consider this should be positively expressed in this overarching policy.	210191 (Anglian Water Services Ltd)
We object that this policy does not include any reference to heritage (which is why we believe that a Historic Environment Strategy is required as part of the Local Plan).	202814 (Cambridge Past, Present and Future)
We welcome the general aims of this policy. Historic England focuses on using the power of heritage to secure vibrant and sustainable futures for places with historic character so that generations to come can continue to enjoy them. Our High Streets Heritage Action Zones have maintained, restored and brought	210121 (Historic England)

buildings back into use for local communities and businesses. See our Heritage Led Regeneration Toolkit | Historic England for further suggestions and case studies. We recommend that this policy should include provision for the re-instatement of historic shop fronts.	
I support The Cambridge Cycling Campaign submission. New developments must include adequate links to the surrounding area and links should be part of the Cambridge wide infrastructure without making longer journeys tortuous and complex. Provision should account for future growth in active traffic, climate change strategies and future developments	205009 (A Brown)
The Plan identifies specific locations as Public Realm Improvement Areas that would “benefit from a holistic approach to any future development that comes forward, to provide policy guidance for development that also improves public transport access and infrastructure delivery and seeks improvements to the public realm.” Those public realm improvements reference ‘place making’ over vehicle movement, especially at junctions.” That policy approach will need to be revisited in the light of the forthcoming Greater Cambridge Transport Strategy and any potential impacts the policy would have on the functions of the transport network.	205458 (Cambridgeshire and Peterborough Combined Authority)
There is strong support for embedding flood-alleviation principles into micro rain gardens and small parcels of land within new developments, such as spare or under-used corners. Their role in managing surface water and reducing flood risk should be made more explicit. There is also an opportunity to design small green spaces in ways that help residents understand and value their function in preventing flooding. A key question remains whether growth funding for this type of intervention will be distributed across Greater Cambridge as a whole or primarily targeted at areas experiencing new development.	211007 (Cambridgeshire County Council)

Part 1(c) of policy S/PRIA should be amended to clarify the reference to local shops, as it is currently not sufficiently defined and may not apply uniformly to all Public Realm Improvement Areas (PRIAs). Suggest: ‘help sustain or deliver facilities and amenities appropriate to function and character of the area’. The following would provide a more practical and flexible approach to guiding change while avoiding unnecessary additional policy layers: Part 3 should read “where proposals provide opportunities and potential challenges, site promoters should develop a steering document, approved by the planning authority as part of a planning application to promote and guide overall change during the life of the plan for the relevant area” Para 3.1.156 should read “it is recognised that while development can improve an area’s attractiveness it can also challenge the area’s character, in such circumstances site promoters are encouraged to develop a steering document to guide the area’s reconfiguration. Site specific policies requirements are also included, to highlight key local characteristics along with short and long-term opportunities and area aspirations that development should take account of as part of any planning application.”	204029 (Railpen)

Policy S/PRIA/CRP: Cambridge Retail Park

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were raised about protecting the strategic cycle route linking Riverside, the Beehive and Petersfield, and to safeguard land for a future bridge at Coldham's Common. Camcycle raised concerns about the lack of permeability.

Comments were made by local residents about specific improvements include a direct connection to Cambridge Railway Station, Chisholm Trail and bus services. Cam Skate requested to include leisure, and community uses in the policy wording.

Comments were made by local residents to improve design and heights and integrate with light rail network.

Further responses were made by Railpen on the alignment with nearby sites and the provision of infrastructure and a movement strategy.

Comments were made by Historic England about reflecting local heritage assets.

Response to the main issues raised in representations

The Councils' response to the issues raised in the draft Local Plan (Regulation 18) consultation includes:

- Suggested amendments have been in response to comments raised by Historic England.
- Wording has been added to the policy to protect the cycle route linking Rivers, the Beehive and Petersfield.
- Some of the Railpen suggestions have been incorporated into the policy wording where this aligns with the Council's approach to the site and the preparation of consistent policies.
- There are not currently plans for a future bridge at Coldham's Common and therefore the safeguarding wording has not been added to the policy wording.

- It is too premature to reflect any plans for a light rail network. The issue is currently being explored by the Cambridgeshire and Peterborough Combined Authority.
- Point 1a has been revised to include reference to leisure and community uses to address representations from Cam Skate.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Whilst there are no designated heritage assets within the site, there are two listed buildings on the other side of Newmarket Road – 247 Newmarket Road and Cambridge Gas Company War Memorial, both listed at grade II. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy.	210122 (Historic England)
It is essential we protect the strategic cycle route linking Riverside, the Beehive and Petersfield, as well as safeguarding land for a future bridge to Coldham's Common.	201999 (D Langley)
Development must protect the strategic cycle route linking Riverside, the Beehive and Petersfield.	202297 (R MacDonald), 202514 (H Brown), 202629 (A Lawrence), 202888 (J Williams), 203207 (G Orwell), 203322 (A Hoare),

	203344 (S Hughes), 203658 (V Ashton), 205150 (J Grantham), 205220 (K Brightwell), 205324 (R De Beaux), 205374 (S Nuttall), 205380 (A Williams),
The site should also safeguard land for a future cycle/pedestrian bridge to Coldham's Common.	202297 (R MacDonald), 205220 (K Brightwell), 205324 (R De Beaux), 205374 (S Nuttall), 205380 (A Williams),
Active travel needs to be prioritised from the outset, with provision for walking & cycling being mandatory.	203322 (A Hoare), 203684 (T Preud'homme)
Section 1.d and 1.e talk about active travel mostly within or around the site; it should also be a requirement for development to integrate with public transport for travel to and from the site. This is important as at present the area is poorly served by public transport. Specific improvements would be to ensure: Direct connection to Cambridge Railway Station; Direct connection to the Chisholm Trail; A wider range of Bus services, adding services perpendicular to Newmarket Road.	203585 (P Tribble)
Protect the strategic cycle route linking Riverside, the Beehive and Petersfield. Safeguard land for a future bridge to Coldham's Common. Requirement for the provision of trees along Newmarket Road and open space and amenity space. No/minimal parking provision.	202514 (H Brown) 20888 (J Williams) 203344 (S Hughes)

	203207 (G Orwell) 204562 (D Potts) 204590 (R Hoadley) 202629 (A Lawrence)
Expansion must unlock better walking, cycling and public transport for existing residents Limit car access between Cambourne and Cambourne North Set binding mode share targets Require early delivery of the main active travel network and crossings	202901 (J Williams)
Active travel needs to be prioritised from the outset, with provision for walking & cycling being mandatory. It should require provision of a protected, continuous and direct cycle route linking Riverside, the Beehive and Petersfield. It should also require safeguarding of land for a future pedestrian and cycle bridge across the railway to Coldham's Common	203322 (A Hoare)
Feel very positive with East gate ambitions and ideas. Will improve pedestrian and cycle access to Health and other facilities East/ West of roundabout. There is a need to ensure all current planning applications consider the ambition. Suggest cycle lanes and pathways should ensure they connect to current Newmarket road, (west side), ones which could be improved and greater use of Walnut Tree Ave made. If there is key development at Halfords site consideration needs to be given to impact on pedestrians and cyclists.	202289 (G Wrycroft)
Can this be part of a much wider masterplan that requires a significantly improved standard for building design (again incorporating the findings in neuroarchitecture) and also incorporating / making provision for a new rail/light rail stop at Coldham's Lane Bridge. A station at the bridge by the rail junction to the	203742 (A Carpen)

Cambridge-Newmarket Line would enable significant public transport access to the retail park, to the revamped Beehive sci-tech development, and to the Abbey Stadium, as well as for residents of NW Romsey. See https://cambridgetownowl.com/2023/07/15/why-the-beehive-redevelopment-plans-need-a-rail-station/ note it would enable closer rail access to the Grafton.	
Recommends amending part 1(b) of policy S/PRIA/CRP for clearer integration objectives with the Beehive Centre and the surrounding neighbourhoods; For part 2(a and c), Railpen suggests replacing 'policy framework' with 'steering document(s)' for practicality and clearer urban relationship guidance. In part 3(a and c), Railpen highlights the need to acknowledge the railway line in east-west connections and remove ambiguous references to the Greater Cambridge Partnership. Railpen requests clarity on the 'overarching development and environmental strategy framework' in para 3.1.159, proposing a reference to a 'steering document' instead. Provides detailed wording suggestions.	204083 (Railpen)
The land use should retain retail and ensure that cars can still access the site and not focus too much on active travel and public transport.	203801 (A Chan)
The Retail Park is presently of low quality as public realm, is dominated by car parking and is unattractive for pedestrians. I would support sensitive development (including retail, food, etc) to increase the amenity of the site; and efforts to make it safer and more pleasant as a through route for pedestrians.	205067 (N Spenley)
As with Beehive, the site at Coldham’s Lane, Newmarket Road and Henley Road are close to residential properties including Silverwood Close, New Street which are impacted by the Beehive.	205474 (B Smith)

Height Mers here as does overcrowding, which is not made sufficiently clear, nor is the reduction of traffic (pre-planning discussions showed two multi-storey car parks). Care must be given to traffic on Coldhams Lane which has increased since Mill Road bus gate was introduced. In summary the Local Plan must protect homes from the problems of obfuscation and height that have arisen during Beehive planning applications.	
No mention of community, sports, leisure, culture or creative hubs within the policy which we see as integral to supporting the vitality of this area given its city centre location.	210562 (Cam Skate)
Cambridge Retail Park is one of the most car-dominated sites in the city, yet it sits between dense residential areas and along key walking and cycling desire lines. Its redevelopment is a critical opportunity to reduce short car trips and address fragmented networks. The Plan refers to improving permeability through the site but does not explain how this will be achieved in a location defined by railway severance. Policy S/AMC/BC should be amended to include: ● A requirement for a protected, continuous and direct cycle route through the site that avoids conflict with turning vehicles and aligns with strategic desire lines; ● A requirement to safeguard land and secure delivery mechanisms for a future pedestrian and cycle bridge across the railway to Coldham's Common; and ● A requirement that permeability for walking and cycling is mandatory rather than encouraged, with multiple direct connections beyond the site boundary.	209082, 209083, 209084 (Camcycle)

Policy S/PRIA/EG: Eastern Gate

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments received focused on two main areas.

St Matthews Centre, Sturton Street, Cambridge was identified in previous HELAA assessments, causing concern for future impact on the community if it was to be considered. Comments requested not to allocate the site, siting the importance of the local amenity space, and previous planning refusals.

Ther were a large number of comments supporting the Elizabeth Way bridge and Underpass(es) cultural hub project. There were objections to the demolition of the roundabout and underpass, opportunities to create a cultural hub, with better connectivity for active travel, space for cultural activities, and an improved urban environment.

There was a suggestion to widen the boundaries, both north to Riverside and west to include the entire ARU Campus along both sides of East Road, and to include locations like Mercers Row, or to extend to the riverside.

Comments supported the re-establishment of the historical local centre and high street function of Newmarket Road, with a range of attractive shop fronts, cafes and restaurants.

Historic England highlighted the historic environment issues in the eastern gate area that would need to be considered. Other comments said that the neglected heritage of the area must be revived and become available for use by the community and wider public.
Railpen sought a change to the current policy wording of part F, as integrate positively with the adjacent areas is not sufficiently clear or measurable as a policy objective.

Response to the main issues raised in representations

St Matthews Centre, Sturton Street, Cambridge was not allocated in the Draft Local Plan but was identified in previous HELAA assessments. Whilst the HELAA sets out the reasons for assessing the site on the grounds of suitability, availability and achievability, the HELAA Red scores are noted, and the site has not been put forward in the Proposed Submission Local Plan.

Responses highlighted an opportunity to explore the extension of the policy area (PRIA/EG) to incorporate Elizabeth Way up to and beyond the river. The objectives would be consistent with the wider plan objectives and context of policies related to WS/CH: Cultural and creative hubs, Policy J/AW: Affordable workspace and creative industries, Policy BG/EO: Providing and enhancing open spaces, Policy GP/QP: Establishing high quality landscape & public realm, Policy CC/SD: Sustainable development and the climate emergency, Policy WS/CF: Community, sports and leisure facilities, and Policy I/ST: Sustainable transport and connectivity.

Proposals set out by The Underpass Project, including the Founding Principles are recognised as seeking to revitalise and improve the PRIA, and align with the proposed policy. Whilst the Local Planning Authorities are supportive of the objectives outlined for the project, the PRIA is currently the appropriate type of allocation to achieve the aspiration of the policy and enable opportunity to secure funding and other initiatives through community engagement and participation with stakeholders. The boundary of the policy

area has been amended to reflect the boundary identified as opportunity for improvement within The Under Pass Project, and wording has been amended to incorporate further benefits of the area including improving access to culture offers, providing spaces for creative arts, improving the public realm amenities and landscape, biodiversity and improving health and wellbeing.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
St Matthews Centre, Sturton Street, Cambridge (HELAA Reference 59405) Would be a disaster for this community. Site was given an Overall Score of 'Red'. The exclusion of the site must be permanently enforced. That will protect our vital, extremely limited and increasingly pressurised local amenity space - noting St Matthew's Piece as the only public park in North Petersfield. Unambiguous evidence of this need lies in the sequence of five Planning Refusals since 2021 (none appealed), each pertaining to this area: 25/0432/TTPO, 24/0413/TTPO, 23/0119/TTPO, 22/0271/TTPO, and (most significantly) 20/04514/FUL.	201191 (K Herron), 201192 (R Isaacs), 201193 (J Linney), 201194 (S Bjornson), 201195 (A Lindsay), 201196 (B Smith), 201198 (S Schofield), 201199 (L Kirsop), 201200 (N Adamson), 201201 (B Greig), 201202 (C Horne), 201204 (S Cracknell), 201205 (S Moss), 201206 (G Glover),

	201207 (G Archer), 201209 (B Sylvester-Bradley), 201210 (J Selby), 201211 (R Williams), 201212 (J Chapman), 201213 (P Salin), 201215 (U Stubbings), 201216 (E van Zwanenberg), 201217 (G Haraldsdottir), 201218 (D Schwarz), 201219 (H Schwarz), 201220 (S Salin), 201257 (A Erdil), 201259 (I Harvey), 201262 (L Tubb), 201263 (R Mills), 201264 (C Spooner), 201265 (F Lyall Grant), 201329 (L Franks),

	201401 (J Wright), 201423 (C Aman), 201427 (J Bradley), 201454 (T Neal), 201469 (Cllr R Robertson), 201513 (B Greig), 201741 (J Johnson), 201743 (J Johnson), 201816 (K Russull), 201879 (R Rozier) 203768 (Cambridge Green Party (R Comins, Research Officer)) 203600 (N Glegg) 202935 (Cambridge Glenys Self) 203420 (Federation of Cambridge Residents' Associations (W Blythe)) 201359 (JV Neal), 201187 (J Neal), 201188 (L Kelly),

	201189 (J Murphy), 201190 (B Cijffers), 201270 (D Storey), 201271 (C Carpenter), 201273 (J Ladlow), 201285 (C Douglas), 201289 (J Wickerson), 201290 (Cambridge glenys self), 201291 (Cambridge GRT Solidarity Network), 201292 (J Connett), 201320 (J Davey), 201328 (J Franks), 201553 (H Phillips), 201840 (G Kent), 201866 (J Hurst), 201960 (P Watson), 201965 (A Furlong), 205573 (J Ord), 205654 (S Buckingham), 207648 (Duxford PC)
Any planning should preserve the existing green space and prevent the felling or reduction of trees on St. Mathews Piece, with a defined exclusion zone to mitigate potential impacts on nearby buildings. The proposed density of developments appears incompatible with policies regarding green space,	202529 (A Brown)

biodiversity, and tree canopy. Developments in the Eastern Gate zone must not exacerbate traffic issues on New Street, which currently serves as a shortcut between Newmarket Road and East Road.	
Part of this site lies within the Riverside and Stourbridge Common Conservation Area. There are also several grade II listed buildings including the Church of St Andrew the Less, 247 Newmarket Road and Cambridge Gas Company War Memorial. There are numerous listed buildings nearby. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. We welcome criterion 2c and paragraph 3.1.162.	210123 (Historic England)
The boundaries of the Eastern Gate area are inappropriate. They fail to recognise the integrity of the Riverside neighbourhood area, which includes all streets from Riverside south, such as Abbey Road, Riverside, Priory, Saxon and Beche Roads, River Lane, and the CHS estate. But even more strange, there is no discussion of the ARU campus. The recent acquisition of the Mackays site on East Road suggests that a Master Plan is needed, either within or separate from the Eastern Gate. Widen the boundaries significantly, both north to Riverside and west to include the entire ARU campus along both sides of East Road.	201794 (Cambridge Group of the Ramblers, J Tuffnell, Secretary)
Support S/PRIA/EG Elizabeth Way bridge and Underpass(es) cultural hub project: I support this project. I object to vehicle-led transport strategies and oppose the demolition of the roundabout. I support safer, better connectivity for pedestrians/cyclists and a multi-disciplinary urban	201991 (Skateboard Cambridge CIC (P Elbro, Director)

design strategy which: Creates a cultural hub in and around the infrastructures for cultural, recreational and commercial use, coordinates Transport and bus lanes with urban realm design, encouraging pedestrians/cyclists desire lines N/S towards the river, and promotes a sense of place with priority use for residents and visitors.	204228 (A Giarlis) 204229 (NEUBAU Architecture Ltd B Lenz, Architect) 204336 (K Fisher) 204009 (L Cooke) 204352 (K Fisher) 204388 (K Fisher) 204245 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204212 (L Cooke), 205243 (University of Cambridge)
S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) cultural hub project, I support proposals that seek to increase and intensify planting and biodiversity within the S/PRIA/Eastern Gate. This includes areas above and adjacent to the Elizabeth way bridge, landscaped areas within the East Road underpass, and improvements along the Newmarket Road, including new hedges and trees planted to separate pedestrians and cyclists and other active transport users, from cars. This is a very recent project (2025), and I support development within the designated S/PRIA/EG of a Cultural Hub offering	204321 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204431 (K Fisher), 205265 (University of Cambridge)

accessible Community-led Cultural, recreational and commercial uses, to promote a sense of place and identity for the Elizabeth Bridge, Underpass(es) and environs.	
Support regeneration of the bridge and adjacent underpasses within the S/PRIA/EG With reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) cultural hub project, I support proposals that seek to regenerate and open for use, the empty storage facilities underneath the Elizabeth bridge and within the underpasses. This would enhance the area's vitality and use and benefit from the existing pedestrian and cyclist footfall along the river promenade.	204320 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204430 (K Fisher)
The St Andrew the Less Community Project supports plans for improvements to the Eastern Gate and encourages an addition: 1.g. celebrate and enhance the existing heritage, recognising that heritage can increase pride in place and connectedness for communities. The heretofore neglected heritage of the area must be revived and become available for use by the community and wider public. The development of a heritage trail will also contribute to the vibrancy of this area and Riverside.	204739 (NEUBAU Architecture Ltd (B Lenz, Architect) 204549 (The St Andrew the Less Community Project) 204825 (A Sheedy)
I strongly support the re-establishment of the historical local centre and high street function of Newmarket Road, with a range of attractive shop fronts, cafes and restaurants. Making the road a single carriageway and tree line promenade should be considered and linking previous historical north-south crossings.	204882 (A Sheedy)
The Eastern Gate area should be extended to Mercers Row, to include the historical streets of Oyster Row, Garlic Row and should do everything to return these streets to residential streets and eliminate the rat run from commercial vehicles.	207546 (A Sheedy)

Proposed site plan of S/PRIA/EG - extend the red line boundary I support the variation / extension of the red line boundary to include the East Road Roundabout ‘Underpass’ and also the whole of the Elizabeth Way bridge (above and below) incl adjacent public realm, landscaped areas and highways, North and South of the river Cam (Walnut Tree Avenue, Cutter Ferry Path, Cutter Ferry Close a.o.) (as submitted by the Elizabeth Way bridge and Underpass(es) project)	204426 (K Fisher)
Support Safer and more comfortable travel: I support any improvements to create a more comfortable and simplified pedestrian movement along the Newmarket road/East Road/Elizabeth Way and roundabout, prioritising pedestrians and cyclists, providing safer junctions and analysing desire lines for better connectivity between adjacent wards and the river.	204409 (K Fisher) 204303 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead))
I do not support the planned demolition of the underpass, and it was rejected by a majority of respondents (refer to GCP public consultation process) Demolition is not a viable or sustainable solution for the transport problems. I support alternative options brought forward which would regenerate the infrastructure and coordinate it with other as-found 70s leftover spaces, creating a public realm and cultural hub with better access and manoeuvrability for pedestrians and cyclists to move between the adjacent wards and the river.	204273 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204384 (K Fisher)

Oppose plans to demolish the Newmarket Road and East Road and underpass: I object to any plans proposing the demolition of the East Road Roundabout underpass, which would be an unsustainable loss of a public space. The underpass contains a thriving biodiverse landscape and also has great potential for adaptation as a public common, to include active landscaping, street furniture, skating, exhibitions, workshops and other cultural and public engagement.	204311 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204423 (K Fisher)
Oppose plans to demolish the Elizabeth Way Roundabout, which would be an unsustainable loss of a public space. The underpass contains a thriving biodiverse landscape and also has great potential for adaptation as a public common. We support the Underpass and the Elizabeth Way bridge cultural hub project, supporting proposals that seek to regenerate and open for use, the empty storage facilities underneath the Elizabeth bridge and within the underpasses. This would enhance the area's vitality and use and benefit from the existing pedestrian and cyclist footfall along the river promenade.	203767 (Cambridge Green Party (R Comins, Research Officer))
Support proposed extended site plan S/PRIA/EG I support a phased approach to planning, build and operations which seeks to address the imminent transport issues as a first priority. Following this, any plans should accommodate active modes of transport within the proposed multi-disciplinary urban plan, which seeks to re-imagine this area within the S/PRIA/Eastern Gate as a cultural hub. (as submitted by the Elizabeth Way bridge and Underpass(es) project)	204317 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204427 (K Fisher)
Support gateways / entry points to residential neighbourhoods: I support any improvements to create an urban gateway/sense of arrival in the city via the Elizabeth Way and the Newmarket Road. I support a	204308 (Cambridge Junction / Create Cambridge (M

change in perception of the hierarchy between cars and other transport users, contributing to lower speeds and improved safety and visibility for pedestrians and cyclists, elderly residents and children.	Burman, Artistic Director & CEO / Co-lead)) 204410 (K Fisher)
Comment 1c - public realm improvements: I strongly support public realm improvement that will generate a sense of place and safety including lighting, street furniture and new urban programme and uses for this neglected area.	204367 (K Fisher)
Comment 1e - better visual and physical connections: I strongly support better connectivity and signage/ wayfinding for residents and visitors. Active and landscaped transport networks linking adjacent wards with the river will help regenerate neglected pockets within the urban realm, making them accessible for public use.	204373 (K Fisher)
I support the development of a cultural Hub within the designated PRIA, offering a mix of accessible programmes and open access active space in the public realm, particularly on, in and around the Elizebeth Way Bridge. The area has its own identity and is well used, the architecture is of historic significance and many of the spaces are unique. I am in favour on introducing space for community sports and cultural programming alongside the development of some of the existing active transport link and better connections both East/Wast and North/South. I am in favour of keeping the underpass. Issue not raised previously. we are in desperate need of community, youth and arts spaces as well as workshops, storage and experimental space for supporting the city's cultural life. The Elizebeth Way Bridge and Underpass has a range of unique spaces within and around its structure that have the potential to transform access to arts and culture across the North and East of the city. Especially if these are run in conjunctions with existing arts events and organisations.	204294 (T Woodcock)

Vehicular Traffic along Newmarket Road and East Road and underpass: I support the redevelopment of Newmarket Road pedestrian and cycle paths, and the adaptation of Elizabeth Way underpass as a public common. I support the re-design of the car-dominated transport roundabout to include cycle lanes and four required pedestrian & cyclist crossings, which prioritise pedestrians and cyclists and integrate practical and desired lines for better N/S and E/W connectivity.	204300 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204407 (K Fisher)
Better connectivity: I strongly support better integration of pedestrian and other active transport modes with this car-dominated infrastructure, as well as prioritising pedestrian and cyclist desire lines	204255 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204364 (K Fisher)
support: Comment relating to an urban design led approach to S/PRIA/EG with reference to the Elizabeth Way bridge and Underpass(es) cultural hub project, I strongly support an urban, multi-disciplinary design led approach which seeks to resolve transport issues with a comprehensive strategy that integrates transport with urban disciplines. Any design proposals should respect the conservation character of adjacent wards and offer sustainable solutions to re-invent the neglected 70s infrastructure.	204297 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204403 (K Fisher)
On site provision of functional public spaces and nature: with reference to the Elizabeth Way bridge and Underpass(es) cultural hub project, development proposals should use S106 or other public funding opportunities to improve on the type and diversity of public realm spaces allocated for spontaneous and non-programmed outdoors recreation, regenerating leftover or neglected highways and public spaces and other opportunities for hard landscaping, as well as re-introducing nature, suds and raingardens.	204293 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead))

Shared highways surfaces should prioritise use for active modes of travel and encourage active engagement from a diverse local community, by increasing street furniture for seating, creating opportunities for urban sports and active landscapes, to encourage integration of young people and to promote an active, outdoors lifestyle. The needs addressed should reflect the demands of local residents and local businesses, in order to generate a local neighbourhood public realm strategy, reflecting a diverse resident demographic.	205260 (University of Cambridge Z Svendsen, associate professor) 204400 (K Fisher)
Support: public realm improvement area opportunity: with reference to the Elizabeth Way bridge and Underpass(es) cultural hub project, I support the regeneration and transformation of this neglected transport infrastructure, to realise the potential of underused spaces for sustainable redevelopment, and to provide much needed community, cultural and sports uses. This should include a range of ages and users including skate friendly seating, natural shelter, bicycle parking, increased street lighting and active landscapes, access to water as well as safe facilities particularly for women including toilets within F+B offerings.	204290 (Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead)) 204396 (K Fisher)
support: Comment point 3 - urban design led character appraisal: with reference to the Elizabeth Way bridge and Underpass(es) cultural hub project, I support the group's intent to adapt a multi-disciplinary approach to public realm improvements and place making. I strongly encourage the integration of pedestrian and cyclist desire	204287 Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead) 204391 (K Fisher)
support: Comment 2d - pedestrian comfort: From a transport perspective, there is currently no direct or safe way to cross N/S or E/W along the Elizabeth way bridge and roundabout, difficult to gain access to the river other than residential neighbourhoods. I strongly support development that seeks to integrate	204284 Cambridge Junction / Create Cambridge (M

and prioritise desire lines for pedestrians, cyclists and other active modes over vehicular transport, creating a safer transport hierarchy.	Burman, Artistic Director & CEO / Co-lead) 204390 (K Fisher)
support: Comment 2c - re-modelling access to the East Road underpass: The East Road underpass is large at approx. 1,450m2 in area and comprises one-third landscaped areas and mature trees. Designs for the underpass should intensify landscaping and biodiversity, make material improvements of hardscape areas, to allow for active urban sports and flexible-use street furniture, supporting future use as a public square/common.	204279 Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead), 205253 (University of Cambridge)
support: Comment point 1d - new public spaces: with reference to the EW bridge and Underpass(es) project, I support the group's intent to adapt the East Road Underpass pedestrian & cyclist infrastructure as a public common and cultural hub.	204257 Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead) 204370 (K Fisher), 205248 (University of Cambridge)
support: Comment 1f - business and retail parks adjacencies: I strongly support the regeneration of the Elizabeth Way bridge and Underpass(es) as they have potential to provide synergies and also alternatives to commercial programme in the neighbourhood retail parks. There is a strong case for a sustainably integrated, affordable community and cultural hub appropriately placed within the urban context of the riverside promenade and transport infrastructure.	204260 Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead) 204377 (K Fisher)
support: Comment 2a - restore the balance between people and vehicles: I strongly support better links and a transport strategy prioritising pedestrians and cyclists with the East Road/Elizabeth	204265 Cambridge Junction / Create Cambridge (M

Way/Newmarket Road approach routes and the Roundabout including under passages, there are currently no concessions made to prioritise local, active transport and negotiating the current vehicular traffic condition can be considered dangerous.	Burman, Artistic Director & CEO / Co-lead) 204381 (K Fisher)
support: Comment point 1a - - character of the area - East Road/Elizabeth Way roundabout: The East Road Roundabout, situated within the Eastern Gate area, is known to be a major high-traffic access node - it is well positioned to promote a ‘sense of arrival’ in the City (currently a neglected asset). I support efforts to mitigate the negative impact of vehicular transport, to prioritise access and connectivity for pedestrians, cyclists and other forms of active transport, and to activate the pedestrian underpass as a public space giving it a new identity.	204252 Cambridge Junction / Create Cambridge (M Burman, Artistic Director & CEO / Co-lead) 204359 (K Fisher)
With reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) cultural hub community project, the project sits in catchment area of 5 adjacent wards, connected by a shared infrastructure link, the Elizabeth Way bridge and related underpasses. The area sits within a public realm improvement area with potential to adapt leftover indoors and outdoors spaces for cultural and sports programmes, which would work well in line with the Cambridge tradition of skating and urban skating, providing indoors and outdoors recreation and youth engagement.	205113 (M Cleminson)
Support: principles of sustainable development / retention of concrete infrastructures in a climate emergency: with reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) community project. Object to proposals to demolish the Underpass, proposals were rejected during the 2023 consultation. It would cause unnecessary disturbance and high-carbon emissions to backfill and level the underpass drum 70’s transport infrastructure which contains existing biodiversity and has proven potential as an inviting public square. Support minimal environmental footprint / maximum impact	204269 (A Giarlis), 204393 (NEUBAU Architects),

redevelopment of the as-found underpasses and under crofts, greening of the public realm in and around the transport infrastructure.	
Reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) community project. I support the designation of this asset as a noteworthy architectural asset, albeit where the asset should be championed through regenerative and community-focused practices. The space is currently undervalued and transition experiments such as the 'Out of the dark' urban light show showcased an alternative, community-led and culturally advancing use for the space. Attention should be paid to how the cultural economy of such an asset can be utilised, with a designation and allocation for cultural use in the Local Plan being the first step.	204495 (T Ziromskas)
This is desperately needed but must develop the spaces in response to the developing needs of the growing community and particularly with the responsive development of cultural facilities for young people, creatives, families and actives travellers. Many of whom are already developing innovative ways of utilising existing spaces. It is important that a top down solution is not imposed by 'consultants'. There are organisations working around the Underpass/Under croft project that are far better suited to develop responsive and user led solutions. I object to vehicle-led transport strategies and oppose the demolition of the roundabout.	204678 (T Woodcock)
When considering the Elizabeth Way roundabout development as part of Eastern Gate please look at cycleway markings needed on Newmarket road/Sun Street (West approach) access points and improved signage for cyclists who want to use Walnut Tree Avenue to get to Riverside cycleway. Also, for cyclists joining this junction from Walnut Tree Ave. This access point should be improved to make it	202002 (T Jewell)

the attractive option for pedestrians and cyclists over what is poor condition paving by Halfords and poor signage. The underpass is currently a safer option to cross over.	
Railpen supports the policy and its reference in Part 1 to the Beehive Centre and Retail Park and how the Eastern Gate area and adjoining or nearby sites can collectively deliver a greater beneficial impact to the local area. Railpen requests an amendment to Part 1 (f) of policy S/PRIA/EG as currently worded below: f. integrate positively with the adjacent Cambridge Retail Park (Policy Ref. S/PRIA/CRP), Beehive Centre (Policy Ref. S/AMC/BC), Fitzroy/Burleigh Street/Grafton Area (Policy Ref. S/AMC/FBG) and surrounding neighbourhoods. References to ‘integration’ is not sufficiently clear or measurable as a policy objective.	204092 (Railpen)
The boundary of the Eastern Gate PRIA does not include Riverside. I suggest this should be designated as a PRIA for the following reasons: (i) It is a key link in the City’s sustainable transport infrastructure, as the entry point to central Cambridge for three Greenways; (ii) It is a stretch of accessible urban riverfront that connects three green spaces with distinctive heritage assets with unspoilt river views; (iii) GCP are working to create a vibrant destination with city-wide benefit; (iv)It is adjacent to Eastern Gate PRIA and Areas of Major Change, with development proposals with major implications	205173 (M Evans)
About points 2a and 2b. You just hate car drivers. Soon all cars will be electric, but you will still hate car drivers. It is your fault if we have congestion in Cambridge, as you want to greatly expand the population and the city can't cope with it. Sustainable development means very limited development, and you just can't get your heads around that. You have been completely captured by Camcycle -- their utopia is a paradise for able-bodied single people who live near to the centre and never have to carry bulky loads or multiple children with them.	201232 (S Williams)

The Draft Local Plan acknowledges issues of vehicular traffic dominance and accessibility around the Elizabeth Way roundabout but fails to address the condition of Elizabeth Way itself, a key corridor linking North and East Cambridge to the city centre. Residents report safety concerns on Elizabeth Way, including near-misses for parents with young children, speeding traffic, and cyclists being forced onto pavements due to disappearing cycle lanes. Speeding and red-light running are prevalent issues, exacerbated by the confusing multi-lane layout, which residents believe encourages aggressive driving. There is strong support among residents for reducing Elizabeth Way to two traffic lanes with narrower carriageways to help calm traffic and improve safety. Cycle provision is inconsistent and unsafe, leading to conflicts between cyclists, pedestrians, and fast-moving traffic, with pedestrians often forced off pavements. Residents view Elizabeth Way as one of the most dangerous roads in the city, a result of outdated design prioritising cars, and express a desire to engage in discussions to enhance safety and liveability.	201910 (A Rahman)
This policy is good as far as it goes, but should bring out the important foci for the area. - as a high street for Riverside - as a cultural hub project for the Elizabeth Way Bridge and Underpass - as a revived space for Heritage, particularly celebrating the 13th century church of St Andrew the Less I attach details on all of this.	203004 (M Cleminson)
Please include content on references to developments/discoveries in the field of neuroarchitecture, require Health Impact Assessments to cover the mental stress generated by certain building designs and styles.	203698 (A Carpen)

Please include something about outstanding/iconic buildings for the corner of East Road / Newmarket Road - a huge opportunity for something that is not a dull box.	
The benefits of redevelopment and opportunities to enhance the Eastern Gate are well established and supported. The policy should be more positively phrased in respect of the benefits of development opportunities. However, there is one point of concern within this policy, specifically 'Studies will also be required to justify proposed land uses floorspaces and their redevelopment on a proposal-by-proposal basis'. This is a somewhat 'anti-development' approach, albeit likely inadvertent. It would be constructive if the policy cross referenced that such justification is not required where there is separate policy support for stated uses (i.e. education development as set out in draft policy J/FD).	203996 (Anglia Ruskin University)
RARA seeks to re-establish the historical local centre and high street function of Newmarket Road for Riverside residents, with attractive shop fronts, cafes and restaurants. Making the road a single carriageway and tree-lined promenade should be considered for this currently run down and pedestrian-unfriendly stretch. Please rephrase point 2b to start: "prioritise a pedestrian-led movement hierarchy which emphasises." as in Policy GP/QP. We support point 2c to re-establish the historic route and visual links between Occupation Road and Abbey Road. Please also add to 2c "and the former pedestrian connectivity between Coldham's Lane and River Lane." (photo attached).	2034447 (Riverside Area Residents Association), 205182 (M Evans)
There is a risk of much of this area becoming a heat island. Priority should be given to increasing tree cover, public open space and wildlife corridors. Land currently built on or tarmaced over (for example	204824 (R Randall)

underused garages or little used buildings) should be designated for parks/open space/nature reserve areas. Permission should be refused for anything which might damage existing trees or open space.	
☑ non-designated heritage asset with reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) community project, I support retention as a noteworthy 70's Heritage asset. In 1950 the architect / town planner Lord William Graham Holford produced a report for Cambridge County planning, proposing a comprehensive road framework the scale of which was unprecedented in the history of Cambridge transport planning, leading to construction of the infrastructure in 1969. This introduced environmental and social challenges to the local residential area. ☑ I support regeneration and re-use of the EW Bridge and underpasses as a pedestrian/cycle friendly, cultural hub.	205057 (M Cleminson)
With reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) cultural hub community project, I support the re-design of neglected pockets of the public realm using a multi-disciplinary approach. The East Road underpass provides a benchmark opportunity for integrating public art and engagement events. It presents a microclimate with existing biodiverse planting and has potential to be more green and provide opportunities for temporary art installations. Development proposals should use S106 or other public funding opportunities to improve on the type and diversity of public realm spaces allocated for spontaneous and non-programmed outdoors recreation, as well as promoting biodiversity.	205188 (E Nowak)
I recommend that the Riverside area is (a) either added to the Eastern Gate Improvement Area, or preferably (b) becomes an Improvement Area of its own. Riverside presents many opportunities: making a pedestrian boulevard along the length of the river, providing an attractive and safe	205526 (D Spiegelhalter)

environment for cycling, enhancing the area underneath Elizabeth Way Bridge and outside the industrial history museum, encouraging biodiversity and wildlife both in and beside the river itself.	
support: Point 2i - support ‘local labour’ promoting and retaining local talent and skills: With reference to S/PRIA/EG and the Elizabeth Way bridge and Underpass(es) cultural hub project, I support local labour and the provision of workspaces for local SMEs to promote Cambridge local small to medium size businesses and start-ups through affordable space provisions including Artists workshops, makerspaces, exhibition spaces, shops a.o. as well as offering apprenticeships.	205276 (University of Cambridge)
Support for Policy S/PRIA/EG is expressed, with a request for it to explicitly recognise Elizabeth Way as a key strategic corridor requiring comprehensive planning beyond just the roundabout. The respondent highlights a critical gap in the Plan's analysis, noting that it focuses on the roundabout while neglecting the strategic importance of Elizabeth Way for connectivity. Concerns are raised regarding the historical context and transport issues affecting the entire Elizabeth Way corridor, which limits pedestrian and cyclist safety. The respondent suggests that the policy should extend its scope to address the scale, layout, and design of Elizabeth Way, promoting a comprehensive strategy for safety and community reconnection. A modification to Policy S/PRIA/EG is proposed to ensure it aligns with the Plan's sustainability, accessibility, and community cohesion objectives, providing clearer long-term direction.	205472 (Cambridge City Council (Cllr J Dalzell))
The introduction of new at-grade crossings along Newmarket Road conflicts with the need for bus priority, suggesting a need for either subways and bridges or a re-evaluation of the bus-based strategy.	207390 (Cambridge Past, Present and Future)

S/PRIA/HRRS: Hills Road and Regent Street Corridor

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by Trinity Hall to include Bateman House as a site allocation. Comments were made by North Newton Residents Association about widening pavements. Further responses were made by a local resident to ask for a masterplan for the area and have consideration for children and the late night economy. Comments were made by Historic England about reflecting local heritage assets and preparing a HIA.

Response to the main issues raised in representations

The Councils' response to the issues raised in the draft Local Plan (Regulation 18) consultation includes:

- In response to Historic England, the suggested amends have been made to the policy. As this is a policy area a HIA has not been prepared for this area.
- Point 2 of the policy has been amended to include wider pavements in response to the North Newton Residents Association.
- Due to the scale of this site allocation a masterplan led approach is not appropriate across the whole policy area, this policy area sets out key principles to guide development in this area to improve the public realm for children and for the late time economy by improving the public realm and making it safer.
- Bateman House has not been allocated as a site allocation because it is next to the Botanic Gardens and a Conservation Area which are quite significant constraints for any redevelopment. A pre-application should be able to resolve these issues and suggest a way forward for this site.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
82-90 Hills Road Cambridge Trinity Hall supports policy S/PRIA/HRRS, which aligns with the objectives of Cambridge Local Plan 2018 Policy 25 that identifies 82-88 Hills Road as an allocated site for improvements. An updated version of 2018 local plan allocation M5 should be added to Chapter 3 of the draft Local Plan, crucial for enhancing the Hills Road/Regent Street Corridor.	202787 (Trinity Hall)
The quality of architecture in these area needs to be improved.	203696 (A Carpen)
6c - needs clear statement that wider pavements are required the length of Hills Road, from Station Road to Regent Street, in line with improvements proposed in 6a (Regent Street). Footfall from the railway station to the city centre is high; improvements proposed in the 2018 Local Plan have not been implemented. This key route into the city for residents & visitors requires a) reduction in traffic and the space given to it and b) focus on local businesses & public realm so that Hills Road returns as the 'high street' for Newtown & Glisson Road residents as it was.	205179 (North Newtown Residents Association)
The Policy Area lies within New Town and Glisson Road Conservation Area and the Central Conservation Area. There are numerous listed buildings along Regent Street and Hills Road, including the grade I listed Downing College and Church of Our Lady of the Assumption and the English Martyrs, the grade II* Wanstead House and grade II listed St Pauls Church and there are numerous grade II listings. The Botanic Gardens is a grade II* Registered Park and Garden. Development within this area therefore has the potential to affect the significance of these assets including through development	210124 (Historic England)

within their settings. There is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. The Policy should make more reference the role of heritage in the re-vitalisation of retail areas.	

Policy S/PRIA/MC: Mitcham’s Corner

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made by local residents about the removal of the gyratory at Mitcham's Corner and use of this as public space. Further responses were made by Sport England to reflect the integration of active design principles. Comments were made by Historic England about reflecting local heritage assets. Comments were also made by local residents about the bias against cars.

Response to the main issues raised in representations

In response to comments received, Amendments have been made as per Historic England’s suggestions. In terms of the comments from Sports England, the reference has not been included because it is not specific to this public realm improvement area these active design principles. The policy area can set ambitions for the public realm improvement but not specific interventions in the transport network, this is the role of the highways authority.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
4a and 4b -- you just hate car drivers. Cars don't drive on the pavements and pedestrians don't walk on the road, so their needs are perfectly well-balanced already, thank you	201233 (S Williams)

We are keen to see the removal of the gyratory at Mitcham's Corner, for the traffic volumes to be kept to an absolute minimum and for as much promotion of walking and cycling as possible. There is great potential for this to become an excellent public space. The ugly gyratory is well beyond its "sell-by-date". Despite the gyratory's existence, there is already a burgeoning community. Removal of more traffic will further encourage this and could provide Cambridge with another place and neighbourhood that it is proud of	201304 (M Bleazard)
Mitchams corner needs a complete redesign, prioritising people over cars, and with as many homes, shops and restaurants etc as possible.	203583 (H Thomas)
The Policy Area lies within Castle and Victora Road, De Freville and the Central Conservation Area. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy.	210125 (Historic England)
Sport England encourages the integration of Active Design principles, or alternatively reference to our Active Desing Guidance, to maximise opportunities for physical activity.	209220 (Sport England)

Policy S/PRIA/MR: Mill Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was broad support for the policy from local residents, although concern was raised about bias against cars in the policy wording. Comments were raised about needing more bus routes. A comment suggested plans for pedestrianisation should go further. It was stated that there is no mention of trees, nature or greenery, and that more sustainable drainage and more green public space is needed. Historic England highlighted the importance of considering local heritage assets. Kings College considered the policy repeated other policy requirements.

Response to the main issues raised in representations

Amendments have been included to address representations from Historic England and local residents about heritage assets. It is the role of highways authority and wider transport strategy to manage bus routes. It is an important role of the local plan to support active travel. Point 3c of the policy has been added to reflect greening and sustainable urban drainage. The Transformation Project is noted, however it is not appropriate to include this in the policy wording. The principles of improving the public realm and the high street are reflected in the policy wording.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Support for the policy.	200981 (M Lucas-Smith), 201279 (F Samuel), 205267 (A Williams), 205466 (P Lythgoe)
Concerns raised about bias against cars in the policy wording.	201234 (S Williams)
Plans for pedestrianisation of Mill Road needs to go further.	201279 (F Samuel), 203808 A Chan)
Safety of pavements is an issue so support the policy.	201715 (K Mak)
A new public use should be found for the Old Library.	202824 (Cambridge Past, Present and Future), 205327 (J Preston)
Need to specifically mention preservation or enhancement of the Conservation Area.	205327 (J Preston)
Parts of the Policy Area lies within the Mill Road, Newtown and Glisson Road and Kite Conservation Areas. It includes part of the Mill Road Cemetery – a grade II Registered Park and Garden as well as the Cambridge City Branch Library and Gas Lamp both listed at grade II. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. We understand that there is no HIA for this as it is a Policy Area. The Policy currently makes little reference to the historic environment. Amend policy wording to include more	210126 (Historic England)

reference to the historic environment. This should include nearby heritage assets and any requirements for heritage (either mitigation or enhancements) in the policy. The Policy should make more reference the role of heritage in the re-vitalisation of retail areas. See our Heritage Led Regeneration Toolkit	
The policy should give guidance on securing a new public use for the Old Library.	202824 (Cambridge Past, Present and Future)
We would also comment as follows on the supporting information. It is not clear why the site plan differs from that in Policy S/C/OPM. The third paragraph is entirely unnecessary as Design and Access Statements are a requirement of the Councils' planning application validation requirements.	208243 (Kings College)

Policy S/PRIA/OPML: Old Press/Mill Lane

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments were made about the bias against car ownership.

Comments were made by Historic England, Cambridge Past, Present and Future, and a local resident to highlight the heritage assets in the policy. Historic England set out that a HIA is required. Further responses were made by Cambridge Past, Present and Future to raise concerns about point 1d allowing the demolition of potential heritage assets. Comments were made by Kings College critiquing the duplication of policy between S/C/OPML and raised concerns about the masterplan.

Response to the main issues raised in representations

The Councils' response to the Mers raised in the draft Local Plan (Regulation 18) consultation includes:

- This site is a Central Cambridge location and therefore in a sustainable location with public transport and active travel connections, and it is therefore the strategy to reduce car parking in this location to reduce congestion.
- In response to Kings College, point 1 of the policy has been revised to align with the site allocation and not the masterplan and design and access statements have been removed from the supporting text. The other policy criterion have been retained to shape any other future development coming forward on this site.
- The policy wording has been amended to reflect the heritage assets on and offsite including the Grade I Listed Leper Church.
- In response to concerns about demolition arising from point 1d, the assessment of the planning balance at the planning application stage will determine whether the value of retaining the building outweighs the delivery of open space.
- A HIA has not been completed for this site because it is a policy area.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Concerns raised about bias against cars in the policy wording.	201225 (S Williams)
Concerns raised about traffic and configuration of the roads around Mitcham's Corner.	201304 (M Bleazard), 203583 (H Thomas)
Concerns raised about Listed buildings and Buildings of local interest not shown.	205361 (J Preston)
There are a number of designated heritage assets within the site boundary including part of the Central Conservation Area and a number of listed buildings including Cambridge University Centre, The Mill Public House, The Mill The Mill Bridge and Paved Surround, Mill Haven - West House and Mill Haven - East House, Cambridge University Press (Pitt Press), Telephone Kiosks, 1 Mill Lane, House Adjoining Number 74 on The North, 74 Trumpington Street, 8-11 Little St Marys Lane, Number 1 Little St Marys Lane including gas lamp and Emmanuel Church all listed at grade II. The site is adjacent to other listed buildings including Little St Mary's Church (grade II*), Pembroke College and Pembroke College Chapel both listed at grade I, St Botolph's Church also listed at grade I as well as numerous grade II listed buildings. This is a highly sensitive location in terms of heritage. Development within this area therefore has the potential to affect the significance of these assets including through development within their settings. There does not appear to be a Heritage Impact Assessment for this site. An HIA should be completed. The recommendations of the HIA should be included in the policy wording. We welcome criterion 1 a and 1 c, but these should be expanded to better reference the historic environment.	210127 (Historic England)

The respondent supports the policy but raises a concern regarding a non-listed building of heritage value on the eastern side of the Mill Pond, which is significant to the area's historical context. The respondent opposes the potential demolition of the building by its owner for the creation of open space, advocating for its repurposing instead. While the respondent supports the wording of policies 1a and 1b, they express concern that policy 1d could be interpreted to justify the demolition of the mill building. The respondent requests that the conflict within the policies regarding the potential demolition of the mill building be resolved.	202840 (Cambridge Past, Present and Future)
The College would suggest that this policy is combined with S/C/OPM as there is both repetition and inconsistency between the two policies. It is not clear why this policy requires accordance with the 2018 Masterplan, when Policy (S/C/OPM), which is more fundamentally concerned with the redevelopment of the area not just the public realm, doesn't. The first sentence of the policy should therefore be deleted. Despite being concerned with public realm, this policy strays into more detailed design aspects which are covered in the redevelopment policy – consequently limbs a) b) and c) should be deleted from this policy.	208242 (Kings College)
We would also comment as follows on the supporting information. It is not clear why the site plan differs from that in Policy S/C/OPM. The third paragraph is entirely unnecessary as Design and Access Statements are a requirement of the Councils' planning application validation requirements.	208243 (Kings College)

Summaries of Representations: Sites Edge of Cambridge

Edge of Cambridge Introduction

Summary of issues arising from Draft Local Plan representations:

Cambridge City Council Liberal Democrat Group offered general support for the allocations approach. One comment supported the plan in that it did not allocate land at the west fields.

Most comments made on this chapter introduction focused on alternative sites being suggested for allocation. Comments supporting their allocation included issues around strategy choices, and the relative sustainability of the edge of Cambridge supporting green belt release.

One comment raises concern about the amount of development proposed. Historic England requested further consideration of building heights, particularly at North East Cambridge. Mixed comments were received about the Cambridge Biomedical Campus. One comment considered growth was not sufficient. Another comment sought greater protection for the surrounding area. One comment challenged the approach to the Cambridge South East transport scheme.

Response to main issues raised in representations:

Comments are noted, including those which supported the draft plan's approach. Comments proposing alternative sites, and providing information on alternative sites, have been assessed through the Housing and Employment Land Availability Assessment. Strategy choices have also been considered through wider evidence, including the Sustainability Appraisal, and document why it is not considered that exceptional circumstances exist to release additional land beyond that proposed for Cambridge Biomedical Campus. Land adjoining the campus outside the proposed development remains within the green belt. The South East Transport shame is the subject of a Transport and Works Act application, where a public inquiry will consider comments received.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
We support these policies to encourage vibrant and active communities with access to green spaces.	202845 (Cambridge City Council Liberal Democrat Group)
While I support the ambition to plan positively for Cambridge's future, I am deeply concerned that, without stronger protections, the city's growth could come at the expense of the very rural landscapes and communities that make this region so special.	209245 (D Hepworth)
Building Heights We have some ongoing concerns regarding the densities and heights on some of the edge of Cambridge sites. Development at very high densities/heights has the potential to impact on the overall	208929 (Historic England)

setting of this historic city. We appreciate that there will inevitably be a trade-off between height versus further urban expansion. We have particular concerns about heights in north-east Cambridge and remain so about impacts on views from Ditton Meadows and the Conservation Areas, as well as wider views approaching the City from the north-east and east.	
Cambridge South East Transport Scheme No need to pursue this route and destroy the landscape at such an astronomic cost when a perfectly good alternative has been proposed by Better Ways for Busways along the A1307 corridor from the A11 to the Cambridge Biomedical Campus. This could be done in sections to avoid disruption, much of the route already has bus lanes in place and the cost is a fraction of that proposed by the route across green belt which would ruin good agricultural land. The Gog Magog Hills have been included as a priority for enhancing green infrastructure and will be negatively impacted by CSET and therefore I strongly oppose this ill thought through strategy.	207646 (J Coppendale)
Green Belt Object, as set out extensively in our response to Policy S/GB, when there is a need to allocate so many more housing sites, the blunt application of Green Belt to any consideration of further allocation on the edge of Cambridge, which is shown to be one of the most sustainable locations for growth in the GCLP evidence base, is at best illogical. These representations are accompanied by the submission of the following land parcels for allocation in the Greater Cambridge Local Plan: 1) Southern extension to Peterhouse College (A southern expansion to previously released Green Belt sites GB3/GB4) (HEELA Site ID 200790); 2) An easterly expansion to	209699, 209700 (CEG Land Promotions)

the previously released Green Belt site GB1 (HEELA Site ID 40058b); and 3) Southern extension to Employment site E/3 (HEELA Site ID 200795).	
Cambridge Biomedical Campus With Life Sciences identified as the greatest area of growth, why is the area around the Cambridge Biomedical Campus restricted to that proposed in Policy S/CBC Cambridge Biomedical Campus (including Addenbrooke's Hospital) Figure 60. Releasing more Green Belt will meet all of the strategic priorities as set down in the Draft Greater Cambridge Local Plan.	200995 (P Wheeler)
Cambridge Biomedical Campus The area covering the campus should be extended to protect the area on the opposite side of the railway which provides a green pathway for flora and fauna extending from Trumpington Meadows via Trumpington Community Orchard Clay Farm Community Garden and Hobson Park and onward to Nine Wells. This area is also important for Wellbeing and social inclusion.	201016 (C Wright)
West Fields, Cambridge Pleased site has not been included in the sites for development because it is vital that the Green Belt around the City is maintained for future generations, despite our great need for more affordable housing.	201466 (S Smalley)
Land South of Shelford Road, Fulbourn (referenced as site 51610 / 115137 in the HELAA) Evidence submitted to address HELAA issues. Fulbourn's sustainable location warrants new site allocations due to its access to services, employment opportunities, and transport links. The site will provide improved green spaces accessible to all, supporting the aim for allocations on the edge of Cambridge.	205005 (Miller Homes)

Land at South West Cambridge (Site Ref. 52643) The promoted development providing a mix of uses including between 2,500 and 2,800 dwellings, supporting facilities, GI network and landscaping.	205161, 206827 (North Barton Road Landowners Group)
Land adjacent to A1303 and M11 at Rectory Farm Would make an ideal edge allocation for residential or commercial development. The Madingley Park and Ride site located between Eddington and West Cambridge is becoming increasingly under pressure. Site could serve as a Travel Hub that either alleviates pressure on Madingley P&R or replace it entirely, thus allowing the existing Madingley P&R site (a highly sustainable, brownfield site) to be freed up and used to accommodate much needed housing or employment growth at Eddington or West Cambridge.	206091, 206098 (Wimpole Associates Ltd)
Land East of Gazelle Way, Cherry Hinton Objects, fails to inset site from the Green Belt and does not propose allocation of the site for development. Allocate it for a residential-led mixed-use urban extension to the City to provide approximately 1,500 new homes, employment space, new Country Park and associated community and other infrastructure.	209756 (Endurance Estates)
Land at Fen Ditton (HELAA Ref. 47647 and HELAA Ref. 200770) As a medium-scale site, it can be brought forward without reliance on the provision of significant strategic infrastructure, unlike many of the larger allocations within the Plan. This is particularly relevant given the Plan’s own acknowledgement, at paragraph 2.79, that delivery of its vision is dependent on infrastructure provision by a range of external partners, including water supply, waste water treatment, and transport bodies, over which the Councils have limited control.	210226 (Vistry Group)

The College has previously submitted a number of sites as part of the Local Plan. • Land South of Adams Road, Land south of Wilbraham Road, no longer need to be allocated as they are developed • Land north of Madingley Road, Cambridge (HELAA: 40393) is within the built-up area of the city and therefore is not reliant on an allocation to establish the principle of its redevelopment. • A number of other sites are promoted at Great Shelford, Girton, and Coton, are all considered suitable for allocation.	211065 (St.Johns College)

Policy S/CE: Cambridge East

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comment that capacity testing shows the Cambridge East site can accommodate more than the stated ~8 000 dwellings, noting in particular public transport connectivity provided by the proposed station near the site.

Comments were made regarding the proposed uses at the site, including support for and comments regarding the proposal for cultural infrastructure at this site, including proposals for a concert hall and other uses such as a lifelong learning centre; recommendations to include emergency services buildings on site within the policy. Requests for greater flexibility were made by the landowner with regard to specialist housing.

Limited comments raised concern regarding design, heritage and townscape impacts, including concerns regarding proposed architectural style, and impacts on local heritage assets including those arising from the potential height and massing of the proposed development. Comments from Historic England asked that that policy be strengthened to provide greater protection for heritage assets. The landowner requested less prescriptive policy wording relating to heritage assets.

A limited number of comments supported the approach to green spaces including for the green corridor. On the other hand, comments suggested that the development at Cambridge Airport will not protect Green Belt purposes in this area. The landowner

requested less prescriptive supporting text wording regarding potential future changes to the green corridor. The National Trust asked for further engagement to explore connections to the Wicken Fen Vision proposal.

A large number of comments raised concerns about transport impacts, including many concerned that the proposed low car approach was not realistic. The landowner supported the proposed monitor and manage approach to transport included in the policy for addressing Comments were raised that the site needed to review its transport strategy to account for the proposed new station at Cambridge East.

Comments raised concern that greater priority needs to be given in relation to infrastructure provision at this site including for medical needs, to meet the needs of the wider area. Comments were raised by neighbouring authorities seeking clarification about potential infrastructure impacts of this site on their area.

One comment raised concern regarding the potential socio-economic divide between areas of poverty in East Barnwell and newer developments.

Concern was raised over the availability and deliverability of the site, noting in particular that development is dependent on airport becoming available despite uncertainty around relocation of airport operations.

Response to the main issues raised in representations

Comments supporting a higher capacity than that set out in the policy have been considered. The capacity identified in the policy is based on consideration of site size and constraints, testing of a range of densities, and assumptions regarding the mix and land take of different uses. Based on available evidence the housing capacity set out at Draft Plan stage is considered to remain robust.

The housing capacity is expressed as “approximately” to allow for more detailed evidence to refine the eventual figure. A specific figure for office and R&D employment uses is not identified in the policy, to provide flexibility regarding the eventual capacity.

The uses set out in the policy are defined responding to the depth of evidence available. A consistent approach has been taken for strategic sites in this plan, both for meeting specialist housing and gypsy and traveller accommodation needs. The strategy approach to meeting such needs is explained in the Strategy Topic paper and is supported by further evidence. The Councils consider that strategic sites play an essential role in the strategy for meeting such needs. Support for cultural provision is noted. At Proposed Submission stage the requirements for cultural uses, as well as leisure uses, are set more precisely than at Draft Plan stage, as supported by Greater Cambridge Cultural Infrastructure Strategy - Stage 2 (2026) and Draft Greater Cambridge Retail and Leisure Study - Interim Study Findings (2026).

The policy wording seeks to balance protection of local townscape and heritage assets with enabling the significant opportunity that the site presents for sustainably located development. The Proposed Submission policy wording has been amended to reflect this balancing further and has also been amended to respond to further exploration of potential listing of heritage assets on the site, resulting in a more flexible policy that focuses on the listed assets. The reference to “contemporary” design has been removed in response to comments.

The Councils consider that the broad approach to green spaces included in the Draft Plan policy remains robust and retains strong protection for the Green Belt corridor whilst retaining flexibility acknowledging the uncertainty associated with a future master plan. Ahead of Proposed Submission the Councils engaged with all relevant local partners including the National Trust to refine the policy wording regarding off site green infrastructure provision.

The Councils recognise that this is a significant scale of development with likely substantial transport impacts, but also that the site will provide benefits to public and active travel connectivity for the whole of eastern Cambridge. The policy includes strong transport requirements to enable a low car living approach, including design requirements, specified transport schemes, and a trip budget approach enforced through monitoring. A new section has been added to the Plan to address the opportunity provided by Cambridge East station.

The Councils recognise the importance of infrastructure delivery supporting development. The Proposed Submission Plan is supported by an Infrastructure Delivery Plan which identifies the infrastructure requirements relevant specifically to Cambridge East, including identifying funding and delivery timings. The key transport infrastructure requirements relevant to the site are identified within the policy itself.

The Councils recognise the potential socio-economic divide between areas of poverty in East Barnwell and newer developments. The allocation seeks to mitigate this by requiring the development to integrate well with surrounding communities, including providing an exemplar approach to movement and transport within and through the site that would benefit existing neighbouring communities. The proposed cultural and leisure uses would also provide benefits to neighbouring communities. Other policies in the Plan require new development to provide benefits to local residents, including Policy WS/IO: Creating inclusive employment and business opportunities.

The position regarding the availability and delivery of the site has changed since the Draft Plan stage. In June 2026 Homes England and The Hill Group announced that they have completed the acquisition of the Cambridge airport site, and that Cambridge Growth Company will work in collaboration with Hill to deliver the site. The announcement includes that Marshall will relocate its operations by mid-2029, and that the partners will have a focus on accelerating housing delivery. This announcement provides

confidence that the site will be available and can be delivered in line with the timings set out in the housing trajectory included in the Proposed Submission Plan.

Table of representations:

Summary of issues raised in comments	Comments highlighting this issue
Vistry and The Quy Estate support the vision and objectives for Cambridge East (EC). Importantly, the delivery of CE would generate wider sustainability and infrastructure benefits that extend beyond the allocation itself. In particular, the proposed public transport, active travel improvements and the concentration of services and facilities would materially enhance the sustainability of surrounding areas, including locations such as Fen Ditton. The proximity of Fen Ditton to CE means that it would be well placed to benefit from, and contribute to, the critical mass of services, employment opportunities and sustainable movement networks introduced through the CE development, further strengthening the case for additional growth in this location.	210232 (Vistry Group)
Capacity Comment that capacity testing shows the Cambridge East site can accommodate more than the stated ~8 000 dwellings, especially with the new railway station and increased commercial floorspace.	(Marshall Group Properties)
CGC is supportive of this policy. CGC would welcome the opportunity to work jointly with GCSP on this allocation and in particular on further work which could support the potential for a higher development capacity than that currently identified in the draft Plan given the potential future transport accessibility and capacity related to the EWR station at Cambridge East. The provision of the station would open the	208939 (Cambridge Growth Company)

opportunity for additional employment and mixed use proposals and also on whether there is the potential for future expansion to the east of the allocation for Cambridge East identified in the draft Plan.	
Marshall strongly supports that the policy requires the delivery of a truly mixed-use development. The specific cultural and community uses identified in the policy should not be listed ahead of a masterplan being developed. The policy should allow for flexibility by removing the specialist housing percentage requirements. For the B2/B8 space requirement, additional wording is added to account for any changes in demand, e.g. “unless up-to-date evidence of need for industrial land suggests otherwise.” Support that the Policy does not specify an exact E(g) floorspace quantum but encourage the supporting documents to be consistent with the Policy to avoid confusion.	211778 (Marshall Group Properties)
Marshall objects strongly to the inclusion within Policy S/CE of the requirement for two sites of 12 pitches for Gypsies and Travellers and to Policy H/GT, which assumes the incorporation of sites for Gypsies and Travellers within strategic sites.	211779 (Marshall Group Properties)
Uses Support Create Cambridge in asking that: • delivery of a cultural anchor (venue, arts centre or artist studios) is required in Phase 1 • cultural provision is not deferred to later phases, where it is at risk of non-delivery • Create Cambridge is engaged as an advisor/consultee on plans and proposals for cultural infrastructure as part of new developments Early cultural infrastructure is essential to avoid dormitory development and support identity, cohesion and liveability	202058 (H Chamberlain), 202143 (Cambridge Junction), 202200 (Ms H Tam), 202311 (Cambridge Junction), 202324 (Cambridge Junction / Create Cambridge), 202413 (T Shaw), 202426 (Kettle's

	Yard), 202687 (T Altmann), 202717 (W Townsend), 202785 (S Lee), 202877 (Cambridge Junction), 203030 (The Arts Theatre Cambridge), 203852 (N Yeni), 203872 (University of Cambridge), 205089 (H Paterson), 205336 (N Oakley), 205341 (L Howse), 205402 (A Seiglow), 202388 (J Webber), 202933 (R Tarry), 202971 (T Flinders), 205157 (J Walsh), 205052 (Uni of Cambridge), 204842 (L Matthews), 205013 (Wysing Arts Centre), 203541 (D Lever), 203632 (University of Cambridge), 203484 (L Heap), 203439 (S Ashworth), 203345 (N Ellis),

	202462 (K Jones), 202879, 204172, 202755, 205407 (Cambridge Junction / Create Cambridge), 204402 (New International Ecounter), 204689 (NEUBAU Architects), 204702 (A Girarlis), 205309 (A Carolina)
Support provision of a concert hall, need for a modern hall that could seat 300-500 people. Currently we are restricted to churches (seat 200) or the university concert hall which is expensive and no parking.	203817 (Cambridge Wind Band), 203948 (S Hughes), 204794 (Cambridge Graduate Orchestra)
Concern there are major gaps: Proposals for Cambridge East/Airport need to incorporate *a second urban centre for Cambridge* that is sub-regional at scale. Provision for a new large lifelong learning college *must* be incorporated ideally as part of the Cambridge East site as an anchor institution - along with a music venue that has a capacity substantially larger than the Cambridge Corn Exchange, and capable of hosting top tier acts at an affordable price. Provision for a new city hall for the new council. A country park that has a 'nature bridge' over link to Coldham's Common. Ornate twin towers theme. Cambridge East Station	202360 (A Carpen), 203750 (A Carpen)

Under the subheading ‘Uses’ Section 4 – add a new criterion e. as follows; “e. Provision of a fire & rescue service drop down point & contributions to fire & rescue, police and ambulance facilities funding”	207475 (Cambridgeshire Constabulary), 207508 (Cambridge Fire and Rescue Service)
Sport England supports the inclusion of sports provision, including criterion 25(h) which requires the delivery of a sports pavilion (Use Class F2). The scale and type of provision should be informed by an up-to-date Playing Pitch Strategy (PPS), Built Facilities Strategy (BFS) and Facilities Planning Model (FPM) for swimming pools.	209221 (Sport England)
We have reviewed the other site allocations in the emerging Plan. Given our current location and history in the Abbey ward, an appropriate location could be within any major new urban extension at Cambridge East. This draft allocation allows for the provision for a wide range and scale of cultural, leisure, shops and community uses to meet the needs of the wider city and sub-region. The allocation notes that this may include civic uses, a conference centre, concert hall, arts centre or leisure facilities. Although this list would cover a new football stadium, it would be helpful to refer explicitly in the Plan to Cambridge East being a potential appropriate location for a new stadium for Cambridge United.	211873 (Cambridge United Football Club)
Townscape Comment that architectural style should not enable styles that have been built in existing large developments in Cambridge	203750 (A Carpen)
Built form paragraph 8, is not sound because it is neither effective nor fully consistent with national policy. By requiring a “contemporary approach” that "embraces modernity", the policy risks being applied as a presumption in favour of a particular architectural idiom rather than focusing on outcomes.	204638 (Cllr T Bygott)

This ambiguity may exclude high-quality development that delivers coherent streets, perimeter blocks and durable public realm through other approaches. Given the scale and permanence of Cambridge East, the policy should be amended to make clear that design quality is judged on urban form, sustainability and place-making outcomes, not architectural style.	
We have some ongoing concerns regarding the densities and heights on some of the edge of Cambridge sites. Development at very high densities/heights has the potential to impact on the overall setting of this historic city. We appreciate that there will inevitably be a trade-off between height versus further urban expansion. We have particular concerns about heights in north-east Cambridge and remain so about impacts on views from Ditton Meadows and the Conservation Areas, as well as wider views approaching the City from the north-east and east.	208929 (Historic England)
Development within this area therefore has the potential to affect the significance of heritage assets on site and nearby, including through development within their settings. We welcome the preparation of the HIA. Section 5.5 helpfully summarises the key heritage sensitivity and Section 6 makes a number of recommendations. Whilst we broadly welcome criterion 5 – 7, these do not sufficiently reflect the recommendations of the HIA. The HIA recommendations include some strategic landscaping and areas of open space at the north-eastern edge of the site as well as a heritage setting for the airport buildings. These must be included within the policy and the Spatial framework (figure 61). We recommend that you Amend policy and figure 61 to incorporate the HIA recommendations in relation to strategic landscaping, open space to	210128 (Historic England)

northeast of site and heritage setting for airport buildings. Criterion 10 should also refer to the strategic views and Skyline and Tall Buildings Strategy. Figure 61 Amend scheduled Ancient Monument to Scheduled Monument (NPPF Preferred terminology) Amend throughout the Plan.	
Marshall does not consider that any other buildings meet listing criteria beyond the listed Control and office building. In relation to the retention of Hangar 1, the draft policy promotes more definitive constraint which Marshall considers to be a level of detail not appropriate for the plan but a matter to be worked through as part of the design development process. Marshall considers that the draft wording should be reviewed to recognise the reality that, whilst the separate character of Teversham must be respected, development at Cambridge East will be visible from the village.	211781 (Marshall Group Properties)
Nature Supports the policy recognition given to biodiversity and green infrastructure issues. The policy represents a good framework to avoid adverse impacts on nearby high-value nature sites and to provide high quality green infrastructure including off-site strategic natural greenspace.	202972 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 202849 (Cambridge Past, Present and Future), 203209 (G Owell)
Concern that the alignment and width of the Green Belt corridor through Cambridge East should be preserved to maintain its function as a vital green link between Coldham's and Stourbridge Commons and Ditton Meadows.	202849 (Cambridge Past, Present and Future)

Many people, me included, regard Cambridge Airport as part of the Green Belt. I know you say it isn't that any longer. Cambridge East is going to be greatly degraded when that becomes developed. I have found very few details of how much green space will be left on the airport.	201224 (S Williams)
I think that the broad design of Marshall's Airport is adequate. I like the idea of green corridors spreading out of the city through Marshalls and I hope in the long term this can be supported with proper environmental infrastructure such as wildlife road crossings, or wildlife underpasses for Newmarket or Airport Road, although I recognise the likely prohibitive costs of these at present. I am strongly supportive of a Cambridge East Station.	208722 (Cambridgeshire County Council (Cllr M Morgan))
I don't think what you are going to allow on Cambridge Airport will contribute to 'protecting and enhancing the green corridors which extend into the city'. At least you are going to leave some green space, though. Initially I thought you were going to pave over the whole lot.	201253 (S Williams)
We note that the policy requires provision of a country park beyond the site to connect through to the Wicken Fen Vision area and encourage your authority to engage as soon as possible with the National Trust about this.	207602 (Natural England)
The National Trust strongly support the requirement to provide strategic scale green infrastructure beyond the site to connect Cambridge City Centre to the Wicken Vision area, reducing recreational pressure on designated sites. The policy requires provision of a country park beyond the site to connect to the Wicken Vision area. It is noted that the location, scale and character of this site is yet to be determined. Work needs to be undertaken to establish this, in order that it can be identified in the proposed Submission Plan. It also needs to be clear how and when the country park will be delivered, in order that it is available for use prior to the occupation of new dwellings at Cambridge East. The	211077 (The National Trust)

National Trust would welcome engagement in discussions about green infrastructure delivery and suggest that consideration is given as to whether our site at Northfield Farm could assist with this provision.	
Green Corridor protection is ambiguous and risks incremental erosion of landscape and heritage assets, particularly around Teversham. Townscape, landscape and heritage wording, particularly in relation to Teversham, needs greater precision	201181 (Save Honey Hill Group), 203619 (Horningsea PC)
The specific reference to compensatory widening is not appropriate or necessary and, as drafted in the supporting text, is misleading to the reader that this can be expected in response to instances where the green corridor is narrowed. Compensatory widening references should be removed to ensure the policy is compliant with national policy. Marshall also wishes to question whether it is appropriate that the Green Corridor is designated as Green Belt.	211782 (Marshall Group Properties)
Movement Comments about transport include: • The indicative “trip budget” and “monitor and manage” approach lacks binding limits, clear triggers, and enforceability • Development should be conditional on finding solutions to active transport constraints (including Fen Ditton Road underpass for Marleigh cycle route, widen Coldham’s Lane railway crossing) • Set ambitious mode share targets and secure walking and cycling links early • Trip budget is too high • The site must not promote car trips to the city centre, which is facilitated by restricting access to Barnwell Rd and Newmarket Rd.	201181 (Save Honey Hill Group), 202001 (D Langley), 201236 (S Williams), 202301 (R MacDonald), 202370 (C B), 202643 (A Lawrence), 203654 (V Ashton), 203695 (T Preud'homme), 203814 (A Chan), 204570 (D Potts),

• You are promoting a low car use approach -- that is not what residents want • People do not want to park their cars at off-site car barns as you suggest • People will NOT avoid using cars and Newmarket Road and Coldhams Lane will be absolute nightmares at rush hour • All homes need easy (walking) access to shops and jobs, and wider recreation • Ensure the layout is friendly to bus route planning, with rights of way access to bus stops, direct bus routing, utilise bus gates • Policy wording must be sufficiently robust to ensure any transport infrastructure which is critical to accommodating sustainable growth in this location is secured and adequately planned for. Concern that there could be potential impacts within East Cambridgeshire. • Need improved links to Addenbrookes and along Barnwell Rd to access secondary schools and station. • I would like to highlight the importance of walking and cycling connectivity across Marshall's to Marleigh and Teversham. I think that it should be thought that any benefits of Marshall's redevelopment can be shared with Teversham. How an adequate viable bus service to Teversham is provided should be considered as part of the transport design for Marleigh.	204593 (R Hoadley), 204659 (East Cambridgeshire DC), 205156 (J Grantham), 205391 (A Williams), 205406 (N Saad), 205436 (S Nuttall), 205343 (R de Beaux) 202849 (Cambridge Past, Present and Future), 208723 (Cambridgeshire County Council (Cllr M Morgan))
CCC Active Travel Strategy 'wheeling' refers to travel using a wheelchair, mobility scooter, pushing a pushchair etc. rather than cycling.	210527 (Cambridgeshire County Council)
The existing transport strategy needs to be reviewed in light of the recent announcement of a station within the site as part of EWR and the proposed provision of an eastern access to Cambridge station, both of which have the possibility to significantly impact the operation of the site in transport terms.	210580 (Cambridgeshire County Council)
Broadly supportive of this policy framework in relation to transport as it reflects its own ambitions and complements the transport strategies that we have developed. The proposed monitor and manage	211784 (Marshall Group Properties)

approach means that infrastructure delivery uncertainty can be managed and should not serve as a hinderance to Cambridge East moving forward. Supports the principle of an evidence driven approach to deriving a trip budget but clear that this does not need to be prescribed by the policy. The Policy should recognise that the extant trip making from the site can be used to support a first phase of development.	
The current capacity of the trip budget has been identified at approximately 1,500 trips in the AM peak and 1,800 trips in the PM peak. This level of trips is understood to have been tested with the regional model and is considered to be able to be accommodated within the local road network, including the local SRN junctions. National Highways would require as part of the local plan process to understand the impact of this development and the cumulative impact on the A14 junction 34 prior to agreeing the trip budget and agreement of appropriate mitigation measures should the trip budget not be met.	209008 (National Highways)
EWR Co is now considering including a new Cambridge East station within its plans for EWR. At this stage, the design of this station is still in its early, feasibility phase. EWR Co is aware of challenges around the site and will continue to explore how this opportunity could be realised to support economic and housing growth in the area. If third-party funding is not secured, the station will be removed from EWR Co's plans. The Councils' full support for a new station at Cambridge East is also welcomed, with EWR Co agreeing that this would provide a 'step change in public transport connectivity' for the Cambridge East development site and eastern Cambridge more widely. EWR Co recommends that land required for Cambridge East station is included in Policy S/CE: Cambridge East, rather than the AMC, as the new station is closely related to the former, with which it will need to be closely integrated with and will help to unlock. EWR Co would welcome consideration by	211885, 211904(East West Rail Company)

the Councils as to how to maximise the density of development of the Cambridge East site and amendments to Policy S/CE to achieve this, given the benefits in terms of sustainable travel that a new EWR Cambridge East station would bring.	
Given that the Station now has the same status as a station at Cambourne upon which a new community is being planned as part of the Local Plan, Marshall considers that the Policy should sensitively reflect the opportunity.	211785 (Marshall Group Properties)
Proposed trip budget risks normalising high levels of car use rather than driving mode shift. The framing of the trip budget also lacks spatial context. Trips into the city are extremely problematic, and must be discouraged. General vehicle access to Barnwell Road should therefore be removed as well as the numerous site accesses onto Newmarket Road. Plan underestimates the level of investment required in the surrounding active travel network. ● Review car trip budgets and introduce binding walking, cycling and public transport mode share targets ● Make delivery of key active travel links a planning condition and phasing trigger, supported by a co-delivery plan between the councils, highways authority and developers, including pooled funding where necessary. ● Explore and understand the need for connectivity across Coldham's Common with financial safeguarding to deliver a bridge from the Cambridge Retail Park to Coldham's Common.	211768 (Camcycle)
Aviation safeguarding, noise, and height constraints are insufficiently defined, creating uncertainty and risk of abortive development	201181 (Save Honey Hill Group), 203619 (Horningsea PC)

It is unclear how access to medical facilities will be provided; Addenbrookes A and E cannot cope, also dentists.	202370 (C B)
There should be greater priority for infrastructure to support the significant growth in east Cambridge. It has long suffered in comparison to most other parts of Greater Cambridge.	203785 (T Panter), 209123, 209124, 209125, 209126, 209127, 209128, 209129, 209130, 209131, 209132, 209133 (R Patel)
The overall level of growth planned for Greater Cambridge and two planned developments (Policy S/GF: Land Adjacent to A11 and A1307 at Grange Farm and Policy S/CE Cambridge East) are expected to impact upon West Suffolk given its proximity and the functioning of the surrounding towns of Newmarket and Haverhill. This will require collaborative working with West Suffolk and a full assessment through the preparation of the local plan evidence base.	204788 (West Suffolk Council)
Concern exist regarding the potential socio-economic divide between areas of poverty in East Barnwell and newer developments. There are reported anti-social behaviour issues in the new Marleigh development. The overstretching of NHS primary care services in the area is a major concern.	205406 (N Saad)
Marshall would welcome the opportunity to explore further what parameter plans would be required and the level of detail that these are expected to contain. The policy should make reference to viability and the unique circumstances that exist on the site.	211783 (Marshall Group Properties)
The concept plan is not representative of a masterplan for the site and so it should not be assumed that features on the concept plan are fixed. The concept plan and policy wording should be clear what is	211780 (Marshall Group Properties)

already consented and what it proposed. The red line should also be adjusted to include the green corridor.	
Concern over the availability and deliverability of the site: • The policy contains multiple interdependent risks relating to airport operations, transport capacity, green corridor protection, water/flooding, and safeguarding and development is pendant on airport becoming available despite uncertainty around relocation of airport operations • Comprehensive development of the airport site is dependent on a change in airport status, meaning the entire site is available for development. Uncertainty regarding relocation of the airport function must be resolved. • Questions whether the assumptions in the GCLP for Cambridge East are realistic given recent announcements that Marshalls has cancelled its planned move from Cambridge Airport to Cranfield. Note Marshall still aims to vacate site by 2030, predicated on identifying and relocating to a new premises. • The site at Cambridge East comprises land at Cambridge Airport that was safeguarded from the previous plan, which was also identified as a growth area as part of the Cambridge Local Plan (2003). Noting the significant amount of time that this allocation has been identified within previous Local Plans, we raise significant concerns over the delivery of this site within the timescales anticipated, particularly noting larger sites by their very nature can take longer to be delivered. • Marshall announced in October 2025 that the business will not be moving to Cranfield but that the company is still committed to moving its aerospace business from its Cambridge Airport base by 2030 (with development anticipated to start in 2032). Notwithstanding this aspiration, there is still no certainty that the airport will move within these predicted timescales, particularly given that an alternative site to relocate to has not yet been secured. As a result, development at Cambridge East could be significantly delayed which could result in limited or no housing delivery for a number of years, particularly within the first 15 years of the plan period.	201181 (Save Honey Hill Group), 203619 (Horningsea PC), 205234 (K Brightwell), 203340 (A Hoare), 202891 (J Williams), 202515 (H Brown), 209969 (Granta Land Ltd), 211042, 211055 (Wates Developments (and Landowners)), 211592 (Places for People)

There is a risk of overstating housing delivery by conflating consented schemes with contingent, policy-dependent capacity. The final Plan should include a clear phase-by-phase deliverability table identifying which homes are deliverable in the near term and which are contingent on airport availability, major infrastructure and other prerequisites	201181 (Save Honey Hill Group), 203619 (Horningsea PC)
Whilst CE is not reliant on the relocation of the CWWTP like NEC is, it is essential that the Local Plan does not rely disproportionately on CE to meet housing delivery requirements within the early and middle stages of the plan period. Medium-scale, well located sites such as Fen Ditton are capable of coming forward without reliance on strategic infrastructure and can therefore play a critical role in supporting the housing trajectory and ensuring delivery against the plan's timescales.	210233 (Vistry Group)
Land at South West Cambridge (Site Ref. 52643) Promotion of additional site on the edge of Cambridge at land at South West Cambridge (Site Ref. 52643)	205161 (Carter Jonas on behalf of North Barton Road Landowners Group)
Land East of Gazelle Way, Cherry Hinton Endurance Estates strongly objects to the proposed policy map for Cambridge on the basis that it fails to inset Land East of Gazelle Way, Cherry Hinton, from the Green Belt and does not propose allocation of the site for development.	209756 (Endurance Estates)
I think some development on Lakes, like in the Netherlands, such as close to the proposed Cambridge East Station, should be considered.	208723 (Cambridgeshire County Council (Cllr M Morgan))

Policy S/CBC: Cambridge Biomedical Campus

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Cambridge Biomedical Campus Ltd, Pemberton Family and Pemberton Family Trusts, Cambridgeshire County Council and Prologis and Cambridge University Hospitals NHS Foundation Trust all referenced the importance of the campus for UK life science sector, and the global significance of the site. They offered general support for the local plan approach, but also areas where they sought change. There was a general support for the need for a site wide masterplan. Flexibility was a theme in the comments, in terms of use classes and phasing, to ensure the area could be adaptable to future needs of the sectors present.

Opportunities within the Strategic Enhancement Area and the Landscape Improvement Area, but a desire for the policy not to be too prescriptive. Housing delivered on the Campus should primarily serve Cambridge University Hospital / NHS campus workers including medical students, but acknowledgement was also sought that market and build to rent maty be needed to make delivery viable, and the policy should also allow dwellings a spart of the expansion land. The goals of the transport requirements were supported, but plan should be flexible on how they are achieved. The ambition for an east-west street was supported, however, it is essential that the policy recognises that its delivery is likely to occur at a later stage in the overall development programme. CUH focused on the importance of their being an infrastructure delivery plan.

The University of Cambridge also highlighted the need for a more coordinated approach to infrastructure for the site.

Cambridge Growth Company supported the policy and the allocation for expansion through release of land from the Green Belt for future phases to support the future development of the Biomedical Campus.

Great Shelford PC, Great Shelford Village Charity, and Stapleford & Gt Shelford Neighbourhood Plan Steering Group expressed concern about the scale of development, and there needed to be consideration of the cumulative impacts on landscape and ecology.

A number of comments reference the need for a site wide masterplan. There was also support for additional health provision, including a new acute hospital.

Some developers promoting other developments highlighted that their sites could complement the CBC proposals.

Comments objected the green belt release in principle, questioning whether the need had been properly demonstrated, or the impacts properly understood, including on the green belt. A number of these comments included conditions that should be required if land is released, such as firm requirement for a new acute hospital, a focus on uses that need to be located there, and enforcement of transport issues.

Impacts on ecology and wildlife were raised, by Bedfordshire Cambridgeshire and Northamptonshire Wildlife Trust, and Cambridge Past Present and Future, and John Meed who has presented extensive information on farm land birds. Hobsons Conduit Trust

refence the importance of nine wells. They highlight the need for extensive mitigation. Historic England require consideration of heritage and landscape when considering building height and form, and the need for development to be linked with mitigation.

A number of comments focused on the impact of CBC on adjoining communities. Many reports were included of issues arising from parking and antisocial behaviour impacting adjoining areas. Proposals must include mitigating for the failures of previous growth.

A lot of comments highlighted transport concerns and suggested interventions. Personal experiences of accessing the site were highlighted. Cambridge South East Transport Scheme received a number of specific objections, siting alternative transport measures which could be applied.

Comments objected to a new vehicle access into CBC from Granham's Road, saying that there were better ways bus access could be achieved. There were concerns that it would simply move or worsen traffic problems

Response to the main issues raised in representations

Support from a range of stakeholders for the policy approach is, noted, but also local concern on a range of environmental issues.

The Cambridge Green Belt Study (2021) identified that the area adjoining Babraham Road and north of Granham's Road would have 'high' harm to Cambridge Green Belt Purposes, and the area beyond would have 'very high harm'. However, there are exceptional circumstances to justify release of land from the Green Belt. This site is only one of a number of life science sites in the Cambridge cluster, it offers the unique benefit of siting commercial research directly with the hospital. The Greater Cambridge Growth Sectors Study identifies that some businesses need to be in close proximity to clinical research. Submissions by the

Campus on ‘the Power of Proximity’ and the ‘CBC Economic Impact Study’ also provide evidence regarding those benefits. The expansion provides the opportunity to provide new facilities to enhance the site, but also support enhancement of the existing campus. The Written Ministerial Statement of 8 May 2024 emphasised the importance of the site.

A wide range of stakeholders emphasised the importance of a site wide masterplan, and infrastructure and amenity planning, to ensure the full benefits of the site are achieved and the impacts are mitigated. The local plan policy includes this requirement. This will also be of key interest to those living near to the campus who sited many concerns about impacts of living near to the site. Mitigation must include improvements to the surrounding area, and the approach to public realm and landscape has now been refined. Given the scale and long term construction of the Campus, placemaking is fundamental to achieving high quality and comments from local and neighbouring communities regarding community safety, and poor design is noted. A Place Book approach has been introduced to mitigate the impact of new development, and require policy to prepare design codes to respond positively to placemaking requirements. Policy reflects that a Masterplan is fundamental to delivering phases 3 and 4 of the Campus.

The Strategic Enhancement Area and Landscape Improvement Area wording has been amended to respond to request for clarity of what these areas may provide, including reference to habitats, farmland birds and other sensitive ecology. The policy has also been amended to clarify the importance of the key strategic views at Nine Wells LNR and the heritage asset at White Hill Farm, and other important green spaces such as the Magog Down and the Pocket Park. The importance of natural and ecological features is noted, and the policy includes reference to the Hobson Conduit Trust legal agreement for the chalk stream.

The spatial framework has been amended to make clearer the green edge and Local Nature Reserve colours. The landscape buffer to the south has been amended to show clearer boundary treatment. Other changes have been made to reflect comments on the key.

Many comments from the Campus owners and stakeholders sought flexibility in the policy, but is also important that the plan sets clear policy in terms of mitigation and infrastructure expectations, in order that a world class campus is achieved, and impacts on the wider area are addressed.

Transport infrastructure is going to be key to addressing future needs of the site. The opening of the Cambridge South Station is a huge step forward, but other infrastructure will be needed to support future growth, including enhanced South East Cambridge Transport. The realigned Granham's Road entrance is also considered necessary to serve the expanded campus. Concerns raised about the modal filter of Dame Mary Archer Way, have been noted and reference is now made to measures that need to be implemented to manage traffic across the Campus.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Cambridge Biomedical Campus Ltd • CBC Ltd works with landowners and local government / organisations to drive and inform how the Campus should evolve so that it both maintains and further builds upon its success. The UK	203327, 211012, 211013, 211014, 211626, 211627, 211628, 211629, 211630,

life science sector has grown significantly in recent years, with Cambridge playing a fundamental role in this. • Overall, CBC Ltd agrees with much that has been included in the draft Local Plan concerning the Campus. CBC Ltd's primary concern for the draft Local Plan is to ensure that the leading international importance of the Campus as a location for life science excellence is protected, enhanced and, importantly, not diluted. For the Campus to retain its leading reputation, it must be vibrant, desirable and offer best in class facilities to attract talent and key life science businesses. • CBC Ltd seeks a masterplan led policy approach that will provide clarity concerning the timing / trigger for its production, as well as a properly defined context and framework. The policy approach proposes clear triggers and parameters which would require a whole Campus masterplan include. The need for an IDP is also linked to the proposed Campus masterplan triggers. • Given the proximity of the Strategic Enhancement Area to the Campus and significant opportunity for place shaping and contribution to the Campus it offers, works on this land should take place before any works on the land within the Landscape Improvement Area take place. • Any housing delivered on the Campus should primarily serve Cambridge University Hospital / NHS campus workers including medical students. • Applications for other uses should need to provide an amenity strategy. • Need to secure developer funding to improve public space. • Other detailed amendments are proposed.	211631, 211632, 211633, 211634, 211635, 211636, 211637, 211638, 211639, 211640, 211641, 211642, 211643, 211644 (Cambridge Biomedical Campus)
Pemberton Family and Pemberton Family Trusts Support the overall approach to the policy but object to two parts (Part 7 and Part 17d) where the Pemberton Family requires a detailed amendment to the policy to ensure the effective use of land and to ensure a sound allocation that involves the release of Green Belt land. • Strong support to the overall policy and the continued recognition by the emerging Local Plan of the important role of CBC and its future growth	205286, 210481,210482, 211294, 211295, 211296, 211297,211298, 211299, 211300, 211301, 211302, 211303, 211304, 211305,

• object to the policy requirements for the LIA. policy should allow for flexibility in design and not limit the use of the entire area for linear or drainage features. • SEA should specific requirements for landscape buffers, green infrastructure protection, flood risk mitigation, and the use of Green Belt land to enhance biodiversity. • Policy, Spatial Framework and the Proposals Map all need to align and be consistent and accurate in how they represent the land and allocation. Important that all Local Plan plans or diagrams that present the site graphically show and designate these two areas (LIA and SEA) separately. • The term “future phase” should be replaced with “expansion” to avoid the potential inference that the development of the expansion land should only occur after the existing Campus has been regenerated. • Including an explicit reference to “life sciences” to ensure the full scope of work undertaken at the Campus is accurately reflected. This proposed amendment aligns with the uses outlined in paragraph 2 of the draft policy. Additionally, the suggested references to “an innovation hub” and “visitor accommodation” are important to highlight, given the significant benefits these elements will bring to the Campus and its wider community. • Describing CBC as ‘globally significant’ is an accurate reflection of its international standing. The unique mix of uses at the Campus make it a world-leading centre of research, development, and medical application. • Support the identification of land to the south of the Campus for green infrastructure enhancements, including open space and biodiversity. It may be difficult to achieve the necessary net gain in biodiversity and all amenity provision within the Campus’ expanded boundary. This may change, however, and if it does become possible, then the clear direction in legislation and policy is for those benefits to be provided onsite so far as possible. • Provision of higher education uses within the Campus is a key component of its offer and success.	211306, 211307, 211308, 211309, 211310, 211313, 211315, 211317, 211319, 211321, 211323 211325, 211327, 211329, 211331, 211333, 211335, 211337, 211338, 211340, 211341, 211343, 211345, 211347, 211349, 211351, 211353, 211355, 211357, 211359, 211361, 211363, 211365, 211367, 211369, 211371, 211373, 211375, 211377, 211379, 211381, 211383, 211385, 211387, 211389, 211391, 211393, 211395, (Pemberton Family and Pemberton Family Trusts)

• Paragraph 8(e), which states a floorspace figure for research and development and healthcare uses only (excluding higher education, leisure, hotels, and other supporting uses), be deleted and additional text be included at paragraph 8(b). • A reference to use classes is not necessary and may unduly limit the scope of potential uses. Flexibility is particularly important given the evolving nature of life sciences research, which is increasingly associated with AI and data-driven methodologies. As a result, there may be a shift from traditional wet lab facilities to dry lab environments. • Requirement for a Framework Amenity Strategy for the Campus is supported. However, we do not agree with describing the Campus as a “24-hour” community. • A well-designed masterplan for the Campus should intentionally promote interaction between people who live, work, and visit there. • The majority of housing delivered on the Campus will be located within the existing boundaries and will be provided by CUH to meet the needs of CUH and wider NHS campus staff. However, there is also an aspiration to enable the delivery of build-to-rent homes for Campus workers within the expansion land. • The policy wording should recognise that the proposals will bring about a substantial amount of change, and that some of these changes may adversely affect views or heritage assets. It is essential that the policy recognises that land optimisation will sometimes require development forms, scales, or configurations that do not enable the enhancement of all existing views into or across the site. • Recognise that in certain circumstances, proposals for demolition may deliver benefits that outweigh the carbon savings associated with retaining the existing building. • Support the ambition for an east-west street; however, it is essential that the policy recognises that its delivery is likely to occur at a later stage in the overall development programme • Policy should be flexible regarding for Transport strategy and trip budget, it should be sufficient for the policy to set out the ambition not exactly how it will be achieved at this stage. • Healthcare uses may not be suitable and viable for all water use, energy etc aspirations.	

• The benefit that a campus-wide masterplan can play in ensuring the best possible outcomes is understood and appreciated. The LCG has prepared a draft Spatial Framework supported by robust assessment and evidence. We support the requirement to be the output of a planning application rather than something that should necessarily precede one. • Acknowledge GCSP's desire to include a spatial framework (figure 63) but we are concerned that may appear more prescriptive/precise than the stage of the process we are at • Future strategies should apply to the area covered by the application. While coordination across the wider campus is encouraged where possible, it is unlikely that existing management strategies can be revised. • The policy is not contingent on identifying a single delivery body, nor should it be interpreted as such. • Proposals may need to come forward on an expedited timeframe. The draft policy should not prejudice this happening but be flexible enough to accommodate them in an appropriate way that does not prejudice the rest of the masterplan being built out in accordance with its terms. • A number of other detailed points are made and changes proposed. .	
Cambridgeshire County Council and Prologis Pleased to submit representations in support of the draft Local Plan, and in particular Policy S/CBC. Detailed wording changes are suggested. • Describing CBC as 'globally significant' is an accurate reflection of its international standing. The unique mix of uses at the Campus make it a world-leading centre of research, development, and medical application. The policy rightly recognises this position and sets an appropriately defined context for expansion of the Campus. • We recommend including an explicit reference to "life sciences" to ensure the full scope of work undertaken at the Campus is accurately reflected.	209136 209137, 209138, 209139, 209140, 209141, 209142, 209143, 209144, 209145, 209146, 209147, 209148, 209149, 209150) 211314, 211316 211318, 211320, 211322, 211324, 211326, 211328, 211320,

• The term “future phase” should be replaced with “expansion” to avoid the potential inference that the development of the expansion land should only occur after the existing Campus has been regenerated. • support the identification of land to the south of the Campus for green infrastructure enhancements, including open space and biodiversity. • The provision of higher education uses within the Campus is a key component of its offer and success. • Provide clarity on what floorspace figures are referring to in terms of uses, and that they are indicative. Also need flexibility between use classes given the evolving nature of life sciences research • Do not agree with describing the Campus as a “24-hour” community. While the hospitals operate around the clock, these activities do not generate a night-time economy • The term “comprehensive” should be deleted from Para 10 as it could be misinterpreted as implying a level of detail that is not intended at this stage. • A well-designed masterplan for the Campus should intentionally promote interaction between people who live, work, and visit there. • The majority of housing delivered on the Campus will be located within the existing boundaries and will be provided by CUH to meet the needs of CUH and wider NHS campus staff. However, there is also an aspiration to enable the delivery of build-to-rent homes for Campus workers within the expansion land.	211332, 222334, 211336, 211339, 211342, 311344, 211346, 211348, 211350, 211352, 211354, 211356, 211358, 211360, 211362, 211364, 211366, 211368, 211370, 211372, 211374, 211376, 211378, 211380, 211382, 211384, 211386, 211388, 211390, 211392, 211394, 211396, 211398, 211400, 211402, 211404 (Cambridgeshire County Council and Prologis)
CUH strongly supports the overall vision for CBC. • We recommend including an explicit reference to “life sciences” to ensure the full scope of work undertaken at the Campus is accurately reflected. CBC as globally significant is an accurate reflection of its international standing. The unique mix of uses at the Campus make it a world-leading centre of research, development, and medical application. A reference to use classes is not necessary and may unduly limit the scope of potential uses.	208764, 209276, 209277, 209278, 209279, 209280, 209281, 209282, 209286, 209289, 209290, 209291, 209292. 211788, 211789,

• The term “future phase” should be replaced with “expansion” to avoid the potential inference that the development of the expansion land should only occur after the existing Campus has been regenerated. • CUH supports the identification of land to the south of the Campus for green infrastructure enhancements, including open space and biodiversity. Our primary objective would be to ensure that the expansion land and associated enhancement land, provides an opportunity for enhanced recreational access for our staff, patients and visitors. • The provision of higher education uses within the Campus is a key component of its offer and success • The scale of development at the Campus should be determined by physical and infrastructure constraints such as building heights, the trip budget, and land availability. These constraints require further assessment, and current work does not support a defined minimum or maximum. • It is essential that the scale of new healthcare buildings be determined by the specific operational requirements of the Trust, the model of care to be delivered, and the clinical and spatial standards that apply at the time of design. • We are making the case for significant renewal of our wider hospital estate, and a case is being put forward to Government for funding to develop the business case for a new Acute Hospital. • We enjoy excellent partnership working across healthcare, academic and commercial research partners on campus, which should be encouraged. • LCG’s evidence base submitted to GCSP identifies an opportunity to deliver approximately 1,000 additional homes on the Campus. The Expansion Landowners are therefore very supportive of this element of the draft policy. However, we propose an amendment to increase the indicative number of units to allow greater flexibility for additional homes to be delivered on the expansion land. • CUH support the objective that the majority of housing delivered on the Campus will be located within the existing boundaries and will be provided by CUH to meet the needs of CUH and wider	211790, 211791, 211792, 211793, 211794, 211795, 211796, 211797. 211798, 211799, 211800, 211801, 211802, 211803, 211804, 211805, 211806, 211807, 211808, 211809, 211810, 211811, 211812, 211813, 211814, 211815, 211816, 211817, 211818, 211819, 211820, 211821, 211822, 211823, 211824, 211825, 211826, 211827, 211828, 211829, 211830, 211831, 211832, 211833, 211834, 211835, 211836, 211837, 211838, 211839, 211840, 211841, 211842, 211843, (Cambridge University Hospitals NHS Foundation Trust)

NHS campus staff. In order for staff housing to be viable, an element of market housing or build to rent may be necessary. • Requirement for a Framework Amenity Strategy for the Campus is supported. However, we do not agree with describing the Campus as a “24-hour” community. • The policy wording should recognise that the proposals will bring about a substantial amount of change, and that some of these changes may adversely affect views or heritage assets. It is essential that the policy recognises that land optimisation will sometimes require development forms, scales, or configurations that do not enable the enhancement of all existing views into or across the site. • Consider giving greater clarity on the respective roles of the SEA and LIA such that the balance between such objectives as biodiversity enhancement, recreational access, access and movement corridors, landscape buffering/screening and impact on views can be assessed in the round. • Policy should be flexible regarding for Transport strategy and trip budget, it should be sufficient for the policy to set out the ambition not exactly how it will be achieved at this stage. Patient parking is a priority for CUH. • The LCG remain committed to the long term ambition to deliver the east-west link, or High Street, as a public transport and active travel corridor. It is essential that the policy recognises that its delivery is likely to occur at a later stage in the overall development. • Healthcare uses may not be suitable and viable for all water use, energy etc aspirations. • We support the need for a campus-wide Framework Masterplan. • CUH encourage a focus on establishing the approach to Infrastructure Delivery to ensure the ambitions for the campus, and the expectations of each landowner / area of the masterplan are clearly defined. • Othe detailed wording changes are suggested.	

The University of Cambridge supports the policy in the Local Plan that promotes the expansion and enhancement of the Biomedical Campus, recognising its national and international significance for education and research in life sciences. The Vision and Objectives of the policy are endorsed, aiming to establish the campus as a leading centre for medical research and health science in Europe. While generally supportive of the allocation and wording, the University has provided detailed comments in an attached document to clarify aspects of the policy in alignment with other landowners. Concerns are raised regarding the 'Lifespan' section of the policy, particularly about the lack of clarity on phasing and delivery of expansion proposals. The Development Strategy indicates that development is contingent on appropriate infrastructure being in place to support the campus's needs, which the University believes requires a more coordinated approach. The University advocates for a detailed masterplan that includes infrastructure and delivery timing to ensure all developments align with the broader vision of the plan. The University expresses willingness to collaborate with partners and the Greater Cambridge Shared Planning Service to address these concerns and contribute to the Infrastructure Delivery Strategy.	204736 (University of Cambridge)
The Biomedical Campus is encroaching on the Green Belt south of Cambridge, and the proposed CSET busway will further impact this area. These must be considered together. Both the Biomedical Campus and the busway will have significant harmful effects on the Green Belt, with concerns about the cumulative impact on the surrounding countryside, regardless of landscaping efforts. While the proposal for a Landscape Improvement Area is welcomed, previous plans under Policy CSF/5 have not been implemented, raising doubts about future improvements. Clear plans and guaranteed funding for landscape improvements must be established before granting planning permission for any	204687 (Great Shelford PC)

development. Proposals for public access should align with the recommendations in the Stapleford and Great Shelford Neighbourhood Plan. There must be a firm and irrevocable commitment against any further development in the Green Belt should the construction of the busway proceed.	
• The respondent expresses broad support for Policy S/CBC clauses 14, 17, and 18, emphasising the need for new developments to integrate sensitively with surrounding areas and retain key views, particularly from strategic viewpoints like Nine Wells Local Nature Reserve and Magog Down. • Concerned about the cumulative impact of building height and density on the Cambridge Biomedical Campus, suggesting that it may create a 'concrete wall' that detracts from the landscape, particularly from high points on the Gog Magog Hills. This 'wall' could be broken up by fingers of vegetation penetrating into and through the southern fringe. • The respondent calls for greater specificity in Policy S/CBC 14a regarding transitions in height, scale, and landscaping, arguing that current guidelines may inadvertently support taller buildings that negatively impact long-distance views. • There is a concern that the lack of height restrictions in Policy S/CBC clause 16c may lead to increasingly taller buildings that overshadow City views, public spaces and the greenbelt, suggesting that medium-mature trees should be included in planting plans to mitigate the raw edge of the development. • Support is expressed for the vegetated landscape buffer proposed in Policy S/CBC clause 17d, with a recommendation to expand the Strategic Enhancement Area southwards to Magog Down to enhance nature and landscape character. • The respondent believes that improved landscaping policies from the 2008 Cambridge Southern Fringe Area Action Plan should be incorporated into the draft Greater Cambridge Local Plan to ensure community and environmental benefits are preserved.	202085 (Great Shelford Village Charity)

• The respondent argues for limited private car access on the new road and supports alternative transport solutions that would improve connectivity within the Cambridge Biomedical Campus, such as an on-road CSET route coupled with upgrades to existing roads.	
The respondent expresses broad support for Policy S/CBC clauses 14, 17, and 18, emphasising the need for new developments to integrate sensitively with surrounding areas and retain key views, particularly from strategic viewpoints like Nine Wells Local Nature Reserve and Magog Down. Concerns are raised about the cumulative impact of building height and density on the Cambridge Biomedical Campus, suggesting that it may create a 'concrete wall' that detracts from the landscape, particularly from high points on the Gog Magog Hills. This 'wall' could be broken up by fingers of vegetation penetrating into and through the southern fringe. The respondent calls for greater specificity in Policy S/CBC 14a regarding transitions in height, scale, and landscaping, arguing that current guidelines may inadvertently support taller buildings that negatively impact long-distance views. There is a concern that the lack of height restrictions in Policy S/CBC clause 16c may lead to increasingly taller buildings that overshadow City views, public spaces and the greenbelt, suggesting that medium-mature trees should be included in planting plans to mitigate the raw edge of the development. Support is expressed for the vegetated landscape buffer proposed in Policy S/CBC clause 17d, with a recommendation to expand the Strategic Enhancement Area southwards to Magog Down to enhance nature and landscape character.	201552 (J Flynn, Chair, Stapleford & Gt Shelford Neighbourhood Plan Steering Group)

Improved landscaping policies from the 2008 Cambridge Southern Fringe Area Action Plan should be incorporated into the draft Greater Cambridge Local Plan to ensure community and environmental benefits are preserved. The respondent argues for limited private car access on the new road and supports alternative transport solutions that would improve connectivity within the Cambridge Biomedical Campus, such as an on-road CSET route coupled with upgrades to existing roads.	
I am unable to find details of the Strategic Enhancement Area S/SEA/CBC which is referred to in 17d of Policy S/CBC.	201829 (F Goodwille)
We are disappointed that Site 40509 remains unallocated, which we consider unreasonable and inconsistent with the Local Plan's aims. HELAA review highlights clear discrepancies in site assessments. Compared to Site OS276, an allocated Green Belt site, Site 40509 performs significantly better, receiving five Green ratings and no Red ratings, whereas OS276 receives two Reds and only two Greens. Excluding Site 40509 on Green Belt grounds while allocating a less sustainable site is unjustified and demonstrates inconsistency in assessment and site selection, undermining the equitable application of the Local Plan's criteria.	204428 (Waterbeach Instruments Ltd)
Strong support is given to this policy. Cambridge Biomedical Campus is a globally significant hub of research and innovation that has led to tangible improvements to human health and wellbeing. Its expansion and regeneration deserves full support. The potential for Cambridge South to complement and support the expansion of CBC has long been evident, with housing delivered on Cambridge South intended to support the evolution of the Campus and to meet the needs of its diverse workforce. Whilst the two sites are now being promoted separately, that intrinsic relationship between the two sites remains obvious.	208216 (Pigeon Land and LIH)

CGC supports this policy and the allocation for expansion through release of land from the Green Belt for future phases to support the future development of the Biomedical Campus. The strategic importance of CBC has been stated in the Written Ministerial Statement 8th May 2024, including support for the accelerated delivery of any associated housing development and the provision of appropriate levels of affordable housing to meet the housing needs of those working at the campus. CGC recommends that further consideration is given to the boundary of this allocation in relation to the proposed access. The access as shown on the Spatial Framework plan figure 63 appears not to be deliverable due to the consented scheme to the north of Babraham Road. Therefore, an alternative redline for the proposal allocation should be considered to allow for alternative access arrangements.	203914, 208940 (Cambridge Growth Company)
This section needs to give priority to measures that will improve the mental as well as physical health of people. See the research in Neuroarchitecture and note how the existing building style ***increases levels of mental stress in the brain*** - achieving the opposite of what hospitals and health facilities are meant to do. The Frank Lee Centre should be made public and *massively expanded* to become a leisure centre. Provision for a new lifelong learning centre is essential.	203762 (A Carpen)
Provision for keyworker housing near the Cambridge Biomedical Campus should be made given the additional hospital construction happening. The distances staff have to travel involves crossing county boundaries for too many. This could be a requirement for developments at any existing or proposed railway stations, and possibly light rail stops should such a system get built.	203828 (A Carpen)
Urgent need for a masterplan prior to further development Need for a direct link in this policy between jobs and housing availability to ensure they come forward together.	202847 (Cambridge City Council Liberal Democrat Group)

EWR Co supports the principle of the development and expansion of the Campus, as it aligns with EWR Co's objective to facilitate economic growth within the Oxford–Cambridge Growth Corridor. EWR will contribute to the Councils' vision for the Campus.	211898 (East West Rail Company)
Support the expansion of the Cambridge Biomedical Campus, recognising its importance to healthcare and science. Concerns are raised about the safety and wellbeing of staff commuting to the site, highlighting current commuting experiences as lengthy and potentially dangerous. Many staff cannot work from home and must travel to campus, necessitating improvements in convenience and safety. Many staff cannot afford to live in Cambridge, limiting their commuting options to car. Improvements in parking and bus services are essential to accommodate the growth of the campus. The frequency of the guided bus service should be increased, particularly during peak times. A shuttle bus from Cambridge Train Station to the hospital is suggested to alleviate capacity issues on the guided bus for those travelling to St Ives.	201173 (A-J Denman)
The biomedical campus is a good location for as much development as possible. I has a new station, a number of bus routes and jobs and amenities. As much development as possible, as dense as possible should take place. If anything, it should go further than what the plan currently proposes.	203616 (H Thomas)
My 14-year ecological study shows that the fields adjoining the Biomedical Campus hold remarkable populations of farmland wildlife. Encroachment of CBC has already had an impact on threatened species and S/CBC will further increase the pressures. While the proposed mitigation is an improvement over the first proposals in 2021 there will be tensions in the way the mitigation fields may be managed. To help conserve threatened farmland species I recommend a combination of enhanced arable land with some grassland and wildflower plots secured under long-term agreements, with	202585 (J Meed) (206306, 206307, 206308 206309, 206310, 206311, 210870, 210871, 210872 210873, 210874, 210875, 210876, 210877, 210878,

species-specific conditions for farmland birds including appropriate management and annual monitoring.	210879, 210880, 210881, 210882, 210883, 210884, 210885)
Object, CPPF acknowledges the importance of the site and supports the release of Green Belt land for clinical and research investment but opposes further boundary expansion in future Local Plan reviews. The Cambridge Biomedical Campus SPD, adopted in April 2025, should be referenced in supporting documents. An updated master plan is necessary to identify redevelopment opportunities and strategic landscaping to mitigate impacts on the landscape. Policy needs to require the masterplan to be updated. Consider restricting development to those uses where it is essential to be onsite. Amend policy to direct housing development to sites not needed for biomedical purposes. Heavily scrutinise and sensitivity-test forecasts for modal shares for transport to/from the CBC. Test all routes onto and through the Campus for adequate capacity for all modes, recognising that there will be large cohorts of people walking and cycling to and from Cambridge South station. Revisit the options for providing bus priority between the Babraham P&R and the Biomedical Campus to also accommodate buses arriving on the A1307 from Haverhill via the Babraham Research Park.	202862 (Cambridge Past Present and Future)
CPPF is concerned that residential development may encroach on land needed for biomedical purposes, advocating for housing only on unsuitable land. High-rise residential developments should be located in areas appropriate for such buildings, and housing should be limited to key worker accommodation. Policy needs to require the masterplan to be updated. Consider restricting development to those uses where it is essential to be onsite.	209295 (Cambridge Past Present and Future)

CPPF suggests a different approach to development and green space on the south-east boundary to enhance outcomes for nature and people, referencing the Wildlife Trust BCN. Mitigation strategies for new habitats should consider the needs of red-listed farmland birds and may require off-site nature-friendly farming.	209296 (Cambridge Past Present and Future)
The Wildlife Trust supports point 14(b) of the policy and the principles in bullet 17(c). The Wildlife Trust fully supports effective buffering of both LNRs at Nine Wells and Beechwoods. The fields immediately to the east of Nine Wells are also essential to buffer this site and protect the chalk springs. The Biomedical Campus is known as a hotspot for farmland birds. The proposed landscape enhancement and accessible greenspace provision will not provide suitable compensation for the loss of farmland bird population. These will need off-site areas of nature friendly arable farming with a secure long-term future and not typical greenspaces. The policy doesn't adequately provide for this. We are extremely concerned overall that the proposed landscape buffer is the wrong solution in the wrong place in terms of delivering nature recovery and ecological enhancement in line with the Cambridge Nature Network and the Greater Cambridge Green Infrastructure Opportunity Mapping. It fails to deliver the strategic natural greenspace that the City requires and demonstrates a lack of long-term vision to deliver the Cambridge Nature Network. A corridor from Beechwoods LNR to Nine Wells LNR around the edge of the Babraham Park & Ride site is not the right solution.	202995 Bedfordshire Cambridgeshire and Northamptonshire Wildlife Trust)
Wildlife Trust believes that now is the time for a comprehensive approach to long-term planning for development on the south-east edge of Cambridge to create a one-off targeted Green Belt release in appropriate locations and to deliver a regionally significant sub regional greenspace of 500 Ha in size", comprising a large accessible area of chalk downland and associated habitats from Cherry Hinton to	202998 Bedfordshire Cambridgeshire and Northamptonshire Wildlife Trust)

Beechwoods and Wandlebury, and on towards Magog Down. Targeted release of green belt land in more than one location will facilitate the land assembly required to deliver the strategic green infrastructure in the best location	
Nine Wells remains the principal source of spring water feeding into our chalk stream system, and so it is axiomatic that the Trust is directly concerned with the health of the springs and the curation of Nine Wells LNR. The Trust have legal agreements with developers at CBC to cover surface water arriving into the Brook. Parameters have been established for flow rates of run off and many interventions have been successfully including at Clay Farm and CBC. We believe that these legal agreements should be recognised in S/CBC. It should be explicit the importance of water quality and natural habitats.	209014 (Hobsons Conduit Trust)

Other comments from stakeholders

There are no designated heritage assets however there is a scheduled monument known site revealed by aerial photography west of White Hill Farm. There is also a grade II listed monument at Nine Wells with inscriptions including Thomas Hobson, of Hobsons Conduit. There are also important views of the edge of the city from the higher land to the south and in particular from heritage assets including the scheduled monuments of Little Trees Hill (on Magog Down) and Wandlebury. Any development of this site has the potential to affect these heritage assets and their settings. We welcome the preparation of the HIA. We welcome 14c, 16c.and 16d and 28. 14c should also specifically mention the scheduled monument west of White Hill Farm as well as the listed monument at Nine Wells. The policy should include the need for a Conservation Management Plan of the heritage assets in the Landscape Enhancement Area including their ongoing maintenance. Criterion 16 should be amended to reference	210129 (Historic England)

the need to scale down heights towards the edge of the development as recommended in the HIA. However, we have some serious on-going concerns about heights and the softening of the edge of the City as well as landscape enhancements in the wider area. Landscape Enhancement Areas have been part of the previous Local Plan and yet there has been little change to the wider setting of the city in this broad area. It is imperative that future development of the Addenbrookes site is linked to positive offside mitigation to help enhance the setting of the City and indeed views from heritage assets along the southern hills. This aspect of the Plan, and the link between development and mitigation must be strengthened to ensure that it is implement. This issue applies not only in relation to Addenbrookes but to other Landscape Enhancement Areas in the Plan.	
Unless the Strategic Enhancement Areas start to deliver a softening of the landscape e.g. around Addenbrookes, we will have ongoing concerns about heights of development in the proposed CBC extension to the south of Addenbrookes.	208930 (Historic England)
A new purpose-built ambulance hub is required for Cambridge and the surrounding areas, ideally in the area of green belt south of the Cambridge Biomedical campus. The right infrastructure would include 1 ha of land to build the ambulance hub with close access to nearby main roads. The new ambulance hub would be designed to enable expansion to allow for population growth for the next 30 years. A new Ambulance Hub would cost around £20-£22m (including land purchase, EV charging infrastructure requirements).	210320 (East England Ambulance Service NHS Trust)
Site area includes a safeguarded Waste Management Area for the partially implemented EIC as shown on the Cambridgeshire and Peterborough Minerals and Waste Local Plan (2021) Policies Map. Developers should be made aware that the partial implementation of this EIC involved the construction	210604, 210611 (Cambridgeshire County Council)

of underground tunnels; and this should be considered in any design. It is requested that supporting text to this effect is included in the Plan for this allocation. we welcome that nature is included within the policy for the Cambridge Biomedical Campus (including Addenbrooke's Hospital), particularly the need to 'improving ecological links between Nine Wells LNR and GoG Magog Hills' and the allocation of 'Non-development areas adjacent to Cambridge Biomedical Campus Strategic Enhancement Area' (S/SEA/CBC)	
Anglian Water welcomes the policy requirements set out within the Resources section of these policies, which sets out important measures including innovative approaches to water management on site, including SuDS, water reuse and solutions to address flood risk, and sewage disposal.	210192 (Anglian Water)

Comments Related to Garnham's Road Access

Object to proposed new vehicle access into CBC from Granham's Road • Not be needed if the suggested alternative for a busway spur off the A1307 Hinton Way roundabout was adopted, because this would connect all the CBC with Cambridge South Station (CSET fails to achieve this) and it would significantly reduce traffic volumes near Addenbrooke's / Babraham Road /Hills Road and provide emergency vehicles a direct blue light route into Addenbrooke's. • A link from Granham's road into CBC would exacerbate congestion at junction with the A1301 High Green (at the Coop) and the queuing at the level crossing. • The Better Ways for Busways' alternative for a busway, as cheaper, faster to achieve and far, far less damaging to our environment and respectful of the Wandlebury landscape	202085 (Great Shelford Village Charity) 201552 (J Flynn, Chair, Stapleford & Gt Shelford Neighbourhood Plan Steering Group) 202664 (A Gannon) 202639 (S Newman) 204955 (O Arthurs) 207657 (K Foreman)

• Proposed route doesn't seem to take into account the destinations which travellers wish to access, i.e. Cambridge South Station, all part of CBC, proximity to Babraham P&R Previous plan committed not to build south of Granhams road • To facilitate the alternative CSET route, we support upgrades to Francis Crick Avenue and Dame Mary Archer Way, as per clause 20b • Granham's Road. This is across farmland, from a notoriously poorly maintained and difficult road • Proposed entrance to the expanded Cambridge Biomedical Campus from Granhams Road may worsen traffic and should restrict private vehicle access • It may shift traffic congestion to A1301/Granhams Rd junction and Graham's Rd level crossing rather than alleviate it, and questioning the necessity of the road given that CSET is intended to reduce traffic volumes.	208406 (M Cooper) 209023 (Hobsons Conduit Trust) 202664 (A Gannon) 202626 (I Smith) 203156 (J Jasiewicz) 204979 (C Arthurs) 203081 (T Lane) 205650 (A Sykes) 203189 (V Morgan) 204457 (N Pond) 208557 (J Robinson) 203100 (C Schofield) 204979 (C Arthurs) 203102 (N Campbell) 204107 (A Baker)
PC would like to raise concerns about the extra traffic that will be using Granhams Road as the relief road joins with it because his is a fast signal track road. Would also like to highlight the importance of Nine Wells as an environmental site for rare chalk streams. Figure 64 shows the area being both sides of Granhams Road (this is land being released from Greenbelt) but maybe some of this is to retain a green area.	202535: 205585: 205586 205587, 205588,205589 (Little Shelford Parish Council)

Object, why continue to pursue an access into CBC from Babraham Road at Granhams. This will increase congestion. It is too close to Addenbrookes and will require a roundabout or lights. The access should be near the Babraham Road roundabout where there is more space to allow a better flow of traffic into the CBC. The policy rightly emphasises the importance of the Gog Magog Hills, yet it has deemed approval of an ill-considered busway which will visually dominate the most attractive landscape close to Cambridge and seriously harm the Green Belt throughout its route. It is a tragic situation. The busway route is hugely flawed. Seven thousand residents have objected and how can the County deem approval at the same time as stating that it harms the Green Belt and is inappropriate development. Although the GCP have spent ten years considering CSET, the approved busway route should be abandoned. For years those who use the 1307 know that forming a good access into the CBC near to the Babraham Road roundabout would be the most effective solution allowing both bus and car access.	204119 (B Reeve)
The Transport Strategy needs thorough scrutiny, particularly regarding the realism of mode-shares for train and bus transport. The technical note on Granham's Road realignment lacks clarity on tested options, and some claims about integration benefits require further examination. Consideration should be given to bus services from the A1307, with potential advantages from a continuous inbound bus lane or separate busway.	209297 (Cambridge Past Present and Future)
Granhams Road	208744 (Trumpington residents Association)

Unless the CBC Landowners devise and implement a robust contemporary solution to ensure that the CBC's private roads are only used by authorized users – and no-one else – the proposal to realign Granham's must be a non-starter.	

Comments raising transport issues

Connectivity between the Biomedical Campus and West Cambridge is required. The Plan must identify and secure key off-site active travel improvements. On-site walking and cycling improvements should not be delayed further.	205245 (K Brightwell) 204600 (D Potts) 202516 (H Brown) 205163 (J Grantham) 205410 (A Williams) 207542 (R De Beauz) 202306 (R Macdonald)
Expansion of the Biomedical Campus is understandable given its regional and national importance. However, the Local Plan does not yet set out a sufficiently robust spatial strategy to accompany this growth. While Cambridge South station will significantly improve access, it primarily resolves an existing deficiency rather than enabling the scale of growth now proposed. Transport cannot be treated as a single intervention. Large-scale employment growth without corresponding housing or genuinely mixed-use development risks intensifying peak travel demand and increasing pressure on already constrained corridors. At present, the level of mixed-use development proposed around the campus is token. If the objective is to support healthcare, research and education, the Plan must enable	209066, 211771 (Camcycle)

people to live close to where they work. The policy should: ● Require genuinely mixed-use development at a meaningful scale within and adjacent to the Biomedical Campus, including high-density housing with low car ownership, to reduce the need for long-distance commuting ● Avoid token residential provision and explicitly link employment growth to housing delivery in a walking or cycling distance to the campus If land is released around the Biomedical Campus, the Plan should not embed physical and spatial constraints that prevent homes being built close to the campus. The Plan identifies cycle connections over the railway but does not acknowledge that these are already major failure points as well as a fragmented on-site network. The busway bridge requires significant intervention, either through cantilevered widening or a parallel structure, if it is to support the level of cycling demand associated with further Campus expansion. Connectivity between the Biomedical Campus and West Cambridge is critical if growth in these two areas is to be successful. This is discussed further in the following section. The policy should: ● Ensure that boundary treatments associated with Green Belt release do not create long-term physical or spatial barriers to movement, future connections or neighbouring communities ● Identify the active travel connections over the railway line as critical infrastructure and explicitly acknowledge the need for improvement ● Secure firm commitments to upgrade the key walking and cycling corridors serving the campus,	

including Trumpington Road, Long Road and the busway path with delivery tied to development phasing.	
With such a significant expansion proposed, including green space provision, I question whether it is wise to try and fit everything on this one site. It will be the size of a town, but it lacks the transport infrastructure to cope properly. For staff, visitors and patients (for some of whom this hospital is not local) it would make more sense to consider another location outside Cambridge. There is only such much that can be built here.	201197 (B Nicolson)
Priority access by bus from the Park&Ride/South Cambs along a new road would be very welcome. It would be great if the Plan and accompanying Transport Strategy brought about 20 minute journeys by any mode between Eddington/West Cambridge and the Biomedical Campus.	203213, 205600 (S Hughes)
The Biomedical Campus has a policy of preferring public transport over private car use. But Stagecoach can't match this, leaving people often waiting 30 minutes or more for a bus to the station and centre from 17:00 to 17:30. I leave my desk at 17:01, arrive at the bus terminus at 17:10, and then wait. And wait. Buses to the station and centre should be every 5 minutes. The RTPI needs to be reliable (currently broken again!) If I miss 18:00 connecting bus, I have a 30 minute wait for the next to Bar Hill.	201041 (P Spowart)
I work at Cambridge Research Park, can see it from the edge of the village but inaccessible by bike. How did they get permission for a site with no safe cycle accessibility.	202641 (C Amos)
Growth of the biomedical campus can only be sustainably achieved if: More housing is planned along it, with <1 parking space per housing provision; boundary treatments associated with the green belt does not hamper active travel movement in the future - more emphasis is put on active travel connections over the railway, in particular a widening of the busway bridge or new path parallel to it clear	203732 (T Preud'homme)

commitments made to upgrade the key walking and cycling corridors serving the campus, including Trumpington Road, Long Road and the busway path with delivery tied to development phasing.	
(1) The Babraham Road Park and Ride is placed too close to the city centre. Regardless of whether the new busway gets built, the P&R should be further out with dedicated bus lanes between the P&R and Addenbrookes. That way cars have an incentive to use the P&R (skip the traffic) rather than driving all the way in. (2) I would urge the council to consider adding a bus stop on the busway bridge across South Station, making the transfer between buses and trains seamless	203826 (A Chan)
Support plans to improve bus access to Cambridge Biomedical Campus (CBC) and links between the Babraham Park&Ride and CBC.	203239 Cambridge Area Bus Users)

Comments focused on the Cambridge South East Transport Scheme

I wish to comment against the proposed CSET bus route across green belt bordering the Gog Magog Hills which is due to cost 160 million pounds at current estimates. There is no need to pursue this route and destroy the landscape at such an astronomic cost when a perfectly good alternative has been proposed by Better Ways for Busways along the A1307 corridor from the A11 to the Cambridge Biomedical Campus. This could be done in sections to avoid disruption, much of the route already has bus lanes in place and the cost is a fraction of that proposed by the route across green belt which would ruin good agricultural land. The Gog Magog Hills have been included as a priority for enhancing green infrastructure and will be negatively impacted by CSET and therefore I strongly oppose this ill thought through strategy.	207646 (J Coppendale)

Object, CSET plan encroaches onto Green Belt land and does is not proposed to lie within the public transport corridor. The proposed Busway will urbanise the rural countryside of south east Cambridgeshire. The Gog Magog Hills will be negatively impacted, when this was a priority for enhanced strategic green infrastructure. The Gog Magog Hills have not been afforded the value and protection required when considering the environmental impacts of the proposed route of the CSET Busway. Construction of the proposed Busway is expensive, when a cheaper alternative is available.	205468 (J Macpherson)
Don't like the CSET plan to concrete over the fields to produce a busway to take commuters from Abington to Addenbrookes (bypassing the local villages). I believe buses should run down the existing roads and bus lanes should be added to existing roads. Nine Wells should be protected, along with the DNA path. Buses should run into the town centre not terminating at Addenbrookes. Train station, car parks at Foxton and Whittlesford need to be enhanced to run commuters to Cambridge stations such as Cambridge South. The CSET's destruction of Cambridge greenbelt is simply wrong, expensive and shameful.	207522 (C Ayling)
BC is continuing to expand along the A1307 and the alternative in road bus lane would include a new spur road that emergency vehicles could use to access A&E more quickly, potentially saving lives. CBC already has a new transport access for travellers coming from the South on the West side of the site with Cambridge South Station. So why build CSET that enters in the same location? Accessing the Eastern end of the site via the bus road provides a different alternative for anyone travelling from the Southeast, such as Linton and Haverhill where housing is less expensive and many of CBC's key employees live. Please do not approve the scheme as proposed by GCP.	208139 (M Harper)

Comments opposed to Green Belt Release

GSPC is opposed to any further expansion of CBC. CBC needs to focus on healthcare and R&D first and foremost, not commercial activities. • CBC should have a mix of uses ‘ together clinical care, clinical education and clinical research including medical research institutes which meet local, regional, and national health care needs – together with directly related biomedical and biotechnology research and development activities’. The Policy does not reflect the unique nature of the site. Policy should restrict uses to those that need the relevant proximity. • The need for the new acute hospital is not recognised either in the draft Plan or in this policy. Without the new acute hospital, we would suggest that the Local Plan is not viable. Policy also does not respond to various health care needs identified in the CBC demand report. Sufficient land is available within existing campus to meet healthcare needs. • The case for expansion has not been established because the underlying data used overestimate potential demand, by failing to identify and focus on those businesses which need to be co-located with anchor institutions, such as Addenbrooke’s and the LMB. • The case for the removal of further land from the Green Belt for expansion has not been made. The underlying data and plans for CBC submitted by landowners and Vision 2050 itself have not been subject to public consultation. Estimates of demand on which the draft Local Plan relies are fundamentally flawed. • Green Belt assessment misinterpreted, the site will cause very high harm to the green belt. • Gas main and landscape impact may limit granhams road realignment potential. Could realign and still leave land undeveloped around it or swap for phase 3 land near nine wells. Realignment may also simply shift pressure to A1301. Private car access should be limited. Question whether this multi-modal access road is needed at all if the Better Ways for Busways’ alternative for a	210897, 210898, 210899, 210900, 210901, 210902, 210903, 211934, 211935, 211936, 211937, 211938, 211939, 211940, 211941, 211942, 211943, 211944, 211945, 211946, 211947, 211948, 211949, 211950, 211951, 211952, 211953, 211954, 211955, 211956, 211957, 211958, 211959, 211960, 211961, 211962, 211963, 211964, 211965, 211966, 211967, 211968, 211969, 211970, 211971, 211972, 211973, 211974 (Great Shelford Parish Council)

busway spur off the A1307 Hinton Way roundabout was adopted. Proper enforcement of driving prohibition should be precondition.

- We support the proposals for a single integrated campus-wide masterplan for CBC and for the use of a single delivery body capable of managing the delivery of infrastructure and securing the long-term stewardship of shared facilities and public spaces. Should also be an energy masterplan.
- There has been no programme of landowner engagement with the community.
- We are concerned that the cumulative breadth, density and height of building on CBC will increasingly present a 'concrete wall' on the southern approach into Cambridge. Greater specificity should be given to the phrase "appropriate transitions in height, scale and landscaping". We are concerned that a lack of building height restriction.
- Policy needs to reference protection of nine wells. Affordable housing should be ahead of other development.
- we would like to see the Strategic Enhancement Area expanded: additional benefits to nature and landscape character would accrue if the Strategic Enhancement Area extended further south, along the SW side of Babraham Rd (i.e. that part of Babraham Rd which falls between Hinton Way and Haverhill Rd) all the way to Magog Down. Local Landscape policies have not been sufficiently responded to.

If, despite our opposition, the proposed release is included in the final Local Plan:

- It must be conditional on funds for the building of the new acute hospital being secured and building of the Cancer Research and Children's hospitals;
- It must be conditional on a solution to the continuing failure to enforce the prohibitions in The City of Cambridge Area G (Consolidation) Order 1993 (as amended) as they apply to the roads within CBC. The proposed southern access road from Granhams Road should not be multi-modal. Private cars should not be permitted to use it.

• Recognise CBC's unique and limited purpose - consideration should be given to including occupation use restrictions. Amenities should also be limited to those which need to be there. • Insufficient regard is paid in to the impact of CBC on the shrinking Green Belt that separates Cambridge from its necklace villages and on the neighbouring fragile Nine Wells Local Nature Reserve. Tall buildings are a particular issue, and we oppose a prominent entrance from Granhams Road.	
1. Object, I am opposed to any further expansion of the Cambridge Biomedical Campus ("CBC"). CBC needs to focus on healthcare and R&D first and foremost, not commercial activities. 2. The rebuilding of the acute hospital is crucial not only to the achievement of CBC's unique purpose, but also to the viability of the draft Local Plan. The healthcare needs of the current and growing population cannot be met without it, especially as the average age of that population is increasing. The need for the new acute hospital is not recognised either in the draft Plan or in this policy. 3. The case for expansion has not been established because the underlying data used overestimate potential demand, by failing to identify and focus on those businesses which need to be co-located with anchor institutions, such as Addenbrooke's and the LMB. This is a fundamental flaw. "Cambridge Biomedical Campus Vision 2050: Creating a life sciences quarter for Cambridge" ("Vision 2050") is not fit for purpose. Despite this, it underpins the supporting evidence submitted by landowners, which has been relied on by GCPS. In particular, the current plans propose disproportionately to expand the commercial activities at CBC. 4. As a result, the case for the removal of further land from the Green Belt for expansion has not been made out. This is compounded by a failure to recognise accurately the level of harm this removal will cause.	203820 (A Sykes)

5. The underlying data and plans for CBC submitted by landowners and Vision 2050 itself have not been subject to public consultation, yet the proposals in this policy (such as for 687,000 net additional sq m (GIA) of research and development floorspace (use class E(g)(ii)) specifically related to biomedical and biotechnology uses and clinical healthcare and hospital facilities) are derived from the relevant documents. 6. If, despite our opposition, the proposed release is included in the final Local Plan: (a) it must be conditional on funds for the building of the new acute hospital being secured and consideration should also be given to making it conditional on the building of the Cancer Research and Children's hospitals, each of which also appears important to the continuing success of CBC. (b) it must also be conditional on a solution to the continuing failure to enforce the prohibitions in The City of Cambridge Area G (Consolidation) Order 1993 (as amended) as they apply to the roads within CBC. Further, the proposed southern access road from Granhams Road should not be multi-modal. Private cars should not be permitted to use it. (c) the draft policy must properly recognise CBC's unique and limited purpose and consideration should be given to including occupation use restrictions. Amenities should also be limited to those which need to be there. (d) I support the proposals for a single integrated campus-wide masterplan for CBC and for the use of a single delivery body capable of managing the delivery of infrastructure and securing the long-term stewardship of shared facilities and public spaces.	
Object, the fields south of the CBC are a flood risk. Careful consideration needed: BIG collection ponds need to be in place close to Ninewells if this is to go ahead. Where are the workers for the new research	203790 (S Marelli)

institutes going to live? The housing market in Cambridge is saturated. More buildings will only mean more heat. Protect trees. There is currently no availability of shops at walking distance, a car is needed for everything.	
The loss of this green space for the community is psychological as well as physical - the sense of space when walking in these fields, when viewing the landscape from Addenbrookes bridge, Hobsons park, Nine Wells Nature Reserve and the DNA path. The proposed new buildings will close these spaces in, disconnecting us from the wider landscape of which we are currently part. The proposal is damaging and poorly considered, for both local people and nature.	203643 (H Donoghue)
Object to the loss of Green Belt for the proposed construction of 1,000 new homes at CBC, on the following grounds: i) The Employment & Housing Topic Paper Table 5.7 shows no need for additional office/R & D floorspace, above committed development, including 4 new schemes of 229,000 sq.m. Therefore, the loss of 22 hectares of Green Belt at CBC is not justified for office/R & D floorspace. ii) The need to redevelop Addenbrookes Hospital can be carried out on the existing site. proposed 1,000 homes is not justified under existing Green Belt policy as there is no need for homes for new employees at CBC. Legal Obligation/Planning Condition should restrict development to Specialised Housing for NHS/ Research workers on short contracts. The proposed 1,000 homes is not justified under existing Green Belt policy as there is no need for homes for new employees at CBC. The redevelopment of Addenbrookes will not result is major jobs increases requiring new homes. The Needs/Supply assessment Table 5.7 shows there is a surplus of supply.	204722 (R Turnbull) 210487 (R Turnbull)

If housing is considered necessary for CBC workers, a Legal Obligation/Planning Condition should restrict development to Specialised Housing for NHS/ Research workers on short contracts, for up to a one year tenancy, & the number of units reduced to 250 units of Specialised Housing, See Vale of White Horse Inspector's Report, pages 15-18, paragraph 56 onwards, on Issue 3: Exceptional Circumstances for housing at Harwell Campus not justified in AONB. This was due to loss of employment land & no need to housing next to employment land.	
Our opposition to the CBC's yet further expansion into our Green Belt does not result from purblind attachment to preservation of the Green Belt no matter what. It is the result of a rational and concerned view that neither the CBC in its submissions nor the two councils in this Draft Local Plan establish the "exceptional circumstances" which are the only grounds for further release – for the only incursion into the Cambridge edge of the Green Belt proposed in this Plan.	208743 (Trumpington residents Association)

Comments raising impact on adjoining communities

Red Cross Lane needs mitigation for the unintended consequences of the CBC/CUH growth to take off excessive no's never intended for a residential area. • CBC creates an environment conducive to innovation and knowledge creation, as evidenced by Cambridge's high number of patent applications per capita. The CBC serves as a hub for cutting-edge research and development, showcasing the positive economic impact of research funding in driving progress within the biomedical sector. Yet alongside rapid growth there can be unintended negative consequences, these can be felt by the neighbourhoods that the CBC site sits beside and on the established smaller residential areas. • A Neighbourhood Impact Report would be a valuable addition to the understanding of this effect locally, taking forward the" CBC commitment from its Vison 2050 to be a good neighbour.	207052 (207053, 207054, 207055, 207056, 207057, 207058, 207059. 207060, 207061, 207062, 207063, 207064, 207065, 210851, 210852, 210853, 210854, 210855, 210856210857, 210858,

• The disproportionate number of people travelling through the surrounding residential neighbourhood creates negative impacts. Active, continuing involvement with local governance bodies particularly the Greater Cambridge Partnership and Cambridgeshire County Council is needed to mitigate the impacts. Every effort including financial incentives, should be made to facilitate the maximum use of public transport and active travel. • Cambridge Biomedical Campus Vision 2050 rightly praises some of the public transport infrastructure, but has enough consideration been given to increases movement acres campus? Has the increased use of public transport by the surrounding neighbourhood been factored in? • Misuse of residential streets for Cambridge Biomedical Campus parking can be tackled. Misuse of residential streets by Private Hire Vehicle drivers can be tackled. CBC/CUH could support residents parking and double yellow lines so that the local streets are not used as an overspill car park for the campus. • Staffing targets are not being met, CUH have said 40 staff are lost a month due to not being able to offer accommodation. When new staff are recruited and then cannot find appropriate accommodation. Private accommodation is mistaken as being on the CBC/CUH site causing stresses for the area. Government guidelines recommend no more than 10% HMOs is any street/estate to maintain balanced neighbourhoods where there is a mixed tenure and no one need dominates and removes family housing. • Develop the Queen Edith's Employment and Skills Scheme. • Need toilets, taxi ranks, parking for private hire, patient drop off, blue badge spaces, better active travel routes, support for carers. • Recognise need for antisocial behaviour enforcement. Remove smoking sheeter near Red Cross Lane. Supporting residents prior to problems.	210859, 210860, 210861, 210862, 210863, 210864, 210866, 210867, 210868, (Red Cross Area Residents Association)
Red Cross Lane needs mitigation for the unintended consequences of the CBC/CUH growth to take off excessive no's never intended for a residential area. Red Cross Lane access needs closing as does the smoking shelter for safety of the residential area that CBC sits beside. Clearly demarcating boundaries	203294 203295 203296 203297, 210869 203298 (S Blackburn)

to CBC/hospitals site is required – to reduce crime, Anti-Social Behaviours, parking dangers/stress, illegal speeding motorbikes, crashes of emergency vehicles and other issues overspilling onto residential streets 24/7. Transition" on the basis that for a decade all reports have not had any positive impact on reducing the unintended negative impacts of growth. The policy requires development to 14 (a) "Integrate sensitively with adjoining residential neighbourhoods. Replace with new Route 3 to Nightingale Park via bus station path and Hills Road, avoiding Red Cross Lane. Remove existing Route 3 to avoid residential areas Babraham Park & Ride has established cycle routes away from Red Cross Areas built to high spec through Ninewells directly to CBC and Hospitals. This needs utilising to take away unintended negative consequences of CBC growth and over use of small residential areas bringing in crime, anti-social behaviours, traffic, parking stress, noise & pollution. benefits of campus growth for the local Red Cross Areas must include mitigating for the failures of previous growth that led to anti-social behaviour, littering and pavement parking.	
• Para 4 on page 212 says: The campus will grow to form a vibrant and sustainable neighbourhood, capitalising on its highly accessible location. It will be a high quality place to live... It isn't that now. The Nine Wells estate has almost nothing in the way of communal facilities, and Dame Mary Archer Way is a significant movement barrier between the Ninewells estate and the existing CBC facilities. • Capacity for approximately 1000 additional homes on the campus. The existing Ninewells population, plus 1000 new homes, is a lot of residents, yet their needs don't even get a mention. • There needs to be a transition down from 6 storeys at the west end of the phase 2 land to 4 storeys at the east end, and a transition from commercial to residential buildings. • Regarding Para 14b: This works both ways. The views of Nine Wells Wood and Magog Down from the main hospital ward tower and the children's hospital need to be preserved too	208143 (C Claxton) (208144, 208145, 208146, 208147, 208148, 208149, 208150, 208151)

• Regarding Para 17 on page 215: Figure 63 on page 219 shows something like this, extending northwards from Granhams Road to the eastern end of Nine Wells Wood. It needs to extend further north, to the "elbow" of Dame Mary Archer Way, to establish a green avenue through the ex-Green Belt land, visible from the hospitals, and creating a green boundary between the commercial and residential parts • Para 19 on page 215 says: Provide a network of world class, coherent, well designed and high quality public and communal spaces, taking a holistic campus wide approach, But again the needs of residents are not addressed at all. • Para 20 on page 216: this is entirely from the perspective of employees and visitors, the travel needs of residents are ignored. The residents don't just go to and from the CBC, they have lots of other journeys to make too. • Active travel needs more than the proposed east-west High Street, it also needs a safe and direct active travel route from/to Babraham Road, the 1000 new houses on the phase 4 land, and the existing Nine Wells estate. • Residents of the 1000 new houses on the phase 4 land are also going to need a bus route, unless they are expected to walk to Babraham Road or Dame Mary Archer Way to access public transport.	

Policy S/ED: Eddington, Cambridge

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The University of Cambridge supported the general direction of the policy but suggested some amendments.

Natural England points out the proximity of the site to Eversden and Wimpole woods, and the need to consider mitigation. Historic England highlights nearby heritage assets, and that a range of views should be referenced. The HIA is clear than the site is not considered appropriate for tall landmark buildings. Therefore criterion 6 b should be deleted. The HIA references the need for reduced scale of development as well as landscape buffers and screening in the south-eastern area of the site. This should be included in the policy. The heights referred to in the policy and supporting text do not reflect the HIA. The Environment Agency request adding a requirement for a Flood Risk Assessment. National Highways provided the comments they made on the planning application for this site. Cambridgeshire Constabulary requested reference to fire & rescue, police and ambulance facilities funding.

Cambridge Past Present and Future ask for recognition of other views, including from Red Meadow Hill, and the additional cost of maintaining green infrastructure.

Other comments raise points including impact on car parking, rights of way, Huntingdon Road acting as a barrier, and the need for more variation in design and height of buildings. Better bus connections were requested. The Spatial framework should show the

Ascension Burial Ground City Nature Reserve, ands should include an East-West green corridor. The plan should make it clear that there should be no vehicular access at all from Storeys Way.

Response to the main issues raised in representations

Broad landowner support for the policy is noted. The policy has been amended to make it clearer the quantum of development for each phase and it is clear that future development should be well integrated with existing development. The policy does not provide a feasibility caveat to the provision of affordable housing as these matters are addressed through the housing policies of the Plan. The Local Plan, as set out in the Development Strategy and Homes Topic Papers, is clear that there is a housing need for specialist accommodation and that the Local Plan approach is, in part, to address these needs through the strategic sites of the plan. The employment wording in the allocation is now more flexible compared with the adopted Local Plan, and enables university related development to come forward at any time subject to policy requires of the plan.

The policy sets out the necessary supporting infrastructure required to deliver the site. Where this can not be secured and delivered onsite, the councils will seek to secure financial contributions for off-site provision.

The policy has been amended to note that future applications will need to consider the Eversden and Wimpole Woods SAC Impact Risk Zone and already notes that development proposals will need to take account of and safeguard nearby wildlife sites. The policy does not require the completion of Phase 1 of the development before Phase 2 can commence. This would need to be carefully considered through any future masterplan and phasing plan for the site, which would form part of the planning application process.

The Spatial Framework has been updated to reflect the previously missing wildlife sites and heritage assets. It would be for the planning application process to respond to the adjacent landscape and townscape features within and adjacent to the site and whilst these are broadly identified in the Context section of the policy, it now also makes reference to the east-west green corridor. The policy also includes additional reference heritage assets that would need to be considered through further heritage assessments as well as reference to strategic viewpoints. This list is not exhaustive and would need to be considered through these additional studies. The NPPF is clear that Local Plans should not prescribe specific building styles. Therefore the policy approach for high quality new buildings, as supplemented by the policies in the Great Places Chapter, as well as evidence such as the Skyline and Tall Buildings Strategy, is considered to be proportionate for plan making and provides a suitable policy framework to inform and assess future planning applications.

The indicative spatial framework has been updated to include Academic Led Development.

Wording has been added to the policy to address possible flooding concerns, which would also be addressed in more detail in the flooding and water management policies in the Local Plan.

The policy does not require existing footpaths to be removed, and these would be protected through other Local Plan policies and Rights of Way legislation. Whilst the ‘Girton Gap’ is still considered to be an important feature to avoid the coalescence of settlements and for them to maintain their own identities.

The policy, alongside the infrastructure related policies in the Local Plan, requires a comprehensive and detailed approach to be undertaken to address transport impacts of the development. This would include car park provision. However, it should be noted that the existing site is well serviced by active and public transport and future development should not undermine the existing

approach to sustainable travel that has already been achieved on the site. Given the M11 is a motorway on the Strategic Road Network, the Motorway Traffic (England and Wales) Regulations 1982(SI 1982 No. 1163) do not allow for buses to stop and pick up passengers on such roads. The policy wording has been amended in relation to private vehicle access as suggested by the representation. Subject to the approval and delivery of the Cambourne to Cambridge high quality public transport corridor, the site would be well connected with the proposed railway station at Cambourne. The site should provide new or connect to the active travel network to ensure people have access to other services, facilities and areas and therefore the policy maintains this requirement.

The policy notes the requirement for long-term management, maintenance and stewardship of infrastructure including landscape and open spaces. The requirement for financial contributions towards emergency services would be addressed through the infrastructure policy of the Local Plan and so is not repeated here.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
The University supports the general direction of the policy to densify the site and make the best use of the available land. There are several detailed comments in relation to the policy wording which are attached in a table with comments set against the relevant policy/paragraph numbers. There is inconsistency across the plan of naming the site. Eddington should be used for all references to the site.	202528 (University of Cambridge)
Eversden and Wimpole Woods SAC should be included in the HRA (AA), particularly in relation to 'Physical Damage and Loss of Habitat – Natural England's Impact Risk Zone (IRZ) for this SAC is about	207603 (Natural England)

to be updated to a 6km core sustenance zone (CSZ) and a 10.2km landscape connectivity zone (LCZ) for barbastelle bats.	
No consideration is given to the Ascension Burial Ground as a prestigious cemetery or a City Nature Site. The site plan does not include an East-West green corridor and does not seem have sufficient green area at the east of the site to support existing wildlife in adjacent woodland, hedgerows and mature gardens. Figure 66 does not show the Ascension Burial Ground City Nature Reserve or mature hedgerows along field boundaries' noted in Context section v. It does not show the Grade II* listed property and Grade II listed garden at 48 Storey's Way almost adjacent the site and the further Grade II listed buildings at 29, 30, 54, 56, 63 and 76 Storey's Way.	202395 (K Wiemer)
Whilst the site does not include any designated heritage assets the site lies adjacent to Conduit Head Road and Storey's Way Conservation Areas and their associated listed buildings. Girton College listed at Grade II* and lodge (grade II lie to the north of the site. The American Military Cemetery, a grade I Registered Park and Garden lies at an elevated position of the west of the site, commanding long ranging views across the site. This contains the grade II* listed memorial and is also adjacent to the grade II * Madingley Mill. There are several designated heritage assets in the village of Madingley, including Madingley Conservation Area, Madingley Hall (grade I), and its grade II Registered Park and Garden, the grade II* church of Mary Magdalene as well as numerous grade II listed buildings. Any development of this site has the potential to affect these heritage assets and their settings. We welcome the preparation of the HIA. 5a What about views from Madingley Cemetery and Madingley Hall/RPG?	210130 (Historic England)

We recommend that you add these views to criterion 5a. We welcome criterion 5b although in criterion iii ‘Farrow’ should read ‘Furrow’. Criterion 6b: The HIA is clear than the site is not considered appropriate for tall landmark buildings. Therefore criterion 6 b should be deleted. The HIA references the need for reduced scale of development as well as landscape buffers and screening in the south-eastern area of the site. This should be included in the policy. We welcome criterion 6c. Paragraph 3.2.27 - The heights in this paragraph are not supported by the evidence in the HIA. The HIA says nothing about 5 storeys at the edge of the site, nor does it allow for testing for taller buildings elsewhere in the site. Indeed, it specifies lower heights in the south-eastern part of the site. Amend paragraph to more accurately reflect the HIA. See our recent response to 25/03746/OUT in which we set out our detailed concerns regarding height.	
North West Cambridge has an allocation within the current local plan but has been recognised that there is the ability to increase the capacity for new homes. National Highways are currently consulted on the planning application for the increased quantum of development on site. National Highways offered no objection subject to the inclusion of suggested conditions, including the requirement for a Travel Plan with a sufficient monitoring regime to ensure the development does not result in additional trips on the SRN, namely M11 junction 10.	209009 (National Highways)
This policy should refer to the requirement for a site-specific FRA to include hydraulic modelling of the ordinary watercourses within the site to define the flood extents at the site. The policy should also clarify that a sequential approach should be taken with more vulnerable development located outside of areas of fluvial and surface water flood risk.	211182 (Environment Agency)
Concern around the increase of population at the site and the reduction in car parking.	201237 (S Williams)

The proposed expansion of Eddington/North West Cambridge. It’s unclear to me from the documents whether the pathway from just north of Howe's farm, across the fields to Madingley American cemetery will be maintained. As a regular user of this path for walking/mental health, I hope that this walking route is to be kept.	201489 (K Bright)
Sustainable infrastructure (carried over from initial development) vital. New connections are made at marginal cost. Homes kept simple. Open gap with Girton village not necessary. Growing affinity. Huntingdon Road a barrier that needs to be diminished. Concerning appearances from the West, Eddington looks understated and variations in both colour and height would bring create more interesting perspectives and lend the distinctiveness that Eddington deserves. Given the distance from Eddington to Cambridge the access to a railway station is still an issue. U bus provides this capability. Rapid transit to both Cambridge and the future Cambourne station need to be options.	202113 (R Stobert)
The policies overlook two key issues. First, they fail to consider the strategic viewpoint from Red Meadow Hill, which offers panoramic views over Cambridge, the University of Cambridge West Cambridge Campus, and the historic city’s setting, ensuring building heights do not disrupt this view. Secondly The growing population from development will place a financial burden on the charity managing the nature reserve, highlighting the need for funding to maintain visitor facilities and manage the area effectively. The respondent requests that the development of West Cambridge includes mechanisms to support the creation of the nature reserve, aligning with the overall vision for the Local Plan.	202982 (Cambridge Past, Present and Future)
Need to be clear on *how* the site's taller buildings will improve the city's skyline given the mediocre and controversial designs that polarise opinions. Will there be an alternative design that makes	203779 (A Carpen)

provision for the 'teeming towers and dreaming spires' the tourist literature contains about Cambridge? The current style is bulky, bland, minimalist and repetitive. Can this local plan make provision for a building style where ornate and architecturally interesting (and aesthetically pleasing/inspiring) spires can be incorporated into a design style given their complete absence in the existing development?	
If we are serious about public transport, we need to think about how to connect West Cambridge and Eddington with the rest of the bus network. Being close to the M11 would strongly incentivise people to drive to South Cambridge or London if this is not well thought out. I suggest adding bus stops on the M11 (request permission for the DoT) either south (for off-road busway connections) or north (for on-road busway connections) of Madingley Road. This allows the operation of express buses to places like South Cambridge or London, preventing cars from overburdening the M11.	203833 (A Chan)
Policy S/NWC: Eddington (5,550 dwellings/14,850 population) (p.225) Under the subheading ‘Uses’ Section 4 – add a new criterion i. as follows; “i. Provision of a fire & rescue service drop down point & contributions to fire & rescue, police and ambulance facilities funding”.	207476 (Cambridgeshire Constabulary), 207509 (Cambridge Fire and Rescue)
The Context does not include the need to respect the Ascension Burial Ground as a City Wildlife Site and a cemetery. The Context does not include the woodland at the southeastern edge where the site borders Archaeology/Astronomy nor the mature gardens that surround the eastern boundary of the site. Public Space includes no provision for amenity to the east of the site.	208625 (Madingley Road Area Residents Association)
The provision for Nature does not include an east-west green corridor for wildlife between the Green Belt on the west of the site and the city wildlife site, the large mature gardens of Castle ward, college playing fields and Archaeology/Astronomy grounds to the east and southeast of the site.	208626 (Madingley Road Area Residents Association)

There are several errors and omissions in Supporting Information Figure 66. Most notable are the absence of the Ascension Burial Ground City Wildlife Site and a Grade II* listed property on the eastern boundary of the site. The location of the primary school is incorrect. The location of mature hedgerows is not shown.	208627 (Madingley Road Area Residents Association)
The plan should make it clear that Phase one of the development should be completed before any Phase two is commenced. The phases defined as in S/NWC: Eddington. The plan should make it clear that there should be no vehicular access at all from Storeys Way, and the adjective 'private' removed from section 14, so to ensure there is no conflict with section 11(c). 'The Ridgeway' runs NW from the cul de sac of Storeys Way towards Eddington eventually reaching Huntingdon Road. The Planning document should reflect this and not be misled by the developer's labelling.	210832, 210833, 210834, 210835 (Storeys Way Residents Association)

Policy S/WC: West Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The University supports the general direction of the policy which aligns with the approved Outline Planning Approval and offers flexibility for change across the plan period. Detailed comments are provided in relation to the policy wording.
Natural England points out the proximity of the site to Eversden and Wimpole woods, and the need to consider mitigation.

Historic England highlights nearby heritage assets. Any development of this site has the potential to affect these heritage assets and their settings. Criterion 9b should be extended to include the setting of the listed buildings. Cambridge Past Present and Future ask for recognition of other views, including from Red Meadow Hill, and the additional cost of maintaining green infrastructure.

Cambridgeshire County council requested that the policy required facilitating the Cambourne to Cambridge Busway.

Other comments asked for better bus connections, and measures to make cyclists feel safe. Better connections to other destinations in Cambridge. Measures are needed to control light pollution. Several comments reference the West Fields should be protected from development.

Response to the main issues raised in representations

Policies in the Local Plan require new development to be well served by active travel and public transport. At West Cambridge, whilst the site is reasonably well served by public transport, it is expected to improve with the proposed Cambourne to Cambridge High Quality Public Transport Corridor, which is now referenced further within the Movement section of the policy. As part of future applications on the site, the proximity to all public transport stops would need to be considered and outlined in a Transport Strategy and the enhancement of existing footways/cycle paths would be identified where required. Wider cross city bus movements and active travel connections are to be considered through the CPCA Greater Cambridge Transport Strategy, as they are the responsible body.

An additional policy criterion has been added to reflect that the site is now located within the Eversden and Wimpole Woods SAC Impact Risk Zone. Additionally, sensitive lighting strategies will be required for new developments across Greater Cambridge and therefore this is addressed through other plan policies.

The policy has been amended to reflect existing heritage assets and strategic viewpoints in this area, including assets within the site.

The policy notes the requirement for long-term management, maintenance and stewardship of infrastructure including landscape and open spaces. The requirement for financial contributions towards emergency services would be addressed through the infrastructure policy of the Local Plan and so is not repeated here.

Objections to other specific site proposals are noted and addressed through the Housing and Employment Land Availability Assessment (HELAA).

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Would suggest placing buildings near bus stops and improving existing pedestrian access to these stops. Worth mentioning that the footpath/cycle path along Madingley Road is in dire condition and needs improvement for safety. As a cyclist I do not feel safe cycling on it. Also attached a draft proposal for an interchange between east-west running buses (4/905/X3/proposed busway) and orbital/north-south running buses that may utilise the M11 for consideration. They would allow buses to serve trips between West Cambridge and the M11 corridor, which is currently ridiculously slow by public transport.	203835 (A Chan)
We strongly object to the development of the land named "Land off the Lawns" with ID 115526. The key reason: this landlocked lawn is a biodiversity hotspot, one of the few remaining ones within Cambridge. Its difficult access is a feature. While the land is much enjoyed by the neighbours, who thankfully don't abuse it, this land is a key resource as habitat for wildlife. Please consult the sample of the large diversity (140 species) in invertebrate wildlife housed within the land in the iNaturalist citizen science project area for the land, as can be seen at the inaturalist.org website.	204114 (Professor A Cardona)
The University supports the general direction of the policy which aligns with the approved Outline Planning Approval and offers flexibility for change across the plan period. There are several detailed comments in relation to the policy wording which are attached in a table with comments set against the	202530 (University of Cambridge)

relevant policy/paragraph numbers. There is inconsistency across the plan of naming the site. Cambridge West should be used for all references to the site rather than 'West Cambridge'.	
Eversden and Wimpole Woods SAC should be included in the HRA (AA), particularly in relation to 'Physical Damage and Loss of Habitat – Natural England's Impact Risk Zone (IRZ) for this SAC is about to be updated to a 6km core sustenance zone (CSZ) and a 10.2km landscape connectivity zone (LCZ) for barbastelle bats.	207607 (Natural England)
Considering the planned growth of the biomedical campus, many trips between West Cambridge and the biomedical campus are likely. It is essential that these are done via active travel and public transport. This will require an emphasis in improving bus priority to make it more reliable in the face of traffic jams. Two other improvements to the cycling and walking provisions are also needed: - recognize Sheep's Green Bridge limitations and plan a replacement or additional river crossings - require additional walking and cycling connections between West Cambridge and the Sidgwick Site to relieve pressure on Burrell's Walk	203741 (T Preud'homme)
Given the large number of buildings planned for the site each potentially contributing additional light pollution to what is a relatively dark area of Cambridge, the lighting requirement should be in the policy. The University has assured me that for recently developed and future buildings, lighting will comply with category E2 (Village or relatively dark outer suburban locations). Despite this, it is unclear whether the most recently opened building (photo attached) complies with that standard. It would help for the requirement to be clear to architects from the earliest design stage to avoid unnecessary lighting from the outset.	203205 (K Weimar)

I am against development of the West Fields site off Barton Road, and I support the city council, which I believe has rejected this site. It is part of the Green Belt, which is an important part of what makes Cambridge attractive and liveable for residents, visitors, and scientific / business companies. The site is also prone to flooding.	201343 (C Humphrey)
Development on West Fields (Site ID 115681) should remain protected from development until at least 2045 to save the green belt and prioritise and maintain open green spaces.	205701 (Newnham Labour)
I support the position taken in the proposed Local Plan to exclude from the favoured development sites the West Fields south of the West Cambridge site. This open area currently breaks up the ring of new development that is gradually encircling the city, allowing city residents to walk or cycle out into the countryside avoiding urban areas. It also allows wildlife a route from the river and parks within the city to open countryside.	201473 (V Yates)
The policies should consider the impact on the strategic viewpoint of Red Meadow Hill, which offers a panoramic view over Cambridge and is significant for the historic city's setting. There is a need to acknowledge the transformation of land on the western edge of Cambridge into a nature reserve, which will enhance access to green space for West Cambridge Campus users. The respondent highlights the financial burden on their charity to maintain paths and manage visitors to the nature reserve, indicating a lack of funding for necessary facilities and management. The respondent requests that the policy includes mechanisms for the development of West Cambridge to support the creation of the nature reserve, aligning with the vision for the Local Plan.	202988 (Cambridge Past Present and Future)

Clear and explicit statements on the long-delayed West Cambridge Swimming Pool that the University of Cambridge still has not built must be incorporated into this section. Don't let the University get this struck out.	203827 (A Carpen)
Outline planning permission was approved under planning reference 16/1134/OUT. Sport England commented on the planning application on November 2nd 2017 raising no objection to the proposal. The provision of on-site sports facilities should be informed by an up to date evidence base, and any subsequent updates. Sport England are aware that the Council are in the process of undertaking a PPS and BFS, and that a FPM for swimming pools has been completed.	209222 (Sport England)
The grade II* listed Schlumberger Gould research Centre is located within the West Cambridge site. There are two Conservation Areas, West Cambridge and Conduit Head Road adjacent to the site (and their associated listed buildings). Any development of this site has the potential to affect these heritage assets and their settings. We welcome the preparation of the HIA. We broadly welcome criterion 9 Criterion 9b should be extended to include the setting of the listed buildings. 3.2.48 The Schlumberger Building is grade II*. The text needs to be amended (currently says grade II). Reference should also be made to the listed buildings in the adjoining conservation areas	210131 (Historic England)
Movement – there should be a statement referring to facilitating the Cambourne to Cambridge busway and associated active travel route.21	210586 (Cambridgeshire County Council)
It is entirely possible to deliver a safe, high quality cycling route between West Cambridge and the Biomedical Campus that would support 20-minute journeys. Delivering a 20-minute public transport journey would require significant reductions in general traffic in the city core particularly around Lensfield Road and the approaches to the city centre. Connectivity between West Cambridge and the Sidgwick	211772, 211773 (Camcycle)

Site must also be improved. These interventions involve decisions that could be explicitly acknowledged and supported through the Local Plan. Without this, bus-based solutions will remain constrained by congestion. Identify active travel and public transport connectivity between West Cambridge, the city centre and the Biomedical Campus as a strategic priority.	

Policy S/HHR: Land between Huntingdon Road and Histon Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments from the landowner broadly support the continued allocation of Darwin Green and welcomes a single comprehensive policy for the site, given its advanced planning and construction status. However, they propose several detailed wording changes to the policy.

Additionally, other comments request amendments focusing on ensuring appropriate noise mitigation (prioritising earth bunds over reflective barriers), maintaining watercourse base flows, securing good active-travel permeability without vehicular links to Girton, future-proofing the internal road network for buses, and establishing clear governance for the Country Park.

Historic England highlight heritage considerations (including potential assets and the Conservation Area). There are also comments requesting financial contributions to emergency services be explicitly included.

Response to the main issues raised in representations

The policy has been amended to reflect the recent planning consents for the various phases of the development. However, the policy retains the requirement for two primary schools, which is based on the latest understanding of education requirements generated by the development. If this were to change for later phases of the development, this would need to be justified and agreed with the Education Authority.

The policy provides additional criteria relating to noise mitigation measures and the requirement for the delivery and long term stewardship of the Country Park to be secured through a legal (S106) agreement. It also now identifies the adjacent Conservation Area and has also been updated in the Heritage Impact Assessment for the site. At this stage, there are no known other potential heritage assets in this location, but there is a formal process to designate new Statutory and Non-Statutory Heritage Assets where applicable.

The policy does not address the base flow of existing watercourses as this is addressed through Policy CC/IW: Integrated water management, sustainable drainage and water quality and therefore does not seek to repeat other policies set out in the Local Plan.

Financial contributions towards essential infrastructure, including emergency services, is addressed by Policy I/ID: Infrastructure and delivery and is therefore not repeated in this policy.

Table of representations

Summary of issues raised in comments	**Comments highlighting this issue**
The respondent supports the continued allocation of Darwin Green under Policy S/HHR but requests minor changes to the policy wording. Darwin Green has historically been divided into two allocations, one under the Cambridge City Local Plan (Policy 20) and one under the South Cambridgeshire Local Plan (Policy SS/2), due to its location across two local authority boundaries. Both allocations have outline planning permission, with Phase 1 partly occupied and under construction, while Phases 2 and 3 are at Reserved Matters stage. The respondent supports a comprehensive policy approach for Darwin	203032 (Barratt David Wilson Homes and the North West Cambridge Consortium of Landowners)

Green in the emerging Greater Cambridge Local Plan, acknowledging the advanced construction and technical work already completed. The respondent has provided specific wording changes for Policy S/HHR, indicating proposed deletions and additions, with justifications for these changes outlined.	
It is important that earth bunds should be prioritised and if not, any noise barriers must be absorbent and not reflective. Reflective barriers along Orchard Park have increased noise issues.	203954 (Histon and Impington PC)
The policy should require a suitable compensation flow should be provided so the pre-development base flow of existing watercourses is achieved at all times	201663 (J Pavey)
Given the proximity to Girton and neighbouring areas, permeability will need to be addressed: • for active travel, to ensure good and safe access to new services and facilities and to existing bus services • agrees that the development should not provide direct vehicular access to/from Girton • the internal road network needs to be future proofed for buses	202140 (R Stobart), 203837 (A Chan)
Clear governance arrangements will be required for the Country Park	202140 (R Stobart)
Are Woodhouse and Impington Farms potential heritage assets	202140 (R Stobart)
Contributions to fire & rescue, police and ambulance facilities provision/ funding should be added to the policy wording	207477 (Cambridgeshire Constabulary), 207510 (Cambridge Fire and Rescue Service)
The Conservation Area has not been considered in the Heritage Impact Assessment or the policy wording	210132 (Historic England)

Summaries of Representations: Sites Other Site Allocations on the edge of Cambridge

Policy S/EOC: Other Site Allocations on the edge of Cambridge

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Historic England requested that criteria 1 of the policy be clarified to list the sites.

Other comments on this introduction were related to site allocation proposals. Green belt releases were proposed for a variety of reasons, including additional development needs, that grey belt should have been included, and due to the specific opportunities the proposals provide, including for housing, employment and a travel hub.

Response to the main issues raised in representations

In response to Historic England's comment the policy structure has been clarified.

Proposals for alternative site shave been considered though an update to the Housing and Economic Land Availability Assessment where they fit within the broad emerging strategy of the local plan. New evidence submitted has been considered, and where

considered appropriate scoring has been amended. Comments related to strategy choices have also been considered, particularly under the development strategy policies. It is not proposed to add additional village sites to the proposed submission local plan. An update to the Green Belt Study has been carried out to consider which areas would meet he governments definition of being grey belt. Whilst some site may meet the definition, exceptional circumstances is still required for green belt release, and the Councils do not consider that exists in light of alternatives available.

Table of representations:

Summary of issues raised in comments	**Comments highlighting this issue**
Criterion 1 is unclear as to which sites it is referring to. We recommend that Criterion 1 should list the four sites.	210133 (Historic England)
Land North of Madingley Road, Cambridge (HELAA Reference 40491 / Site ID 115543) Site is very suitable for an allocation for B2 (General Industrial) and B8 (Storage and Distribution) uses, including but not limited to high technology industries such as digital infrastructure data centres and gigafactories. Draft plan not currently meeting employment needs.	211514 (Trinity College Cambridge)
Land East of Gazelle Way site (HELAA Reference 40250) The Development Strategy should include additional allocations on the Edge of Cambridge to balance housing supply and mitigate risks of delays from New Settlements. Further growth on the edge of Cambridge is seen as sustainable due to existing infrastructure and proximity to jobs and services. The Council has not conducted a comprehensive Green Belt assessment, which is necessary to identify suitable Grey Belt land for development. Endurance Estates objects to the omission of the Land East of	205103 (Endurance Estates)

Gazelle Way site (HELAA Reference 40250), proposing it for a mixed-use development of in the region of 1,500 dwellings and employment space. Site is grey belt.	
Land adjacent to A1303 and M11, Rectory Farm, Cambridge (HELAA Reference 208800) Representation in relation to a site submission to be tested through the HELAA. A range of issues raised on plan strategy including that plan should address higher development needs, grey belt land should be located. Land adjacent to A1303 and M11 is suitable for residential or commercial development due to its sustainable location and access to transport. The site could also serve as a Travel Hub to alleviate pressure on Madingley Park and Ride, potentially freeing it up for housing or employment growth at Eddington or West Cambridge.	211091, 202044 (Wimpole Associates Ltd)

Policy S/EOC/NWO: Land north of Worts' Causeway

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The policy requires further consideration of landscape and heritage impacts, specifically noting on-site and adjacent heritage assets that could be affected by the proposed development. Additionally, concerns were also raised regarding active travel site access and shared facilities.

One organisation identified that the site should be considered as part of a wider Green Infrastructure opportunity that aligns with the southern part of the city.

Response to the main issues raised in representations

The policy has been amended to account for the on-site and adjacent heritage assets that could be affected by the development. Additionally, the policy also reflects that landscape mitigation measures for the site should be linked to the green infrastructure provision on-site and how it forms part of a wider network. However, the proposal in the representation to re-consider the Development Strategy and Green Infrastructure network across the southern part of the City has not been taken forward in this specific allocation as it for the Development Strategy to consider this matter.

The policy already requires good access by active travel into the site but additional measures as well as new facilities are not currently deliverable having been considered as part of the planning application process for application 20/01972/OUT.

Table of representations

Summary of issues raised in comments	Comments highlighting this issue
We believe there could be a different approach taken to development and green space on the south-east boundary of Cambridge, which could deliver even better outcomes for nature and people. We refer you to the response made by the Wildlife Trust BCN and the potential for an enabling development which could better deliver the ambitions of the Cambridge Nature Network by extending new green space and habitat creation from Nine Wells, north-eastwards to Cherry Hinton Chalk Pits.	202993 (Cambridge Past, Present and Future)
More needs to be included on multiple entrances and exits - especially by footpath/cycle paths. Must avoid building another housing estate with only a single point of access. What contributions will be made to what shared facilities either on site or on neighbouring sites will be made so the area doesn't end up as a dormitory neighbourhood requiring long journeys to get essentials?	203782 (A Carpen)
There are no designated heritage assets within the site. The grade II listed Milestone lies just to the east of the site. The milestone will need to be protected during the construction works. We welcome the preparation of the HIA. We welcome criterion 1a. The policy should also refer to the Building of Local Interest, Netherhall Farm (though we appreciate it is	210134 (Historic England)

mentioned in the supporting text at paragraph 3.2.70). The policy/supporting text should also refer to the need to protect the milestone.	

Policy S/EOC/SWO: Land south of Worts' Causeway

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The policy requires further consideration of landscape and heritage impacts, specifically noting adjacent heritage assets that could be affected by the proposed development. Additionally, concerns were also raised regarding active travel site access and shared facilities.

One organisation identified that the site should be considered as part of a wider Green Infrastructure opportunity that aligns with the southern part of the city.

There is broad landowner support for the allocation.

Response to the main issues raised in representations

The policy has been amended to account for the on-site and adjacent heritage assets that could be affected by the development. Additionally, the policy also reflects that landscape mitigation measures for the site should be linked to the green infrastructure provision on-site and how it forms part of a wider network. However, the proposal in the representation to re-consider the Development Strategy and Green Infrastructure network across the southern part of the City has not been taken forward in this specific allocation as it for the Development Strategy to consider this matter.

The policy already requires good access by active travel into the site but additional measures as well as new facilities are not currently deliverable having been considered as part of the planning application process for application 19/1168/OUT.

Summary of issues raised in comments	Comments highlighting this issue
We believe there could be a different approach taken to development and green space on the south-east boundary of Cambridge, which could deliver even better outcomes for nature and people. We refer you to the response made by the Wildlife Trust BCN and the potential for an enabling development which could better deliver the ambitions of the Cambridge Nature Network by extending new green space and habitat creation from Nine Wells, north-eastwards to Cherry Hinton Chalk Pits.	202999 (Cambridge Past, Present and Future)
More needs to be included on multiple entrances and exits - especially by footpath/cycle paths. Must avoid building another housing estate with only a single point of access. What contributions will be made to what shared facilities either on site or on neighbouring sites will be made so the area doesn't end up as a dormitory neighbourhood requiring long journeys to get essentials?	203781 (A Carpen)
There are no designated heritage assets within the site but the Grade II listed Milestone is close to the site. These needs to be protected during construction of the development and should be referred to in the policy/supporting text. Welcome the preparation of the HIA and criterion 1a of the policy wording.	210135 (Historic England)
The Cambridge Investment Partnership (CIP) support draft allocation S/EOC/SWO for land at Newbury Farm. As the Council is aware, CIP controls part of the draft allocation (Phase 3 - land on the western side)	204222 (Cambridge Investment Partnership)

and has already secured reserved matters approval, reference 24/01531/REM. The draft allocation accords with the details already approved.	
We strongly support the policy to reduce the urbanising impact on this edge of the Green Belt, to facilitate access to the countryside, and to manage car use.	210904 (Great Shelford Parish Council)

Policy S/EOC/BS: Bell School, Babraham Road

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Whilst the landowner is broadly supportive of the allocation, representations have been made that the policy should be more flexible in its approach to land uses and should provide the opportunity for residential or healthcare related development.

There are no designated heritage assets within or adjacent to the site.

Response to the main issues raised in representations

There are no amendments made to the policy. Whilst comments suggested that the policy should be more flexible in its approach to appropriate land uses, the site is in very close proximity to the existing educational facility and therefore provides an excellent opportunity to place purpose-built student accommodation adjacent to the school. In addition, the existing or future accommodation needs the school are not known. By allocating the site for student accommodation, the policy is taking a longer term approach to meeting existing or future occupier needs throughout the plan period.

The site is within close proximity to Cambridge Biomedical Campus (Policy S/CBC) which is identified in the Local Plan for approximately 1000 campus related homes. Therefore, this policy does not propose to allocate the site for keyworker NHS housing.

Table of representations

Summary of issues raised in comments	Comments highlighting this issue
The Bell Language School has closed. Can this site be turned into keyworker housing for the NHS hospitals?	203765 (A Carpen)
There are no designated heritage assets within the site and none nearby. No comments	210136 (Historic England)
The Bell Educational Trust is broadly supportive of the allocation of the Site at Babraham Road for residential uses. This is a highly sustainable site which is ideally suited for a range of uses that could make a valuable contribution to the NPPF requirement for 10% of the overall housing from sites under 1 hectare.	208389 (The Bell Education Trust)
The proposed allocation is for the remaining part of the Site which benefits from an extant planning permission for student accommodation. The site can only accommodate students associated with the Bell Educational Trust which historically meant the Bell School. Up until last year, this had been the intention of the Trust, but due to Bell going into administration, it is no longer an option.	208390 (The Bell Education Trust)
In line with Paragraph 127 of the NPPF, The Bell Educational Trust asks the Council to consider amending the policy to allow for greater flexibility regarding future occupiers and uses. Moreover, the requirements for student accommodation if any are unknown. The policy as worded would hinder the site being developed for other appropriate uses whether this be for student accommodation, other residential uses or even healthcare uses to contribute to housing need set out in Policy S/JH.	208391 (The Bell Education Trust)
It is therefore suggested that the wording of the policy be amended as follows: - Site area of 0.38 hectares	208392 (The Bell Education Trust)

- Capacity for approximately 100 student bedrooms or other residential uses or healthcare related uses in the alternative 1. Development proposals must demonstrate how they will meet the following requirements: a. With regard to new student bedrooms the need to contribute towards meeting the needs of the adjacent educational site or other existing educational institutions in line with Policy H/SA: Student accommodation whilst being carefully integrated; or b. Residential development and/or healthcare uses which sensitively respond in height, mass, density and landscaping to its immediate residential context.	

Policy S/EOC/FRE: Fulbourn Road East

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments raised concerns about the impacts of development on the adjacent properties and local townscape character. There were also comments regarding the site's accessibility by active and public transport, in particular the provision of a new railway station in Fulbourn.

One organisation identified that the site should be considered as part of a wider Green Infrastructure opportunity that aligns with the southern part of the city whilst another highlighted that the site should provide training opportunities for young people.

The landowner raised concerns about the lack of flexibility in the policy wording and noted that the site benefits from a planning permission. They also requested greater clarify on the proposed landscape buffer whilst Historic England noted that the site could impact nearby heritage assets and their setting and that the policy required clarification.

Response to the main issues raised in representations

The policy has been amended to provide greater flexibility in relation to the quantum of development. This is consistent with the approach taken for all site allocations in the Local Plan. The policy is also clearer that development should be informed by careful consideration of the local context, including townscape and landscape character and has removed the required to not build in the

previously undefined eastern part of the site. The supporting text also notes that the eastern part of the site is more sensitive in relation to the historic environment and so a design led approach is required for future applications.

The existing planning permission for the site is now referenced in the supporting text.

Responding to the comments on transport, the policy now emphasises the need to increase sustainable travel modes which will need to be addressed through a Transport Assessment, Travel Plan and Parking Strategy. There are no current proposals for a Fulbourn railway station from either East West Rail, Network Rail or the Department for Transport. New infrastructure of this scale would require significant investment which is beyond what can reasonably be expected from this one development.

The proposal in the representation to re-consider the Development Strategy and Green Infrastructure network across the southern part of the City has not been taken forward in this specific allocation as it for the Development Strategy to consider this matter.

Other Local Plan policies address issues relating to skills and training and so are not repeated in this policy.

Table of representations

Summary of issues raised in comments	**Comments highlighting this issue**
Why have you decided the maximum height here should be so much less than that permitted at Mission Street (Land South of Coldham's Lane)? I would be delighted if you would put the same limit (no taller than three commercial storeys) also at Mission Street.	201238 (S Williams)

The respondent strongly supports policies 1a-f. They suggest a different approach to development and green space on the south-east boundary of Cambridge for improved outcomes for nature and people. The respondent references the Wildlife Trust BCN's response regarding enabling development to enhance the Cambridge Nature Network. They propose extending new green space and habitat creation from Nine Wells to Cherry Hinton Chalk Pits.	203003 (Cambridge Past, Present and Future)
There is already considerable traffic on Cherry Hinton Road & Fulbourn Road that extend beyond rush hours. Provision *must* be made towards having a new transport link from a new Fulbourn Railway Station on an upgraded railway line - which developers must contribute towards. Developers should be required to contribute towards public transport provision and *not* towards private commuter buses which provide local residents with no benefit and only costs - potholed roads and pollution.	203758 (A Carpen)
Provision should also be made for supporting new facilities for lifelong learning and for children and especially teenagers.	207471 (A Carpen)
BioMed Realty support the continued allocation of Fulbourn Road East under Policy S/EOC/FRE. However, to ensure the policy remains flexible and effective, several amendments are required. In particular, the policy should allow greater flexibility in the floorspace quantum and building height parameters, avoiding overly prescriptive limits that could constrain delivery. In addition, clarity is needed regarding the approach to any landscape buffer to the east of the site to ensure this is appropriately defined and controlled. Please refer to the covering letter for further detail on the recommended amendments to the policy wording.	201661 (BioMed Realty)

The policy should allow greater flexibility in the floorspace quantum and building height parameters, avoiding overly prescriptive limits that could constrain delivery	201661 (BioMed Realty)
Planning permission for development has been granted and implemented on site (ref. 21/00772/OUT, as amended by 23/03182/S73), demonstrating the deliverability of development within the proposed allocation. This is a fact that must be noted in the supporting text of the policy.	210427 (BioMed Realty)
The policy cites 56,000 sqm of development (the sub-text states 'approximately' 56,000 sqm). While the policy does not impose a fixed cap on development, the reference to a specific floorspace figure is unhelpful in its current form and risks being misinterpreted as a limit on the quantum of development. An amendment is needed to either remove the floorspace reference or replaced with a reference to an approximate figure of development	210428 (BioMed Realty)
Policy in its current form does not define what constitutes the 'eastern part' which introduces ambiguity.	210429 (BioMed Realty)
The inclusion of a fixed height restriction within the policy wording is unnecessary and overly prescriptive	210430 (BioMed Realty)
Section 1.f; this policy should require increasing sustainable travel modes, not merely consider it.	203597 (P Tribble)
Safe, direct cycling and walking and wheeling access is needed between Cherry Hinton and the Beechwoods/Roman Road/Babraham P&R. It would also connect to the Nature reserves and give safe pedestrian access avoiding Lime Kiln Hill which is simply unsafe on foot or cycle.	203836 (Mr Wookey)
Development has the potential to affect the Fulbourn Hospital Conservation Area and its setting. Criterion b is too vague. The policy should set out how much of the site can be developed. Criterion c – does not properly reflect the HIA. The HIA refers to the prevailing building height to the	210137 (Historic England)

north and west. To the north, development is 2 storey residential. Amend the policy to be clearer on heights. We welcome criterion e which reflects the recommendations of the HIAS.	

Summaries of Representations: Sites Existing Settlements

Policy S/NST: Northstowe New Town

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments focused on green separation, heritage, and community infrastructure. Several respondents emphasise that land forming part of the Longstanton and Oakington green separation — including Longstanton Meadows, ridge-and-furrow fields, and areas within the Longstanton Conservation Area — should be removed from the allocation or more clearly protected from development. This also included comments about the clarity of mapping, that recent permissions were granted within areas marked as green separation, and the need for a stronger policy statement preventing any built development in these gaps.

Historic England and other groups highlight the significance of Longstanton Paddocks, medieval remains, pillboxes, and nearby Conservation Areas, requesting explicit reference to these assets, with appropriate mitigation, and potentially a Conservation Management Plan noted in the policy. Other comments highlighted the need to protect ancient woodland and existing countryside, and to ensure heritage considerations shape land-use designations.

There were several comments regarding community facilities, services and social cohesion. Comments call for stronger provision for community spaces, emergency services contributions, improved healthcare delivery, faith and cultural facilities, and a clearer strategy for traveller pitch delivery. Northstowe Town Council also raises issues around employment space, self-build targets, education wording, and the need for a distinctive facilities and employment opportunities to help avoid the town becoming a dormitory settlement. Longstanton PC highlight the infrastructure burden on their village, which cannot support further development.

Homes England have broadly noted that matters that have been addressed through the consented developments should not be required in this policy to avoid conflicts with these consents and/or delays to implementation. They also note that the policy should not seek to introduce new requirements such as the provision of specialist and Gypsy and Traveller accommodation. Homes England also request clarification on ancillary uses within open spaces and note that some mitigation measures may fall beyond the red line boundary of the allocation.

Transport and connectivity concerns were also raised, with comments relating to for better public transport, fairer bus fares, and direct links to Cambridge North and the city centre. Respondents also support additional tree planting, clearer flood-mitigation requirements, and improvements to policy wording on recreation, including water-based activities and appropriate sports provision.

Response to the main issues raised in representations

- The Northstowe New Town policy is now supported by the Northstowe Strategic Enhancement Area (S/SEA/NST) Policy Area. This policy area specifically identifies that this land is designated to ensure that there is sufficient physical and visual separation between Northstowe and neighbouring settlements and maintains a soft, green landscape to enhance the wider rural setting and relevant Conservation Areas. This has also been reflected on the Greater Cambridge Local Plan Policies Map;

- The policy also identifies local heritage assets and that development will need to protect and, where possible, enhance their setting and how this will be managed through the preparation of a Conservation Management Plan. As this site was allocated in the South Cambridgeshire Local Plan (2018), has a site specific Area Action Plan (2007) and has been considered in further detail through subsequent planning applications, a Heritage Impact Assessment has not been undertaken;
- Additional flexibility has been set out in the Policy to support town centre uses coming forward within the new town that serves both local residents but also those in the wider surrounding area. This also includes greater flexibility in relation to specific forms of sports provision as this would need to be considered through a Sports Strategy; Additionally, the policy requires the provision of employment floorspace as part of a mixed and well balanced community;
- The policy outlines that the development of the new town must be well served by new services, facilities and open space and that these should be phased to the delivery of new homes so that residents, workers and visitors have easy access to them to meet their day to day needs. This also includes temporary provision until such time that permanent facilities are delivered. It has also been updated to reflect the latest education requirements;
- The policy identifies requirements relating to flooding and sustainable surface water drainage measures. Subsequent planning applications will therefore be required to address this policy requirement and for it to be secured through a legal (s106) agreement;
- Financial contributions towards essential infrastructure, including emergency services, is addressed by Policy I/ID: Infrastructure and delivery and is therefore not repeated in this policy;
- The Councils have identified a clear housing need for Gypsy and Travellers accommodation and the Council's preferred approach is to address this through a number of ways, including provision at the strategic sites. This is consistent with the previous approach of the South Cambridgeshire Local Plan (2018) and is reflected in the relevant conditions of the planning

permission for the site. Policy H/GT sets out the specific requirements for the implementation of this particular policy requirement. This approach also applies to specialist older persons accommodation.

- The policy requires the new town to deliver a range of homes including self and custom build. This would need to be considered for each phase of the development, in accordance with existing planning conditions attached to the outline permissions.
- Planning applications would have been considered on its own merits and in accordance with the adopted development plan.
- Adequate bus provision will need to be considered through future phases for development, specifically through subsequent versions of the Transport Assessment. This will inform whether additional funding is required to support additional services and/or a subsidy of fares for new residents.
- There are several ways in which new facilities can be secured and delivered. This will vary depending on site specific circumstances and it is not the role of the Local Plan to pre-determine a suitable approach to delivery.
- Whilst the council and the supporting text to the policy notes the existing planning permissions for the site, a number of policy requirements have been retained within the policy as they have yet to be implemented, for example, the Town Centre Strategy. This has been retained in the policy to ensure that any changes to the consented schemes can be considered against these policy requirements if required.
- The provision of ancillary uses to support sports and open space facilities is addressed through Policy WS/CF: Community, sports, and leisure facilities as it is not a specific matter related to this allocation.

Table of representations

Summary of issues raised in comments	Comments highlighting this issue

Area bounded by Rampton Road, Long Lane, Mills Lane and Woodside (Longstanton Meadows) overlaps the Longstanton Conservation Area and forms part of the green separation between Longstanton and Northstowe. It provides substantial amenity value for the inhabitants of Longstanton and future inhabitants of Northstowe. It should be removed from the Northstowe Site allocation to make it clear that land to the west of Long Lane is not available for development.	201164 (A Helliwell), 211746 (Homes England)
The green separation between Northstowe, Oakington and Longstanton is part of the area's green infrastructure. The land between these settlements provides ecological connectivity, landscape character and access to countryside for nearby communities and should be recognised in the Plan.	204421 (Cllr Thomas Bygott)
The other problem with Northstowe and other new towns is lack of community, lack of community spaces, worse engagement, poorer mental health, and more anti-social behaviour. How do you plan to make these new towns have a realistic sense of community. This is not just about schools. Where can people join the bridge club, knitting circle, etc, etc, all these make a community and enhance individual's mental health? When Stevenage was developed, it quickly became the drug centre of England, in the 1970-80s. How can you learn from this example and others?	201503 (C Meads)
Group supports approach to heritage in Policies S/NS and S/NST, acknowledging the importance of heritage assets. Concerns regarding Longstanton Paddocks, where visible remains of the mediaeval village exist, which is subject to a management plan. Paragraph 11 of Policy S/NST restricts land uses between Northstowe and Longstanton to open land, which is deemed inappropriate for Longstanton Paddocks due to potential harm to heritage significance.	202945 (Northstowe and Longstanton Heritage Steering Group)

Recommend specifically mentioning Longstanton Paddocks in paragraph 54 of the Policy to ensure its significance as a key landscape feature is maintained and enhanced.	
Protected ridge and furrow field which forms part of the designated green separation between Longstanton & Northstowe needs to be recognised and made clear that field is protected and only used as green separation.	203780 (B Ball)
What is the one significant new leisure facility that this site could host, that has easy, frequent, and accessible public transport access, that could otherwise not be located in Cambridge City due to land prices and lack of land availability? Please make provision for this - co-ordinated with the other New Towns so that each place has at least one different facility that the others lack, thus encouraging people from within Cambridge to visit, and ensure that the New Towns are not dormitory towns. Ensure children & teenagers are involved at design stage.	203783 (A Carpen)
Under the subheading 'Uses' Section 7– add a new criterion n. as follows; "n. Contributions to fire & rescue, police and ambulance facilities provision/ funding"	207483 (Cambridgeshire Constabulary), 207514 (Cambridge Fire and Rescue Service)
Whilst the open land uses such as playing fields, allotments and cemeteries precludes housing, destroying ancient woodlands and existing countryside simply to provide a different sort of open space would be hugely detrimental. Proposals within the Longstanton Conservation Area should be reconsidered to provide a strong legal protection for existing countryside within it.	201154 (S Roberts)

The respondent supports the policy of providing a green separation on the northern side of Oakington, including tree planting to enhance the pastoral parkland character. The Oakington Inset Map is unclear regarding the green separation, particularly the brown areas and their designation, which the respondent finds confusing. The respondent presumes that the areas marked S/NS indicate site allocations but requests clarification on the map's key. The respondent raises concerns about recent planning permission granted for housing on land designated as S/NS, questioning how this aligns with the Northstowe policy area. The respondent objects to the use of any green separation land for housing, stating it contradicts the stated policy.	203557 (L Lawrence)
We note the inclusion of two Traveller sites in Northstowe of 12 pitches in each. We would like the Local Plan to clarify and confirm that these sites are to be located within the Northstowe Defined Development Extent and not on land bought outside these boundaries by Northstowe's developers, Homes England.	208077 (Oakington & Westwick PC)
We note and support the clear policies to maintain a green separation between Northstowe and Oakington and Westwick. It is important that there is no development from the Oakington and Westwick boundaries nor a further expansion of Northstowe. We note and support the commitment to plant additional trees and the need to maintain the green separation. We strongly object to any development being allowed in the green separation or that the green separation should take the form of playing fields, allotments, cemetery or for any other form of planned use.	208078 (Oakington & Westwick PC)
We suggest that GCSP submit an appeal against development for eight houses on the field between Manor Farm Close and the Northstowe boundary in order to maintain this green separation.	208079 (Oakington & Westwick PC)

We welcome the statement regarding flood mitigation, but there is a complete lack of detail and specifics in terms of location and form of flood mitigation. The Plan must include a statement regarding these issues.	208080 (Oakington & Westwick PC)
We note that the inset map provided is contradictory, suggesting that the area marked is both a green separation and also an area where certain forms of development could be permitted within the green separation. The map therefore needs to be redrawn to make absolutely clear that no development will be allowed between Northstowe and Oakington and Westwick and a policy statement should be included in the document to this effect.	208081 (Oakington & Westwick PC)
The Parish of Longstanton has provided the backbone for a significant amount of new housing in this area, notably the 'Home Farm' development within the village and now the development of Northstowe. The village's infrastructure cannot support further development. Councillors continued to raise concerns that this would not be the limit of land which is reclassified and that this process would be repeated as the need for housing arises.	208465 (Longstanton PC)
Residents have aired concern that some or all of the proposed 24 Traveller Pitches at Northstowe that would be located on any of the previously mentioned Green Separation Areas. While the council respects the need to provide facilities for all parts of the community, the historic significance and existing infrastructure within the village must be considered when locating these new facilities. These areas are not suitable for pitches. Confirmation is provided that the proposed Traveller Sites will be located within the Northstowe Defined Development Extent and not on adjacent land outside of the NDDE.	208466 (Longstanton PC)

Dedicated, direct, frequent, reliable and affordable connections should be provided connecting Northstowe with Cambridge North, and Northstowe with Cambridge City Centre. For the avoidance of doubt the current Guided Bus provision is unacceptable.	208058 (Northstowe TC)
We would like to underline the timescale for delivery of traveller pitches and add the requirement that such pitches may come only when a comprehensive set of facilities, strong community cohesion, and adequate provision of local services (policing, fire, healthcare, leisure, employment, etc.) are fully in place.	208059 (Northstowe TC)
A typo here predicts 1,018,000 homes; this should read 10,180	208060 (Northstowe TC)
The ratio of employment capacity to dwellings falls below other comparable settlements like Graven Hill and NW Cambridge. Without additional employment space Northstowe will be a permanent dormitory town and with more people commuting this may put more strain on the roads and public transport.	208061 (Northstowe TC)
While these uses are described using planning Use Classes, in addition it would be desirable to use plain language to describe what this means in practice. We would like Lab space to be specifically noted here, as it is in short supply locally.	208062 (Northstowe TC)
We note that Northstowe Phase 1 was delivered with zero self/custom build homes. There are three plots coming forward presently in the first parcel of Phase 3B, but we would welcome an additional target being recorded here so progress toward it can be tested against future planning applications.	208063 (Northstowe TC)

We are now far beyond "early occupation", and all involved parties have failed to deliver "Temporary (...) healthcare facilities" and indeed are in default on the Phase 2 S106 planning obligation requiring permanent healthcare facilities.	208064 (Northstowe TC)
It is unfortunate that the existing established S106 obligations provide for land for faith and cultural use but failed to provide for any monetary or in-kind contributions to realising facilities on that land. It is regrettable that providing facilities in a new and master-planned development has fallen solely on the shoulders of religious and community groups. This contrasts with Cambourne, where a S106 agreement provided for monetary contributions toward delivery of a church.	208065 (Northstowe TC)
We welcome and support this clear re-statement that Northstowe will be separated from adjacent settlements. This separation must be retained and neither Northstowe *nor the adjacent settlements* should be developed into the gap.	208066 (Northstowe TC)
Please strike "which will not undermine the vitality and viability of other nearby towns or compete with Cambridge;" It is essential that Northstowe Town centre is allowed to compete with others in the area. It would be highly inappropriate and unacceptable for the LPA to neuter development of the Town Centre because it could compete with other areas. Please also adjust "immediate surrounding area" to "wider surrounding area" for similar reasons.	208067 (Northstowe TC)
We support the principle of outdoor sports provision, but a bowling green is already provided in Northstowe with no further pressing need given the town's demographics. Would suggest padel or bocce is more appropriate for casual sports provision associated with a town park. It would be appropriate here to reference the close proximity of the secured swimming pool provision to the Town Centre.	208068, 208069 (Northstowe TC)

"Continue to offer recreational opportunities" please reword to "must offer water-based recreation opportunities in the future" as this is currently not happening	208070 (Northstowe TC)
We note that while the relevant S106 payments have been made during the development of Northstowe, for example to fund the capital costs of the Guided Busway, the current level of service provided to Northstowe residents in return is deeply unacceptable. In addition, the charging model adopted by the operator and approved by CCC sees bus journeys commencing in Northstowe attract higher fares than the same bus being boarded in adjacent settlements. The AAP demanded 12 months subsidised/free bus travel, so this text is a significant weakening of that. In any case, this was not made available to later residents. We believe that no such subsidy exists currently.	208071, 208072 (Northstowe TC)
Sport England supports criterion (d) requiring indoor and outdoor sports facilities and strongly supports paragraph 34 requiring maintenance plans for such facilities.	209226 (Sport England)
Parts of the Longstanton Conservation Area lie within the site. There are also 8 grade II listed pillboxes within the site. There are a number of other designated heritage assets nearby including Oakington and Westwick Conservation Areas and their associated listed buildings including the grade I All Saints Church, St Andrews Church and St Michaels Church, both listed at grade II* and several grade II listed buildings. Any development of this site has the potential to affect these heritage assets and their settings. There does not appear to be an HIA for this allocation. It is important that the policy identifies on-site, and nearby heritage assets and any mitigation and enhancement measures required to address any impact. Amend policy accordingly. Is there a	210141 (Historic England)

Conservation Management Plan for the site? If so, this should be referenced. If not, we recommend that this should be included as a policy requirement.	
Suggested wording amendment: “A nursery, secondary school, primary school and special school have now been built but further education facilities will be required to meet the needs of the new town, including additional primary schools”.	210590 (Cambridgeshire County Council)
Draft Policy S/NST includes detailed requirements relating to movement, connectivity and transport mitigation. However, for Northstowe these matters have already been comprehensively assessed and secured through the existing outline planning permissions, Environmental Statements, Transport Assessments and associated conditions and legal agreements. Any policy wording that could be interpreted as adding new requirements, constraining approved development parameters, or re-opening matters already resolved through the outline permissions would risk undermining the effectiveness of the policy and slowing delivery. As a result, this would be inconsistent with national policy and guidance on positive plan-making and deliverability.	211735 (Homes England)
The draft Local Plan seeks to include additional specialist accommodation of 1,050 units (Part 7a ii) and 24 permanent Gypsy and Traveller pitches (Part 7a iii). These are additional policy layers that are introduced to the Northstowe site that are not consistent, nor committed to in the outline development descriptions. Homes England has no additional land available at Northstowe and so these references should be removed from the draft policy.	211736 (Homes England)
The draft Local Plan and Policy S/NST should clarify how strategic sports hubs are intended to function within areas that are designated as protected open space. While the protection of open space is supported, sports hubs require ancillary development such as car parks and sports	211737 (Homes England)

pavilion. Policy should explicitly allow sports hubs to deliver necessary supporting infrastructure and ancillary development. Alternatively, sports hubs could be given a distinct policy designation that recognises both open space and community infrastructure, ensuring that built forms are not constrained by restrictive open space policies.	
The Lifespan section of the draft policy is particularly overprescribed as it requires comprehensive masterplanning, adherence to phasing plans and design codes and stewardship strategies. These details are already adhered via reserved matters applications, discharge of conditions application or planning obligations. The wording should be updated to reflect what matters have already approved and agreed for Northstowe.	211738 (Homes England)
The draft policy makes reference to required capacity improvements associated with the A14. Highways improvements delivered as part of the Northstowe development, including works affecting the A14 corridor, are intended to mitigate the impacts of the Northstowe development alone. Other site allocations / planning applications in the vicinity should not rely on this increased capacity and must demonstrate, through their own transport assessment, how any capacity constraints on the A14 would be mitigated as part of their proposals.	211741 (Homes England)
Part 7b of the proposed policy refers to a variety of uses proposed in the Town Centre (Phase 2) and includes incorrect floorspaces. The draft Policy should refer to the figures set out in the approved Town Centre Strategy (for Phase 2 (ref. S/2011/14/COND14). Part 7c states that retail and other town centre and local centre uses to be provided in accordance with an up-to-date Retail Needs Assessment and Town Centre Strategy.	211743, 211743 (Homes England)

There is an approved Town Centre Strategy for Northstowe under the Phase 2 outline (ref. S/2011/14/COND14). A retail needs assessment is not required by any of the outline consents and should not be introduced at this stage.	
The proposed policy requirements for education healthcare, community, cultural and leisure facilities are broadly consistent with the four outline permissions as it the requirement for temporary facilities. The policy refers to youth facilities which can form part of wider community facilities and the open space strategy. This approach is supported, provided it does not create additional triggers or obligations beyond those already secured through existing legal agreements and planning conditions.	211744 (Homes England)
The policy places a stronger emphasis on biodiversity networks and long-term landscape management than the outline summaries alone; however, this is consistent with the Environmental Statements accompanying Phases 3A and 3B and does not represent a departure from the approved development strategy.	211745 (Homes England)
Homes England are also landowners for land that is located outside of red line boundaries for the outline planning permissions. This is an acknowledgement that supporting infrastructure is to be delivered outside of the settlement boundary, such as the Southern Access Road East (if required) and flood mitigation measures.	211747 (Homes England)
I am very concerned about the addition of permanent traveller sites in the Northstowe town. Relocate these sites from Northstowe to the outskirts of villages. I appreciate the need for these sites, but I do not think in the main part of Northstowe is the correct location for them.	201732 (R Beaumont)

This plan is extraordinarily difficult to get to grips with. There has been no public meeting in Longstanton at which we could have found out what is proposed. Local residents have not been notified of this consultation. When I entered that I live in [REDACTED] (the westernmost part of Longstanton) it came up with nothing of significance, but I hear that there are plans for Traveller sites potentially just South of where I live. This process needs to be restarted in a way that actually involves local residents.	202590 (A Riley)
Longstanton & District Heritage Society believes that this local plan should emphasise the vital contribution Northstowe's rich heritage can make to the building of a strong community and providing the "unique identity and sense of place" promised in the town's original planning documents. LDHS asks for four particular aspects to be considered: 1. Clarification and confirmation of the conservation and protection status of the heritage asset known as "Northstowe Longstanton Paddocks". 2. Acknowledgement in the Local Plan of the new Heritage Strategy for Northstowe being commissioned by Cambridgeshire County Council Natural and Historic Environment Team. 3. Greater emphasis of the need to protect, conserve and present Northstowe's rich heritage as part of a connected Fen-Edge landscape and for the facilitation of heritage learning by all members of the Northstowe community alongside members of other local, connected communities. 4. Clear designation of the Green Separation between Northstowe and the villages of Longstanton and Oakington as "Protected Space". Specific areas are proposed for designation.	204189 (R Hetherington)

There appears to be an error in paragraph 3.3.67 which states 10,18000 homes	204383 (Abbey Properties Cambridgeshire Ltd)

Policy S/WNT: Land north of Waterbeach

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The comments raise concerns about the overall vision for Waterbeach, particularly the continued allocation of greenfield land which is seen as eroding the area's historic low-lying landscape and local identity. While there is support for some elements, such as the Strategic Enhancement Area, respondents argue that the policy lacks sufficient clarity and ambition in delivering meaningful green infrastructure. There are worries that the proposed level of on-site green space will not meet recreational demand, potentially increasing pressure on nearby protected nature sites. Contributors also stress the need for clearer protection of heritage assets, stronger alignment with existing plans, and greater certainty that Waterbeach Village's distinct character will not be undermined.

A significant theme is the adequacy of infrastructure, services, and connectivity. Respondents highlight the need for clearer commitments to emergency services provision and education (including SEN and secondary school capacity), alongside better phasing to ensure infrastructure keeps pace with housing delivery. Transport concerns also highlight the proposed closure of the existing railway station, ongoing pressure on key routes such as the A10/A14, and calls for improved public transport, cycling links, and alternative solutions such as bus corridors and a new station at Milton. More broadly, there are doubts about the deliverability and sustainability of proposals, including unresolved issues around water infrastructure and the provision of Gypsy and Traveller accommodation. Concerns are also raised about inconsistencies with existing planning permissions and the Spatial Framework, as well as the risk that the scale and pace of development could outstrip both infrastructure provision and realistic delivery, ultimately

affecting community cohesion and long-term stewardship. There is also a comment requesting that the Waterbeach New Town SPD is carried forward to support the delivery of the site.

Response to the main issues raised in representations

The policy wording has been amended to provide greater clarity on the role and function of the Strategic Enhancement Area, whilst also requiring its delivery to be coordinated by the two landowners bringing forward the new town. There is also further reference to the role the SEA has in terms of filtering views from Denny Abbey and other heritage assets in that area. The exact location of specific uses within the SEA will need to be considered and determined through the planning application process, as it would not be reasonable to determine this through the Local Plan, especially given there are existing planning consents for the site and live reserved matters applications being considered. The recreational pressures generated by the development have been considered in Local Plan terms through the Sustainability Appraisal and the Habitats Regulations Assessment, with any identified mitigation measures required added to the policy. At the delivery stage, this will then be considered in further detail, ensuring the phasing of mitigation (including the delivery of accessible open space) is aligned to the delivery of new homes. The policy wording now reflects the important multifunctional nature of the SEA and how it will need to address the recreation, wellbeing and other needs of those living, working and visiting the new town.

The Greater Cambridge Local Plan Development Strategy sets out the councils identified strategy for growth and how the councils have arrived at this position, noting a range of evidence studies and how the plan is in general conformity with the national planning policy framework. Additionally, the plan and policies within it, are subject to consideration through the Sustainability Appraisal which consider environmental, social and economic indicators. The principle of residential led development at Waterbeach New Town as already been established through the South Cambridgeshire Local Plan (2018) and subsequent planning permissions. Therefore,

the proposed allocation remains for a residential led mixed-use development and supports the continued delivery of the site, including the necessary mitigation and supporting infrastructure.

The Councils have identified a clear housing need for Gypsy and Travellers accommodation and the Council's preferred approach is to address this through a number of ways, including provision at the strategic sites. This is consistent with the previous approach of the South Cambridgeshire Local Plan (2018) and is reflected in the relevant conditions of the planning permission for the site. Policy H/GT sets out the specific requirements for the implementation of this particular policy requirement.
The Housing policies of the Local Plan identify different housing types and tenures and how these should be delivered throughout Greater Cambridge. This allocation for Waterbeach New Town outlines the broad quantum of development, acceptable land uses and policy requirements, which must be read alongside the other relevant policies of the Local Plan. There are clear national definitions for the different types of affordable/subsidised housing products and the Local Plan, in combination with the Greater Cambridge Housing Strategy, will inform the housing types and tenures that come forward at the new town across each phase.

The policy has been clarified to confirm the education provision required to support the development and the phasing of this will need to be agreed with the education authority. Financial contributions towards essential infrastructure, including emergency services, is addressed by Policy I/ID: Infrastructure and delivery and is therefore not repeated in this policy.

The policy wording has been developed further to ensure there is an appropriate, context led, approach at the interface between the new town and the existing village to maintain its townscape character. The policy also supports higher density development around the relocated railway station, as suggested by the representation.

The transport impacts of the development are noted, and the Movement section of the policy sets out clear requirements for future development to address impacts generated by the new town. This will need to be phased in line with the delivery of the town and will require a multi-modal approach including high quality active travel connections, enhanced public transport provision (including the relocated Waterbeach railway station and public transport corridor) as well as highways improvements. The policy is clear that development should not have an adverse highways impact on existing settlements and that financial contributions will be required for measures identified in the Ely to Cambridge Transport Study as well as a monitor and manage approach for each phase of the development to ensure that the mitigation measures are adequate as the new town builds out. The Interim Greater Cambridge Transport Strategy notes that in the medium term (2030-2035), there will need to be a north corridor package of measures delivered, which includes targeted A10 improvements, with possible larger highway interventions delivered in the long term.

Whilst the principle of relocating the railway station was established through the 2018 South Cambridgeshire Local Plan, the Greater Cambridge Partnership will be responsible for its delivery. The proposal to also retain the existing station in combination with the relocated station will be subject to further consultation undertaken by the Department for Transport. There may be an opportunity during this consultation for respondents to put forward other options including other new stations along this route. At this stage, the Interim Greater Cambridge Transport Strategy does not identify either of these proposals.

The policy as well as other policies in the Local Plan note the timely provision of infrastructure, services and facilities are needed to support developments of this scale. This will need to be kept under review through subsequent phases of the development to ensure the needs of new residents, workers and visitors are meet as the town comes forward. The policy has been amended to provide some flexibility on this basis. The policy also requires temporary and meanwhile uses to be delivered to provide initial facilities where needed, as not all amenities will be commercially viable at an early stage of the town’s development before a critical mass of people has been achieved.

The comment regarding sustainable connections to the Wicken Vision area and Wicken Fen has been added to the policy whilst the request for further engagement is noted.

The provision of water and wastewater infrastructure is a clear requirement for any new development and is addressed through Policy CC/WE: Water efficiency in new developments and is therefore not repeated in this policy. Additionally, any detailed proposals for the delivery of such infrastructure are subject to planning consent.

The policy has been amended to confirm the number of new homes that will be delivered during the plan period. The long-term stewardship, governance and community identity are addressed in the policy as this will be an important part of how the town is delivered and maintains its long-term success.

It is not uncommon for completed homes to be advertised for sale whilst future phases of development are under construction. There is a build out period both for the properties as well as the supporting infrastructure like streets and local open spaces and it is unlikely to be economically viable for the house builder(s) to only commence latter phases of development once all earlier phases are sold. Additionally, this is a planning condition that cannot be reasonably applied to developments through the planning system.

Amendments to the indicative spatial framework have been made to reflect the consented development and factual updates to the policy have also been applied. However, some requirements, such as addressing potential areas of flood risk are still relevant until such time that the consented development in this area, and any necessary mitigation measures, have been implemented.

The supporting text to the policy now highlights that the Waterbeach New Town SPD will be a material consideration in the determination of future planning applications. However, under the changes to national planning policy, existing SPDs cannot be 'rolled over' or readopted by local planning authorities.

The policy wording and the indicative spatial framework provide a clear and consistent approach to ensuring that development is contained within the allocation area, and the role and function of the adjacent SEA. Any development proposals outside of the developable area or elsewhere in the parish, will need to comply with other policies in the Local Plan. Notably, the Defined Development Extents ensure that isolated development in the countryside is not generally supported whilst land to the south of the parish falls within the Cambridge Green Belt, which has national and local protections.

Made Neighbourhood Plans and adopted Local Plans have the same weight in decision making, however, if there is any conflict between the policies in the two plans, the most recently adopted/made plan takes precedence in decision making. Nevertheless, the Councils do not believe that the proposed allocation conflicts with the Waterbeach Neighbourhood Plan, as it is an update to an existing adopted allocation.

Table of representations

Summary of issues raised in comments	**Comments highlighting this issue**
Vision and Identity • Object to allocation of further greenfield sites in Waterbeach which erodes low-lying historic fields that form part of the local landscape identity.	201331 (J Bell)

Uses • Under the subheading 'Uses' Section 4– add a new criterion m. as follows; "m. Contributions to fire & rescue, police and ambulance facilities provision/ funding" • Be clearer on the permission for a SEN School and that no more than two secondary schools are required. • I am concerned that housing proposed within Waterbeach New Town will not be genuinely affordable for people with existing local connections, including younger residents and families. The Draft Plan does not clearly explain: - How affordability will be secured over time - What proportion will be social or genuinely affordable rent - How local need will be prioritised. This undermines confidence that the development will support a balanced community.	207484 (Cambridgeshire Constabulary), 207515 (Cambridge Fire and Rescue Service), 210529 & 210591 (Cambridgeshire County Council), 208980 (J Williams)
Context • Strategic Enhancement Area welcomed but policy needs to be more explicit in identifying area for provision of strategic natural greenspace to serve the new development. • Current extent of on-site green infrastructure will not be sufficient or attractive enough to support the recreational needs of the new population and will therefore likely result in displacement of recreational pressure to nearby designated nature sites. • Policy should be amended to incorporate delivery of strategic green infrastructure within the strategic enhancement area in accordance with the masterplan SPD document. • The plan does not give sufficient assurance that Waterbeach Village's distinct character will be protected, risking increased traffic and loss of landscape and breaching the Waterbeach Neighbourhood Plan. • It is important that the policy identifies on-site, and nearby heritage assets and any mitigation and enhancement measures required to address any impact. • The new town at Waterbeach should include high-density development focused around its new station.	202983 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 208975, 208981 (J Williams), 210142 (Historic England), 208035 (Railfuture East Anglia)

Travel • Transport impacts on the A10/A14 and surrounding villages remain significant. • Object to closure of existing Waterbeach railway station. • No objection to new station but existing one should be retained. • Forcing residents to travel further to reach rail services contradicts Policy I/ST's aim to prioritise walking, cycling, and public transport. • Retaining both stations would enhance access to rail, reduce car dependency, support social inclusion, and provide network resilience. • Milton should receive a new railway station and a metro-style service, to improve connectivity and support the plan's sustainability objectives. • Support moving railway station to better serve the town, but for many destinations (west Cambridge, science park, retail park, city centre), it is not convenient for residents to do a feeder>train>feeder journey as it is slow, expensive, or infrequent. • Suggests bus lanes along southbound A10 to create a bus corridor to relieve the pressure on road. • Propose blocking through traffic in Milton and building a bus/cycling-only bridge across the A14. • Support the provision of high quality pedestrian and cycle links to nearby existing facilities such as Cambridge Research Park (CRP) • Policy wording used must be sufficiently robust to ensure any transport infrastructure which is critical to accommodating sustainable growth in this location is secured and adequately planned for.	201332, 201333, 201334 (J Bell), 201366 (D Malik), 201402 (R Swift), 201404 (P Johnson), 201405 (I Williams), 203844 (A Chan), 204476 (Royal London Mutual Insurance Society), 204670 (East Cambridgeshire DC)
Infrastructure • Delivery heavily dependent on timely and costly infrastructure, some of which has already been delayed.	201180, 202602, 202603, 203305, 203314 (Save Honey Hill Group), 208977

• Risk that housing delivery will outpace infrastructure provision. Plan should include stronger triggers to ensure infrastructure comes forward at the right time and mitigates potential for substandard living conditions. • Temporary facilities / meanwhile uses may not guarantee the same quality of service as a fully developed town. • Water supply, wastewater treatment and environmental capacity present unresolved risks. • Proposed pipeline solution has not been robustly reassessed against more sustainable alternatives, despite earlier studies identifying a local Waterbeach WRC as the preferred option. • The Plan is unjustified under NPPF 36b because the Waterbeach strategy depends on a pipeline founded on a misleading account of regulatory advice. • Plan unsound as it treats the Waterbeach pipeline as a necessity despite the CWWTPR DCO ExA Report confirming there is no operational need and no presumption of need under Section 105. • 2014 Water Cycle Study previously identified a local Water Recycling Centre would provide "betterment" for the River Cam and the local community. By promoting a pipeline justified solely by "facilitating" a relocation that is now unfunded and uncertain, the Councils are endorsing a strategy that fails to meet the "Exceptional Circumstances" established by the Secretary of State's Decision Letter and contrary to NPPF paragraph 11, as more sustainable alternatives (local treatment) exist. • DCO confirms that Pipeline South will become redundant once a new works is built. Proposing high-cost, high-carbon infrastructure that is designed to be decommissioned shortly after completion is inconsistent with the sustainability objectives of the Minerals and Waste Plan 2021 and the NPPF. • Insert binding policy wording to ensure that wastewater treatment and potable water supply are delivered prior to or alongside housing occupation, with clear triggers and monitoring.	(J Williams), 208035 (Railfuture East Anglia) 203593 (Horningsea PC)

• The access strategy relies heavily on the A10. Traffic impacts on the A10/A14 network require robust and timely mitigation, prevent rat-running through neighbouring villages. • Long-term stewardship arrangements for open space, community assets and unadopted infrastructure are essential but challenging at this scale. • The ongoing proposals for Waterbeach are problematic, being a dominant satellite attached to the side of an existing settlement and relying predominately on the existing village and overburdened road and facilities. The facilities and road improvements should have been in place prior to the impact and occupation of the new housing to avoid harm to the existing. The current Plan for the satellite New Towns is not sufficiently robust in phasing.	
Other • Stated capacity of up to ~11,000 homes may overstate realistic delivery by 2045 • Long-term stewardship, governance and community identity require stronger safeguards. • No further development should be approved until the new-town properties are sold. • New town has been infilled contrary to the original understanding and that no new schools have been provided • The Draft GC Plan does not assess cumulative development pressure across Waterbeach Parish as a whole, focusing almost exclusively on the New Town site. I am concerned that this leaves other sensitive parcels of land vulnerable to Incremental or speculative development, the loss of agricultural land and open countryside and harm to heritage assets and their setting • The Draft GC Plan does not provide sufficient reassurance that the separate identity, character, and quality of life of Waterbeach Village will be protected in the long term. I am concerned that: - Increased traffic, pressure on services, and loss of landscape setting will cumulatively erode village character. The Draft Plan does not clearly explain how it will remain in general conformity with the Waterbeach Neighbourhood Plan, as required by planning law.	201180 (Save Honey Hill Group), 201333 (J Bell), 208975, 208976 (J Williams)

Alignment with existing policy and planning application context: • It is noted that the policy and supporting text seeks to reflect key elements established through the outline planning permissions at Waterbeach New Town. However, there are a number of deviations from that framework which WDC wishes to highlight • Conflicting statements on heritage value, drainage and the use of design codes at phase level are included in the draft. • The requirement for 24 Gypsy and Traveller pitches in Policy S/WNT was not included in the adopted South Cambridgeshire Plan or the Waterbeach SPD and it is unrealistic that these could be delivered under the existing outline planning permissions. • The draft policy's wording that development east of Bannold Drove should be avoided because of flood-risk is inaccurate and fails to recognise relevance of provision within the outline planning permission for Waterbeach and should therefore be deleted. • The Spatial Framework Diagram in the draft plan deviates from the parameter plans in the outline permission and the SPD. • The draft policy makes no mention of any on-going role for the SPD • Omits any reference to the adopted Spatial Development Plan and northern buffer area and fails to capture the transport phasing linked to the A10 corridor. • Land-use allocations are presented as fixed quantities rather than "potential for" values and the policy attempts to protect a private museum, which exceeds the authority's remit.	209202, 209198, 209199, 209200, 209201, 211749, 211750, 211751, 211752 (Urban & Civic), 205116, 206847, 206848, 206849 (Waterbeach Development Company) 210989 (C Newell)
The National Trust considers that Waterbeach could be far better connected to the Wicken Vision Area and Wicken Fen via a foot/cycle bridge over the River Cam which would provide a more direct route via sustainable modes of transport. This development should look beyond its	211080 (National Trust)

boundaries to provide access to the wider landscape, particularly to the east. This should be included in the policy. The National Trust would welcome the opportunity to discuss this further. The National Trust are currently working with partners to deliver a new foot/cycle bridge over Burwell Lode to improve access to the south of Wicken Fen.	
What is the one significant new leisure facility that this site could host, that has easy, frequent, and accessible public transport access, that could otherwise not be located in Cambridge City due to land prices and lack of land availability? Please make provision for this - co-ordinated with the other New Towns so that each place has at least one different facility that the others lack, thus encouraging people from within Cambridge to visit, and ensure that the New Towns are not dormitory towns. Ensure children & teenagers are involved at design stage.	203784 (A Carpen)

Policy S/BA: Bourn Airfield New Village

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

The comments are generally supportive, particularly from key stakeholders such as Juniper and Natural England. The overall ambitions of the draft plan, including the growth strategy and the allocation of Bourn Airfield for a new community, are endorsed. However, there is a strong emphasis on ensuring the policy remains fully aligned with the existing outline planning permission, allowing for flexibility as the scheme evolves over time. Respondents call for clearer wording on how the policy will apply alongside extant permissions, and raise concerns about inconsistencies with the spatial framework, including omissions such as access points and a primary school. There is also objection to elements of the policy seen as premature or unjustified, such as the removal of land from the allocation area within the Strategic Enhancement Area and the inclusion of Gypsy and Traveller pitch requirements.

A range of site-specific and strategic issues are also highlighted. These include suggestions to strengthen transport provisions—particularly around public transport delivery—and to ensure comprehensive integration of all land parcels, including areas currently excluded from the allocation. Environmental and design considerations are raised, with support for enhanced biodiversity measures such as dark corridors, and calls for improved leisure, retail, and community facilities to avoid creating a dormitory settlement. East West Rail highlighted the relationship of the site with their proposals.

Heritage concerns are also noted, particularly the need to identify and protect nearby listed buildings and conservation areas, supported by appropriate assessment and policy references. More broadly, some respondents question whether the proposed land use mix is appropriate, suggesting alternative approaches such as a stronger focus on employment uses, while The National Trust emphasise opportunities for partnership working to improve sustainable connections to surrounding assets such as the Wimpole Estate.

Response to the main issues raised in representations

The policy has been amended to provide some flexibility around the quantum of homes and commercial floorspace. This enables future development proposals to respond to future needs whilst also ensuring that the policy approach is consistent with the other Local Plan allocations. The policy is broadly consistent with the consented application for the new settlement but has been updated to reflect any recent material considerations. For example, the requirement to form green networks linking with Cambourne North and surveys and mitigation, where needed, to address local bat species in the wider area.

The red line boundary of the allocation does not affect the implementation of the existing planning permission. The 2018 South Cambridgeshire Local Plan identified two boundaries for this site, a larger Strategic Site and the smaller Major Development Site in which the development would take place. The proposed allocation in the Greater Cambridge Local Plan applies a similar approach, with a site allocation for the developable area (previously known as the Major Development Site) and areas for mitigation and enhancement within the Strategic Enhancement Area Policy Area. The policy makes specific reference to the SEA for this site and identifies that it forms an important component of the new village. Therefore, which the role and function of the SEA has been clarified in the policy wording, the Councils have retained the proposed approach for the reasons set out above.

A significant proportion of Bourn Quarter has been built out whilst the remaining plots within the site have planning consent. The councils do not believe that the site needs to be kept within the allocation area, however reference is now made to the policy that the development of Bourn Airfield needs to integrate with this locally important employment site.

Amendments to the indicative spatial framework have been made to reflect the consented development and factual updates to the policy have also been applied.

The Councils have identified a clear housing need for Gypsy and Travellers accommodation and the Council's preferred approach is to address this through a number of ways, including provision at the strategic sites. This is consistent with the previous approach of the South Cambridgeshire Local Plan (2018) and is reflected in the relevant conditions of the planning permission for the site. Policy H/GT sets out the specific requirements for the implementation of this particular policy requirement.

The policy broadly sets out the necessary uses which are required to support this new community, including leisure provision, education facilities and community uses. This will need to be refined through any subsequent planning applications for the site and informed by the latest evidence and any other material considerations. These facilities should be informed by the views of local people, as set out in the NPPF and the Council's Statement of Community Involvement, which requires community engagement ahead of the planning application stage. The Councils have a strong track record of encouraging and facilitating youth engagement during the design development stages of planning applications and this is supported by other policies within the Local Plan.

The principle of residential led development at Bourn Airfield as already been established through the South Cambridgeshire Local Plan (2018) and subsequent planning permission. Additionally, the Councils evidence does not identify a current or future need for

further large-scale retail or employment uses in this location. Therefore, the proposed allocation remains for a residential led mixed use development.

Additional wording has been added to the policy to address the comments relating to ecology and the historic environment.

The comment regarding sustainable connections to The Wimpole Estate and the request for further engagement are noted.

Table of representations

Summary of issues raised in comments	**Comments highlighting this issue**
No comments to make on the policy, which reflects previously agreed policy.	202984 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust)
Juniper supports the overall ambitions of the draft plan including its growth strategy and the inclusion of Bourn Airfield as a site allocation. Policy S/BA should support the delivery of a new community at Bourn Airfield. Juniper supports the overall vision, identity and uses as expressed.	203427 (Juniper Propco (Bourn) Limited)
Policy for this site must be entirely consistent with the outline permission and support its implementation so that new homes can be delivered as soon as possible. The policy must provide for some flexibility to enable the delivery of development on the site to evolve to respond to changes in circumstances that may be encountered over the lifetime of the development of the site, should new planning applications be required.	203427 (Juniper Propco (Bourn) Limited)

Greater clarity is required, particularly regarding the relationship between the development being implemented in accordance with an existing planning permission and policy which would apply to any new applications.	203427 (Juniper Propco (Bourn) Limited)
The SEA around the developable area should be removed from the Local Plan as it is premature to de-allocate a part of the site that is integral to the whole scheme. These areas already benefit from a consented parameter plan.	203427 (Juniper Propco (Bourn) Limited)
The Spatial Framework for the allocation is not consistent with the outline permission. It should also provide flexibility for future amendments to the layout of the settlement. If retained, it needs to include the correct eastern vehicle access and missing primary school.	203427 (Juniper Propco (Bourn) Limited)
Amendment is needed to public transport section, either to a segregated bus link or equivalent scheduled rapid mass transit. Amendments also needed to reference related to Cambourne to Cambridge as it is not factually correct.	203427 (Juniper Propco (Bourn) Limited)
Bourn Quarter should be reincorporated into the allocation boundary, along with the land outside the Major Development Site area, to ensure a comprehensive approach across all areas and effective integration and connectivity between different uses. It should not be unpicked at this juncture.	203427 (Juniper Propco (Bourn) Limited)
Object to the Gypsy and Traveller approach in the draft plan, which is unsound and should be remedied by provision in forthcoming strategic sites, such as Cambourne North where it can be secured. The reference to Gypsy and Traveller pitches is unsound and should, therefore, be removed from Policy S/BA.	203427 (Juniper Propco (Bourn) Limited)
What is the one significant new leisure facility that this site could host, that has easy, frequent, and accessible public transport access, that could otherwise not be located in Cambridge City due to land prices and lack of land availability? Please make provision for this - co-ordinated with the other New Towns so that each place has at least one different facility that the others lack, thus encouraging people from within Cambridge to visit, and ensure that the New Towns are not dormitory towns. Ensure children & teenagers are involved at design stage.	203786 (A Carpen)

Develop Bourn Airfield as a retail and Business Park rather than more houses. No provision for entertaining these extra people or providing services for them	207462 (A Parfitt)
Natural England welcomes the strategic priorities of the Local Plan and are pleased to note that the Vision for Greater Cambridge, includes the aspiration for a big decrease in climate and environmental impacts, and increase in the network of nature, wildlife and multi-functional green spaces. We would encourage your authority to add wording to the Nature section of this policy about sensitive lighting strategies and providing dark habitats/corridors where possible, particularly if these can link with those planned in Policy S/CBN, and around the outer edge of the settlement.	207616 (Natural England)
There are no designated heritage assets within the site but there are some grade II barns to the north of the Grange I the Strategic Enhancement Area to the south of the site allocation. Great Common Farmhouse (also grade II listed) lies to the west of the site. Bourn Village and Hall Conservation Area lies to the south of the site. Any development of this site has the potential to affect these heritage assets and their settings. There does not appear to be an HIA for this allocation. It is important that the policy identifies on-site and nearby heritage assets and any mitigation and enhancement measures required to address any impact. Amend policy accordingly. We welcome reference to the grade II listed barns at criterion 9. We recommend that Criterion 9 should also reference Great Common Farmhouse (also grade II listed). Figure 88 This should also identify nearby heritage assets (much as the other Spatial Frameworks do)	210143 (Historic England)
The Wimpole Estate, including Eversden and Wimpole Woods SAC/SSSI is located approximately 6km to the south of Cambourne. It will inevitably draw visitors from the new developments at Cambourne and Bourne Airfield. However, it is currently poorly connected to these locations by sustainable transport. Policy S/CBN promotes better connections and sustainable modes of transport to surrounding villages, facilities and open spaces. The National Trust would welcome discussions with the LPA and developers about the opportunity to work in partnership to deliver sustainable transport options between Cambourne/Bourn and Wimpole.	211079 (The National Trust)

Barratt Northampton is currently progressing a Reserved Matters application forming Phase 1 of the Bourn Airfield new settlement. The representations focus solely on the Development Management policies, as they are of direct relevance to the delivery of the Bourn Airfield new settlement.	210501 (Barratt Homes Northampton)
EWR Co is proposing to route the new railway through a mined tunnel under the A428 and the Bourn Airfield site, much of the tunnel is within land that has planning permission. However, part of the tunnel may be located under land identified for mixed use/residential-led development in the land use parameter plan and Spatial Framework. It is important that proposals for any built development above or near to the tunnel are suitable for such a location and would not conflict with or prejudice the delivery of EWR. There may also be a requirement for EWR to utilise land within the site in order to construct the proposed tunnel, mitigate impacts on A428, and/or undertake utilities diversions. To avoid a conflict between the proposed allocation and the EWR Safeguarding Directions, EWR Co requests that draft Policy S/BA is amended in Para 15 and 3.3.110.	211895 (East West Rail)

Summaries of Representations: Sites New Settlements

New Settlements

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments on the new settlements introduction have been grouped to draw out the issues raised.

General comments

Essex County Council welcomed joint working on accessibility and connectivity on the cluster of sites south of Cambridge. National Highways highlighted the need for transport modelling to reflect anticipated development timing. Natural England suggested an alternative approach to the red-line mapping of sites. Historic England highlighted the need for Heritage Impact Assessment to also influence the detailed planning stage of sites. Other comments highlighted the need to consider the landscape impacts of new settlement sites, and it was questioned why site policies did not identify building heights. Comments expressed concern about the qualities of exiting new settlements. Cambridgeshire Local Access Forum raised the importance of building in active travel networks

and connectivity Cambridge Past, Present and Future said that garden town principles should be applied. Cambridge Acre said the development strategy risks drawing investment and services away from existing rural villages. Endurance estates considered they should be supplemented with additional village development sites. Thakeham Homes proposes sites which together would form a major new settlement.

Comments focused on Infrastructure

National Highways highlighted the need for transport modelling to reflect anticipated development timing. Anglian Water Services and NHS Cambridgeshire and Peterborough Integrated Care Board identified the need to plan for infrastructure to meet the needs of sites. Other comments were concerned with infrastructure delivery, and the impacts of planned infrastructure.

Comments focused on Land adjacent to A11 and A1307 at Grange Farm

Comments expressed concern regarding the proposal, and considered that it should be removed from the local plan. Reasons include: Would create Isolated car reliant community, limited public transport, lack of infrastructure capacity, loss of agricultural land, Impact on water and chalk streams, landscape and visual harm. Site previously rejected, inadequate evidence base to demonstrate benefits. Focus on completing the existing new settlements.

Comments focused on Cambourne

Comments expressed concern about the development being used to help justify East West Rail. It was seen as acknowledgement that failures with the current Cambourne site needed to be rectified. Where Cambourne could attract jobs to go with the homes. Development should not take place until public transport measure are in place.

Comment on Northstowe

One comment requested that land providing green separation and public access should be identified for protection.

Response to the main issues raised in representations

On the general comments, we will continue to engage with adjoining authorities, building on the engagement captured in our statement on duty to cooperate activities. Heritage consideration will be a detailed matter to consider at the planning application stage of the site development process, as will detailed design issues including building heights. The emerging plan includes a comprehensive set of polices to ensure high design quality. Proposals for additional sites have been considered through consideration of the development strategy, and testing of individual site proposes in the Housing and Economic Land Availability Assessment.

The Proposed Submission Local Plan is accompanied by further evidence exploring transport infrastructure needs and delivery, which have informed the Infrastructure Delivery Plan.

Comments on Land adjacent to A11 and A1307 at Grange Farm and North Cambourne echo those made against the site policies themselves. Response to issues raised have been provided on against those policies later in this document.

Table of representations

Comments raising general new settlement issues.

Summary of issues raised in comments	**Comments highlighting this issue**

ECC notes that the Local Plan states “We also have evidence that locating homes close to existing and proposed jobs at the cluster of research parks to the south of Cambridge would help reduce commuting and associated carbon emissions and congestion”. ECC welcome joint working to ensure consideration is given and actively planned to ensure accessibility and connectivity to key services and facilities that will benefit Cambridgeshire and Greater Essex residents, visitors and those investing in these localities.	210473 (Essex County Council)
We note that some of these allocations SEAs, particularly where SSSIs and other sensitive habitats are within or adjoining the sites. Whilst we welcome this, we also wish to make you aware of the case of Uttlesford District Council (UDC), who took a similar approach, but were directed by the PINS inspector to merge the development and non-development areas into one red line boundary for increased flexibility in masterplanning, in order to overcome constraints. Whilst this may not happen here, it would be prudent to be prepared, and we advise that a minimum buffer area adjacent to SSSIs should be decided upon in case the quantum of Green Infrastructure provision eventually becomes fragmented into smaller parcels across the wider red line boundary. We would be happy to provide more information and discuss this further with your authority in our ongoing meetings.	207608 (Natural England)
For some sites the policy wording states that a Heritage Impact Assessment will be required (e.g. North Cambourne/Grange Farm). This is a helpful requirement, but we suggest adding the words ‘more detailed HIA’, given that an HIA has already been prepared for these sites. The policy should also make clear that the HIA is needed to inform the masterplanning / proposals.	208920 (Historic England)

The policies should set parameters consistently and should respect the rural character of the open countryside. Storey heights do not appear to be controlled at Grange Farm and other new allocated development sites, which would have a significant and potentially detrimental effect on the open countryside. They have been partially set at Bourn Airfield New Village, however, it is unclear why the edge of the settlement is considered important at Bourn but not elsewhere, and why the Local Plan proposes no control over the height of the rest of the development on these very prominent sites in the open countryside.	210987 (C Newell)
The new settlements being proposed on former WW2 airfields are functionally prominent hilltop sites. The current Plan is not sufficiently robust to show this will be achievable sustainably within the environmental thread of sustainability.	210988 (C Newell)
It is unclear why the proposed Spatial Framework plans of these sites have excluded the perimeter buffers, as the Plan should retain control over these. These would be better controlled by inclusion within the site boundary and hatching as non-developable / open space / tree buffer areas as appropriate. The boundaries to these buffers should be reconsidered to be simple and clear to achieve the purposes of buffering and provide most efficient use of land (NPPF129). The development should maintain an area's prevailing character and setting (NPPF129). There are conflicts in the CBA Townscape reports, some of which are significant (such as Great & Little Abington villages having modest prevailing 1½ storey housing and being assessed as 4 storey prevailing heights).	211918 (C Newell)
Other recent large-scale developments, such as Waterbeach, have proved to be unattractive places to live. We are lucky to enjoy village life in a rural setting. A large scale, fairly high-	206600 (A Butchart)

density development so close to us would likely deliver a socioeconomic decline which may negatively affect South Cambridge's status as a sought-after place to live. It may not draw science and technology workers, who, like us, would choose to live elsewhere.	
For new development sites, particularly on the edge of Cambridge, in new settlements, and in the rural southern cluster, CLAF expects: •Early engagement with rights of way teams and access stakeholders during site master planning. •Provision of safe, convenient, coherent and attractive routes that connect new communities to existing path networks, services, public transport nodes and green spaces. •Routes designed to enable a range of non-motorised users, recognising that multi-user access benefits health, wellbeing and social inclusion	208167 (Cambridgeshire Local Access Forum)
Policies should require new settlement to conform with Garden Town Principles as defined by the tcpa (Town and Country Planning Association)	203007 (Cambridge Past, Present and Future)
The focus on creating well connected, self-sufficient new settlements is positive, but the strategy risks drawing investment and services away from existing rural villages. While strong public transport links to Cambridge are highlighted, there is little reference to how surrounding villages will connect to these new hubs or benefit from new facilities. The cumulative impact on rural roads, health services and schools is not addressed. Stronger rural proofing would include explicit links between new settlements and nearby villages, shared service planning and safeguards to avoid weakening existing rural centres.	203160 (Cambridgeshire ACRE)

South Cambridgeshire is becoming increasingly urbanised and losing its rural character	202427 (P Deer)
My main concerns are as follows: Increased traffic on local roads from the new housing and railway; Destruction of countryside and ancient sites; Cambridgeshire's very poor record on new towns - both Cambourne and Northstowe are cultural deserts with insufficient services and what services they have lagging development; Pressure on local services.	205254 (T Meyer)
Endurance Estates endorses the proposed New Settlement Allocations, including Cambourne North, as these locations represent excellent opportunities to capitalise on recent growth in a way which materially enhances the existing settlements. The new settlements should continue to have a significant role in the delivery of the overall housing need, however, Endurance Estates are of the view that these new settlements should be supplemented by additional development on the edge of Cambridge and within the sustainable villages in the district.	209708 (Endurance Estates)
HELAA Reference 208915, HELAA Reference 208916 and HELAA Reference 208917. Thakeham controls circa 1,800 hectares of land in South Cambridgeshire, located between Shepreth to the east and Kneesworth to the west, that is intended to deliver a zero carbon new town of more than 25,000 new homes, alongside new employment, services, amenities and requisite infrastructure to support a thriving community, the details of which can be found in our accompanying Vision Document. Furthermore, we have the potential ability to increase this to circa. 40,000 homes with the inclusion of the adjacent Ministry of Defence land at Bassingbourn. The 40,000 homes proposed are therefore an upper limit on the	209757 (Thakeham Homes)

potential for Wetherbrook. Wetherbrook New Town will support the growth spirations of the region, providing much needed housing to support economic growth but also provide production and manufacturing facilities, incubator and flexible workspace supporting the life science, biotech and medical sectors.	

Comments on Infrastructure issues

Summary of issues raised in comments	**Comments highlighting this issue**
It is National Highways understanding that new strategic sites, including North East Cambridge, Grange Farm, Cambridge East and Cambourne construction would be limited until 2032 therefore, National Highways recommend that traffic modelling reflects the expected delivery timescales.	209012 (National Highways)
Please note that specific comments regarding wastewater treatment at our WRCs has already been addressed under Policy S/DS. We support the requirements for a Foul Drainage Strategy to support the delivery of these settlements and consider that this requirement should be consistent across the new settlement policies (dependent of the stage of planning consent each site has progressed to).	210193 (Anglian Water Services Ltd)
Site allocations lacking explicit on-site health facility requirements should mention the need for financial contributions for health and infrastructure mitigation, aligning with the IDP approach. Engagement with Council Officers during early plan preparation and input into the	205091, 205093 (NHS Cambridgeshire and

Infrastructure Delivery Plan is Welcomed. An additional assessment by the ICB in Stage 2 of the IDP process will provide targeted evaluations of key site allocations and health infrastructure needs	Peterborough Integrated Care Board)
I am concerned about the number of trees and fields that have been used for the new A428 and now for the North west railway. If we keep building on farm land, there won't be enough fields for food and wildlife. As a resident of Papworth Everard, we don't want to be surrounded by roads railway's and housing it's not what we moved to a village for. We have had a lot of upheaval with the new A428 constantly changing and diverting traffic and then it will be the railway.	201170 (T Carter)
Strategic sites: test against lived reality Large allocations must be judged on: • real travel behaviour, • realistic public transport delivery, • and actual timelines — not optimistic assumptions. Development should not proceed where: • key infrastructure is speculative, • impacts are pushed onto existing communities, • or road access is constrained without alternatives. Sustainability that depends on "future fixes" is not sustainability.	208879 (D Smith)

Comments focused on Land adjacent to A11 and A1307 at Grange Farm

Summary of issues raised in comments	**Comments highlighting this issue**
The allocation of land at Grange Farm should not proceed. The site is greenfield with negligible connection to existing built up areas. As such any development would result in an	201296 (J McGill)

isolated community heavily reliant on outside resources; it would be strongly car-reliant; it would represent a "foot-in-the-door" for further unsustainable neighbouring development.	
Grange Farm needs to be taken out of the plan and existing new developments e.g. Cambourne, Waterbeach and Northstowe completed. The brownfield site at Cowley Road should be revisited. Grange farm site is on prime agricultural land within the green belt. The proposed urban development, situated on a rise, will dominate the landscape of surrounding local communities and significantly change the character of the area. Other approaches to SCDC's housing requirements can be met as set out in the consultation documents. Grange Farm was previously proposed for development and disregarded by GCSP on the grounds of being unsustainable; there have been no change in circumstances since that decision. No access is proposed between Grange Farm and the A11; additional traffic exiting onto the A1307 will cause increased congestion.	201860 (J Carter)
I find the plan to build 6-8000 new homes on productive farm land a disgrace, we have a population large enough For our fragile infrastructure Hospital at capacity, roads a bloody disgrace, schools at capacity, no appointments at health centres, The proposed development will dominate the landscape and will be visible from as far as Ely, Below the farm land is a chalk Aquifer feeding a chalk stream ,which would be destroyed.	201922 (G Johnson)
This draft Policy relies on a series of unsubstantiated assertions and claims about evidence. There is simply inadequate analysis and information to support what is claimed. This proposed Policy has all the hallmarks of having been added in at a late stage, which is exactly what has happened with the requirement to find additional homes to replace those	203569 (B Haydensmith)

originally in the Plan at the existing wastewater treatment works adjacent to Cowley Road. It is also highly opportunistic, with the unusual situation of one landowner providing an easy alternative for the location of homes the draft Plan seeks to identify	
These public transport-led developments from other new settlement sites all offer a marked contrast to the Grange Farm development, which despite claims that it will be sustainable and served by public transport, falls far short of the above examples. There is an attempt in the Draft Plan to deal with this when it says, “the new settlement will play a critical role extending the South-East Transport Scheme.” This is a highly speculative comment and even if some sort of extension to the main scheme can be provided, would fall far short of the public transport alternatives offered in Cambourne, Northstowe and Waterbeach.	208534 (B Haydensmith)
Grange Farm is severely constrained by major roads (A11 and A1307) and the protected Roman Road. Only one access is proposed—via a new roundabout on the A1307. The proposal lacks proper traffic modelling and data on existing network performance. Comparable settlements with similar or smaller populations have multiple access points. Highways England is unlikely to allow another junction on the A11. Even a link to the Worsted Lodge layby would increase pressure on FourWentways and risk queueing onto the A11. A1307 already carries heavy traffic, including many HGVs, and will face additional pressure from Haverhill’s growth. Queueing from the new roundabout is likely to extend into Little Abington. This will encourage rat running through the village to reach the A11/A505.	208535 (B Haydensmith)
Traffic is increasingly backing up due to congestion near Babraham Research Campus, Fourwentways and queues already extend to the A11/A505 slip roads at peak times. There	208536 (B Haydensmith)

are existing issues on the A505. A505 is highly congested and set to worsen with expansions at the Genome Campus and new housing nearby. Grange Farm traffic will add substantial pressure, with the A505 being the only viable westbound route. The respondent has doubts about the CSET extension. The extension requires crossing the A1307 and a new bridge over the A11—expensive and disruptive. Uncertainty whether this extension will ever be delivered. The respondent has concerns about walking / cycling routes. Only the southern end of the site has a realistically walkable route; northern areas would be too far. The respondent has concerns that the congestion and transport issues cannot be mitigated.	
Criticism that the allocation of this site was driven by the loss of the waste water plant site. This brownfield Cambridge site was ideal for new housing. The housing shortfall is marginal. Excluding the waste water site from future plans is inefficient, especially given likely lower long term costs compared to delivering infrastructure for alternatives like Grange Farm	208537 (B Haydensmith)
Policy S/GF is misaligned with strategic objectives, unsustainable, and transport problematic. The site should be removed and replaced with a better aligned alternative. There is a lack of evidence to allocate this site. There are no sufficient alternative site assessments and better alternatives have been ignored. The claim that proximity to research parks will reduce commuting is unsupported. Evidence shows limited job growth at nearby research parks, many of which already have associated housing allocations. No data is provided on expected travel behaviour or vehicle movement estimates, despite critical transport implications.	208538 (B Haydensmith)

The respondents have concerns about landscape and visual harm. Development would remove productive farmland and dominate gently rising landscape. Intrusive visual impact over a vast area (views as far as Ely Cathedral). High density flats needed due to constrained land area would worsen this impact. The development is too large for the available land, leading to overcrowding and inadequate green buffers. Boundary mitigation is inferior to that of other new settlements. The proposal threatens heritage assets including the Roman Road and Little Abington Conservation Area. Sewage infrastructure proposed on the village side of the A1307 would negatively affect existing residents	208539 (B Haydensmith)
Plan for sustainable travel is unrealistic. Most people working at the science parks already reside within Cambridge, These are unlikely to all relocate to grange farm. The plans for expansion within granta are less than the capacity at grange farm, therefore it is likely that at least some residents will be commuting elsewhere. It also ignores the fact that most families do not just go straight to work, they also need to drop off children. 6000 houses with an average of 1 car per household, commuting between 7-9 would be about 1 car per second being added to the a1307. Changes to plan: If this size project goes ahead, a junction needs to be added to a11 to protect the a1307 and the villages from excessive noise and air pollution from the inevitable congestion. This will also be more suitable for the Lorries for the storage facilities. I think grange farm rather than having a protected strip to the north of the area, should have it to the south along the a1307 so that little abington is not consumed by the new development	202599 (B Stapleton)

and the wastewater that runs off the hill that is planned for grange farm has got somewhere to be absorbed and stops abington being flooded. It will also help to shield grange farm from the noise of the a1307. The sewage works for the new town should not be in little Abington. There is a Bronze Age cemetery at the planned site, it is a danger to the protected chalk stream and destroys the pleasant rural charm of the properties along Bourn bridge road.	

Comments focused on Cambourne and Cambourne North

Summary of issues raised in comments	**Comments highlighting this issue**
The integration of Cambourne North with the existing town would seem not wholly unconnected with rectifying the failures of existing Cambourne (e.g. the lack of a town centre). Whether integration will be “supporting services and facilities“ in anything but the long term seems unlikely (see above). Regarding the “northern forest”, see remarks on Policy S/CBN.	201905 (C Deer)
Building on Currently farmed agricultural land is Wrong in ecological, sustainability, land utilisation and economic terms. The development North of Cambourne towards Elsworth is a prop to help justify the EWR rail line.	205368 (J Daffarn)

EWR has not produced a costed Feasibility forecast or Business plan, and to most local people it is an outrageously expensive white elephant that does not justify a station at Cambourne at all. Without that station there is NO reason for the development area almost linking Cambourne with Elsworth and Knapwell. National need for self-sufficiency means it is madness to lose this area.	
Cambourne North is a new settlement, separated from the existing town by a trunk road and a railway; it is anything but an organic outgrowth of existing Cambourne. The insistence on achieving integration between Cambourne North and the existing town would seem to acknowledge that things were not got quite right before (e.g. the lack of a town centre). Whether integration will be “supporting services and facilities“ in anything but the long term seems unlikely (see above). With regard to the “northern forest”, see remarks on Policy S/CBN.	202344 (P Deer)
The juxtaposition of commercial properties and housing is hoped to create jobs, but the success of attracting skilled jobs remains uncertain based on past experiences in Cambourne.	210451 (P Deer)
I support the expansion of house building in Northstowe, Waterbeach and Cambridge Airport, which are close enough to Cambridge for some people to cycle, which have adequate public transport provision and where it is possible to make further improvements to public transport. However, further expansion of Cambourne (too far from Cambridge and employment centres for most people to cycle, and currently lacking adequate public transport) is unwise until the rail link is in place and this will only create more motor trips into	203292 (J Palmer)

Cambridge, adding to existing congestion along all of the arterial routes into the city from the west – including Barton Rd/A603 where I live.	

Comment on Northstowe

Summary of issues raised in comments	**Comments highlighting this issue**
Northstowe Openspace The Northstowe Site allocation as delineated on the map includes area bounded by Rampton Road, Long Lane, Mills Lane and Woodside (Longstanton Meadows). This area overlaps the Longstanton Conservation Area and forms part of the green separation between Longstanton and Northstowe. It has recently been opened up for public access and provides substantial amenity value for the inhabitants of Longstanton and future inhabitants of Northstowe. It should be removed from the Northstowe Site allocation to make it clear that land to the west of Long Lane is not available for development	201164 (A Helliwell)
Homes England are fully supportive of the continued allocation of Northstowe as a sustainable new town and are committed to its ongoing delivery alongside Greater Cambridge Shared Planning and other key stakeholders. Key to this is ensuring that the existing planning permissions and local plan policy continues to support the delivery of housing and community facilities in the right way and in good time.	203984 (Homes England)

Northstowe is a New Homes Accelerator Site and policy should not introduce complexity or constraints which would slow delivery.	

Policy S/CBN: Cambourne North

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments focused on scale, landscape and transport impacts, and the relationship of the development with surrounding villages. Many respondents emphasise that development north of the A428 represents an excessive expansion into open countryside, eroding rural character and risks overwhelming existing settlements. Concerns highlighted the risk of coalescence with Elsworth, Knapwell, Boxworth and Papworth Everard, with calls for much stronger landscape buffers, early and substantial tree planting, and clearer guarantees that no built development will encroach toward the villages. Several comments also note previous Planning Inspectorate decisions have already identified the site's elevated topography and visibility as highly sensitive, and argue that these constraints have not been adequately addressed.

Environmental and ecological issues were also raised where respondents stress the importance of protecting ancient woodland, arable habitats, and species such as Barbastelle bats, with Wildlife Trust and RSPB highlighting that there should be explicit recognition of ecological constraints, stronger mitigation, and acceptance that off site compensation is likely to be required. Comments also noted that the proposed "Cambourne Forest" is too narrow, insufficiently defined, or risks becoming tokenistic unless planted early, managed professionally, and expanded to provide meaningful separation and biodiversity gain.

Transport and traffic concerns form one of the largest themes. Respondents highlight the likelihood of significant increases in car journeys, pressure on rural lanes, and rat-running through Elsworth, Knapwell and Boxworth. Many argue that the road network is already inadequate, with narrow bends, congestion, and no capacity for additional flows. Comments call for clearer traffic modelling, early delivery of active travel routes, binding mode-share targets, as well as a bypass for Elsworth. Several comments also questioned whether East West Rail will meaningfully reduce car use, with some questioning the viability of the station itself, the route choice, and the environmental cost of construction.

Infrastructure capacity and phasing were also major concerns. Respondents question whether water supply, drainage, schools, healthcare, emergency services and community facilities can support a development of this scale. Many stress that services must be delivered upfront, not after housing occupation, and that surrounding villages should benefit from S106/CIL contributions. Flooding concerns are prominent, particularly in Elsworth, Conington and Swavesey, with calls for robust attenuation, long-duration storage, and improvements to existing drainage systems.

Comments relating specifically to Elsworth, Boxworth, Knapwell and Papworth Everard emphasise the close proximity of the new settlement, fears of becoming suburbs of an expanded Cambourne and the impact on their conservation areas, historic landscapes and rural lifestyles. Suggested amendments include widening buffers, improving routes around Papworth, restricting access and ensuring that development boundaries are fixed to prevent future creep.

A smaller number of comments address housing numbers, employment provision and overall justification. Some argue that too many homes are proposed, that demand is unproven, or that Cambourne already has unsold properties. Others note that without strong employment strategies the area risks becoming a dormitory settlement, increasing commuting pressures.

Response to the main issues raised in representations

The councils have undertaken additional evidence since the draft Greater Cambridge Local Plan consultation on a number of themes which were identified in the comments. These relate to landscape, ecology, heritage and transport and are addressed in more detail below and within the Site Allocations Topic Paper.

The Councils have worked in collaboration with the Highways and Transport Authorities as well as National Highways as it has developed additional transport evidence. Through a series of detailed transport modelling exercises, it has been possible to identify the transport implications generated by the development during the plan period and the necessary mitigation measures required to ensure there are no significant adverse impacts on both local roads and the strategic road network (SRN) (A428/A14). This includes active travel (walking and cycling), public transport and access measures both within the site but across the wider local area. At this stage, the transport evidence is not recommending that a by-pass for the northern villages is required. Through this work, the Trip Budget has also been revisited to provide a more accurate limit on the number of peak hour trips that the highways network can accommodate and has also taken into account other development proposals in the local area to understand the cumulative impacts.

The policy requires a number of additional transport assessments to be undertaken as a development proposal is being prepared as part of a planning application. It is at this stage that more detailed testing and transport interventions will be identified and secured. The transport evidence and Local Plan recognise that additional mitigation measures may be necessary beyond the plan period in order to facilitate the full build out of the site.

The comments regarding the East West Rail proposal are noted however this is a project that is not being delivered by the Councils. The Councils are statutory consultees to that project and are also not the determining authority as it is being brought forward as a Nationally Significant Infrastructure Project (NSIP) and will be reviewed and determined by an independent government inspector. The merits of the overall project as well as key decisions relating to costs, route alignment and environmental considerations will be for EWR Co. to set out as part of their NSIP application. The Councils, through this allocation, are seeking to respond to the proposed new railway station at Cambourne in line with the requirements set out in national planning policy.

Through the additional evidence work undertaken, the Councils have revisited the boundaries of the allocation and the supporting Strategic Enhancement Area. The Landscape Visual Appraisal has identified the most visible and therefore sensitive parts of the developable area, and the allocation boundary has been amended by increasing the gap between Cambourne North and Elsworth. There have also been some minor amendments to the boundary near to Knapwell and on the eastern edge of the site. The Landscape Visual Appraisal also identified that the land to the west of the site is less sensitive in landscape terms and therefore this has been included within the development area. Additionally, the Heritage Impact Assessment has also been updated and identifies the necessary mitigation measures required to protect the setting of the adjacent conservation areas.

The matters relating to coalescence have sought to be addressed by the amendments to the allocation red line boundary. Additionally, the policy wording in relation to the role and function of the Strategic Enhancement Area (SEA) has been developed further to provide a clearer indication of the types of uses/activities and mitigation measures that are acceptable within it. The supporting text to the policy identifies that as new types of spaces are delivered within the SEA, these would gain planning status such as Protected Open Space or a Local Wildlife Site.

The phasing of mitigation measures, such as tree planting, will need to be coordinated and phased accordingly. The policy requires this to be set out through a Place Book approach in combination with other studies including a Phasing Strategy and Biodiversity Enhancement, Implementation and Management Plan. Based on the construction rates identified in the Housing Delivery Study, it is anticipated that Cambourne North will continue to be built over several decades, providing sufficient time for landscape mitigation measures to be implemented and for them to become established. Given the scale of the Cambourne North SEA and the opportunities it presents, there is significant potential for a forest to be provided in this location as part of a mosaic of landscape typologies. The allocation also recognises the RSBP Hope Farm and seeks to further their environmentally friendly approach to arable farming within the SEA.

Whilst the allocation will reduce the amount of arable farmland in this location, the policy seeks to minimise this through compact forms of development, focused around the proposed railway station and key areas of activity within the development. It also supports the continuation of farming within the SEA.

Whilst the site contains some Public Rights of Way, much of the land north of the A428 is not publicly accessible. The policy wording requires publicly accessible spaces and footpaths to be provided within the SEA.

Cambourne North contains and is adjacent to a number of ecologically sensitive and important sites, including Ancient Woodland and Sites of Special Scientific Interest (SSSI). As part of the additional evidence undertaken, the councils have engaged with local and national bodies and organisations including the RSPB, Wildlife Trust and Natural England to develop an evidence led approach to protecting existing sites, habitats and species and identifying the necessary policy requirements which will inform future planning

applications within the site. This includes management and monitoring requirements, the provision of new woodland buffers around protected sites, dark corridors across the site to form part of a wider ecological network and minimum buffer zones around sites and existing vegetation which are in excess of national standards. The existing ecological assets and the necessary mitigation and enhancement measures form a key element of the updated Spatial Framework and policy wording.

The timely provision of necessary supporting infrastructure will be required to support the development. This relates to all forms of infrastructure, including transport, water, sewage, community and cultural facilities and education. This is required in the policy to align with the phasing of development and agreement will need to be sought with the relevant bodies/authorities during the planning application process. Currently, no development is anticipated to come forward at Cambourne North until 2032 when there is sufficient water capacity to serve the development. The policy identifies the broad infrastructure areas that will need to be delivered through the development of the site, informed by the Infrastructure Delivery Plan. However, this will need to be kept under review based on the emerging land uses, quantum and housing mix. The Councils will continue to keep under review the most appropriate way to secure financial contributions from development across Greater Cambridge.

Known areas of flood risk have been taken into account through the updated evidence, all of which fall outside of the developable area. The policy wording in relation to the SEA notes that this area would need to address flooding issues and the policy now addresses site specific flooding requirements. In addition, Policy CC/FM: Managing flood risk sets out clear requirements for new development proposals.

The Councils are required by national planning policy to meet their identified housing needs through the preparation of the Local Plan. Cambourne North contributes towards meeting the need during the plan period but the policy looks beyond 2045 to set out

the council's longer-term aspiration for the town. The introduction of new transport projects as well as a wide range of services and facilities as part of Cambourne North will continue to make this location a desirable location for people to live, work and visit.

The policy sets an ambitious but realistic amount of new commercial floorspace for the development but notes that the councils would broadly support more employment development subject to meeting policy tests. This also does not include wider employment opportunities generated by the development such as construction, retail and supporting services like education.

The Councils agree that new developments should be multi-generational and designed to accommodate the needs of everyone. This is supported by a range of policies across the Local Plan including the design of new homes and public spaces.

The councils, through the Cambourne Spatial Options Assessment (2025) and Housing and Employment Land Availability Assessment (HELAA) (2026) rejected the option to develop to the south of the existing town and subsequently the sites in this location due to their suitability. Additionally, other sites submitted to the councils as part of the Local Plan process have been considered through the HELAA.

Summary of issues raised in comments	Comments highlighting this issue
Support • Very positive step for my children and those growing up here. • Development feels proportionate and rational.	**Individuals:** 203676 (N Woods), 201414 (J Carey), 200987 (R Howard)

Summary of issues raised in comments	Comments highlighting this issue
• The site of Cambourne North is appropriate for new development provided EW Rail proceeds. If it does proceed there would be less need for the busway via Coton. • Site can be extended westwards, utilising the remaining land between the A428 and the East West Rail corridor up to the new junction between the A428 and the A1198. • Plans attached to representations show potential additional development areas to the west which Endurance consider to be suitable for development and potential additional access from the new A428 / A1198 Junction currently under construction and utilising land under Endurance Estates' control. • Provision of new development both to the north and south of Cambourne, would have substantial benefits in sustainability terms and boosting housing supply in the short term, and that it is clearly the most suitable option when considered against the alternatives. • Commend strategic vision for promoting balanced growth by increasing sustainable employment opportunities alongside residential development, reducing car reliance, and supporting sustainable transport. • Emphasis on low-carbon development and biodiversity net gain is seen as a positive reflection of national priorities.	**Other organisations:** 204152 (Endurance Estates), 204253 (Richborough), 205149 (Taylor Wimpey East Anglia), 205158 (Taylor Wimpey East Anglia), 207609 (Natural England), 209976 (Endurance Estates), 211892, 211887 (East West Rail Company)

Summary of issues raised in comments	Comments highlighting this issue
• Welcome positive approach taken to shaping and planning this new settlement so far, and we will continue to work with you as you develop and refine the policies around this allocation. • Endurance strongly support and welcome the identification of Cambourne North as a New Settlement proposal with scope to contribute significantly to Greater Cambridge's long term housing needs over the Plan period and beyond. Taken together with the existing Cambourne settlement, the combined new town will have sufficient critical mass to enable it to support a wide range of employment, retail, leisure, cultural and other services and facilities that will ensure it can become a desirable, vibrant and sustainable place to live and work. • EWR Co strongly supports the proposed allocation and spatial framework and the vision for Cambourne North which aligns with an EWR station at Cambourne and which will maximise the benefits of this highly sustainable location served by the new station and EWR services. EWR Co agrees that the EWR project will make the town one of the 'best-connected places in the region', providing an opportunity to grow and enhance the town and increase the critical mass of population, employment and services available to the existing and future communities in the area.	
General	**Individuals:**

General concerns raised about proposed new settlement: • Sprawl of development across A428 • Increase in crime • Doesn't fit in with plans for neighbouring settlements • How will developers be stopped from building poor quality homes • Build on brownfield sites rather than agricultural land • Prime agricultural land would be lost • Increased noise and light pollution • Development north of A428 previously been refused by Planning Inspectorate due to planning constraints and negative landscape impact • Focus on urban agglomerations and interests of rural South Cambridgeshire subservient • Policy should be strengthened to ensure Cambourne evolves into a cohesive town rather than a series of fragmented developments. • Comprehensive masterplan is essential. • Must prioritise seamless integration to prevent physical and social severance caused by the A428, • Integration with Cambourne impossible due to A428 barrier and EWR	201318 (M Meyer-Kelly), 201426 (E Chavida), 201496 (V Lebedeva), 201502 (C Meads), 201546 (L Payne), 201680 (C Davies), 201771 (I Claydon), 201807 (K Rhodes), 201877 (M Goldberg), 201891 (C Deer), 201953 (R Milns), 202000 (I Claydon),202027 (D Askew), 202161 (H Fordham), 202280 L Meyer), 202322 (P Deer), 202348 (C Farquharson-Robert), 203332 (R Jamieson), 203562 (D Pope), 203605 (R Askham), 203639 (J Tanner), 204236 (G Tanner), 204531 (I Chamberlain), 204656 (N Woods), 204710 (H Rhodes), 204776 (C Drummond), 204782 (I Maddison), 204964 (M Jordan), 205506 (D Brown), 205184 (J Cowdrey), 205189 (L Hanzi),

Summary of issues raised in comments	Comments highlighting this issue
• Reliance on higher density housing and specific requirements for the applicant to address integration issues is viewed as inadequate. • Environmental damage that may result from the development, is suggested to be justified by anticipated economic benefits. • Danger of failing the tests of “scale…appropriate to the location” “protect and enhance local features of green space”, “landscape” and “the necessary infrastructure capacity to support the development” • Plan lacks detail. • Houses aren’t being built close enough to the main part of Cambourne for it to be connected, • Houses will be of poor quality and with no or little gardens and what green space there is supposed to be won’t be looked after properly. • Essential that existing and future growth, and the implications on wider area, are taken into consideration, with any required mitigation identified and planned for from the outset. • Overly vague and the proposed Cambourne North development is excessively large. • Vital information is missing throughout draft plan, hindering consultees' ability to make informed decisions. The plan lacks transparency and has not provided meaningful information to local communities about the proposal's full impact.	205369 (S Keep), 205592 (E & J King), 205594 (I Chamberlain), 204656 (N Woods), 204765 (K Seifert), 205023 (J Cowdrey), 207404 (N Woods), 204795, 208652 (C Drummond), 208703 (J&C Collins), 211212 (C Askham), 211215 (C Askham) **Other organisations:** 202124 (Elsworth PC), 203016 (Cambridge Past, Present and Future), 204226 (Richborough), 204655 (Papworth Everard Parish Council), 204951 (Papworth Everard Parish Council), 204957 (Papworth Everard Parish Council), 205149 (Taylor Wimpey East Anglia), 206106 (Elsworth Parish Council), 207070 (Cambourne Town Council),

Summary of issues raised in comments	Comments highlighting this issue
• Based on scant research with dubious projections around, for example, expected employment figures in Cambridge and the requirement for more housing. • No consideration of development and impact of AI. • Building heights must be tightly controlled and not exceed reasonable heights for a rural setting • Development scope should meet local, not national needs • GCP has not complied with its duty to co-operate (SCI). Has been no engagement with Papworth Everard Parish Council despite being a statutory consultee for planning applications and an important stakeholder that is materially affected by what is proposed by GCP. • Should establish point of contact for local residents during large developments to help address concerns and keep community informed. • Not easy to accept such a significant impact this proposal will have on everyone. • Naming of Cambourne North and Cambourne Forest is seen as inappropriate; suggestions include New Elsworth or Elsworth South. • Should insist on solar panels on all utility buildings to help achieve net zero. • Expansion entering new territories of farmland and countryside which should be left alone. Cambourne getting too big for unnecessary reasons. This settlement needs to be stopped.	207074 (Cambourne Town Council), 208257 (Martin Grant Land Limited), 208500 (Central Bedfordshire Council), 208503 (Central Bedfordshire Council), 208504 (Central Bedfordshire Council), 208505 (Central Bedfordshire Council), 209332 (Cambridge Past, Present and Future), 209979 (Endurance Estates), 209980 (Endurance Estates), 209988 (Endurance Estates), 209989 (Endurance Estates), 209992 (Endurance Estates, 209999 (Endurance Estates), 210004 (Endurance Estates), 210005 (Endurance Estates), 210008 (Endurance Estates), 210020 (Endurance Estates),

Summary of issues raised in comments	Comments highlighting this issue
• Should include environmentally friendly houses with solar panels, heat pumps, and trees along roads, prioritising sustainability and nature. • If the space between the A428 and the railway is wide enough to allow playing fields, the distance between Cambourne South and Cambourne North makes it very difficult to envisage how the communities can be integrated. • Requires stronger policy wording, clearer evidence, and binding commitments on various issues before it can be supported. • Community led stewardship / strategy bodies must include the surrounding villages as equal partners with resources allocated to the village bodies to enable this democratic equality. The new development must be of benefit to all, not just the railway and builders. • For each section of the proposals, complete a 1 to 10 scoring system which summarises the real confidence of the writers of these plans that the promises they speculate on will be: 1 legally committed to by developers and other bodies responsible for this area without any future retraction/renegotiation 2. 100% funded long term after allowing for contingencies/inflation 3. Of genuine benefit to existing residents in the area 4. All will be sustainable and funded for at least 25 years ahead 5. The additional wealth created will be retained for the benefit of the local communities affected in the form of quality schools, doctors, emergency services,	210022 (Endurance Estates), 210025 (Endurance Estates), 210030 (Endurance Estates), 210044 (Endurance Estates), 210058 (Endurance Estates), 210063 (Endurance Estates), 210064 (Endurance Estates), 210066 (Endurance Estates), 210067 (Endurance Estates), 210068 (Endurance Estates), 210830 (Elsworth Parish Council), 210831 (Elsworth Parish Council), 211412 (CALA Group Ltd), 211594 (Places for People), 211721 Cambourne Town Council), 209331 (Cambridge Past, Present and Future)

Summary of issues raised in comments	Comments highlighting this issue
care homes etc as well as the quality Forest. 6.Timescales .Any promise must be qualified with a score. • Rise in crime associated with more people and lack of activities. • Will have massive impacts on surrounding villages, with potential benefits like improved bus services, but also significant adverse effects and inadequate mitigation measures. • Plan addresses well-being and social inclusion, but Cambourne North may face social and behavioural challenges due to its scale and development pace. • Land north of A428 is in Elsworth not Cambourne. • Land to the South of Lower Cambourne presents a viable option for immediate development, requiring less infrastructure and allowing for short to medium-term growth. • Planned development is far too large for the locality and if it does go ahead should be reduced in scale. • Insufficient discussion about the very significant impact of a prolonged construction phase on existing residential communities. • Encourage LPA to provide clear guidance on phasing and infrastructure delivery to ensure timely provision of transport and community facilities.	

Summary of issues raised in comments	Comments highlighting this issue
• Some of our residents, businesses and other bodies, benefits could flow from the location of a station for Cambourne and the creation of a new centre for the town north of the A428. • Concern how North Cambourne will operate as part of a single, coherent town, particularly given physical barrier created by the A428. • Architectural approach for North Cambourne must be sensitive to established character and identity of Cambourne and wider Cambridgeshire context and should inform scale, materials, proportions and public realm. • Overly distinctive or self-contained architectural theme risks creating an isolated development that feels disconnected from the existing town and would be inappropriate for new development. • Should adopt an architectural language that respects local history and townscape, demonstrated through a context-led, human-scale set of Design Codes. • MGL have provided a series of recommendations and suggestions in relation to the policy wording, supporting text and Spatial Framework diagram of Policy S/CBN. • Will contribute to food insecurity. • Endurance object to proposed site allocation boundary. It is too prescriptive at this stage and insufficient work / evidence has been undertaken/provided on key constraints such as landscape and heritage to support such a precise approach. This	

Summary of issues raised in comments	Comments highlighting this issue
is a long-term development that will take place over decades, and greater flexibility is therefore required to enable proposals to respond to more detailed assessment and masterplanning along with changes in circumstances over time. Consistent with policies in the Adopted Local Plans, we feel that the scheme should be design led and that the Concept Spatial Framework is too prescriptive at this early stage in process. • Considered that there is scope to extend development framework further west whilst still maintaining a suitable buffer to Papworth to the north west and without unduly impacting on known constraints or aspirations for Strategic Enhancement Area. This is illustrated through the additional areas shown in orange on the attached Masterplan Spatial Framework Strategy (Drawing Ref: 19-237-SGP-STE-XX-DR-A-011003-P03), which shows potential additional development areas to the west which Endurance consider to be suitable for development as part of the Cambourne North proposals. • Important that masterplanning approach learns lessons from original Cambourne settlement by not making neighbourhoods too separate from one another as this can reduce community cohesion and walkability. • Number or neighbourhood centres, their composition, mix of uses, scale, and timing of their delivery needs very careful consideration to ensure they are vibrant and integrated parts of the new community. This should be evidence driven and determined at the masterplanning stage and secured through appropriate	

Summary of issues raised in comments	Comments highlighting this issue
conditions/legal obligations. This detail should therefore be left to masterplan and planning application stage. • Getting right balance between homes and jobs is essential to creating a mixed and balanced community that its prosperous and has a high degree of self-containment. The town's accessibility by rail and strategic highway network provides an opportunity to be more ambitious in order to achieve the prosperous, thriving community set out within the overall vision. • Whilst there are a number of constraints as identified within the policy, these have been taken into account through the concept masterplanning work to date and it is considered that there is sufficient land within the site to allow for appropriate buffers to the relevant designations and protected features to be delivered. • It is important that flexibility is maintained on the precise boundaries of the development areas to ensure these can be adjusted to reflect more detailed assessment and design work as the design of the scheme progresses. • Endurance support need for various strategies to be developed based on robust evidence to inform overarching approach to land use and to ensure that a mixed, balanced, prosperous and sustainable new settlement is achieved. Accordingly, Endurance support in principle the need for a report covering an Intergenerational Housing Strategy to inform the level of housing typologies to meet the local need.	

Summary of issues raised in comments	Comments highlighting this issue
• Endurance also support in principle the provision of a report covering a Place Activation, Culture and Events Strategy. • Endurance consider there is a degree of overlap between a number of requirements for supporting evidence and that some rationalisation of policy requirements would be beneficial to ensure a more streamlined and legible application submission. • Endurance support provision of mixture of densities within site, with highest focussed around proposed new station and Town Centre. Neighbourhood centres and employment locations whilst being higher in density than most of the site are likely to be at a lower density than the Station Quarter and Town Centre given their less fee central location and function. • Part 14c) Whilst Endurance understand the need to deliver higher density development to make best use of land, this should not compromise the objective of creating a high-quality new community with design that responds to its setting and constraints and a range of house sizes and house types to meet a variety of needs. It is considered that the density range proposed is ambitious, and with a narrow range that is too limited and risks being unduly prescriptive. This could inhibit the place-making aspirations, resulting in a homogeneous development, lacking character and variety, or worse, render development unviable before the development even gets underway.	

Summary of issues raised in comments	Comments highlighting this issue
• Part 16) Endurance agree with general intent and consider that it is important that residential neighbourhoods provide a coherent built form that creates a distinct character for the different neighbourhoods. Whilst aspiration to incorporate complementary employment uses in each neighbourhood is generally supported, it is considered that some flexibility should be built into the policy through addition 'where possible'. This will allow a more flexible and evidence led approach, reflecting needs and the character of each area. • Part 33c) Endurance support and welcome a holistic approach to Cambourne's environmental, economic, social sustainability. Important that balanced approach is taken to prioritising these aspects of sustainability to ensure successful, vibrant economically viable, attractive and sustainable new settlement is created. • Part 45) Endurance are generally supportive of the principles set out and agree with the need to develop a sustainability focussed masterplan. Important that the aspirations are realistic. It should be noted that the policy context may no longer be applicable in light of proposed revisions to the NPPF. • Part 48) Whilst the ambition of achieving a highly sustainable new town is supported, further consideration of the feasibility and viability of the specific requirements is required, particularly as these go far beyond existing legislative and policy requirements. Endurance consider it important that the policy allows for flexibility, particularly in the earlier stages of the development recognising how requirements	

Summary of issues raised in comments	Comments highlighting this issue
and technologies will change over the 30-year implementation period. The requirement for rigid compliance to 'day 1' principles may otherwise impact viability and prevent delivery of the wider scheme. Also considered that there is unnecessary overlap and duplication with point (45) above. • Part 49) Endurance support this approach and consider that a clear phasing strategy that sets out the phased delivery of infrastructure and services alongside the delivery of new housing, commercial and other uses is essential to the successful delivery of the project. It should be recognised that this may need adapting and adjusting over time in response to changes of circumstances given the long-term nature of the development. • Part 51) Endurance support this approach in principle and consider it important to ensuring the long-term successful delivery and ongoing management of the new town, ensuring that its benefits are maximised and will endure for future residents over the long term. • Part 52) Endurance support the preparation of a Meanwhile Strategy in general terms subject to incorporating the proposed report into a more general Economic and Employment Strategy to also include inter alia measures to avoid empty or unused spaces and facilities, and to ensure early provision of amenities and facilities that foster a culture of inclusivity and encourage early community building.	

Summary of issues raised in comments	Comments highlighting this issue
• Part 53) Endurance support this approach and consider that this is essential to the successful delivery of the project. • Will give rise to issues of local governance. While development will take place within the parishes of Elsworth and Knapwell, Cambourne North will presumably fall under the aegis of Cambourne Town Council. What this mean for the continued existence of the parishes thereafter and how will they benefit from, for example, s106 monies also needs to be clarified at the earliest opportunity. Do not only wish to have put in place measures to mitigate the impacts of development. We also want to realise benefits for our communities from them, particularly in relation to improvements in infrastructure such as flood management, bus services, digital connectivity, etc. • Continued engagement by SCDC with our community/ communities is vital. EWR and Cambourne's growth is part of the Oxford to Cambridge corridor national infrastructure project involving stakeholders other than the parishes and the District Council and also the DCO process. Our small community/communities we have no direct interaction and little influence in these and look to the SCDC to represent our interests and therefore we welcome and wish to continue to have dialogue with SCDC. • Whilst this Government is fully committed to the delivery of East West Rail, there are no guarantees that a future government would be as committed. Emerging Local Plan	

Summary of issues raised in comments	Comments highlighting this issue
should focus more growth in Rural/Minor Rural Centres, which are considered sustainable, such as Melbourn. • East West Rail will be complicated to deliver and it is not feasible for Cambourne North to be delivered until such time as the new rail line and station have been completed. Accounting for the substantial uncertainty and major infrastructure required, it is plausible that delivery of the site could slip into the 2040s and the number of dwellings to be delivered as part of this plan period will be very limited. In this regard, the proposed 2,550 dwellings to be delivered in Cambourne North within this plan period is considered to be optimistic. The lack of certainty regarding the delivery of Cambourne North further strengthens arguments for additional small-to medium site allocations. • Inclusivity must be designed into all aspects of development if North Cambourne is to achieve a genuine place-making outcome. Provision should be made for all life stages. Designing inclusivity into developments from the outset is more effective and significantly more cost efficient than attempting to retrospectively add or adapt features once homes and spaces are already built. LPAs must adopt M4(2) standards, and M4(3) for wheel-chair accessible homes and the Plan must clearly address these standards. • The policy must be strengthened to ensure that Cambourne evolves into a cohesive, successful town rather than a fragmented series of developments. The policy should	

Summary of issues raised in comments	Comments highlighting this issue
ensure that Cambourne North is not merely an add-on, but a vital component of a well-integrated, economically vibrant, and self-sustaining town, providing a balance of jobs, services and housing.	
Transport and traffic • Significant number of car journeys generated. • Increased traffic through villages to north to reach A14. • Village roads are inadequate and no proposals for increased capacity. • Impact of new housing at Cambourne North, Bourn and continued development of Northstowe on highway infrastructure around the Swavesey area. • Insufficient consideration of traffic impact on local roads, particularly affecting communities along the A1198, including villages like Longstowe, Arrington, and Kneesworth. • Lack of provision for safe and sustainable alternative transport options along the A1198 corridor. • Little appreciation that for many people use of a vehicle a necessity • There are no cycle paths in villages. • This is the way the village has always been. We do not want to be beside a huge town. This is not what we bought into moving here. The distance of greater	**Individuals:** 200992 (T Roberts), 201325 (M Lester), 201495 (J Brinkman), 203639 (J Tanner), 201411 (Cllr P Sandford), 201452 (C Barnard), 201453 (C. residents and communities, and help to identify where, and the extent to which, mitigation is required. • There is no clear consideration of the increased traffic through peripheral villages, particularly northern, that this will generate. This will come through its employment zone, cultural zone and as a dormitory town for any industrial sites, particularly those being developed along A14. • Policy S/CBN promotes better connections and sustainable modes of transport to surrounding villages, facilities and open spaces. The National Trust would welcome discussions with the LPA and developers about the opportunity to work in partnership to deliver sustainable transport options between Cambourne/Bourn and Wimpole. • Motorised quick access routes North/South for aged people/ambulances/police/fire etc across or into new development facilities not shown. • Clarification requested on vehicle trip budget referenced in policy in terms of whether this evidence base has already been prepared and is available to review or, if not, confirmation on when it will be produced. • New transport and active travel infrastructure linking Cambourne North with Cambourne, surrounding villages and the wider countryside should be required to function as inclusive, multi-user routes, accommodating pedestrians, cyclists and equestrian.	210053 (Endurance Estates), 210054 (Endurance Estates), 210055 (Endurance Estates), 210056 (Endurance Estates), 210517 (Cambridgeshire County Council), 210811 (Elsworth Parish Council), 210812 (Elsworth Parish Council), 210813 (Elsworth Parish Council), 210814 (Elsworth Parish Council), 211776 (Camcycle)

Summary of issues raised in comments	Comments highlighting this issue
• Concerned that existing and already-committed transport improvements—such as the Cambourne–Cambridge bus service and other measures intended to address current transport pressures—could be delayed or deprioritised as a result of the scale of new development. These commitments must be delivered as planned and not deferred. • Essential that parking strategy is fully future-proofed and grounded in realistic patterns of behaviour rather than idealised assumptions about modal shift. • Parking provision must reflect actual car ownership levels, household composition, servicing and delivery requirements, and transitional period before public transport and active travel networks are fully mature. • Any parking strategy must be supported by a clear, deliverable, and enforceable management framework, aligned with Cambridgeshire County Council parking guidance and regularly reviewed against observed demand rather than projected best-case scenarios. Failure to plan for realistic parking demand from the outset would create long-term pressures on the public realm and undermine the overall success of the development. • The Cambridge to Cambourne busway should be extended to directly serve Cambourne station enabling high quality bus services between Cambourne railway station and existing parts of Cambourne and the proposed Bourn Airfield housing allocation.	

Summary of issues raised in comments	Comments highlighting this issue
• As currently drafted, Cambourne appears likely to bring significant and potentially unacceptable adverse impacts on the safe and efficient operation of Cambourne Junction on the A428. The Transport Evidence Report identifies that there is still significant congestion on the highway network (with DS2 proposed improvements) around the site meaning that the model suggests high levels of trips will still remain within the sector. • National Highways are unable to agree to the proposed approach (managing SRN impacts through an indicative trip budget prior to an outline application) at this stage without the benefit of further modelling work for the proposed development. If a trip budget is to be proposed this needs testing within an operational model, with detailed timings/parameters identified and a monitoring approach agreed to enable NH to confirm whether proposals are deliverable in SRN terms. As identified in Circular 01/22, SRN capacity enhancements need to be identified as part of the plan making process, because this provides the best opportunity to consider the cumulative impacts of development and identify appropriate mechanisms for delivery. • National Highways endorse the Local Plan work on 'Transport Vision and Principles' for Cambourne. We support the report's identified next steps, highlighting that additional work is required to consider achievability of vision assumptions and to ensure a robust evidence base is established to support a site allocation of this	

Summary of issues raised in comments	Comments highlighting this issue
significance; we note that even with an ambitious shift to alternative modes demand still exceeded the trip budget. • The emerging Local Plan text and Figure 78 identify a number of additional active travel crossings over the A428, with mention of potential bus provision in associated documents. We recommend further discussion with National Highways regarding emerging crossing locations / existing bridge improvements to consider feasibility and to ensure suitable commitments and costings are included in the Infrastructure Delivery Plan. It may be practical, demonstrated through further modelling work, to consider the need for additional A428 bridge crossing options for private cars, to remove local trips from Cambourne Junction. • Support proposed approach which seeks to integrate the two halves of settlement and consider this to key design challenge for the scheme. A key aspect to this will be maximising potential crossing points across the A428 and future East West Rail, both in terms of road and pedestrian & cycle routes to ensure effective integration. Character and usability of these links will also be important to promote integration. • Comprehensive Transport and Movement Strategy for town as a whole is required which will integrate both the existing and new community with one another and with the planned improvements to be delivered through East West Rail and the C2C Busway.	

Summary of issues raised in comments	Comments highlighting this issue
• Benefits of addressing existing transport and movement challenges with existing Cambourne community are plentiful but particularly manifest in the consideration and setting of a trip budget where the shifting of existing trips is a lever which North Cambourne can use effectively. • The trip budget needs to be better evidenced through detailed and collaborative further working before specificity can be provided and agreed. Monitor and Manage can be employed effectively to ensure compliance through scheme delivery but this control mechanism should also be used to ensure the scheme's Vision is being met. It is considered that Monitor and Manage is the mechanism to ensure preferable outcomes. • Part 18) Endurance consider that wording and interpretation of policy is unclear and whether it is referring to the approach into the town from Elsworth to the north or into the existing part of the town from Cambourne North. It is also unclear why this route should be a focus over others. Further clarity in the wording of the Policy is requested. • Support need to ensure necessary mitigation from A428 and East West Rail and consider the appropriate location of employment uses of one means of securing this. • Part 34) Endurance broadly support proposed policy approach as currently set out and consider that it establishes appropriate principles for the movement strategy.	

Summary of issues raised in comments	Comments highlighting this issue
Policy wording should be adjusted to specifically reference a Vision-led approach for the transport and movement strategy for Cambourne North. • Part 36) Endurance consider that reference to delivery of landbridge being in the early phases of the development should be removed to provide more flexibility. Further consideration of this requirement is required in terms of how this might work and when it could reasonably be delivered having regard to both placemaking and viability considerations. In any event, it is considered that further flexibility is required as to the nature of this and the timescales for delivery. • Part 37) Endurance support the proposed approach in principle, and consider that it is important that the design encourages walking and cycling and makes appropriate provision for active travel throughout both within the settlement itself and through its connections with the existing community, surrounding villages and providing appropriate access to the countryside. • Part 38) Endurance consider proposed policy approach as currently set out is too prescriptive. Considered policy wording should provide flexibility and have regard to what is necessary and allow for alternative approaches where these would achieve similar outcomes. Final bullet point should include the words ‘endeavour to’, recognising that this requires cooperation from other parties.	

Summary of issues raised in comments	Comments highlighting this issue
• Part 39) Whilst Endurance broadly support the approach the words "…minimise duplicated parking provision" should be deleted such that the focus is on reducing vehicular trips. • Part 40) Endurance consider amendments are required to the detailed wording and requirements to ensure that it is clearer and includes more flexibility. Our proposed wording is set out in the document entitled Cambourne North GCLP Reg 18 Reps Final. • Parts 41 & 42) A new vehicular access should be provided from the new junction between the A428 and the A1198 south west of the site currently under construction and as illustrated on the attached plan. Employment Development Access Off Proposed Northern Dumbbell Roundabout General Arrangement Plan (Drawing Ref 48168-P005-001) utilising land under Endurance Estates' control. New junction could serve employment uses between the A428 and East West Rail whilst also helping to separate and reduce heavy goods traffic from entering via existing Cambourne A428 dumbbell access junction, improving the design, character and amenity of these areas and ensuring they are more welcoming for pedestrians and cyclists on the key gateway into Cambourne and assisting with the integration of Cambourne north with the existing settlement. Provision of this secondary access would provide more flexibility in terms of phasing and construction arrangements as part of the implementation of the scheme as well as improving emergency access to the town.	

Summary of issues raised in comments	Comments highlighting this issue
The following change to the policy wording is proposed: c. Vehicle access from two existing junctions on the A428 (at Cambourne and Caxton Gibbet) and the Broadway overbridge. Possible further access from Ermine Street to support later phases. • Part 42) the following change to the policy wording is proposed in red: 42. All expansion proposals at Cambourne will be subject to a monitored and enforceable peak-hour vehicular trip budget, to be agreed with the Local Highway Authority. The indicative trip budget is approximately 2,500 trips in the AM peak and 2,500 trips in the PM peak. Any refinements to this trip budget based on more detailed evidence must be agreed with the Local Highways Authority prior to submission of the outline application. A monitor and manage approach will be undertaken to ensure that the development remains within the agreed trip budget for the site throughout its delivery, and any variations to this monitor and manage approach would need to be agreed with the Local Highway Authority. • Part 43) Endurance support this approach in principle but subject to the comments regarding need to adopt a vision-led approach and review of the proposed trip budgets outlined. Important to ensure that any proposed mitigation is proportionate to the scale and nature of any impacts. • Part 43) The following change to the policy wording is proposed: 43. To support delivery of the agreed masterplan, a strategic and local transport mitigation plan must be prepared by the developer in consultation with the Local Highways Authority and	

Summary of issues raised in comments	Comments highlighting this issue
Local Planning Authority. This will include (but not be limited to) high-quality mobility services that prioritise modal shift and monitor ongoing performance. Innovative measures to drive higher sustainable mode shares, trip internalisation and reduce vehicular trips will be supported. • May also be beneficial to include commitment within part 43 of Policy S/CBN to adding other relevant stakeholders to what is currently a very short list, of those who the developer must consult with on the Strategic and Local Transport Mitigation Plan. • Considered that Policy S/CBN would benefit from clearly stating that the busway link and EWR are prerequisites and development will not commence/continue until these schemes are place, given the trip budget they state. • Transport evidence carried out to date suggests that development here can be mitigated, subject to the delivery of EWR and C2C with relevant extensions into the site at Cambourne North, along with other site specific highway, public transport and active travel improvements. County Council supports development of a stringent trip budget for the new settlement. This mitigation package is not inconsiderable. The County Council would like to continue working on a detailed transport and mitigation strategy for Cambourne. • Camcycle consider cambourne is a way of catering for the growth envisaged by the plan, but only if the Local Plan is honest about the scale of the challenge and willing	

Summary of issues raised in comments	Comments highlighting this issue
to embed enforceable requirements that make sustainable travel the default rather than an assumption.	
East West Rail (EWR) • Development is to justify the EWR rail line. • EWR not produced costed feasibility forecast or business plan. • East West Rail should be completely cancelled or at least postponed until a full business case is made for it which can be publicly scrutinised and challenged • Outrageously expensive white elephant that does not justify a station at Cambourne at all. • Without station there is no reason for development area almost linking Cambourne with Elsworth and Knapwell. • Should be focus on impact of traffic on villages related to the EWR station. • Site is appropriate for new development provided EWR proceeds. • Reliance on EWR for transport capacity is questionable, as evidence suggests only a small percentage of residents will use it for commuting, leading to increased road usage. • Idea EW will support 13,000 more Cambourne households is crazy.	**Individuals** 200987 (R Howard), 201286 (M Jordan), 202348 (C Farquharson-Robert), 203562 (D Pope), 205368 (J Daffarn), 203939 (A Parfitt), 204486 (D Brown), 204696 (D Sampson), 204765 (K Seifert), 205307 (C Smith), 205590 (C Meads), 207345 (K Rhodes), 207382 (C Deer), 208639 (S Keep) **Organisations** 202004 (Haslingfield PC), 203438 (Juniper Propco (Bourn) Limited), 203628 (Cambridge Approaches), 204226 (Richborough), 206107 (Elsworth Parish Council), 207078

Summary of issues raised in comments	Comments highlighting this issue
• Will lose huge amounts of money. The wrong route. Longer than needed and very expensive. The tunnel will be a disaster. • Railway line should take the original rail route as the infrastructure is mostly already there. • Station should be in South Cambourne, away from the A428. • There's an old disused railway that could be reintroduced at a fraction of the cost. • Long-distance guided bus and freightway would be more cost effective. • Contradiction between the environmental aspirations in the Plan and the carbon footprint of constructing EWR and the concreting over of a substantial area of green fields. • Funding for the railway station should not come from Section 106 monies from house builders. • Greater clarity should be provided about the provision of East West Rail and the Cambourne to Cambridge bus link. • the County Council's Transport Evidence Report shows only 1% of trips from extended Cambourne would go to Cambridge Biomedical Campus, contradicting EWR's justification for the route. • EWR would contribute minimally to Cambridge's economic growth. • Development of 13,500 houses appears viable without EWR.	(Cambourne Town Council), 208036 (Railfuture East Anglia), 208938 (Cambridge Growth Company), 209000 (National Highways), 209981 (Endurance Estates), 209982 (Endurance Estates), 209983 (Endurance Estates), 210015 (Endurance Estates), 210016 (Endurance Estates), 210017 (Endurance Estates), 210031 (Endurance Estates),

Summary of issues raised in comments	Comments highlighting this issue
• Insufficient justification for linking the housing development to the railway project, potentially wasting public funds through lack of accountability between planning authorities and EWR Company. • Completion of East-West Rail Stage 3, crucial for Cambourne North, is unlikely before the late 2030s, impacting deliverability of land to the north of Cambourne. • Proposed railway station is likely to attract additional vehicular traffic from neighbouring towns and villages seeking park-and-ride or informal commuter parking. Without adequate and well-planned provision, there is a significant risk of overspill parking impacting residential streets, local centres, and surrounding neighbourhoods. • Support significant housing growth around new station, but this development must be dense enough to ensure the railway can serve it effectively. • CGC recommends that consideration is given to building in flexibility for a greater level of employment ambition at Cambourne West and North linked to the provision of an EWR station. It could be clearer how the Local Plan draws from this evidence to set the vision for the role of the employment land in terms of the sectors catered for and on the amount of development that would optimise employment growth. The additional scale of growth is supported by the Council's evidence base and East West Rail. • National Highways are engaged in ongoing discussions with East West Rail (EWR) regarding the delivery of a new railway station at Cambourne, north of the A428.	

Summary of issues raised in comments	Comments highlighting this issue
Highway improvements needed to facilitate the station and associated track are currently being considered, and implications for futureproofing are being reviewed with the need for further meetings to discuss cumulative impacts. • Support East West Rail and C2C infrastructure schemes and consider that these provide a huge opportunity to create a truly sustainable new settlement subject to their future integration with North Cambourne development. • Considered important that EE, MGL and GCSP continue to engage with East West Rail to ensure that design ambitions for project are appropriately taken into account in design of the EWR alignment, station, and associated infrastructure. • EWR should be encouraged to design with new town in mind. • Support the new station interchange becoming focal point for new town. East West Rail's proposal to move the station towards the A428 roundabout is welcomed and ambition supported, ensuring that it is more central within the town and thus more accessible to both new and existing residents. • Fits with Government objectives of focussing development around train stations and using these as drivers of sustainable development. • Creating a hub around new station will ensure that a high-density mixed-use development can be delivered around station, providing a range of services and facilities in the most sustainable and accessible location, whilst also ensuring through	

Summary of issues raised in comments	Comments highlighting this issue
improved connectivity the scheme is properly integrated with the existing community at Cambourne. • Unclear why Part 11 (e) of policy is necessary. Since major infrastructure (EWR, C2C and A428 enhancements) are to be delivered by others and schemes will likely be implemented, approved and or advanced prior to submission of an application for Cambourne North, this is a difficult requirement to meet. • important to recognise that delivery of new station will be carried out by East West Rail rather than site promoters and it is therefore important that the Local Plan policy should recognise this and incorporate flexibility given that design is progressed by the East West Rail Co. and will be consented via the DCO process.	
EWR Co has reviewed the proposed Cambourne station location and updated its design proposals to move the station 700m west to a location north-east of the A428/Cambourne Road double roundabout. The updated station is expected to enable a greater degree of growth, be more consistent with adopted Local Plan (avoiding constructing on Local Green space), have lower environmental impact (further away from Knapwell Wood), be preferred by communities and stakeholders. EWR Co is in the process of identifying how the new entrance would integrate with the wider masterplan area and how it will interface with existing and new local transport services, and walking and cycling routes, including the proposed extension to the Chisholm Trail.	211882, 211893, 211894 (East West Rail)

Summary of issues raised in comments	Comments highlighting this issue
Land within the S/CBN allocation site identified as being required for the delivery of EWR, and includes land needed for the new railway, Cambourne station, and associated development. This land is included in the EWR safeguarded area. EWR Co supports the principle of criterion 12, but requests the following minor amendments for clarity and to ensure the proposals do not conflict with the Safeguarding Directions. EWR Co agrees that seamlessly integrating Cambourne with the new railway station to the north of the A428 and the EWR route will be critical. To this end, it supports criteria 50-54 of draft Policy S/CB, which sets out that Cambourne and Cambourne North (draft S/CBN) will be planned. In order to integrate the new station with Cambourne, EWR Co is proposing a new footbridge over the A428 to the north of Cambourne Sports Centre. The land required to deliver this new crossing within the S/CB allocation site. This land is included in the EWR safeguarded area. To avoid any potential for conflict between development within the proposed allocation site and the EWR Safeguarding Directions, EWR Co requests additions to draft Policy S/CB.	
Coalescence • Need green belt around Cambourne North to better protect the villages against coalescence.	**Individuals** 201807 (K Rhodes), 201907 (C Deer), 201909 (C Deer), 201914 (C Deer), 201307 (J Turner), 201763

Summary of issues raised in comments	Comments highlighting this issue
• Opposed to destruction green belt land at Cambourne North. • Proposal impinges on neighbouring villages. • Too close to Knapwell. • Would ultimately join with Scotland Farm and Hardwick. • Development boundaries should be fixed to ensure no creep resulting in reduced space between Cambourne North and neighbouring settlements. • Proposal too close to existing settlements and would compromise character of conservation areas and listed buildings. • Parish boundaries must remain intact. • Loss of identity of villages. • Should be a minimum 1km buffer around existing villages, managed by parish council or woodland trust. • Landscape buffer should preserve the open aspect around Elsworth, not act like a fence. • Concern about long term stewardship of landscape buffer and forest. • Houses will be 400 metres from Elsworth and will not prevent coalescence. • Should be a more even distribution of housing. • Cambourne will be isolated due to the railway and A428 with no connections to the existing centre.	(A. Irvine), 201953 (R Milns), 202441 (P Deer), 203702 (S Wyer), 200992 (T Roberts), 200993 (T Roberts), 201470 (C Blencowe), 202347 (P Deer), 202354 (Boyd), 202610 (J Rolfe), 203599 (J Fordham), 203641 (B Skerritt), 203896 (R Chamberlain), 203981 (L Richards), 204095 (C Davies), 204572 (A Watson), 204656 (N Woods), 204765 (K Seifert), 204952 (C Gouldsbrough), 204817 (J Harris), 205189 (L Hanzi), 207176 (W Parker), 207399 (N Woods), 207382 (C Deer), 207539 (D Wood), 207422 (N Thornton), 207526 (P Deer), 208638 (S Keep), 208707 (J&C Collins), 210884 (R McClure)

Summary of issues raised in comments	Comments highlighting this issue
• The evidence base does not demonstrate that the full extent of the non-developable area is necessary, proportionate, or the most effective means of achieving settlement separation. • The strategic enhancement area covers land not in the control of the Authorities or land promoter and so brings into serious question the environmental enhancement promoted by the policy and the soundness and effectiveness of the Cambourne North allocation. • Imposition of extensive designations across land owned and controlled by Varrier-Jones Foundation, without any engagement with the landowner, is unduly restrictive and risks prejudicing the ability of the emerging Local Plan to respond flexibly to future development needs. • Scale and large extent of draft strategic enhancement area allocation is disproportionate and covers land that could sustainably accommodate future development without compromising the separation of Papworth Everard and Cambourne North. • Object to Strategic Enhancement Area which extends over a significant portion of the • C/CBN. It would inhibit any future complimentary development potential offered by the Site Ref. 48096.	**Organisations** 202124 (Elsworth PC), 202127 (Elsworth PC), 202133 (Elsworth PC), 203385 (The Varrier Jones Foundation), 207024 (Mac Mic Land),

Summary of issues raised in comments	Comments highlighting this issue
Environment • Placing adventure playground in new 'forest' area is perceived as a desperate measure to mitigate impact on more sensitive environments. • Green belt destroyed, protected species homeless. • Early proposals referenced a “forest” as a natural buffer. More recent plans fail to reflect commitment and offer no satisfactory or meaningful boundary. Critically important to shield the village from new development, prevent visual intrusion, and preserve its rural setting. • Expansion threatens to erode countryside and green spaces and related mental health and wellbeing benefits, diminishing opportunities for children to enjoy nature and for communities to maintain balance and wellbeing. • Insufficient consideration of environmental impacts and weak defence of removing important arable land which will be increasingly important in a changing climate. • Hope Farm should be preserved in its entirety due to its successful nature-friendly farming practices and positive impact on local wildlife. • 'Forest' is a misnomer. It's just a few trees. • Trees planting must start before any building.	201411 (Cllr P Sandford), 201807 (K Rhodes), 202000 (I Claydon), 202027 (D Askew), 202280 (L Meyer), 202348 (C Farquharson-Robert), 202354 (D Boyd, 202441 (P Deer), 202610 (J Rolfe), 203599 (J Fordham), 203602 (H Passan), 203702 (S Wyer), 204236 (G Tanner), 204526 (I Claydon), 204611 (A Watson), 204614 (A Watson), 204656 (N Woods), 204710 (H Rhodes), 204730 (A Watson), 204817 (J Harris), 204964 (M Jordan), 205307 (C Smith), 205505 (D Brown), 205591 (E & J King), 205672 (M Meyer-Kelly), 205674 (S Barnard), 207405 (N Woods), 207422 (N Thornton), 208647 (S Keep), 208648 (S Keep),

Summary of issues raised in comments	Comments highlighting this issue
• Tree planting for Cambourne Forest needs ongoing professional care, unlike all the dead sticks along the A14. • Countryside to the North of the A428 will be destroyed and the integrity of historic villages threatened. Ancient woodland and sites of historical importance will be compromised. • Impacts on local SSSIs and County wildlife sites, given length of time it will take to establish a Cambourne 'forest'. • Proposed Cambourne Forest is too narrow to effectively prevent coalescence; increasing its depth is recommended. • Visitor access and parking for the proposed forest should be carefully planned to avoid negative impacts on local villages. • Green/forest zones for Cambourne expansion are excessive and should be restricted to allow continued productive arable farming. Infrastructural details are scant and offer no mitigation for expected increase in traffic through Elsworth for rail travel. Elsworth already has intermittent flooding and proposals to improve drainage in the village and downstream to Fenstanton, Swavesey etc are required to cope with rapid runoff from housing developments. • There is no landscape buffer in the south east corner.	202801 (P Gladders), 210991 (C Newell), **Organisations:** 201542 (RSPB), 211078 (National Trust), 206112 (Elsworth Parish Council), 207610 (Natural England), 207611 (Natural England), 209332 (Cambridge Past, Present and Future),

Summary of issues raised in comments	Comments highlighting this issue
• Loss of 100+ trees (aged 40 to 100) along St Neots Road unacceptable and will increase noise and sound pollution for some residential neighbourhoods in Cambourne. • Significant concerns regarding proximity to RSPB Hope Farm, which is within the Strategic Enhancement Area. • Should be contractual commitment for developers to plant woodland before construction, in collaboration with local authorities to ensure successful management. • The National Trust strongly supports the provision of on-site SANGs and new woodland. In accordance with guidance from Natural England, SANGs must be developed and available for use prior to the occupation of the new dwellings which they are intended to serve. The provision of new recreational space and woodland would help ease pressure on these sites and their designated features. However, it is not clear where the woodland would be located or how it would be delivered. This needs to be made clear in the proposed Submission Plan. • Forest should be managed/owned by independent professionals from day 1 to be of any value • To deal with environmental issues such as light pollution we want to see measures such as warm light, low spill light fittings being mandated. • Noise, light and visual pollution.	

Summary of issues raised in comments	Comments highlighting this issue
• Note policy specifies that development must ensure ancient woodlands and SSSIs are kept free from public access and that measures that minimise ecological pressures from domestic animals must be identified and delivered. Whilst we agree with this in principle, have questions about how these points will be achieved in practice. There should be a requirement to monitor effectiveness of measures put in place and a commitment to implementing alternative solutions if initial measures are ineffective. • Support detailed consideration given to incorporating dark corridors into new settlement. This will be especially important for avoiding and mitigating potential impacts to bats associated with Eversden and Wimpole Woods SAC but will equally be of benefit to many other species. • The term ‘SANG’ has a specific definition and set of criteria associated with it and the authority should carefully consider whether to use very prescriptive term, or whether alternative GI phrases should be used for a more bespoke approach e.g., 'SANG-like'. • Cambourne GBI Framework currently proposes 60ha of semi-natural greenspace, but to meet 3ha/1000, 93.6ha would be required. • To meet the official SANG standard of 8ha/1000, 249.6ha semi-natural greenspace would be required. We advise that 3ha/1000 greenspace which meets the Natural England GI Framework Standards criteria should be an absolute minimum,	

Summary of issues raised in comments	Comments highlighting this issue
particularly where mitigation for recreational pressure is needed, and that more should ideally be required. • Support for significant new greenspace and habitat, with consultation with RSPB Hope Farm to achieve nature conservation objectives, and recognition of impacts on Barbastelle bats and ancient woodlands.	
Habitats • Development threatens protected habitats, local character, and ecology and local wildlife. • Should be a detailed acknowledgement of what will be lost with a measured assessment of the inevitable damage • Imperative that the site is developed to enhance biodiversity. • Area is home to protected species, including multiple varieties of bats, turtle doves, barn owls, foxes, badgers, hares and tawny owls • Species rely on undisturbed countryside for survival, and their displacement would represent an irreversible loss to local biodiversity. Such environmental damage contradicts commitments to conservation and sustainable development. • Will not achieve the plan's biodiversity ambitions	201807 (K Rhodes), 203639 (J Tanner), 207176 (W Parker), 201452 (C Barnard), 204095 (C Davies), 204584 (A Watson), 205645 (C Deer), 205674 (S Barnard), 207468 (D Meyer), 208640 (S Keep), 208703 (J&C Collins), 208705 (J&C Collins), 209349 (D Pope), 211213 (C Askham) **Other organisations:**

Summary of issues raised in comments	Comments highlighting this issue
• Mature native plants should be used for forest planting, it should occur before building works to ensure proper growth. • Need to ensure policy supports long-term viability of Hope Farm, which has demonstrated significant increases in biodiversity. • Provision must be made for addressing the ecological impact, both in the construction phase and longer term, through early evaluation and ongoing management and taking remedial action such as the creation of alternative wildlife habitats. • Concerns currently remain about how impacts to these sites will be avoided. • Part 33 of this policy is supported, although we advise that ecological survey and monitoring should also be added as a requirement for specific sensitive locations outside of the site's red line boundary that may be impacted by development. This would help to inform the requirements of part 22, and the suggestions mentioned above relating to this. • Endurance support approach in principle. This will require careful consideration through further assessment work and masterplanning. Extent and scale, delivery and management of the Cambourne Forest requires further consideration and clarification. This must be considered in the context of the wider package of greenspace, biodiversity and infrastructure enhancements. Expectations need to be realistic, and the Councils must also recognise that as woodland does not positively contribute to BNG calculations, some trade-offs may be required.	201542 (RSPB), 202987 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 202990 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 207086 (Elsworth PC), 206112 (Elsworth Parish Council), 207609 (Natural England), 207612 (Natural England), 210043 (Endurance Estates), 210555 (Cambridgeshire County Council), 210556 (Cambridgeshire County Council), 210557 (Cambridgeshire County Council),

Summary of issues raised in comments	Comments highlighting this issue
• Concerned that location and scale of the allocation site and adjacent to Cambourne North SEA have potential to adversely impact irreplaceable habitat (ancient woodland) and protected sites (including Special Area of Conservation). Do not believe this potential impact on biodiversity has been adequately considered. The allocation does not comply with the NPPFs notion of 'sustainable development' and there will be significant conflict with draft BG/BG. It also appears to be wholly at odds with the two Council's draft biodiversity strategies and their support of the LNRS. Urge that the current form of the site allocation is reviewed, including more detailed rigorous ecological investigations, reworked and potentially removed / relocated / scaled back to avoid significant impacts to biodiversity and avoid blocking the delivery of the LNRS. • Site may support functionally linked land for barbastelle bat population of Eversden and Wimpole Woods Special Area of Conservation (SAC). Surprised not to see baseline study of bat usage in the landscape to inform the site allocation process, or a draft Habitats Regulations Assessment. Currently, there is not sufficient publicly available information to ascertain the usage of this landscape by bats and therefore, we recommend a more detailed assessment, potentially including detailed bat survey work, is complete to determine whether the proposed site allocation for Cambourne North is appropriate, in the correct location or of the correct type / scale.	

Summary of issues raised in comments	Comments highlighting this issue
• Areas where natural and ecological considerations necessary for development of a sustainable new town will be extremely challenging, including loss of functional foraging habitat of Barbastelle bats and avoiding impacts on ancient woodlands. • Will not be possible to avoid or mitigate on site all impacts on the ancient woodlands. • Policy correctly acknowledges potential for adverse impacts on land used for foraging by Barbastelle Bats and is functionally linked to the internationally important maternity roost at Wimpole. Policy does not provide connectivity from Elsworth Wood and Knapwell Wood ancient woodlands to the south and south-west towards Wimpole. This is a major failing. • Providing proper landscape connectivity for Barbastelle bats will require strategic green infrastructure corridors across the A428 and East West Rail (EWR), including potentially a green bridge “dark corridor”. Even with these it will not be possible to include complete dark corridors particularly across the A428. • Inclusion of buffer zones and strategic green infrastructure network will provide some mitigation for impacts on the ancient woodlands within Cambourne North, but not sufficient to avoid recreational impacts on the woodlands, which may be significant. • Policy and supporting text should acknowledge it will not be possible or will be highly challenging to avoid or mitigate impacts on-site and there is high likelihood that compensatory measures will be required to address impacts on the ancient woods and Barbastelle bat population.	

Summary of issues raised in comments	Comments highlighting this issue
• The LNRS Local Habitat Map, shows approximately half of the Cambourne North & adjacent SEA being allocated for habitat creation, primarily woodland. Strongly recommend these areas are excluded from the allocation site – if they continue to be included, then we would suggest they are allocated as woodland creation within the SEA, but it would be essential that woodland creation is secured in advance of urban development. Suggest to further minimise impact to biodiversity, that the allocation site if focused immediately adjacent to existing urbanised areas (e.g. A428, Cambourne and potential railway station), rather than sprawling into the rural countryside.	
Landscape • Loss of agricultural land • National need for self-sufficiency means it is madness to lose this area. • Valley south of Elsworth should be protected. ○ Planning Inspectorate rejected development on site due to: Elevated location contributing to its visibility from surrounding roads and villages, making any development highly noticeable. Despite potential mitigation measures like open space and landscaping, the proposed development would significantly adversely impact the rural landscape.	203939 (A Parfitt), 205368 (J Daffarn), 200987 (R Howard), 201770 (G O'Connell), 201771 (I Claydon), 201773 (I Claydon), 202441 (P Deer), 203509 (L Greenwood-Davies), 203519 (A Martins), 203543 (L Greenwood), 203602 (H Passan), 203605 (R Askham), 203702 (S Wyer), 204526 (I Claydon), 207470 (D Meyer),

Summary of issues raised in comments	Comments highlighting this issue
• The Inspectorate concluded that the negative landscape impact of the proposal outweighs other considerations, including the possibility of establishing a Park and Ride site. • New forest should be planted before development, including EWR. • New 'forest' tiny compared to housing, should be more gain for nature like original Cambourne. • The topography shows that the Cambourne is 260 feet or so higher than Elsworth so any building will tower over the village. • Area contains historical sites, including mounds, an abandoned village, and ancient woodland, which may be adversely affected by the development. • Given extent of proposed development we struggle to see how there will be any space left for arable fields. • Endurance support need for strong and robust landscape framework to be incorporated into proposed masterplan for scheme. However, it is considered that the extent and approach to the SEA needs further consideration to ensure the approach is supported by robust evidence and is deliverable. It is also important that detailed extent of development area is informed by the landscape framework to ensure a robust and integrated approach. Flexibility should be provided within the policy to enable departures from the indicative development envelope to enable this.	208019 (P Crisp), 208704 (J&C Collins), 208705 (J&C Collins), 208706 (J&C Collins), 209349 (D Pope), 209354 (A Pope), 209359 (B Skerritt), 209363 (B Skerritt), 209455 (C Davies), 210456 (P Deer), 210844 (R McClure), 210991 (C Newell), **Other organisations** 201542 (RSPB), 206110 (Elsworth Parish Council), 210009 (Endurance Estates), 210010 (Endurance Estates), 210011 (Endurance Estates), 210012 (Endurance Estates), 210013 (Endurance Estates), 210033 (Endurance Estates), 210034 (Endurance Estates), 210035 (Endurance Estates), 210036 (Endurance

Summary of issues raised in comments	Comments highlighting this issue
• Policy requirements and context for S/SEA/CBN Cambourne North Strategic Enhancement Area seem unclear and it is considered that a specific policy / policy section should be set out for this rather than just being shown on the Policies Map and referenced within the Cambourne North policy. • Masterplanning process should secure objectives of Strategic Enhancement Area, allowing RSPB to manage Hope Farm effectively and continue monitoring nature. • Green Infrastructure should buffer Hope Farm to reduce disturbance impacts and support local wildlife, while recreational access should be limited to existing public footpaths. • Land-use and management in the surrounding SEA should complement wildlife populations on Hope Farm, with appropriate habitat creation. • Access restrictions and provision of SANGS are welcomed to protect ancient woodlands, but effective design measures must be ensured. • The land to the north, where the majority of the forest is planned (noting that this would be a mixture of different landscape typologies and not just planted trees), falls away from the ridge that the A428 is on. Therefore, planting in this buffer can only offer a limited visual buffer to the village to the north. However, Papworth has limited intervisibility with much of the site and there is scope to reduce the buffer here and increase the development envelope subject to detailed landscape assessment – due to the undulating nature of the land.	Estates), 210037 (Endurance Estates), 210038 (Endurance Estates), 210039 (Endurance Estates), 210040 (Endurance Estates), 210041 (Endurance Estates), 210042 (Endurance Estates), 210195 (Anglian Water), 210815 (Elsworth Parish Council), 210829 (Elsworth Parish Council), 211078 (National Trust),

Summary of issues raised in comments	Comments highlighting this issue
• Endurance considers there is no reason to include a buffer at western edge of proposed settlement between the A428 junction land at the East Rail Route. It is considered that this land should be incorporated into the scheme, providing additional employment land a further point of access directly onto the new A428 junction. Our suggested approach is illustrated further on drawing Masterplan Spatial Framework Strategy (Drawing Ref: 19-237-SGP-STE-XX-DR-A-011003-P03) which shows potential additional development areas to the west which Endurance consider to be suitable for development as part of the Cambourne North proposals. • Part 22) Constraints identified within the policy have been taken into account through concept masterplanning work to date and it is considered that there is sufficient land within the site to allow for appropriate buffers to the relevant designations and protected features to be delivered. Important that flexibility is maintained on the precise boundaries of the development areas and buffer zones to ensure these can be adjusted to reflect more detailed assessment and design work as the design of the scheme progresses. • Endurance support principle of creating dark corridors within development. Extent and nature of these will require careful consideration through further assessment work and masterplanning.	

Summary of issues raised in comments	Comments highlighting this issue
• Support principle of providing appropriate buffers to woodlands and watercourses within development. Extent and nature of these will require careful consideration through further assessment work and masterplanning. • Endurance support principle of retaining existing trees, hedges and water features within development wherever possible. Extent and nature of these will require careful consideration through further assessment work and masterplanning. • Parts 30, 31, 32 33a) Endurance support this approach in principle. This will require careful consideration through further assessment work and masterplanning. • Anglian Water supports landscape-led design to deliver ecological enhancement, and multi-functional green and blue infrastructure, which will contribute towards integrated water management and mitigating flood risk. • Support requirements within clause 19 under the Resources section of the policy regarding sustainable water management. Whilst the quantum of growth is lower than Cambourne North, we question why the approach in the Resources section, is not aligned with Policy S/CBN which includes the preparation of a Climate and Sustainability Innovation Delivery Plan and a Foul Drainage Strategy. • Want geographical ‘separation’ between the villages and Cambourne North. Hope that this could be achieved through the planning process (with red lines on development, provisions in planning consents that are enforced, section 106	

Summary of issues raised in comments	Comments highlighting this issue
agreements, etc.) and by physical means such as screening with tree planting and the preservation of existing SSIs. • Not clear where the woodland would be located or how it would be delivered. This needs to be made clear in the proposed Submission Plan.	
Heritage • Endurance agree that a proportionate and phased amount of desk based, and field evaluation will be required to determine impact on both known and unknown heritage assets. Whilst extensive archaeological features were identified during the survey work before the Caxton Gibbet to Black Cat extension works began, these did not impact upon the layout and route significantly. • Welcome preparation of Strategic Cambourne HIA and site specific HIA. However, not all the recommendations for the HIA have been fully reflected in the draft policy wording. Please check and ensure that these are included. • Broadly welcome criterion 11 but recommend some re-ordering of bullet points. In particular, Historic Landscape Characterisation and Archaeological assessment need to be undertaken first to inform the preparation of the comprehensive landscape strategy. Therefore, we would recommend that you move criterion 11c to 11a.	210014 (Endurance Estates), 210138 Historic England)

Summary of issues raised in comments	Comments highlighting this issue
• In 11 c we would suggest referring to a '…more detailed Heritage Impact Assessment…' given that an HIA has already been undertaken. We recommend the wording could be amended to read: Historic Landscape Characterisation and Landscape Character Assessment, more detailed Heritage Impact Assessment, and Archaeological Assessment must be undertaken to understand the impacts of development on landscape character, long range and local views and heritage assets and their setting, identifying appropriate mitigation and enhancement measures. The Council's HIA and the results of these further assessments must inform the masterplanning for the site. • In 11c i recommend inserting following '…that respond to topography, historic landscape characterisation and archaeological constraints. • In 11 c iii recommend the policy could allow for the conversion/restoration of the farmhouse and barns and finding a suitable use together with a conservation management plan for the assets going forward. Criterion should also state that development should be excluded from a buffer area immediately surrounding these assets as shown in the framework plan. • 11d Recommend further discussions concerning the timing of desk based archaeological assessment. • Areas of known archaeological sensitivity should be highlighted in the policy and shown on figure 78.	

Summary of issues raised in comments	Comments highlighting this issue
• Welcome criterion 15. • Figure 78 should show heritage buffer identified in HIA around New Inn Farmhouse and Barns and the areas identified for strengthened landscaping in the HIA. • Figure 78 – concerned that the eastern most area shown as a Local Centre might be in the area of archaeological sensitivity. • Figure 78 should show the areas of archaeological sensitivity identified in the HIA. • Figure 78 concerned at the proposed location of employment development in close proximity to the listed New Inn farmhouse. The likely scale of the employment development may not provide a suitable setting for the listed buildings. • Supporting text is light on heritage (for example in comparison to the natural environment.). Suggest that the imbalance should be addressed. • Paragraph 3.3.25 The phrase 'to the south is potentially ambiguous – it could mean to the south of Childerley Hall whereas we think you mean within the southern portion of the site.	
Infrastructure • Development would overwhelm existing infrastructure.	201026 (F Panrucker), 201410 (M Eidevik-Skinner), 201680 (C Davies), 201953 (R Milns), 202027 (D Askew), 203639 (J Tanner),

• Must accommodate all resulting needs within the proposed allocation, so that there are not detrimental, or cumulative impacts on services, facilities and infrastructure outside Greater Cambridge area. • Will there be sufficient water supply? • Services and access to them need to be provided at the same time as houses. • Will require safe, high-quality education provision. • Cambridgeshire schools rank poorly in funding per pupil - why add to this burden? • Insufficient water supplies. • Infrastructure should be delivered first. • Culture, performance and leisure facilities must be built before the houses. • New housing should not be considered until schools and early years provision is expanded. • Infrastructure will not enhance quality of life. • Local NHS hospitals and GP surgeries are already under significant pressure. They do not have the capacity to absorb the needs of residents from 13,000 new dwellings. • Build out speed crucial to delivery of services and facilities. • Plan silent on how CIL/S 106 might benefit parishes around Cambourne North. • Uncertainties on delivery of new infrastructure. • Services in Cambourne are insufficient, suggesting new area will face similar issues.	202280 (L Meyer), 202354 (D Boyd), 203602 (H Passan), 203674 (C Roberts), 203702 (S Wyer), 203939 (A Parfitt), 204236 (G Tanner), 204588 (A Watson), 204591 (A Watson), 204598 (A Watson), 204656 (N Woods), 204776 (C Drummond), 205184 (J Cowdrey), 205593 (E & J King), 205645 (C Deer), 207400 (N Woods), 207397 (L Skerritt), 207467 (D Meyer), 207539 (D Wood), 207770 (R McClure), 208020 (P Crisp), 208641 (S Keep), 208709 (J&C Crisp), 208710 (J&C Collins), 208711 (J&C Crisp), 208712 (J&C Crisp), 209358 (J Fordham), 209360 (B Skerritt), 209362 (B Skerritt), 209365 (C Roberts), 210454 (P Deer), 211211 (C Askham)

Summary of issues raised in comments	Comments highlighting this issue
• Infrastructure of areas like Elsworth and Knapwell cannot cope with the proposal. • Live performance hub should be assessed with local residents to address potential negative impacts. • Lack of clarity on community governance and how developer contributions will be allocated among affected parishes, raising concerns about the impact on Elsworth. • Should provide detail on investment to safeguard and provide facilities within villages. • Cambourne and Northstowe are cultural deserts. Expect N Cambourne to be the same. • Presents significant opportunity to enhance public rights of way network but this is not clearly reflected in the policy requirements. Existing public rights of way should be safeguarded and fully integrated into the masterplan. • Explicit policy support is needed to ensure connectivity, health and wellbeing benefits, and alignment with green infrastructure inclusive objectives. • Add doctors and dentists surgeries to plan from outset. Potentially even a local out of hours surgery, which would also serve surrounding villages. • Significant increase in population brings increased risk of crime, yet there is no robust infrastructure proposed to mitigate this. Expanding housing on this scale without parallel investment in safety and enforcement risks undermining the security and cohesion of an established, close-knit rural community.	**Other organisations** 207086 (Elsworth PC), 203608 (British Horse Society), “06109 (Elsworth Parish Council), 207071 (Cambourne Town Council), 207478 (Cambridgeshire Constabulary), 209224 (Sport England), 209982 (Endurance Estates), 209984 (Endurance Estates), 209985 (Endurance Estates), 209986 (Endurance Estates), 209987 (Endurance Estates), 210007 (Endurance Estates), 210017 (Endurance Estates), 210018 (Endurance Estates), 210019 (Endurance Estates), 210032 (Endurance Estates), 210061 (Endurance Estates),

Summary of issues raised in comments	Comments highlighting this issue
• Concerned by references to a “new” town centre for North Cambourne and reference to the existing High street to be a secondary High street. • Cambourne does not yet have a fully realised town centre, and there is a clear risk that proposals for an additional centre could undermine or delay delivery of the existing town centre strategy. • Under the subheading ‘Uses’ Section 9 – add a new criterion e. as follows; “e. Contributions to fire & rescue, police and ambulance facilities provision/ funding”. • Proposed development will put further pressure on an already stretched local NHS workforce. Many NHS employees at our local hospitals live in local area and therefore the increased stresses and pressures that they are put under could have a negative impact on their personal wellbeing which seems at odds to your wellbeing strategic priority of “to lead healthier and happier lives, ensuring that everyone benefits from the development of new homes and jobs. • Sport England raises concern regarding the use of the term “leisure” and not explicitly referring to indoor and outdoor sport provision. To ensure clarity Sport England recommends criteria a(f) refers to indoor and outdoor sport provision explicitly. The policy should also set out that the indoor and outdoor sports provision should be informed by an up-to-date PPS. Sport England recommend a Sports and Open Space Strategy is also sought as part of the policy.	210062 (Endurance Estates), 210065 (Endurance Estates), 210194 (Anglian Water), 210588 (Cambridgeshire County Council),

Summary of issues raised in comments	Comments highlighting this issue
• Framework for North Cambourne should also have sufficient flexibility to ensure that future development is not compromised by infrastructure and that the necessary roads, bridges and other infrastructure required for the new community can be delivered appropriately. • Support provision of a network of neighbourhood centres across the wider Cambourne North development to ensure all residents have suitable access to day-to-day services and facilities within walking or cycling distance, ensuring creation of walkable neighbourhoods and sustainable living patterns. • Incorporation of a range of high quality open spaces is supported, but suitable balance needs to be sought between open green spaces and higher density living and working spaces around the station. This balance will need to be explored further through masterplanning. • Part 10 (d) regarding provision of Infrastructure improvements is vague and unclear in terms of nature and geographic scope of potential requirements. Accordingly, this aspect should be subject to review as part of a clearer infrastructure policy and supported by an Infrastructure Delivery Plan. • Up to date economic data on employment and retail demand should be used to inform the proposals for a station quarter – such that it can become a lively and well-used gateway to the wider development from early on in the delivery of the scheme.	

Summary of issues raised in comments	Comments highlighting this issue
• Whilst Endurance generally support the idea of providing flexible spaces, it is considered that this level of detail on the design of the frontages is too detailed and prescriptive for this initial stage. These matters should be addressed through future applications when detailed design considerations can be fully considered. It is also important that the Policy does not unduly prejudice market interest from retailers by being too prescriptive about retail formats whilst recognising that creation of active frontages and a balance of uses within the centres will be important. • Endurance support principle of providing active frontages within centres and providing flexible spaces at ground floor that enable future adaptation. It is considered the level of detail on design of frontages are too detailed for this initial stage and should be addressed through future applications and Design Codes. • Part 46) Endurance support this approach in principle. This will require careful consideration through further assessment work and masterplanning in support of future applications. Endurance, MGL and GCSO should engage further with Anglian Water to ensure there is a deliverable strategy for the life of the development, given well publicised capacity constraints in the short term. • Part 47) Endurance support this approach in principle. This will require careful consideration through further assessment work and masterplanning in support of future applications and detailed assessment in urban design and transport terms. Endurance question whether the proposed Street Space and Kerbside Strategy is	

Summary of issues raised in comments	Comments highlighting this issue
necessary. It is currently unclear what this is trying to achieve and it is considered in any event that it can be covered by other documents. • Part 50) Endurance support this approach and consider it essential to the successful delivery of the project. There needs to be recognition that delivery of some of the infrastructure is dependent upon 3rd parties and beyond the promoter's control. Further discussions with stakeholders will be required to ensure that the full range of requirements, anticipated costs and responsibilities for delivery are appropriately assigned. • Quantum of development, which will be delivered beyond the lifetime of the plan, will need to be appropriately phased to align with delivery of supporting infrastructure. • The strong framework for delivering green and blue infrastructure, aligned with the Local Nature Recovery Strategy, provides important multi-functional benefits, including water management and mitigating flood risk. • Support the robust requirements for managing surface water run-off and provision of foul drainage and sewerage proposal. • Agree that the preparation of a Climate and Sustainability Innovation Delivery Plan sets out the key expectations for delivering a climate resilient community and ensures the sustainable use of natural resources, including high standards of water efficiency and on-site water use. • Requirement for a Foul Drainage Strategy is also welcomed.	

Summary of issues raised in comments	Comments highlighting this issue
• Item 9c should include provision of special school, which is likely to be required to mitigate impact of such a large allocation. For Northstowe and some other developments there is a separate reference to education needs in the “Uses” list, so a similar approach is suggested for Cambourne North and amend to "Education facilities to meet the needs of the development including early years, primary schools, secondary schools, sixth form and for special educational needs”.	
Flooding • Flood mitigation measures to be implemented before construction begins. • Flood prevention needed as Elsworth floods frequently. • Elsworth was subject to a major flood event in 2001 when more than 20 homes were flooded • Conington and Fen Drayton already flood from surface water. Future-proofing flooding impact is vital. • Concerns regarding increased flood risk from developments within Swavesey surface water catchment area, as the existing drainage system is already at capacity. Water from large-scale developments should be conditioned to include attenuation basins capable of holding water for up to 4 weeks when the Webb’s Hole Sluice is closed.	201452 (C Barnard), 201519 (A Brown), 201680 (C Davies), 201768 (R Crowther), 201770 (G O’Connell), 201807 (K Rhodes), 202441 (P Deer), 201953 (R Milns), 202348 (C Farquharson-Robert), 202354 (D Boyd),203460 M Passan), 203639 (J Tanner), 203519 (A Martins), 203562 (D Pope), 203702 (S Wyer), 204526 (I Claydon), 204579 (A Watson), 204656 (N Woods), 204765 (K Seifert), 204776 (C Drummond),

Summary of issues raised in comments	Comments highlighting this issue
• Major developments should negotiate S106 contributions for onsite and offsite mitigation to address local flood risk concerns and improve existing infrastructure. • Flood and drainage management plans essential to address existing flooding risks in Elsworth, Knapwell, and Conington, particularly with the proposed increase in housing. • This policy should refer to the need to adopt a sequential approach, prioritising the location of more vulnerable development outside areas at risk of surface water flooding. Recommend that this policy refers to the requirement for the site-specific FRA to include hydraulic modelling of ordinary watercourses within the site to inform site layout and design levels. The policy should also refer to the recommendation to consider the integration of water management and SuDS at the site into the wider strategy for Blue and Green Infrastructure for Cambourne and how the site can contribute to wider flood and water management benefits across the sub-catchment. The policy could highlight that the adjacent Strategic Enhancement Area may offer opportunities to reduce flood risk through water storage or nature-based solutions. • Better to acknowledge that Cambourne and North Cambourne are separate and plan accordingly (this does not mean there shouldn't be bridges, cycleways etc.). • Part 44) Endurance support this approach in principle. This will require careful consideration through further assessment work and masterplanning.	204782 (I Maddison), 204817 (J Harris), 204952 (C Gouldsbrough), 207398 (L Skerritt), 207402 (N Woods), 207465 (A Irvine), 207482 (N Hall), 207769 (R McClure), 207929 (H Sutton), 208649 (S Keep), 208703 (J&C Collins), 208704 (J&C Collins), 209351 (D Pope), 209353 (A Pope), 209355 (G Pope), 209364 (B Skerritt), 211216 (C Askham) **Other organisations** 203059 (Swavesey PC), 211183 (Environment Agency), 210057 (Endurance Estates), 210816 (Elsworth Parish Council), 211183 (Environment Agency),

• Development presents an opportunity to implement effective flood prevention measures in Elsworth, with an invitation for further discussions on this issue. • Policy should refer to need to adopt a sequential approach, prioritising the location of more vulnerable development outside areas at risk of surface water flooding. • Recommend policy refers to requirement for site specific FRA to include hydraulic modelling of ordinary watercourses within the site to inform site layout and design levels. • Policy should also refer to recommendation to consider the integration of water management and SuDS at the site into the wider strategy for Blue- Green Infrastructure for Cambourne and how the site can contribute to wider flood and water management benefits across the sub-catchment. • Policy could highlight that adjacent SEA may offer opportunities to reduce flood risk through water storage or nature-based solutions.	
Housing • Too many houses • No evidence of need for more, houses than currently in pipeline.	203939 (A Parfitt), 205189 (L Hanzi), 205590 (C Meads), 204952 (C Gouldsbrough), 207401 (N Woods),

Summary of issues raised in comments	Comments highlighting this issue
• 100 houses in Cambourne for sale (127atm) and no buyers - no desirability to live there. • Current rates of housebuilding are insufficient to meet demand and are delivered too slowly. Alternative construction methods - such as modular or modern methods of construction - should be actively encouraged to accelerate delivery. • Current approach of developing small parcels over extended periods (often around 18 months), as seen in West Cambourne, is not acceptable for North Cambourne. • Clear delivery targets should be established, with an ambition to complete individual parcels within six months where feasible. • All new housing should be delivered as zero-carbon or near-zero-carbon and include Renewable-based heating systems, High standards of insulation and energy efficiency, Solar panels and battery storage installed as standard, rather than merely “provisioned for”. measures should be mandatory rather than optional to ensure genuine long-term sustainability. • concerned that many homes are built with little regard for future adaptation. North Cambourne should adopt similar principles, ensuring homes can evolve as residents’ needs change over time.	**Other organisations** 207073 (Cambourne Town Council), 207076 (Cambourne Town Council), 207077 (Cambourne Town Council), 207511 (Cambridge Fire and Rescue Service), 209977 (Endurance Estates), 210000 (Endurance Estates), 210001 (Endurance Estates), 210004 (Endurance Estates), 210023 (Endurance Estates), 210024 (Endurance Estates),

Summary of issues raised in comments	Comments highlighting this issue
• Provision of approximately 13,000 homes at Cambourne North is supported and welcomed and it is considered that there is sufficient land available for development to deliver this, though further consideration of density assumptions is advised. • Endurance support aspirations of policy but consider that further flexibility is required in relation to a number of aspects set out to ensure the scheme is responsive to changing needs over time, reflective of the long-term nature of the proposal. For example, Endurance consider that requirement for 10% specialist accommodation is too specific. We support the need for a range of accommodation types for all needs, but10% of 13,000 homes would give rise to 1,300 specialist homes. Our suggestion is that such prescription is not necessary and should be evidence driven by documents such as updated Housing Needs evidence at the time, recognising the long term nature of these proposals with need likely to evolve over the 30-year implementation period. • Prescribed levels of specialist and Gypsy and Traveller pitch accommodation is not justified by Council's evidence base. Policy requires further flexibility to ensure that proposals can respond to changes in need over time as scheme matures and more up-to-date evidence on these needs becomes available. Council's evidence identifies alternative means to deliver pitches for G&T which are preferred to allocations on strategic sites. An approach which includes additional text policy such as	

Summary of issues raised in comments	Comments highlighting this issue
'approximately' 'or at levels as determined through an up-to-date assessment of local needs at the time', would allow for anticipated changes in need over time. • Endurance support in principle the need for a report covering an Intergenerational Housing Strategy to inform the level of housing typologies to meet the local need. • Part 14c) Challenging market conditions, cost of finance, and implications of Building Safety Act have created very challenging conditions for housebuilders to deliver apartments. Whilst these circumstances may adjust and improve, our view is that the policy should be flexible enough to account for changing circumstances over time through to 2060. Such a prescriptive density range in today's market, in this location, is considered a challenge. • A greater range of densities will aid overall delivery with lower densities in edge of settlement and other sensitive areas (such as near heritage assets) and higher densities in the town centre / the new Station Quarter. Suggested that a density range of 40-90dph, would allow for more design flexibility to respond to the various placemaking objectives and allow for a scheme that can deliver 13,000 dwellings. •	
Employment • Few local jobs will be created, increasing commuting pressures. • Incentives required to attract higher skilled jobs/companies to Cambourne North.	203639 (J Tanner), 205645 (C Deer)

Summary of issues raised in comments	Comments highlighting this issue
• Support inclusion of mixed industrial, laboratory, and office campus uses. However, a different approach to delivery is required. In Cambourne, employment sites have too often been delivered late in the development cycle, undermining local job creation and increasing commuter travel. • Concerned about imposition of unreasonable planning conditions, such as mandatory residential units above commercial premises. In many cases, commercial sites should remain wholly commercial. • Given increasing viability pressures on local commercial development, particularly from online retail, planning policy should focus on removing barriers to delivery rather than introducing additional constraints. • The opportunity at Cambourne allows one or more specialised clusters to be planned for from the outset allowing room for future expansion of businesses. • CGC recommends that consideration is given to building in flexibility for a greater level of employment ambition at Cambourne West and North linked to the provision of an EWR station. It could be clearer how the Local Plan draws from this evidence to set the vision for the role of the employment land in terms of the sectors catered for and on the amount of development that would optimise employment growth. The additional scale of growth is supported by the Council's evidence base and East West Rail.	**Other Organisations** 207086 (Elsworth PC), 207075 (Cambourne Town Council), 208938 (Cambridge Growth Company), 209978 (Endurance Estates), 209990 (Endurance Estates), 209991 (Endurance Estates), 209993 (Endurance Estates), 209994 (Endurance Estates), 209995 (Endurance Estates), 210002 (Endurance Estates), 210003 (Endurance Estates), 210006 (Endurance Estates), 210021 (Endurance Estates), 210026 (Endurance Estates), 210027 (Endurance Estates),

Summary of issues raised in comments	Comments highlighting this issue
• Insufficient allowance is currently being made for employment development to ensure a balanced, self-contained and prosperous new town is ultimately achieved. The proposed 108,000sqm of floorspace is not considered to be sufficient to support these aspirations to achieve a balanced, self-contained community consistent with the requirement to operate within a limited trip budget. • Employment is critical part of development mix to ensure a mixed, balanced and prosperous new community, with sustainable travel patterns and high degree of self-containment. • The proposed jobs target and amount of land provided for employment is considered to be too small to support size of the new town and ensure a self-sustaining town which minimises out-commuting. Revise the approach to employment development to be delivered as part of the allocation. • Number of movements from existing settlement, as well as from future residents, can be reduced if a large number and wide range of high-quality jobs are provided as this will have the impact of reducing number of in/out commutes for a proportion of the future population. This has material relevance to working within a limited Trip Budget. • Important that allowance is made for a wide range of employment provision that reflect different market demands and provide flexibility as needs and demand will evolve over time, particularly given the long term nature of the proposals.	

Summary of issues raised in comments	Comments highlighting this issue
• Additional land between A428, EWR and A1198 is considered to be ideal for further employment, facilitated by an additional access onto new A428/A1198 roundabout currently under construction and as illustrated on the attached plan Employment Development Access Off Proposed Northern Dumbbell Roundabout General Arrangement Plan (Drawing Ref 48168-P005-001) showing a potential additional access from new A428 / A1198 Junction currently under construction and utilising land under Endurance Estates' control. Proposed additional access can have significant benefit in reducing pressure on the main Cambourne A428 dumbbell access junction whilst also helping to separate and reduce heavy goods traffic from residential access arrangements and station approach, improving character and amenity of these areas and ensuring they are more welcoming for pedestrians and cyclists. • Endurance would support working with MGL and GCSP to develop an Economic and Employment Strategy at an early stage to help define parameters for this critical ingredient of the project, as part of a compelling overall vision for Cambourne. • Part 14b) Endurance consider approach is too inflexible and does not currently provide sufficient flexibility to reflect wide range of potential commercial uses appropriate to support a town of this size and market demands. Whilst such an approach will be appropriate for office and research and development uses, it would be less appropriate for industrial and logistics or mid-tech uses or many commercial and retail uses. The stacking of some employment uses has not, to our knowledge,	

Summary of issues raised in comments	Comments highlighting this issue
been achieved in the Greater Cambridge market and we would question whether this requirement is realistic, justified or necessary and we are concerned that it would make the site less attractive in the market and therefore be contrary to the aim of achieving an economically prosperous new town. More flexibility should be incorporated to enable different approaches to be taken to enable a wide range of employment uses to come forward in response to market demand. • The need for co-working spaces should be considered further as part of the Employment Strategy as it is important to avoid over-provision with spaces that then sit empty. The policy needs flexibility to enable the scheme to respond to market demand, viability and changes in way people work/live. • Endurance support intention to encourage a flexible range of mixed-use and employment uses which respond to their context. It is important that sufficient flexibility is built-in to the wording of the policy to reflect different types of employment uses that may come forward in different parts of the site.	
Elsworth The proposal will have a detrimental impact on Elsworth and its residents due to: • Close proximity of new settlement to village. • Risk of coalescence.	201174 (K Smith), 201303 (A Brown), 201307 (J Turner), 201396 (S Ireland), 201519 (A Brown), 201765 (A Mitchell), 201773 (I

Summary of issues raised in comments	Comments highlighting this issue
• Increased traffic through village, including during construction. • Loss of natural and historic landscape. • Impact on rural lifestyle. • Forest should be as wide as possible and planted early. • Do not want active travel links to new settlement. • Elsworth will become a suburb of “Cambourne City”. • Visual, noise and light pollution. • Negative impact on conservation area. • Effectiveness of landscape buffer. • Impact on character of Elsworth, a conservation area with grade II listed properties • Increased risk of flooding. Amendments suggested include: • Increasing buffer between Elsworth and new development. • Improve alternative routes around Papworth to alleviate traffic through Elsworth. • Provide bypass for Elsworth. Policy S/CB: Cambourne

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

Comments focus on the adequacy of infrastructure, services and overall place-making of the town, with many respondents questioning whether Cambourne can sustainably accommodate further large-scale growth. Comments note that the existing town already lacks key facilities, with references to limited retail, absence of a post office, insufficient healthcare provision and poor accessibility to everyday services. Several comments describe Cambourne as a “dormitory town” and car-dependent design, raising concerns that new development risks compounding these issues unless community facilities, employment space and town

centre functions are delivered early and alongside the provision of new housing. There are also calls for stronger planning obligations to ensure essential services and infrastructure are operational before occupation thresholds are reached.

Transport and connectivity were raised by several people, with mixed views on the proposed policy. Many respondents support the principle of improved sustainable transport, particularly the early delivery of the Cambourne railway station, enhanced bus provision, and high-quality walking and cycling networks. However, significant concerns were raised about the deliverability of mode-share assumptions, the limited expected uptake of East West Rail, and the risk that most trips will continue to be car-based. Comments highlight potential increases in congestion, pressure on local roads, and safety risks, particularly around schools and junctions. There are several comments requiring clearer transport modelling, binding mode-shift targets, early provision of infrastructure (including crossings of the A428), and stronger integration between development phasing and transport delivery.

Environmental constraints and impacts are also frequently highlighted. Respondents raise concerns about habitat loss, impacts on designated sites including ancient woodland, and the need for stronger buffer zones and biodiversity net gain. Issues relating to water resources and aquifer capacity are also noted, with suggestions to delay development until sustainable water supply solutions are secured. Other environmental concerns include impacts on landscape character, and the need for dark corridors and sensitive lighting. Several comments also stress the importance of protecting and enhancing green infrastructure to mitigate recreational pressure and ensure meaningful ecological outcomes.

A further theme relates to the scale and form of development and its relationship with surrounding communities. Many respondents express concern that continued expansion risks coalescence with nearby villages and the erosion of rural character. This is coupled with criticism of design quality, with some describing proposed development as bland or poorly conceived, and calling for stronger

design standards, health considerations, and better integration with existing neighbourhoods. While some developers and stakeholders support the strategic growth of Cambourne and its role in meeting housing need, they emphasise the importance of clear phasing, coordinated infrastructure delivery, and high-quality placemaking to ensure that growth is balanced, deliverable, and beneficial to both new and existing communities.

Response to the main issues raised in representations

The policy supports the continued delivery of services and facilities required to support the existing town. This includes within Cambourne West, Cambourne Business Park and Cambourne Town Centre. Through the further provision of new facilities, as well as the proposed development of Cambourne North, the Council's aspiration is that Cambourne continues to grow into a successful town that includes a wide range of amenities to meet existing and future needs.

The policy previously required an improved network of Public Rights of Way to surrounding villages as well as throughout the town to enable people to travel into and around the town using active modes. This has been retained within the policy. Additionally, development at Cambourne West has been permitted and continues to be built out with most streets near the Village College providing traffic free routes for non-motorised users.

The policy notes the importance for connections (including by active travel and public transport) to Cambourne North and the proposed Cambourne railway station. It is important that these connections are delivered to minimise the use of private vehicles within the town and maximise the opportunities presented by new active travel infrastructure. Similarly, the policy wording has been amended to reflect the requirement for Cambourne West to financially contribute to the Cambourne to Cambridge public transport corridor. Whilst the merits of the East West Rail and Cambourne to Cambridge projects will be considered as part of a separate

planning process, the councils have undertaken further transport modelling to understand the impacts of development in this area on the local and strategic road network and the necessary mitigation measures required during the plan period. This has been undertaken in collaboration with the Highways and Transport authorities as well as National Highways and considers both the local and wider network, including within areas covered by other authorities. This evidence demonstrates that development in this area can be accommodated based on highways capacity and that an ambitious, yet deliverable, mode share is required to ensure compliance with the proposed Trip Budget for Cambourne North.

The quality of new buildings, design considerations and the impact of heat island effects are considered by other policies in the Plan and so are not repeated in this policy.

The provision of employment uses within the town continues to be an important part of the policy, both within Cambourne West but also the Business Park and Town Centre. There is significant potential for Cambourne to provide employment opportunities close to existing and planned homes, as supported by the policy. The Housing Trajectory for the Local Plan has been underpinned by the Housing Delivery Study (2026) and confirms that the council's housing needs will be met during the plan period.

The Defined Development Extent of the town has been reviewed and set out in the Policies Map. The site submitted close to the Caxton Gibbet junction of the A428 has been considered through the Housing and Employment Land Availability Assessment (2026).

Support from the house builders at Cambourne West is noted. The Cambourne North policy sets out clear requirements in relation to the coordinated design and delivery of infrastructure of that site and how it must provide movement connections with the existing

town. The Indicative Spatial Framework for Cambourne and Cambourne North has been updated and reflects the further evidence undertaken by the councils in relation to transport/movement, ecology, landscape and heritage.

Financial contributions to emergency services is addressed through Policy I/ID: Infrastructure and delivery whilst the management and maintenance of sports facilities is addressed in Policy WS/CF: Community, Sports and Leisure Facilities and so are not repeated in this policy.

The policy has also been updated to reflect the comments in relation to dark corridors and local heritage assets that could be impacted by development proposals within the site.

The landscape, transport, environmental and ecological impacts of the Cambourne North allocation have been considered and addressed against that policy. Water availability is a known issue in the Greater Cambridge area, and the Local Plan identifies that new development will only be able to come forward providing the necessary water infrastructure is in place, anticipated from 2032.

Table of representations

Summary of issues raised in comments	**Comments highlighting this issue**
Cambourne lacks the amenities and facilities which were previously promised.	129984 (A Wilson)

No easy way to get to Cambourne to catch the bus or visit shops. One muddy pathway which is not lit at night and is impossible to use for anyone who is vulnerable. Bins are never emptied. Also need more pharmacies locally.	201158 (G Whitehouse)
Cambourne whilst being well connected with the A428, train and bus, is a failure of a town. It has very limited town services, for example no post office, only a single small super market, no centre. It's a town by design split by its infrastructure which limits non vehicle mobility and increases car use, it's currently and in future best described as a dormitory town.	201294 (T Roberts)
Support Cambourne railway station and believe its early delivery is essential. Local Plan should prioritise station and clearly link major development phases to secured funding and a defined delivery timetable. Without early provision, growth risks increasing car dependency and congestion, contrary to sustainability and climate objectives.	201346 (S Olechowski)
In the same manner as the Bourn outline planning permission, the section 106 agreement for Cambourne West secures funding towards CtoC. However, we note there is no reference to the requirement for a contribution within draft Policy S/CB (Cambourne West). This should be inserted to ensure consistency across the policies.	203435 (Juniper Propco (Bourn) Limited)
Designs look ugly and bland. Developers should not be allowed to impose identikit maximum profit minimum cost design. On "Key principles" please add reference to neuroarchitecture (in particular research findings in this field on the impact of building facades on mental stress levels in the brain) and ensure that building designs are subject to health impact assessments and demonstrate minimal impacts on raised mental stress generation. Also, urban heat islands.	203578 (A Carpen)

Highlights that adding 13,500 houses would triple trip demand, yet EWR's own 2023 data shows only 3% of Cambridge commuters would use the railway – remaining 97% would drive. The plan lacks quantitative evidence that roads won't exceed capacity. While EWR's business case claims credit for 25,000 new houses, it only serves 3% of commuters. The response argues GCSP must prove rail mode share can reach nearly 100% to avoid overwhelming the road network, warning that ideology-driven planning may fail commercially, citing poor Northstowe sales as a cautionary example.	203621 (Cambridge Approaches (William Harrold))
Active travel and public transport provision must be increased: - permeability for walking, cycling and public transport (e.g. via bus gates) must be a primary objective to connect the settlement together, with links open to private motor traffic an exception rather than a default choice - early delivery of strategic bus and active travel crossings across the A428 and rail corridor must be required - a protected and well-designed cycle network between neighbourhoods, the station, town centre, school and employment must be planned - introduce binding mode-share targets with penalty if not met	203745 (T Preud'homme)
Cambourne's perimeter bridleway provides excellent community facility for horse riders, walkers, runners, dogwalkers, families, cyclists to enjoy outdoors, nature and travel sustainably. Makes Cambourne a lovely place to live.	204057 (S Rogers)
We moved to Elsworth to be in a rural location as it’s quiet and surrounded by the countryside. This is the way the village has always been. We do not want to be beside a huge town. This is not what we bought into moving here. The distance of greater Cambourne is coming far too close and will impact	204264 (J Brown)

the rural feel and traffic through the village. This is not acceptable for residence whiting to remain in a quiet village.	
Concerns raised about habitat destruction, particularly the loss of ancient sites like Coton Orchard and recreational pressure on SSSIs such as Overhall Grove and Elsworth Wood. Buffer Zones for SSSIs: Expansion of "green gaps" between development parcels and ancient sites like Overhall Grove to mitigate recreational pressure and 20% or higher BNG.	204302 (L Allpress)
The Environment Agency has objected to large-scale housing due to risks to the local water environment and underground aquifers. No further housing occupations should be permitted until the Environment Agency confirms that new sustainable water sources (such as the proposed Fens Reservoir) are operational to prevent chalk stream depletion.	204302 (L Allpress)
Opponents argue that expansion and infrastructure, including the C2C busway, will cause irreversible damage to the Green Belt and rural landscape.	204302 (L Allpress)
Local schools, including Cambourne Village College, have expressed concerns that planned road layouts will lead to severe congestion and safety hazards for cycling pupils. For sites near Cambourne Village College (e.g., Parcel 2.3), planners must replace narrow residential lane access with a dedicated, high-capacity link road to separate school traffic from residential streets. Implement LTN 1/20 schemes.	204302 (L Allpress)
Calls for growth to be halted until the East West Rail station location and delivery dates are confirmed, as current plans may not integrate well with future rail links.	204302 (L Allpress)

Cambourne Town Council has noted objections regarding insufficient employment uses within the allocation of some proposals. Mandatory Employment Space: Amending applications to strictly enforce the ratio of employment land (offices/light industrial) to housing, preventing Cambourne from becoming a "dormitory town."	204302 (L Allpress)
The Cambourne to Cambridge busway has been criticized for a low benefit-cost ratio and high estimated costs exceeding £200 million. Realigning the C2C Busway to follow existing road corridors (like the A1303) instead of cutting through the Coton Orchard and the Green Belt.	204302 (L Allpress)
Experts question the feasibility of delivering the required 400 dwellings per year to meet 2041 targets.	204302 (L Allpress)
Residents fear that continued sprawl will cause surrounding villages to lose their distinct identity and merge into a single urban area. Redesigning the Cambourne North masterplan to revolve around the future East West Rail station, ensuring high-density development is centred on the rail hub rather than spread out as car-dependent sprawl. Establishing permanent, legally protected "green wedges" between Cambourne West and Caxton/Bourn to ensure these villages do not lose their individual character to urban coalescence.	204302 (L Allpress)
Changing the "Section 106" agreements to ensure that community facilities (shops, GPs, and community centres) are built and operational before a certain threshold of houses (e.g., the first 500) are completed.	204302 (L Allpress)
The policy is not justified as the policy maps require amendments to include additional land within the development framework boundary for Cambourne West. The settlement boundary currently follows the Outline Planning Permission for Cambourne West and needs to be adjusted to include land north of this boundary up to the A428 road. Should include site 115583 and Oak Tree Cottage.	204369 (Abbey Properties Cambridgeshire Limited)

Vistry welcomes Policy S/CBN: Cambourne North, supporting its strategic approach to balanced growth, sustainable transport, low-carbon development, and biodiversity net gain. Vistry endorses Policy S/CB: Cambourne, recognising Cambourne as a strategic growth location with planned transport infrastructure improvements to meet Greater Cambridge's housing needs.	205053 (Vistry Group)
Vistry appreciates the policy's focus on linking new development with existing settlements, highlighting the importance of coordinated design, timely infrastructure delivery, and strong placemaking.	205053 (Vistry Group)
Vistry encourages the Local Planning Authority to provide clear guidance on phasing and infrastructure delivery to ensure timely development of transport and community facilities. Vistry requests that the policy be retained and strengthened as the plan progresses, and welcomes ongoing engagement with planning officers.	205053 (Vistry Group)
Map and especially section near Cambourne playing fields between Great and Upper Cambourne is confusing and not clear. The lack of clarity means it's not a sound or legally robust plan. It is not clear if three bridges are proposed or just one and why it is needed when there is one nearby already. This is an important wildlife area and corridor and will also impact local residents in this area.	205100, 206811 (M Jordan)
The whole orange-circled area and its surroundings constitute an important wildlife corridor, yet this is not recognised in the plan.	206812 (M Jordan)
There has been no direct consultation with residents in the yellow area of the orange circle, despite the likely noise, air-pollution and safety impacts from construction and early bridge works to an empty field and a non-operational East West Rail station.	206813 (M Jordan)

Support Policy S/CB: Cambourne. The policy provides a clear and consistent framework for managing future development in Cambourne.	205171 (Taylor Wimpey East Anglia)
Cambourne is rightly identified as a strategic location for growth, supported by significant planned improvements to transport, road, rail, and public transport corridors. This means it is well placed to help meet Greater Cambridge's substantial future housing needs identified in the draft plan.	205610 (Taylor Wimpey East Anglia)
Welcome policy's holistic approach to integrating new development with existing town. Its emphasis on coordinated design, infrastructure delivery, and strong placemaking principles will ensure growth benefits both established and future communities across Cambourne.	205611 (Taylor Wimpey East Anglia)
Current town centre is dominated by a supermarket, namely Morrisons. There is no permanent Post Office which is ridiculous and no real thought has gone into how to develop Camborne as a town in the past. Frankly it is far too big already to be considered a village.	207461 (L Payne),
Under the subheading 'Uses' – add a new criterion k. as follows; "k. Contributions to fire & rescue, police and ambulance facilities provision/ funding".	207479 (Cambridgeshire Constabulary), 207512 (Cambridge Fire and Rescue Service)
We would encourage the authority to add wording to the Nature sections of this policy about sensitive lighting strategies and providing dark habitats/corridors where possible, particularly if these can link with those planned in Policy S/CBN, and around the outer edge of the settlement.	207613 (Natural England)

Benefits of locating growth at Cambourne recognised due to proposed busway, improvements to the A428 between Black Cat and Caxton Gibbet, as well as the proposals for East West Rail (EWR) providing rail services between Oxford, Bedfordshire and Cambridge. What work has been undertaken to date to identify impacts on the local and strategic road network outside of the Greater Cambridge area, and the mitigation identified to combat these impacts.	208501 (Central Bedfordshire Council)
Vision led approach to transport, with the emphasis on delivery of sustainable transport schemes such as EWR and the Cambourne to Cambridge busway is supported, as recognition in Policy I/ST, point 3, of the need to address transport infrastructure in the wider area including across the district boundary. There will inevitably be an impact on the A1 corridor and local road network within Central Bedfordshire, which does not appear to be reflected within the impact assessment or Infrastructure Delivery Plan (IDP).	208502 (Central Bedfordshire Council)
Strongly supports EWR but that Cambourne would be better served by light rail mass transit linking to Cambridge, with EWR rerouted south avoiding Cambourne. This would support accessibility to key employment sites in Cambridge.	208757 (Cambridge Connect)
Opposes Cambourne to Cambridge on strategic and environmental grounds. A regional travel hub should be provided at the Girton Interchange.	208757 (Cambridge Connect)
There are a number of Conservation Areas to the south of Cambourne, all of these contain numerous listed buildings. There are other listed buildings to the west and the east of Cambourne. There are a number of scheduled monuments in the area as well as two further registered parks and gardens in the area at Bourn Hall (grade II) and Longstowe Hall (grade II*). Any development of this site has the	210139 (Historic England)

potential to affect these heritage assets and their settings. There does not appear to be an HIA for this allocation. It is important that the policy identifies on-site, and nearby heritage assets and any mitigation and enhancement measures required to address any impact. Amend policy accordingly.	
Are you planning to build three new bridges (road, cycle and foot) within the orange-circled 500 m stretch, or just one, and where exactly will it be located?	206810 (M Jordan)
Why is a new cycle/footpath route to Cambourne North required when an existing route is only 500 m away – the proposed route seems an unnecessary expense.	206812 (M Jordan)
Sport England supports the ambition for significant sports and leisure provision, including a regionally significant facility. However, the type and quantity of provision must be informed by a robust, up-to-date PPS, BFS, FPM. Sport England recommend that the policy also includes a requirement for management and maintenance plans for indoor and outdoor sports facilities.	209223 (Sport England)
Expansion to the south of Cambourne should be planned for, either as a stand-alone extension to the settlement, or in combination with development in another direction. As detailed in the submitted documents and plans, Land South of Lower Cambourne is unconstrained and could provide a highly sustainable extension to Cambourne. The benefit of developing multiple areas is considered to be underestimated in the document, particularly in the deliverability section and this is considered to clearly be the preferred option for growth. This needs to be reassessed and it is considered that provision of new development both to the north and south of Cambourne, would have substantial benefits in sustainability terms and boosting housing supply in the short term, and that it is clearly the most suitable option when considered against the alternatives.	204253 (Richborough)

Cambourne doesn’t have the amenities and infrastructure promised from last 20yrs! and now bursting. Will old promises be kept to restore any kind of faith and trust in councils and developers before our support is expected?	200980 (A Wilson)
Cambourne is one of the most challenging locations in Greater Cambridge in which to deliver genuinely sustainable travel at scale. The Local Plan does not yet demonstrate that this challenge has been fully confronted. Plan relies too heavily on future public transport investment to meet transport needs. Without binding mode share and trip internalisation targets, a clear pipeline of transport interventions, and wider changes to the fabric of Cambourne such as new local amenities, trip budgets risk becoming aspirational rather than effective. The Local Plan should: Make permeability for walking, cycling and public transport the primary objective of stitching the settlement together, with a presumption against vehicular permeability between the existing and expanded Cambourne Require early delivery of strategic bus and active travel crossings across the A428 and rail corridor, tied to clear phasing triggers Secure a continuous, protected and legible primary cycle network linking neighbourhoods to the station, town centre, schools and employment. Strengthen the trip budget approach by introducing binding mode-share targets and clear consequences if these are not met	211774, 211775 (Camcycle)

Policy S/GF: Land adjacent to A11 and A1307 at Grange Farm

Abbreviations

PC= Parish Council DC= District Council TC= Town Council

Summary of issues arising from Draft Local Plan representations:

There was acceptance of the need to deliver more housing in Greater Cambridge. There was some support for the allocation of development in new settlements. The allocation was supported by multiple respondents.

Concerns were raised about the oversupply of lab space and the empty sites at local science parks, and therefore a need for homes in this area.

Concerns were raised about the need for housing in this location, how the site was selected, if the site is appropriate for this level of development and the evidence that supports its allocation.

Concerns were raised about impact on landscape as this area is predominately rural and the site has varied typography and how this could create a challenge for a development of this scale in this location.

Concerns were raised about impacts on heritage, on the Conservation Areas in Great and Little Abington, on local Listed Assets and on the Scheduled Monument at the Roman Road.

Concerns were raised around local infrastructure provision, including schools, and impacts on surrounding local businesses.

Concerns were raised about utilities such as water supply, waste water treatment and electricity to ensure that there is enough

provision to accommodate new growth and minimise impacts on existing development.

Concerns were raised about flooding and management of sewers. Concerns were raised about timing of infrastructure delivery.

Concerns were raised about the impacts on existing communities of development of this scale, and how deliverable this site is. Concerns were raised about impacts on the chalk stream and pollution.

Ecological concerns were raised, comments were made about impacts on ecological network and habitats, SSSIs, hedgerows and protection of trees.

Transport concerns from local residents centred around traffic congestion, impact on the local road network, deliverability of CSET, and active travel connections.

Concerns were raised around impact on wider surrounding settlements including Hildersham, Abingtons and other nearby villages.

Concerns were raised about the design of the development. Concerns were raised about the housing delivery mix and impact of Traveller's site.

Further responses were raised by statutory consultees on protection of the Roman Road, Barrows and SSSI.

Response to the main issues raised in representations

The responses have been considered and the representations considered on the individual Local Plan:

- Support noted, including the need for new homes, the benefits of planned housing, jobs, and infrastructure over ad hoc rural developments.

- The Councils have considered the representations made and have been working with the site promoters to develop further evidence to support the allocation and address the concerns raised during the consultation. The Councils have engaged with statutory consultees to iterate the wording of the policy and ensure the impacts of the development are managed and mitigated. Cambridge City Council and South Cambridgeshire District Council are working in partnership to produce a joint local plan.

- Through the development of the joint plan, the Councils have had to consider a range of development strategy options, from sites on the edge of Cambridge through to developments in villages, to consider the most sustainable way development needs could be met. This included reviewing freestanding new settlement site options, noting in our evidence that new settlements located on public transport corridors can be sustainable locations for development.

- South of Cambridge, the area around the M11 and the A1307 corridor is home to a range of major business parks with world-leading facilities and has some excellent and improving public transport links. The Government, Combined Authority and Local Partners have made clear the expectation for continued economic growth in the knowledge intensive sectors that already have space and plans to grow south of the City. The nationally significant science and digital cluster located in this area will require more employees – and suitable housing to realise its potential. A new community at Land adjacent to A11 and A1307 (Grange Farm) provides an opportunity to deliver new homes near to existing KI based campuses, and where planned improvement to public transport which would offer connections to the Cambridge Biomedical Campus. The homes could be supported by services and green spaces that respond to its setting.

- The strategy of the Local Plan is informed by selecting sites that are in the most sustainable locations. Sites that are in locations in areas of high quality public transport and connected to existing defined development extents are selected as a priority for development. The strategy looks first to allocating brownfield sites in the City and Edge of Cambridge and in sustainable locations and then looks to meeting housing need with new settlements at Cambourne North and Grange Farm for example. Of the proposed options for new settlements, Grange Farm is the best of the available options for development, as demonstrated by the HELAA and SA assessments. Options higher up the hierarchy have been prioritised

first and selected considering impacts on the environment, public transport and deliverability. Grange Farm as a site allocation has been selected through the evaluation of sites.

- The Housing Target for Greater Cambridge is calculated via the standard method, and this has given an identified need figure of 48,195 minimum dwellings to be delivered over the plan period. This is also similar to the figure that Greater Cambridge has an identified need for and therefore is the number of homes that the Local Plan is looking to deliver. Through all the sites allocated in the Local Plan, this delivers a figure of 48,065 dwellings to 2045 which is the end of Plan Period. Grange Farm will need to contribute 2,550 dwellings in the plan period to continue to demonstrate a 5 year land supply and deliver the number of units needed in Greater Cambridge in the most sustainable locations. The allocation of Grange Farm addresses the acute Housing Need in Cambridge, as identified in the Housing and Accommodation Needs Assessment.

- The Employment and Housing Evidence Update (2023) by Iceni Projects sets out that there is demand for lab floorspace. GCSP have undertaken engagement with landowners at these campuses where they have ambitions to expand, there is evidence that development is needed in this location for development. Development at Wellcome Genome Campus in Hinxton is allocated for predominately expansion of research and development floorspace and the delivery of 1,500 campus workers to support the function and expansion of the campus. The research campuses in this location are all looking to grow and expand, and therefore further housing is required to provide housing for the workers. Land at Grange Farm, east of A11 & north of A1307 Grange Farm is close to the committed 1,500 homes at Wellcome Genome Campus expansion, but those homes are specifically for staff at Wellcome Campus and as such that there shouldn’t be the same level of impact on delivery rates were both sites to be for market housing. Both sites are required to meet the identified need for homes in Greater Cambridge over the plan period.

- To sustain a development of this size, and to offer employment opportunities within the site, 35,000 sqm of employment floorspace has been identified as an appropriate mix of uses for the site. Greater Cambridge sustains a pipeline of an oversupply of employment floorspace to encourage job creation and ensure there is robustness and flexibility in the meeting needs of the market in terms of employment floorspace. Furthermore, this site is in close proximity to a number of expanding campuses such as Wellcome and Babraham, and will be well connected to Cambridge via the CSET connection.

It therefore proposes a settlement that can provide additional employment floorspace and be well connected to local employment opportunities.

- The Greater Cambridge Local Plan sets a vision for delivering sustainable development for the City and South Cambridgeshire. It is a joint Local Plan responding to cross-boundary issues. The site scored an overall red following the HELAA assessments. This is not untypical for large scale strategic sites where impacts on matters such as landscape will be significant compared with the existing baseline situation. Cambourne North, for example, also scored an overall Red in the HELAA. The process is site specific evidence and testing that will identify how these reds and other impacts can be mitigated as much as possible. For example, through landscape and heritage studies, we would identify specific sensitivities (like local or strategic viewpoints) and feasible mitigation measures, which are then incorporated into the policy.

- The initial HELAA assessment of the Grange Farm proposal reflects the initial site boundary submission from the landowner. Additionally, the Councils also tested a larger site within the HELAA which is aligned with the draft allocation and Strategic Enhancement Area boundary which was in the draft Local Plan. The supporting documents submitted by the landowner can be found on our consultation platform, please see the Supporting Evidence tab. Please note that the landowner did previously request that the initial site submission documents, submitted in 2021, be withdrawn from the HELAA process as it was prepared and submitted on their behalf by their former site promoter. These documents have therefore been withdrawn and superseded by the documents in the link above. It is common for site promoters to withdraw sites, supersede supporting studies/evidence and change promoters/planning agents during the course of the Plan making process, and this process is commonplace.

- The development strategy has allocated this sire as a suitable location for development. The potential sites have been considered and assessed by the HELAA and then if appropriate for development were assessed as reasonable alternatives in the Sustainability Appraisal. Then this informed the list of allocated sites. Then for each allocated site further evidence has been prepared to support its allocation. The development of evidence is underway and will continue. There is no pre-determined development at Grange Farm. Options are being worked through with site promoters to work out how development can be accommodated in the most sustainable way.

- The use of new settlements to meet housing demand has been assessed and evidenced through the HELAA, Sustainability Appraisal and Strategy Topic Paper. It is the approach that will reduce carbon emissions from transport emissions the most and ensure there is sufficient critical mass to be able to support critical infrastructure such as schools, healthcare and transport to ensure the development is sustainable and meets the needs of its residents.

- The site has been demonstrated to be deliverable, as set out in the Housing Delivery Study Addendum. The development is phased from 2034 to ensure sufficient water and transport infrastructure is in place, as well as based on out standard assumptions for delivery timescales of a site of this size. It is demonstrated that 2,550 units are deliverable at Grange Farm within the plan period, and this is set out in the Housing Delivery Study Addendum.

- On balance, when considering the site against the reasonable alternative options, the councils are therefore of the view that this site presented a deliverable and sustainable growth option for the emerging Local Plan.

- In response to concerns that this is the wrong location due to transport, officers are working with the site promoter and statutory consultees to plan work through options to deliver a transport mitigations for the site that will align with the trip budget that has been identified for the site to ensure that impacts on the wider transport network are minimised. This trip budget has been refined by the preparation of further evidence and the development of options to prioritise active travel and public transport to reduce the number of vehicles entering the wider network. The wider Transport Strategy for Cambridgeshire will also seek to manage wider transport issues, considering development and growth across Cambridgeshire.

- The councils have undertaken additional evidence since the draft Greater Cambridge Local Plan consultation on a number of themes which were identified in the comments. These relate to heritage, ecology in the HIA, viability and infrastructure in the IDP. In consultation with the Councils' and statutory consultees, the site promoter has undertaken additional evidence since the draft Greater Cambridge Local Plan consultation on a number of themes. These relate to primarily to landscape, ecology, heritage and transport and are addressed in more detail below and within the Site Allocations Topic Paper. This evidence

includes undertaking landscape assessments, heritage baseline assessments, preliminary ecological assessments and transport assessments and placemaking studies to demonstrate how homes can be delivered sustainably in this location. This has been developed in consultation with officers and statutory consultees.

- To be feasible and viable, it has been identified that 4,200 units is required to be delivered at Grange Farm to sustain a critical mass large enough to support the infrastructure needed for a sustainable settlement. The use of new settlements has been identified as being more sustainable than individual extensions to existing villages because it ensures that infrastructure can be developed to sustain the development and limits the amount of pressure on existing infrastructure. The site capacity has been reviewed in the context of the scale of development that is feasible to be delivered and the impact on the landscape.

- Further capacity testing has been completed by officers and by the site promoters to refine the capacity for the site. Officers have considered the impacts on landscape, ecology, requirement for delivery of biodiversity and green space and the number of units required to establish a critical mass to make infrastructure deliverable. The site capacity has been refined to approximately 4,500 homes, a reduction from 6,000 to minimise the impact of the development.

- There is an identified need to deliver sites for Gypsy and Traveller's in Greater Cambridge. The strategy to meet this need is a combination of optimisation of existing sites to ensure that these sites are occupied by Gypsy and Travellers at safe densities with correct utilities provision and then creating new Gypsy and Traveller sites adjacent to New Settlements. Policy H/GT sets out clear criteria to deliver Gypsy and Traveller sites in a way that minimises impacts on existing development and provides good quality pitches for Gypsy and Travellers. The delivery of sites for Gypsy and Travellers is part of the identified need for housing in Greater Cambridge and sites must be made available for them. The optimal capacity for a traveller site has been identified as 12 pitches per hectare. This figure has been identified as an appropriate scale to ensure that each pitch has sufficient amenity, access to utilities and a safe scale for occupants. This is set out in Policy H/GT as well as being a standard scale of delivery of G&T sites on strategic sites.

- The provision of homes at Grange Farm will be a mix of types, tenures and sizes to provide for a wide range of residents. There is a requirement for 10% of the total homes as specialist accommodation (within Classes C2 and C3), particularly for older people or those with disabilities. Housing affordability is an issue across Greater Cambridge and the delivery of this mix on strategic sites will contribute to meeting the need for affordable homes.

- The IDP has identified the school provision for the site. Further discussions with County have refined the details of this ask and the outputs have been included in the policy wording. At this point, it is assumed that Grange Farm will provide enough school places for the development at Grange Farm. The education and healthcare infrastructure projects identified in Chapters 11 and 12 of the IDP will also mitigate the additional demand on these services arising from planned population growth. Whether residents decide to pursue education and healthcare facilities within or outside of Greater Cambridge is a matter of personal choice, but the IDP identifies projects within or in close proximity to areas of planned housing growth to mitigate the additional demand in full. Local authorities are also legally obliged to cooperate with NHS bodies to secure the provision of healthcare facilities.

- The councils are acutely aware that developments identified in the local plan will need to be accompanied by the right infrastructure. The draft Local Plan consultation in 2025 was accompanied by assessments of infrastructure that would be needed to support proposed developments. Work on the infrastructure requirements is continuing for the next phase of the local plan process. The phasing of the delivery of Grange Farm will align with the construction of transport infrastructure and wider infrastructure delivery.

- The IDP has been developed using an evidence-led methodology that evaluates current infrastructure capacity and increased demand resulting from planned housing and commercial development. Working with delivery stakeholders including Cambridgeshire County Council, Cambridge and Peterborough Combined Authority, the Greater Cambridge Partnership and more, the Council has identified a range of priority transport measures in section 5.3 of the IDP. These transport measures are therefore planned to mitigate the transport impacts of growth brought forward by the emerging Local Plan, ensuring sustainable growth across Greater Cambridge throughout the plan period.

- In terms of infrastructure impacts on the Abingtons and Hildersham and the surrounding area, Grange Farm is designed to not impact on facilities through the provision of its own infrastructure aligned to the phasing of the development including healthcare facilities and schools. The Council welcomes collaborative working with West Suffolk Council on the infrastructure requirements arising from growth planned at Cambridge East, Grange Farm and any other developments proximal to West Suffolk to identify the potential need of cross-boundary infrastructure requirements. The Council also welcomes further engagement with West Suffolk Council on strategic cross-boundary matters and infrastructure issues during the preparation of the next stage of the emerging Local Plan.

- Whilst the Council understands that the Greater Cambridge Transport Strategy (GCTS) is progressing, the GCTS will assess major transport infrastructure projects taking into account the overall impacts of all identified schemes and cross-boundary impacts are considered where they are likely to occur. The Council will continue working with the Combined Authority to identify the potential impact of demand arising from Greater Cambridge on the transport network external to the area.

- Engagement with statutory consultees and the evidence will continue to iterate progressing towards the creation of planning application and considering the full transport strategy for Cambridgeshire. The phasing of infrastructure has informed the phasing of homes including the delivery of CEST and the extension to CSET. This has been agreed in discussion with statutory consultees. An initial trip budget has been prepared for the site as well as a list of infrastructure improvements needed as set out in policy to inform the transport strategy for the site.

- The site promoter has been developing further transport evidence in consultation with National Highways and the Highways Authority and planning policy officers to develop an evidence base for the transport strategy at Grange Farm and to further refine the policy requirements under the movement section including a refinement of the trip budget. Modelling has been undertaken to understand impacts on the Fourwentways Roundabout to consider the impacts of wider transport congestion in the area.

- The trip budget identified by GCSP evidence has been refined by further evidence completed by the site promoter in consultation. The policy requires a number of additional transport assessments to be undertaken as a development proposal

is being prepared as part of a planning application. It is at this stage that more detailed testing and transport interventions will be identified and secured. The transport evidence and Local Plan recognise that additional mitigation measures may be necessary beyond the plan period in order to facilitate the full build out of the site.

- Given the inherent scale of new growth required, the local plan site assessment process (including our Housing and Economic Land Availability Assessment) acknowledges that proposals such as new settlements could result in significant landscape and other impacts. However, given the sustainability benefits the Councils have determined that new settlement proposals that met evidence-based location and scale criteria should nevertheless be subject to consideration for allocation.

- The development strategy and consideration of spatial options and assessment of reasonable alternatives have contributed to the consideration of the configuration and setting of Grange Farm in its wider context. The spatial framework has been prepared to also recognise the interrelationships with existing settlements and the wider area, and this will be used to inform the masterplan.

- The acknowledged impact on the landscape is being mitigated by the use of the use of SEA to provide a buffer. The SEA will be predominately used for agricultural uses, GI and provision of new habitat and restoration. The Strategic Enhancement Area will contribute to retaining a clear green buffer between settlements and it is intended that some of this land remain in agricultural use to respond positively to the local setting. This has been reflected in the policy wording. The boundary of the Land adjacent to A11 and A1307 Grange Farm has been revised to mitigate impacts on the landscape. This includes mitigating views from the site to Roman Road which were identified in the GCSP HIA. These have been reflected in the spatial framework. The management of impacts on the landscape is not just about creating a barrier but also positively contributing to the landscape by being able to see through to the town to enhance the changing landscape. The Eastern Boundary aligns with the typography of the site and slopes down to a buffer created by the SEA. Agricultural uses are encouraged in the SEA to further minimise the impact on development on the landscape by retaining similar uses.

- The spatial framework has been drafted to set out mitigation measures required to minimise impacts on the Abington's and Hildersham. The Strategic Enhancement Area is proposed to contribute to creating a buffer between the developments to

reinforce the integrity of the distinct defined development extents. The use of screening and green buffer in appropriate locations will also contribute to maintaining these edges. The wording of the policy has been further iterated to specify what is acceptable in the SEA. This will improve the clarity of the role of the SEA. The PRoW are being considered in the development of the assessments of the site and will be reflected and protected in the Masterplan. The PRoW along the Roman Road has been identified on the spatial framework.

- The spatial framework has also been developed to set out key constraints, design considerations and a high level indicative layout to inform the design of the site. This contributes to ensuring that the design is of high quality and is suitable in its context- key design principles are established in policy. The policy wording also specifies that this development must be site wide Masterplan led and this Masterplan must be agreed with the Councils' ahead of any planning application approval. Furthermore, a side wide Design Code must be submitted alongside the Masterplan. This will ensure that development follows a clear overarching design and placemaking objectives and principles which will contribute to a high quality settlement. A range of densities have been suggested for this site to ensure that the building heights are reflective of the landscape and align with the typology of the development, with the tallest buildings being in the lowest parts of the sites. These will continue to evolve as plans go into more detailed planning stages. This will be done in collaboration with the Council to ensure design is of a high standard. The site promoter is proposing a unique stewardship model and their current plans for continued local interest in the site that will contribute to a high quality design.

- GCSP has produced a Heritage Impact Assessment (HIA) to support the allocation of the Grange Farm. This document identifies any impacts on heritage assets, listed buildings, scheduled monuments and any key viewpoints and provides mitigation suggestions which have been brought into policy wording and the Spatial Framework to ensure mitigation is considered in the masterplan of the development. GCSP have also been continually engaging with Historic England and the County Archaeology team to work through and agree any mitigation measures for the impact of the development on assets. The Bronze Age Barrows to the west of the site have been reviewed for listing and these are now a Scheduled Monument. These are indicated on the Spatial Framework with a setback for development to minimise impacts. A Geophysical Survey for the Roman Road and the Bronze Barrows has been undertaken by the site promoter and the findings of this has been reflected in the GCSP HIA. GCSP will continue to work with the site promoters and statutory consultees to further discuss

and mitigate against impacts and produce further archaeological evidence as needed, including a site wide DBA and successor surveys as identified by this document.

- GCSP is continually liaising with Anglian Water and the Environment Agency through the water scarcity group to ensure that options are being evaluated to set out a clear strategy on how waste water will be managed to manage impacts on the chalk stream and aquifers. Through the Integrated Waste Water Management Study and Site Specific Flood Risk Assessment to set out strategies for managing impacts of flooding and runoff from greenfield sites.

- The site promoter has engaged independently with Environment Agency, Anglian Water and Cambridge Water to understand how impacts can be reduced. This includes exploring options for sanitisation of water to recharge the aquifer. The options for mitigating impacts on the chalk stream and the River Granta will continue to develop through the development of evidence through to the planning application submission, in consultation with the Environment Agency and Anglian Water.

- Whilst the allocation will reduce the amount of arable farmland in this location, the policy seeks to minimise this through compact forms of development, and key areas of activity within the development. It also supports the continuation of farming within the SEA. The planning application for the site will also be required to complete a site specific flood risk assessment including the sequential test and exemptions test where relevant to ensure that the correct flood risk mitigation measures are in place.

- Grange Farm has been assessed in the Habitat Regulation Assessment and mitigation measure identified in this document have been incorporated in the policy wording, as well as suggested mitigations from engagement with Natural England. The policy and spatial framework has been revised to include policy wording to divert footpaths to just the PROW and not impact on the SSSI. Enhancements to the SSSI are also required in policy.

- The site promoter will be required to complete a preliminary ecological assessment, a cohesive stewardship strategy through early phase community engagement including through conservation groups to deliver community-based enhancement stewardship as endorsed by Natural England; and a recreation pressure assessment for the SSSI to support any planning

application. The Councils' and the site promoter will continue to work with Natural England to minimise the impacts on the SSSI and local ecology. Furthermore, ecological survey and monitoring is required for specific sensitive locations outside of the site's red line boundary that may be impacted by the development is required in the policy to minimise impacts on local habitat and ecological networks.

- Policy WS/HS Pollution, health and safety will apply to all development. This policy will require assessments to mitigate against the impacts of development and its construction. Mitigations through buffers will reduce impact on noise and light pollution. In terms of air pollution, an air pollution assessment will be required, and the prioritisation of active ravel and public transport will reduce impacts on air quality.

Summary of issues raised in comments	Comments highlighting this issue
Support • Really good proposal. people crying out for more homes • Benefits of planned housing, jobs, and infrastructure over ad hoc rural developments. • Support development that aligns with the local area's character, advocating for lower density and height of properties, particularly near existing buildings. • Do not object in principle to the development of a small new town instead of expanding existing villages.	201460 (D Watts), 201750 (J Hall), 201889 (W Cooper), 201804 (R Zimmern), 201889 (W Cooper), 201924 (M Dance), 202876 (C Pippen), 208420 (K Franklin), 208421 (K Franklin), **Other bodies:** 201556 (Stapleford PC), 201669 (Linton PC),

• approve principle of having developments near places of work and understand that they have to be of a certain size. • Contingent on adequate water, education, healthcare, and transport links. • Promotes active and sustainable travel methods, which is viewed positively. • BioMed Realty supports the allocation of Grange Farm as a new settlement. • Supports vision and objectives for Grange Farm as a new settlement that will serve existing and future communities, enhancing sustainability and infrastructure in surrounding areas, including Linton. • Open to exploring how land at Ley Rectory Farm could be sensitively assimilated into the wider development. Wish to stress the importance of ensuring that our residual farm remains viable for the long term. Please continue to liaise directly with The Pampisford Estate and its Trustees. • Pampisford Estate welcome suggestion that delivery will be within the Local Plan period and beyond. PE note Council's updated Greater Cambridge Housing Delivery Study Addendum assumes delivery of 2,550 new homes in the period to 2045. This is lower than position set out within our initial Delivery Strategy and we remain committed to this objective (c. 4,750 dwellings). PE do welcome ambition to plan for a coherent, well planned new town, with a scale and mix of uses to promote self-containment, with range of uses and amenities provided on site to support the needs of all residents. As landowner, PE look forward to working	203371 (BMR Granta Park Propco Limited), 204840 (Vistry Group), 209252 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 209254 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 209256 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 209264 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210722 Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210905 (Great Shelford Parish Council),

constructively with GCSP and wider stakeholders to determine the most appropriate form of development for the site. • As landowner, PE have been stewards of farm for generations. Committed to ensuring that scheme is sensitive to character and context, and is distinctive and separate from the surrounding settlements. PE look forward to working with GCSP to develop masterplan principles which will achieve this shared objective. • PE support ambition for mixed use town centre, and early delivery of amenities to support community integration from earliest stages of development. • Pampisford Estate Farms Limited and the Trustees of the James Binney Will Tr are very supportive of the principle of allocation, broad scale and location of the development and mix of uses proposed. Highlighted a number of areas where more work is necessary to achieve level of precision required for allocation at Regulation 19 stage.	
Do not support • I'm a resident of great Abington and I am not happy about this at all I moved from the city to get away from it and to enjoy a nice quite village now the village is going to be like the city and residents comments need to be respected in this matter I oppose this and do not wish for this to go ahead what so ever.	201310 (K Middleton), 201399 (W Bailey), 205486 (R Sainsbury); 208559 (Abington Residents Campaign), 209069 (Camcycle)

• We were horrified to discover that you are proposing to build a development at Grange Farm which would involves the construction of between 6,000 and 8,000 houses. • Request that the council remove or significantly reduce to respect exiting communities and environmental limits • Abington Residents Campaign (ARC) are completely opposed to Policy S/GF which proposes the introduction of a new Town at Grange Farm. • . In Camcycle's view, the site fails to meet the core requirements of a genuinely sustainable community and should not proceed.	
Not needed • Strategy is wrong and underpinned by an optimistic growth forecast. • Appears to surplus development capacity in the local plan. • Staff of the large science sites in the area already have houses. • Need for the development is not made, it is in excess of housing requirement. • What evidence is there that a development of this magnitude is required? Demand based on current evidence is nowhere near the level indicated in Plan. • Up-to-date forecasting model is required to reflect the future more accurately. • Is a supply of housing being developed near the Hinxton Genome campus, questioning the need for further housing in area. • Focus should be on brownfield sites.	201368 (J Lawrence), 201480(G Brookman), 201624 (D Farrant), 201624 (D Farrant), 201782 (J Tanner), 202022 (A Marns), 202142 (M Turner), 203123 (J Searle), 204111 (J Batchelor), 204201 (P Williams), 204586 (R Elston-Green), 204725 (C Gill), 204733 (M Appleton), 205360 (M Hardinge), 205741 (G Saunders), 205746 (C Feenan), 205947 (S Zmigrod), 206193 (R Barnes), 206199 (R Barnes), 206323 (C Cameron),

• Consultation material indicates the Draft Local Plan allocates materially more homes than the stated local need. • Not "justified" or "positively prepared." Remove allocation or significantly reduce and treat as long-term contingency, pending clearer evidence that optimistic growth scenarios are being realised. • Projections in the Draft Plan for additional population growth and corresponding supply of homes are asserted without any presentation of evidence underpinning those or the relevant sensitivity analysis. • Lack of concrete evidence that there is demand to live at Grange Farm from real individuals involved at local centres of economic activity.	207672 (T Collett), 207783 (P Williams), 207789 (P Williams), 208531 (C Alda), 208629 (G Jones), 210488 (C Gill), 210489 (C Gill), 211647 (G King), 211725 (P Seddon), **Other bodies:** 204707 (Little Abington PC), 204948 (Robinson College),
Should be somewhere else • Inappropriate location, threatening the 'necklace village' concept and damaging the South Cambs landscape. • Should consider brownfield sites. • Edge of city would be better. • There are better and more suitable sites. • Would be more prudent and flexible to continue the sustainable development of existing communities in the area of which Little Abington is a good example. • Inconsistent with national planning policy	201031 (R Smith), 201348 (K Christodoulides), 201367 (M Joslin), 201368 (J Lawrence), 201400 (J Wingfield), 201480(G Brookman), 201494 (J Tharby), 201518 (J Jackson), 201530 (I Rogers), 201531 (H Rogers), 201538 (T Davenport), 210539 (A Patterson Lee), 201542 (L Davenport), 201539 A Patterson-Lee), 201544 (L Davenport), 201577 (G Smith), 201591 (L Menzies), 201624 (D Farrant), 201635 (J

• Does not adequately assess or rule out alternative safeguarded locations further from existing settlements, suggesting a lack of a robust site selection process. • Other locations such as the "Duxford Triangle" bounded by the M11, A11 and A505 should be considered. • Alternatives have not been fully or robustly explored or justified. • Should be relocated to near Horningsea where the sewage farm would have been put. • Should be away from our settlement and built on level ground away from 1307. • Consideration should be given to other sites, e.g. junction off A11. Land near to Fulbourn? • Site is wrong side of A11. • North or South of A11 close to Wilbrahams. • Proximity of this site to Hinxton, Babraham and Granta Park seems to be only reason for choosing it. • More appropriate and sustainable alternative sites exist, including land at Hinxton adjacent to the Wellcome Genome Campus. • Will just provide expensive commuter belt housing as it's close to access roads to London.	Shaw), 201684 (S Bowen), 201694 (S Bowen), 201706 (R James), 201747 (B Seddon), 201753 (L Dav), 201756 (G Sharman), 201762 (D Turnidge), 201766 (F Snell), 201785 (G Farrant), 201798 (J Thirkettle), 201803 (S Fryer), 201804 (R Zimmern), 201821 (Y Arkwright), 201846 (E Goodyear), 201855 (J Hudson), 201884 (L McNicholas), 201887 (K Lander), 201890 (K Cooper), 201912 (J Dodd), 201952 (J Hann), 202009 (D Langley), 202020 (J Rivers), 202023 (P Cullimore), 202067 (D Milns), 202082 (D Palmer), 202092 (R Harman), 202142 (M Turner), 202337 (S James), 202477 (J Herbert), 202518 (H Brown), 202608 (C Cameron), 202708 (D Golding), 202737 (A&L Pepperell), 202796 (S McDonnell), 202907 (J Williams), 202912 (R King), 203141 (V Jury), 203187 (M Jury), 203188 (S Hughes), 203190 (M Furlow), 203389 (G Brookman), 203459 (L

• Needs to be focused on areas where sustainable transport is practicable from the start, not on constrained and remote sites such as this, which virtually demand use of cars. • Should be a plan for sustainable 'infill' developments in existing settlements to secure local schools, shops, services. • Alternative nearby sites, such as Bancroft Park, should also be considered to meet urgent accommodation needs. • Brownfield sites and other alternatives have not been fully explored, particularly the Cowley Road site which could accommodate over 8,000 homes. • If costs of delivering a viable Grange Farm settlement are comparable to — or exceed — the WWTW relocation costs, then decision to abandon NEC should be reconsidered. • Appears to have been rushed, likely as a reaction to Anglian Water wastewater treatment plant at North East Cambridge. • Greater Cambridge HELAA from 2025 shows that Grange Farm Site is not suitable or appropriate - overall suitability was "RED". • Publish a transparent reappraisal of reasonable alternative sites, including locations capable of accommodating new settlements, such as land at Six Mile Bottom, and any additional growth areas identified through forthcoming Cambridge Growth Company work.	Lambourne), 203582 (S Hatchell-Watson), 203648 (E Pimblett), 203653 (S Appleton), 203751 (T Preud'homme), 203797 (R Nagasaki), 203803 (J Cutting), 203805 (A Butchart), 203839 (T Solomonides), 203868 (M Broadhurst), 203911 (E Lambourne), 203931 (A Ross), 203961 (S Somerville), 204015 (J Fairs), 204111 (J Batchelor), 204147 (L Paine), 204156 (B Barkataki), 204196 (A Cooke), 204415 (J Fairs), 204586 (R Elston-Green), 204608 (R Hoadley), 204612 (D Potts), 204617 (J Mannion), 204644 (L Sainsbury), 204682 (E Lane), 204733 (M Appleton), 204759 (M Huntsman), 204783 (R Smith), 204810 (E McKeown), 204871 (V Valge-Archer), 204919 (K King), 205018 (J McDonald), 205020 (S Lee), 205092 (M Whittaker), 205147 (I Sainsbury), 205170 (J Graham), 205249 (K Brightwell), 205400 (S Nuttall), 205443 (A Williams), 205454 (R DeBeaux), 205512 (S Somerville),

• Would be more appropriate for North Cambridgeshire, where infrastructure is already established. • Should be located within walking distance of a mainline train station where all travel to work needs would be addressed. • Consider other locations with better road access and ones that would not cause dreadful congestion to surrounding areas. • Choice of an appropriate site should be led by results of an open presentation on all the alternative irrespective of the land ownership and the clear individual benefit. It appears that the current proposal has been promoted by local landowners without enough consideration of the alternatives. • Allocations to the north of Cambridge demonstrably optimise spatial alignment between new homes and the city's primary employment growth areas—Cambridge Science Park, St John's Innovation Park, the North East Cambridge district, and the Cambridge Biomedical Campus. • Further along A11 towards Fulbourn. • There is so much open land between existing villages to the east that it is closer to the M11, Whittlesford Station and the planned Transport Hub. • Turning Sawston into a town is both logical and beneficial for all. • Housing need could be met by 80 villages each having small developments that would be beneficial to increasing the footfall for businesses and providing an	205540 (G Minhas), 205733 (W Bailey), 205922 (C Paton), 205924 (J Snell), 205925 (J Snell), 205926 (F Snell), 205927 (F Snell), 206595 (A Butchart), 206606 (S Solomonides), 206892 (I Sainsbury), 206899 (I Sainsbury), 207226 (E Lane), 207227 (E Lane), 207235 (S Appleton), 207236 (S Appleton), 207237 (S Appleton), 207238 (S Appleton), 207406 (H Rogers), 207503 (K Lester), 207560 (L Sainsbury), 207561 (L Sainsbury), 207562 (L Sainsbury), 207563 (L Sainsbury), 207564 (R Elston-Green), 207593 (V Valge-Archer), 207597 (R King), 207605 (V Jury), 207673 (T Collett), 207675 (T Collett), 207679 (T Collett), 207921 (H Sutton), 208477 (D Pimblett), 208478 (D Pimblett), 208481 (G Crowe), 208527 (G Brookman), 208528 (G Brookman), 208529 (G Brookman), 208530 (G Brookman), 208547 (D Fraser), 208548 (D Fraser), 208549 (D Fraser), 208550 (D Fraser), 208551 (D Fraser), 208552 (D

increased reservoir of volunteer activities needed to sustain such groups as the scouts, youth groups, village halls and community activities. • Suggest between Babraham and Sawston or land between Pampisford Hall, Sawston, SW to Hinxton. • So much open land between existing villages to the east that it is hard to fathom why Grange Farm could be considered favourable. • Hildersham Parish Council (and a significant number of the residents) cannot help but feel that site near Cambridge North would be a much better choice. • When compared with Land at Hinxton (HELAA Reference 200765) as a reasonable alternative, Grange Farm appears less well aligned with the aim of directing development to locations where active and public transport are the natural choice and where there is a strong relationship with existing (and proposed) major transport infrastructure.	Fraser), 208556 (T Solomonides), 208569 (A Ross), 208570 (A Ross), 208571 (A Ross), 208572 (A Ross), 208573 (A Ross), 208574 (A Ross), 208575 (A Ross), 208576 (A Ross), 208578 (J Bowen), 208666 (E Taylor), 208667 (E Taylor), 209048 (J Darrell), 209717 (J Darrell), 209740 (J Barnes), 210385 (M Cookson), 210432 (B Davies), 210477 (W Bailey), 210486 (E Lambourne), 210664 (F Snell), 210665 (F Snell), 210817 (A Marns), 210826 (C Paton), 211020 (M Hardinge), 211034 (T & A Bradford & Jedrzejewski), 211734 (P Seddon), **Other bodies:** 201603 (Great Abington Parish Council), 203371 (BMR Granta Park Propco Limited), 204112 (P Gill), 204707 (Little Abington PC),

	208111 (Sawston Parish Council), 208153 (Great Abington Parish Council),208159 (Great Abington Parish Council), 209965 (Granta Land Ltd), 210707 (Great Abington Parish Council), 210963 (Great Abington Parish Council), 211676 (Smithson Hill),
Deliverability • No guarantee site can be available since there is an agricultural tenancy. • without clear delivery pathway, timescale, or funding strategy is deemed ineffective and risks long term planning blight, failing to meet national policy requirements. • Relies heavily on future studies, strategies, and mitigation measures to address known and significant impacts, including transport capacity, ecological protection, heritage impacts, wastewater treatment, and already strained healthcare, small schools/education facilities with lack of funding, and policing. • The Local Plan should not overly depend on new settlements for housing delivery in the early and middle stages, as medium-scale sites like Balsham Road, Linton can contribute effectively.	201367 (M Joslin), 201494 (J Tharby), 201542 (L Davenport), 201544 (L Davenport),207920 (H Sutton) 204840 (Vistry Group), 207790 (P Williams), 208322 (PX Land Ltd), 208781 (Axis Land Partnerships Ltd), 209965 (Granta Land Ltd), 211104 (Hallam Land Management), 211414 (CALA Group Ltd),

• Housing trajectory expects delivery of completed dwellings to start within 8 years of adoption of new Local Plan. Drawing on experience from other new allocations in the region, this would not appear to be realistic. • Questioned whether Grange Farm will be capable of delivering any new homes within the plan period and its inclusion within the GCLP therefore becomes untenable. • Requires a binding Delivery Strategy committed by promoter. • Dependent on, amongst other new infrastructure, the Cambridge South East Transport scheme which is not due to even be at public inquiry until later this year. This raises questions over its deliverability. • Deliverability Paper submitted for Grange Farm as part of 'call for sites', confirms that 3,560 dwellings (market and affordable) can be delivered during Local Plan period with the first dwellings being delivered in 2030. Councils' housing trajectory states that only 2,550 dwellings can be delivered during Plan Period. Question how accurate these figures are by both Councils and promoter for Grange Farm. • Discrepancy between number in Housing Trajectory provided by Council (up to 300 dwellings in 2040) and 275 dwellings in promoters Housing Deliverability Paper. Concerns that Council will not be able to deliver that number of dwellings across Plan Period.	

Unsustainable • Size and concentration of proposed development in this rural area deemed undesirable and unsustainable. • Bringing the city to the villages. • New town rather than a proportionate extension • Scale of development is not appropriate at this location. • Lacks explanation for selecting land adjacent to Abington for safeguarding. • Failing to provide proportionate and transparent evidence. • Relies excessively on future mitigation, rendering it unjustified, ineffective, and inconsistent with national policy. • Will function more as a large suburb rather than a self-sufficient town. • Does not provide sufficient positive benefits. • Area is already overpopulated. • An impact (positive and negative) assessment on local areas and towns - and further detail of what will be required to overcome negative impacts. • 6,000 homes identified to be built nearer to Granta Park, Babraham and Biomedical Campus in one block is not sustainable. There are not 12,000 jobs at these sites therefore people need to travel elsewhere for work which is not possible by foot or bike.	201281 (C Wolverson), 201311 (M Donovan), 201330 (J Sharman), 201480(G Brookman), 201482 (A Cameron), 201494 (J Tharby), 201681 (J Weston), 201689 (F Irwin), 201730 (C Paton), 201740 (G Lee), 201753 (L Dav), 201756 (G Sharman), 201764 (J Snell), 201795 (R Barker), 201805 (J Dowling), 201912 (J Dodd), 202142 (M Turner), 202163 (R Livermore), 202726 (A Victory), 202737 (A&L Pepperell), 203734 (D Fraser), 203773 (A Russell), 204111 (J Batchelor), 204810 (E McKeown), 205032 (A Spicer), 205457 (M Fentiman), 205741 (G Saunders), 205745 (R Lee), 205919 (C Paton), 205920 (C Paton), 207235 (S Appleton), 207236 (S Appleton), 207237 (S Appleton), 207238 (S Appleton), 207504 (P Hayden-Smith), 207573 (M Howes), 207927 (H Sutton),207967 (S Trueman), 208546 (D Fraser), 208547 (D Fraser), 208548 (D Fraser), 208549 (D Fraser), 208550 (D Fraser), 208551 (D

• Does not represent a sustainable development and in spite of proximity to the biomedical campus and proposed park & ride / guided busway schemes, will become a car-based commuter settlement, with easy access to London to the south. • Too small to be a sustainable new town or to deliver the scale of facilities on-site to prevent significant additional car journeys. • Inappropriate, being too small to be self-sustaining and too large to fit comfortably within the landscape, necessitating a reduction in size and ambition. • In transport terms, the site is not sustainable. • No plans to make new settlement a self-sufficient community, instead it is envisaged that residents will travel to work and presumably also for shopping, schools etc., • In transport terms, site is not sustainable. • Not in alignment with GCLP strategy to direct development to where active and public transport is the 'natural choice'. • Allocation not a logical conclusion when evidence on sustainable patterns of development around Greater Cambridge area are taken into account.	Fraser), 208552 (D Fraser), 208667 (E Taylor), 206602 (S Solomonides), 210820 (C Newgreen), 211645 (G King), **Other bodies:** 201556 (Stapleford PC), 203001 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 203060 (Cambridge Past, Present and Future), 207393 (Cambridge Past, Present and Future), 207384 (Cambridge Past, Present and Future), 207385 (Cambridge Past, Present and Future), 208322 (PX Land Ltd), 208781 (Axis Land Partnerships Ltd), 209698 (CEG Land Promotions Ltd), 209965 (Granta Land Ltd), 210905 (Great Shelford Parish Council),

Size of development • Needs to be considerably scaled back. • More modest development in keeping with the local need, natural environment and market. • Scale of development should be dramatically reduced to a level the area can realistically support and must not be 10x larger than the existing village population. • Disproportionate to the local settlement hierarchy and risks urbanising a rural area. • Should be at reduced scale as a village not a new town, and without warehouse land. • Too large for a rural area, risking unsustainability in local services such as shops, schools, and healthcare. • Already huge development in this area. • Out of character for rural setting. • Scale it down by at least 50%. • Scale and form are inconsistent with the settlement hierarchy and do not support the plan's strategy of focusing growth in sustainable, infrastructure supported locations. • Site seems wholly inappropriate for a development of the proposed scale and density.	200994 (M Logan), 201407 (G Sanders), 201517 (C Woodward), 201538 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201545 (J Yarker), 201577 (G Smith), 201591 (L Menzies), 201635 (J Shaw), 201684 (S Bowen), 201696 (S Tossi), 201706 (R James), 201716 (C Rodgers), 201747 (B Seddon), 201753 (L Dav), 201756 (G Sharman), 201798 (J Thirkettle), 201855 (J Hudson), 201892 (R Berry), 201919 (G Menzies), 201952 (J Hann), 202337 (S James), 202616 (I Smith), 202696, (S Roberts), 202731 (J Barnes), 203123 (J Searle), 203141 (V Jury), 203190 (M Furlow), 203459 (L Lambourne), 203512 (R Tovey), 203636 (W Dott), 203648 (E Pimblett), 203652 (T Randle), 203653 (S Appleton), 203680 (S Jarvis-Dott), 203683 (D Simmons), 203797 (R Nagasaki), 203911 (E Lambourne), 204201 (P Williams), 204785 (R Foale), 204871 (V Valge-Archer), 204891 (D Newgreen),

• Expansion of the Draft Local Plan allocation beyond the originally promoted Grange Farm scheme raises questions about the necessity and role of newly included land. • Inappropriate, being too small to be self-sustaining and too large to fit comfortably within the landscape, necessitating a reduction in size and ambition. • Scale of development threatens the viability and identity of existing communities, potentially leading to commuter dormitory scenarios. • Inconceivable that a development of the scale proposed at Grange Farm, which is 75,000% larger than what the Draft Plan considers appropriate for category of settlement which Draft Plan itself prescribes for Little Abington, should proceed in light of this. • Significant overdevelopment in close proximity to Grange Farm development. • Disingenuous to bring forward site without detailed reference being made to the already contemplated additional plan to develop site further should adjacent Ley Rectory Farm become available. • The proposed development of approximately 6,000 dwellings is likely to generate between 9,000 and 12,000 private vehicles, in addition to buses, delivery vehicles, and commercial traffic required to support residential and employment uses. This level of traffic generation is wholly incompatible with the existing highway infrastructure.	204895 (J Clifford), 204931 (P Seddon), 205271 (P Dsantos),205486 (R Sainsbury) 205640 (L McNicholas), 205875 (C Randle), 205908 (A Hutchings), 205917 (M Rusted), 205923 (J Snell), 205967 (R Randle), 206164 (C Newgreen), 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207386 (W Dott), 207387 (W Dott), 207406 (H Rogers), 207685 (T Collett), 207925 (H Sutton), 207968 (S Trueman), 208601 (M Appleton), 208602 (M Appleton), 208607 (M Appleton), 208629 (G Jones), 205724 (F Goad), 210387 (M Cookson), 210390 (M Cookson), **Other bodies:**

• Not large enough to provide 6000 houses and all the infrastructure of a town – shops, offices, churches, library, fire station, police station, pub, restaurants, parks, museum, health centre care home etc. • New settlement as massive as the Grange Farm Development must be completely self-contained • Area is characterised by organic, incremental village growth over long periods, creating diversity in scale, design, and character. A large, single phase new settlement cannot replicate this. More appropriate approach would be small seeded settlement, followed by incremental, demand led development that reflects local character and avoids the “instant town” problem. • We were horrified to discover that you are proposing to build a development at Grange Farm which would involves the construction of between 6,000 and 8,000 houses. Based on the average figures from the Office of National Statistics these would be homes for about 2.35 people per household or between 14,000 and over 18,000 people	203060 (Cambridge Past, Present and Future), 204948 (Robinson College), 207383 (Cambridge Past, Present and Future), 207384 (Cambridge Past, Present and Future), 207385 (Cambridge Past, Present and Future), 208585 (Little Abington PC), 208588 (Little Abington PC), 208594 (Little Abington PC),
Infrastructure, Services and Facilities • Must be retail outlets (shops, pubs and restaurants) on the site. • Access to general practitioners is already limited and will likely worsen with the development.	200994 (M Logan), 201031 (R Smith), 201203 (A King), 201275 (E Pepperall), 201281 (C Wolverson), 201311 (M Donovan), 201312 (M Cookson), 201316 (M Craven), 201323 (H

• essential infrastructure—including roads, public transport, schools, NHS provision, policing, waste management, utilities, and mobile connectivity—to be fully funded, approved, and delivered before any housing is built. • More detail needed on timescale for facilities delivery. • Current infrastructure will note cope. • Existing schools do not have capacity for this growth. • GPs do not have capacity. • Lack of detail. • No mention of policing. • Addenbrookes does not have the capacity for this growth. • Increased demand for electricity. • Local shops and amenities are insufficient to support the anticipated increase in population. • Essential infrastructure delivery is unproven, risking housing ahead of services. • residents will need to travel for essential services and amenities, exacerbating congestion and reliance on cars. • Have facilities on site, Doctors, School, allotments, small general store/Post office. Picnic area, swimming pool, skate park. • Provide a partner led GP practice and plan effectively with Addenbrookes.	Biggs), 201330 (J Sharman), 201340 (G Broad), 201348 (K Christodoulides), 201358 (R Parkin), 201360 (V Hefford), 201369 (G Marshall), 201375 (B Spencer), 201398 (Francoise Goad), 201434 (G Moore), 201459 (T Stone), 201482 (A Cameron), 201483 (J Sneddon), 201517 (C Woodward), 201518 (J Jackson), 201529 (M Cooper), 201533 (A Smith), 201538 (T Davenport), 201541 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201545 (J Yarker), 201570 (R Perucchini), 201577 (G Smith), 201580 (S Fraser), 201591 (L Menzies), 201665 (K Hefford), 201681 (J Weston), 201689 (F Irwin), 201696 (S Tossi), 201706 (R James), 201716 (C Rodgers), 201720 (J Fairs), 201723 (A Hutchings), 201725 (J Carr), 201726 (J Mayes), 201731 (L Scott), 201740 (G Lee), 201747 (B Seddon), 201748 (M Radcliffe), 201750 (J Hall), 201753 (L Dav), 201761 (B Gutteridge), 201764 (J Snell),

• Businesses and shops in the new town may require a larger catchment area to thrive. • Similar developments in Waterbeach and Northstowe were promised shops, schools and doctors and they are still waiting. • numerous examples both locally and around the country where infrastructure provision that was promised at the start of a project has been slow in coming or in many cases yet to materialise in spite of houses being built and people moving in • Fails to adequately address cumulative impacts. • No mention of additional emergency services. • Build swimming pool; climbing centre; pump track for bikes. • Proposed retail and postal facilities at Grange Farm could undermine existing village services. • Should include a specific policy safeguard that retail provision at Grange Farm is limited in scale and does not include a supermarket or competing postal facility, in order to protect existing village services. • Successful delivery of Grange Farm depends on resolving significant infrastructure interventions and funding arrangements. • Under the subheading 'Uses' Section 7– add a new criterion n. as follows; "n. Contributions to fire & rescue, police and ambulance facilities provision/ funding".	201772 (H Howe), 201782 (J Tanner), 201788 (H Cornwell), 201790 (S Ackerman), 201795 (R Barker), 201798 (J Thirkettle), 201802 (R Cornwell), 201804 (R Zimmern), 201846 (E Goodyear), 201850 (S Zmigrod), 201848 (R Allum), 201882 (N Rumble), 201883 (A Quinn), 201887 (K Lander), 201890 (K Cooper), 201892 (R Berry), 201912 (J Dodd), 201919 (G Menzies), 201921 (E Crutchington), 201943 (J Dowling), 201952 (J Hann), 201996 (S Fordham), 202017 (J Reynolds), 202020 (J Rivers), 202023 (S. • PE support desire to include primary and secondary education. Should be extended to include early years provision. Note in particular that these should be delivered “from the early phases” of development. We support sentiment but are aware that there is considerable experience in the Greater Cambridge area of careful management of timing of opening new schools (both primary and secondary), with implications for other nearby schools. • PE support in principle the desire to see provision of a new healthcare facility on the development. We wish to encourage early dialogue with the Integrated Care Board to understand the likely requirements and land take. • PE support intentions of policy, noting further work is required to establish the scale of each element of open space, sports provision and to work through how best to integrate into a landscape led masterplan. • A&E facilities at Addenbrookes hospital already under strain and cannot take any further capacity until it is developed and expanded. • Major infrastructure such as energy and roads should be comprehensive but other services and facilities should be in response to demand. Would not need large out of town grocery store to support first seeded development as would destroy viability of stores in existing local villages. • Proposal does not include any meaningful comparative analysis of facilities, amenities, public services, open space, or infrastructure required to sustain a	Dowling), 206204 (R Barnes), 206252 (P Brown), 206320 (G King), 206604 (S Solomonides), 206605 (S Solomonides), 201048 (R Sainsbury), 207049 (R Sainsbury) 207050 (R Sainsbury) 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207236 (S Appleton) 207386 (W Dott), 207386 (W Dott), 207543 (R Allum), 207544 (R Allum), 207545 (R Allum), 207555 (C Rodgers), 207585 (D Donohue), 207594 (V Valge-Archer), 207597 (R King),207963, 207975 S Trueman), 208012 (J Logan), 208428 (N Brown), 208481 (G Crowe), 208530 (G Brookman), 208533 (C Alda), 208554 (T Solomonides), 208581 (J Bowen), 208599 (M Appleton), 208663 (E Taylor), 209049 (J Darrell), 209718 (A Spicer), 209728

population of this size, nor how these would be delivered in an area currently characterised by rural villages and agricultural land. • Concerned that policy does not prejudge appropriate uses, or timing, which will be negotiated application stage. PE committed to ensuring early provision of community facilities to encourage and foster strong sense of community, potentially through some meanwhile uses. However, desire to see this in place “from the outset” could infer this is required before any occupiers and demand. We are keen to learn from best practice in other successful new communities, in places such as Welbourne, Nansledan and Poundbury, for inspiration. • PE support planning for essential services, facilities and infrastructure and we are committed to working with all statutory undertakers, GCSP and other interested parties to ensure timely delivery of infrastructure. Viability will be an important consideration. Drinking Water • Existing concerns regarding the supply of drinking water in the area. • Chalk aquifer and sewage system will not support an additional 6000 homes. • Abington is the driest area of an already dry part of UK. The site is on chalk which supplies our drinking water and keeps the river Granta as a rare chalk stream. • Lack of water locally with solution to come from a new reservoir which is north of Cambridge (pumping costs). • Proposal of more houses without a plan to supply potable water is of great concern. • Water is a vital commodity that requires long term planning and protection. • No mention of a water management plan. • Grange Farm requires 3-4 million litres daily by 2032. Grafham Water Transfer will not be online until 2032. Suspend allocation unless Cambridge Water confirms water supply for 2025-2032 in writing, or defer to post-2032. • Site is over major aquifer highly sensitive to contamination from pollutant runoff. Extent to which risk can be mitigated is unclear, but a major development in this location is clearly undesirable in this water-stressed region.	201031 (R Smith), 201281 (C Wolverson), 201316 (M Craven), 201369 (G Marshall), 201375 (B Spencer), 201459 (T Stone), 201482 (A Cameron), 201624 (D Farrant), 201655 (P Zimmem), 201681 (J Weston), 201785 (G Farrant), 201804 (R Zimmern), 201805 (J Dowling), 201848 (R Allum), 201881 (R Randle), 201882 (N Rumble), 201883 (A Quinn), 201952 (J Hann), 202017 (J Reynolds), 202022 (A Marns), 202477 (J Herbert), 202600 (L Cameron), 202737 (A&L Pepperell), 203459 (L Lambourne), 203680 (S Jarvis-Dott), 203911 (E Lambourne), 204181 (S Morgan), 204196 (A Cooke), 204201 (P Williams), 204395 (P Klein-Ensminger), 204664 (S Haynes), 204725 (C Gill), 204773 (G Boselli), 204810 (E McKeown), 205387 (M Hardinge), 205387 (M Hardinge), 205432 (N Marshman), 205618 (S Lee), 205731 (W Bailey), 205767 (J Sneddon), 205914 (M Rusted), 206030 (J Dowling), 206896 (

• Must require a full Landscape and Visual Impact Assessment (LVIA). • Note that an amount of greenspace has not yet been specified. Natural England advise 3ha/1000 greenspace which meets the Natural England GI Framework Standards criteria should be an absolute minimum, particularly where mitigation for recreational pressure is needed, and that more should ideally be required. For a site of 6000 homes, a minimum of 43.2ha semi-natural greenspace would be needed. • Precautionary, landscape-led approach that reduces development intensity, strengthens environmental protections, and aligns growth with environmental and infrastructure capacity is required. • Impact on local and wider views. • No detailed, independent and verified visual impact assessment. • Will be visible from further away than Trumpington, Duxford, Great Chesterford and Bartlow. • Council's own Skyline and Tall Buildings Strategy concludes site is unsuitable for tall or visually prominent development and identifies a high residual risk of harm even with mitigation. • Soft landscaping proposals will not mask development. • Boundaries of "green" shown on the drawing within the Grange Farm plan does not specify the size of these or how they will be protected. • The development would significantly affect the distinctive chalk landscape, open views and rural approaches. Supply of electricity would be via above ground post or pylons making further intrusions on the landscape. • PE are concerned about lack of clarity about purpose, appropriate land uses, location, definition/purpose and spatial extent of proposed SEA. The term Strategic Enhancement Area is potentially misleading given wide-ranging nature of policy intention and its generalised use across different contexts and boundary interfaces. PE are fully supportive of a landscape led design, but consider that further work is required to establish size and nature of proposed SEA, the purposes and land uses for this area. As long term landowners, both PE and Mr Franklin intend to continue to farm their residual land holdings, and therefore definition over the proposed SEA and consideration of impacts on the residual farm will be important considerations for both landowners. • Support in principle need for robust landscape framework. We have commissioned expert consultants on landscape, ecology and heritage to explore these issues further. Remain concerned about current definition of SEA and agree that this should be devised based on a more detailed evidence driven understanding of site constraints and opportunities, and a landscape led masterplan proposal. • Policy should require legal mechanisms that prevent buffer at the Ley Rectory Farm Barns interface being thinned, repurposed or built upon in future years	(C Randle), 205905 (A Hutchings), 205912 (M Rusted), 205920 (C Paton), 205921 (C Paton), 205945 (R Barker), 205955 (S Zmigrod), 205968 (R Randle), 206027 (J Dowling), 206150 R Livermore), 206153 (R Livermore), 206196 (R Barnes), 206197 (R Barnes), 206202 (R Barnes), 206250 (P Brown), 206314 (G King), 206315 (G King), 206595 (G Butchart), 206602 (S Solomonides), 206603 (S Solomonides), 206605 (S Solomonides), 206900 (I Sainsbury), 207653 (A&C Soares), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207149 (M Huntsman), 207178 (S Bowen), 207227 (E Lane), 207235 (S Appleton), 207238 (S Appleton), 207406 (H Rogers), 207504 (P Hayden-Smith), 207556 (C Rodgers), 207559

Impact on chalk stream (Granta) • Threatens one of only 260 chalk streams in the World which runs through our village. • Strong, enforceable protections for chalk stream must be guaranteed. • Chalk aquifer and sewage system will not support an additional 6000 homes. • The site is on chalk which supplies our drinking water and keeps the river Granta as a rare chalk stream. • No amount of water management on site will prevent contamination. • Chalk streams are internationally important and are already impacted by existing agriculture and sewage plants upstream at Linton. • Policy must provide robust evidence on how the development can proceed without further jeopardizing the fragile local water table and the health of these rare chalk stream habitats. • No detailed, independent and verified environmental and hydrogeological impact assessment. • Development should not proceed unless assessments demonstrate no harm to the chalk stream or increased flood risk.	201368 (J Lawrence), 201372 (A Wells), 201407 (G Sanders), 201467 (R Wells), 201482 (A Cameron), 201538 (T Davenport), 201541 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201554 (R Martin), 201570 (R Perucchini), 201624 (D Farrant), 201655 (P Zimmem), 201662 (N Ockendon), 201706 (R James), 201761 (B Gutteridge), 201762 (D Turnidge), 201790 (S Ackerman), 201795 (R Barker), 201855 (J Hudson), 201882 (N Rumble), 201912 (J Dodd), 201985 (J Sainsbury), 202017 (J Reynolds), 202142 (M Turner), 202337 (S James), 202600 (L Cameron), 202731 (J Barnes), 202737 (A&L Pepperell), 203190 (M Furlow), 203417 (F Davis), 203868 (M Broadhurst), 203911 (E Lambourne), 204181 (S Morgan), 204196 (A Cooke), 204725 (C Gill), 204807 (P Munns),

• Under strategic plan green infrastructure initiatives number 1 is the revitalisation of the chalk stream network - part of the same area as the Grange farm development - nothing mentioned in the Grange Farm plan on how the chalk streams will be protected or affected by this development. • The allocation sits above the river Granta chalk-stream catchment where ecological status is not good, and where regional plans recognise water scarcity and the need to avoid increases in abstraction until new strategic resources come on line. Large scale developments here risks run-off a water - quality impacts on a nationally rare Habitat. • The site sits on a shallow chalk aquifer and adjacent to the rare River Granta chalk stream; construction runoff could pollute these highly sensitive ecosystems. • In the absence of clear, robust and enforceable evidence demonstrating no adverse effect, permission should be refused at Grange Farm. • Exhibits laudable elements and characteristics (being up-slope) so that it could, if all the proposed mitigations and water handling systems are included, be neutral to positive in overall impact on the River Granta. • Trustees have for years been very concerned about impact of CSET proposals, particularly on Nine Wells and the Brook. The Trust supports on-road alternative being put forward by Better Ways for Busways group.	204891 (D Newgreen), 204895 (J Clifford), 204919 (K King), 205147 (I Sainsbury), 205164 (T Stone), 205387 (M Hardinge), 205401 (B Davies), 205430 (E Davies), 205546 (G Minhas), 205601 (S Richards), 205706 (A Wells), 205711 (A Wells), 205731 (W Bailey), 205737 (J Wingfield), 205748 (C Feenan), 205758 (R Wells), 205767 (J Sneddon), 205805 (R Martin), 205942 (R Barker), 205949 (S Zmigrod), 205950 (S Zmigrod), 206168 (C Newgreen), 206898 (I Sainsbury), 207786 (P Williams), 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207150 (M Huntsman), 207237 (S Appleton), 207387 (W Dott), 207564 (R Elston-Green), 207571 (P Gill), 207574 (M Howes), 207583 (G Brookman), 207591 (D

Habitats and Wildlife • Impact on habitats. • Strong, enforceable protections for wildlife must be guaranteed. • Impact on SSSIs. • Increased pressure on existing open and biodiverse spaces in Stapleford parish, including Magog Down, Chalk Hill Down, and Wandlebury Country Park. • Established open spaces may become overcrowded, negatively impacting natural assets, and recommend using CIL/S106 funds to manage the impacts of increased footfall. • impact on precious flora and fauna especially Grey Partridge populations. • Sufficient and sufficiently robust and legally binding safeguards are essential to ensure commercial developers are held to the requirements, both during construction and for the long term maintenance of, for example, biodiversity mitigation.	201311 (M Donovan), 201316 (M Craven), 201357 (K Battom), 201372 (A Wells), 201467 (R Wells), 201538 (T Davenport), 201541 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201662 (N Ockendon), 201753 (L Dav), 201762 (D Turnidge), 201785 (G Farrant), 201788 (H Cornwell), 201790(S Ackerman), 201803 (S Fryer), 201821 (Y Arkwright), 201898 (R Pargeter), 201915 (G Battom), 201919 (G Menzies), 202023 (P Cullimore), 202047 (M Tiplady), 202082 (D Palmer), 202481 (P Brown), 202912 (R King), 203407 (P Allum), 203934 (L Donahue), 204999 (D Stephen), 205164 (T Stone), 205271 (P Dsantos), 205457 (M Fentiman), 205618 (S Lee), 205678 (J Sainsbury),

• Must include specific mitigation strategies and funding to manage the impacts of increased recreational activity on the important ecological, heritage and amenity assets on the adjacent Gog Magog Hills – so that they continue to contribute to the quality of life of the wider Cambridge population. • Item 11d should be revised to replace ‘minimise’ with ‘avoid’ and to take into account Wandlebury and Magog Down by adding 'and other nature and heritage sites’ • How will the development prevent unofficial access points to the Roman Road being created? • Welcome inclusion of SEA to buffer Roman Road SSSI from development, but concerns currently remain about how impacts will be avoided. • Grange Farm is taking away from a natural environment and whilst the plan acknowledges various things as previously mentioned there is no specific detail on how this will be protected or enhanced with only throwaway lines like ”consider these assets” “deliver enhancement wherever possible” these mean nothing and will allow the developer to ignore. • Will the houses have eaves for swallows and house martins, and purpose-built bricks for swifts, and areas for sparrows etc.? • Ecological survey and monitoring should also be added as requirement for specific sensitive locations outside of the site’s red line boundary that may be impacted by	205680 (S Fordham), 205709 (A Wells), 205710 (A Wells), 205878 (C Randle), 205970 (R Randle), 206250 (P Brown), 206316 (G King), 206599 (A Butchart), 207068 (L Cookson), 207653 (A&C Soares), 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207227 (E Lane), 207564 (R Elston-Green), 207565 (S Fryer), 207566 (S Fryer), 2307567 (J Wallace), 207584 (G Brookman), 207585 (D Donohue), 207591 (D Stephen), 207592 (D Stephen), 208527 (G Brookman), 208547 (D Fraser), 208548 (D Fraser), 208549 (D Fraser), 208550 (D Fraser), 208551 (D Fraser), 208552 (D Fraser), 208569 (A Ross), 208629 (G Jones), 206028 (J Dowling), 205913 (M Rusted), 210403 (M Cookson), 210414 (O Barnes),

development. Should be requirement to monitor effectiveness of measures put in place to combat recreational disturbance on SSSI, for example, and commitment to implementing alternative solutions if initial measures are ineffective.	210791 (R Perucchini), 210824 (C Paton), 211652 (G King), 211694 (J Dowling), 211696 (J Dowling), 211728 (P Seddon), **Other bodies:** 201556 (Stapleford PC), 201604 (Great Abington Parish Council), 201605 (Great Abington Parish Council), 202029 (Weston Colville PC), 203001 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 203060 (Cambridge Past, Present and Future), 207383 (Cambridge Past, Present and Future), 207384 (Cambridge Past, Present and Future), 207385 (Cambridge Past, Present and Future), 207614 (Natural England), 2207615 (Natural England), 08592 (Little Abington PC), 210906 (Great Shelford Parish Council),

Historic Assets • Impact on local heritage. • Evidence supporting site selection admits the boundary is too constrained to properly mitigate harm to sensitive heritage assets. • Strong, enforceable protections for heritage assets must be guaranteed. • Impact on Roman Road. • Impact on scheduled ancient monument and Fleam Dyke. • Heritage buildings should be protected from being overshadowed by new developments, requiring careful and sympathetic consideration. • Concerns regarding the archaeological significance. • Impact on Abington's Conservation Area • Preservation of heritage assets have not been fully assessed or mitigated. • Must include specific mitigation strategies and funding to manage the impacts of increased recreational activity on the important ecological, heritage and amenity assets on the adjacent Gog Magog Hills – so that they continue to contribute to the quality of life of the wider Cambridge population. • How will the development prevent unofficial access points to the Roman Road being created? • No Heritage Impact Assessment.	201316 (M Craven), 201483 (J Sneddon), 201531 (H Rogers), 201538 (T Davenport), 201541 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201591 (L Menzies), 201624 (D Farrant), 201690 (J Kelly), 201731 (L Scott), 201753 (L Dav), 201762 (D Turnidge), 201782 (J Tanner), 201795 (R Barker), 201803 (S Fryer), 201805 (J Dowling), 201821 (Y Arkwright), 201898 (R Pargeter), 201919 (G Menzies), 202023 (P Cullimore), 202092 (R Harman), 202163 (R Livermore), 202414 (M Whitcombe), 202481 (P Brown), 202616 (I Smith), 202675 (N Fraser), 202726 (A Victory), 202731 (J Barnes), 203407 (P Allum), 203512 (R Tovey), 203931 (A Ross), 204181 (S Morgan), 204196 (A Cooke), 204201 (P Williams), 204465 (H Sutton), 204617 (J Mannion), 204810 (E McKeown), 204939 (G Brown), 205016 (G Dalton), 205457 (M Fentiman), 205487 (G Minhas), 205387 (M Hardinge), 205545 (G

• Must acknowledge and assess cumulative landscape harm of Grange Farm alongside Kingsway Solar Farm and CSET corridor. It should state that development will be refused if the combined impact creates a continuous "urban wall" across the southern landscape. • Scale of proposed development and its proximity to designated and sensitive sites mean that significant adverse impacts are still likely, despite mitigation. • Impact on Roman Road, Brent Ditch, Fleam Dyke, the A11, the Henge next door to the Bronze Age Barrows, • Does not “preserve or enhance” designated heritage assets, nor the appearance of the Conservation Area of Little Abington (and Great Abington), nor the views into or out of them. • Would be contrary to Planning (Listed Buildings and Conservation Areas) Act 1990 as it would dominate and damage the conservation area's character and appearance due to the proposed size and population density and dominant elevated location on the hill overlooking Little Abington. • There is an historic ancient right of way from the A1307 into a chalk pit which lies within the development. This path was used for centuries by villagers to obtain chalk and clunch to maintain and repair their homes. This heritage should be preserved.	Minhas), 205635 (M Furlow), 205760 (R Wells), 205768 (J Sneddon), 205820 (E Scott), 205821 (E Scott), 205943 (R Barker), 206250 (P Brown), 206317 (G King), 206901 (I Sainsbury), 207051 (R Sainsbury), 207068 (L Cookson), 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207227 (E Lane), 207235 (S Appleton), 207504 (P Hayden-Smith), 207563 (L Sainsbury), 207565 (S Fryer), 207653 (A&C Soares), 207788 (P Willaims), 208011 (J Logan), 208013 (J Logan), 208481 (G Crowe), 208528 (G Brookman), 208569 (A Ross), 208570 (A Ross), 208629 (G Jones), 210389 (M Cookson), 210397 (M Cookson), 210409 (M Cookson), 210824 (C Paton), 210836 (R

• PE support Heritage Impact and Historic Landscape Character Assessments. We support in principle the need for robust landscape and masterplanning framework. Have commissioned expert consultants on landscape, ecology and heritage to explore these issues further, to ensure that we can respond to these key issues. • Whilst there are no designated heritage assets within the site boundary there are a number of designated heritage assets nearby. Any development of this site has potential to affect these heritage assets and their settings. • HIA notes there will be a high risk of residual harm to heritage given scale and nature of proposals. Essential that every opportunity is taken to mitigate impacts and also maximise enhancements for heritage. • Criterion 6 change 'historic assets' to 'heritage assets' and 'Scheduled Ancient Monument' to 'Scheduled Monument'. Amend 'Abington Conservation Area' to 'Great and Little Abington Conservation Area'. • b i Delete Ancient • bii Good to mention GII listed Worsted Lodge but other nearby listed buildings should also be mentioned e.g. 8 Cambridge Road • Needs to reference nearby Great and Little Abington Conservation Area and associated listed buildings. • B iii barrows, not burrows.	Barnes), 211027 (T & A Bradford & Jedrzejewski), 211653 (G King), 211694 (J Dowling), **Other bodies:** 201669 (Linton PC, 203060 (Cambridge Past, Present and Future), 203268 Horseheath Parish Council), 207383 (Cambridge Past, Present and Future), 207384 (Cambridge Past, Present and Future), 207385 (Cambridge Past, Present and Future), 208584 (Little Abington PC), 208596 (Little Abington PC), 209273 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210140 (Historic England), 210727 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210728 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210729 (Pampisford Estate Farms

• Suggest referring to a '…more detailed Heritage Impact Assessment…' given that an HIA has already been undertaken. • Do you mean Historic Landscape Characterisation? Purpose should be to inform the masterplanning. • Recommend re-ordering of the bullet points. • Recommend wording could be amended to read: 'Historic Landscape Characterisation and Landscape Character Assessment, more detailed Heritage Impact Assessment, and Archaeological Assessment must be undertaken to understand the impacts of development on landscape character, long range and local views and heritage assets and their setting, identifying appropriate mitigation and enhancement measures. The Council's HIA and the results of these further assessments must inform the masterplanning for the site.' • Include reference to 'improve understanding and legibility of Worstead Street Scheduled Monument and links to other Roman networks through interpretation and public art' (as recommended in the HIA). • 11 c should mention scheduled monument designation of Roman Road • 11 g should also mention that 'the open character of the landscape buffer should be maintained' (as recommended in the HIA). • 23 Lifespan – needs to include reference to the need for a Conservation Management Plan for the heritage assets.	Limited and the Trustees of the James Binney Will Trust), 210730 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust)

• Figure 82 Spatial Framework We welcome the identification of green space, landscape features around heritage assets. • The Town Centre is shown quite high up the hill. Given that heights of buildings are likely to be taller at the town centre, there is the potential for the built form to be visible above the ridge. We therefore recommend that Centre is moved lower down slope. • Paragraph 3.3.66 Long term Conservation Management Plan also needed for Roman Road and other heritage assets. This should also be included in the Policy. • Further work required to understand heritage importance of Roman Road, and area south of Roman Road and its interface with development. As landowner, geophysical survey work has been commissioned to aid our understanding of the site's heritage significance. Whilst it is recognised that there will be a need to provide some buffer to sensitive heritage and landscape features, there is further work required to determine the most appropriate way to achieve this. Design approaches, such as framing buried remains of interest to give them a visual setting, thereby enhancing their significance, may also be appropriate. • Further work required to determine most appropriate location for "centre" accounting for range of factors. Site topography and building heights will be important considerations, but there will be wider considerations including proximity and access to nearby communities, mix of uses proposed, phasing of	

development and infrastructure required to support delivery of such facilities. Policy should therefore be amended to support identification of a site for a new local centre, but leave flexibility in policy to find the appropriate design led response. • PE support variety of built form as set out in draft policy but conflicts with 7 A) which promotes an average density target of 50 – 55 dwellings per hectare. • PE support landmark features and buildings in appropriate locations, taking account of landscape and other technical work which will provide guidance on appropriate locations for taller buildings.	
Highways • Impact on A1307. • Impact on Four Wentways. • Exit onto A1307 will cause problems. • Consideration should be given to a new junction onto the A11. • Impact on A505/A1301 roundabout • will likely lead to more 'rat running' through Little Abington. • A505 needs increased capacity • Need safe continuous cycle links to other villages • A505 and A1307 are already badly congested during am/pm rush hours. • A1307 is high casualty road which will be made worse.	200994 (M Logan), 201011 (M Lunn), 201031 (R Smith), 201231 (M Sims), 201275 (E Pepperall), 201281 (C Wolverson), 201311 (M Donovan), 201312 M Cookson), 201316 (M Craven), 201323 (H Biggs), 201330 (J Sharman), 201340 (G Broad), 201348 (K Christodoulides), 201357 (K Battom), 201358 (R Parkin), 201360 (V Hefford), 201367 (M Joslin), 201368 (J Lawrence), 201369 (G Marshall), 201372 (A Wells), 201375 (B Spencer), 201407 (G Sanders), 201408 (R

• Timescale needed for adding/upgrading junctions. • No guarantee residents would walk or cycle to Welcome or Babraham Institute. • Scale of development warrants own highways infrastructure. • Underpass or bridge to new P&R • Dedicated lane on A1307 to Addenbrookes for emergency vehicles. • Buses already full. • Put park and ride near housing. • Will site be able to access Balsham Road junction on A11. • Transport estimates are widely optimistic with no scientific backing. • Claiming improved buses and cycling will fix this is unrealistic • Traffic analysis conducted just after post-Covid at the height of people still working from home. • Reliance on the proposed CSET scheme is speculative at best: it may never be approved or funded, and it would not connect most residents to their workplaces, meaning car use will remain inevitable. • Residents will need to travel for essential services and amenities, exacerbating congestion and reliance on cars. • Site is easily accessed from North London and commuting by train from Whittlesford. • Huge volume of traffic now as many staff at Addenbrooke's live in Haverhill.	Lee), 201415 (M Fryer), 201419 (M Fryer), 201434 (G Moore), 201443 (T Randle), 201459 (T Stone), 201482 (A Cameron), 201517 (C Woodward), 201518 (J Jackson), 201529 (M Cooper), 201530 (I Rogers), 201533 (A Smith), 201541 (T Davenport), 201542 (L Davenport), 201544 (L Davenport), 201545 (J Yarker), 201570 (R Perucchini), 201580 (S Fraser), 201584 (E Scott), 201591 (L Menzies), 201624 (D Farrant), 201635 (J Shaw), 201655 (P Zimmem), 201662 (N Ockendon), 201665 (K Hefford), 201667 (A Eleftheriou), 201668 (R Roberts), 201690 (J Kelly), 201691 (C Randle), 201694 (S Bowen), 201696 (S Tossi), 201697 (H Ward), 201720 (J Fairs), 201723 (A Hutchings), 201725 (J Carr), 201726 (J Mayes), 201731 (L Scott), 201748 (M Radcliffe), 201750 (J Hall), 201753 (L Dav), 201756 (G Sharman), 201761 (B Gutteridge), 201762 (D Turnidge), 201782 (J Tanner), 201785 (G Farrant), 201788 (H

• Only 2 routes directly onto the 1307 which doesn't auger well for a steady flow along the road. • Should be new traffic survey. • Should be different access to and from site. • Assuming all will take the bus or cycle is unrealistic. • Impact on those travelling to/from Haverhill. • Introduce additional frequent bus services into Cambridge. • Lack of understanding that it will attract visitors from surrounding villages, necessitating adequate transport provisions. • Concerns about accessibility and connectivity, making it feel more like an enclave. • Fully evaluate the impact of this development on the existing roads. • Need to take account of planned development further along A1307 at Haverhill and villages in-between. • Planned travel hubs would not alleviate impact as they are north on the A1307. • Already dangerous country lanes terrifying to walk and ride on. • Already congested area, with the A1307 at capacity, experiencing peak traffic of 1200 vehicles per hour in one direction. • Whittlesford Station is small and current transport plans, including the travel hub and Linton Greenway, are incomplete. • Enlarge Whittlesford train station.	Cornwell), 201790 (S Ackerman), 201798 (J Thirkettle), 201802 (R Cornwell), 201803 (S Fryer), 201805 (J Dowling), 201821 (Y Arkwright), 201846 (E Goodyear), 201848 (R Allum), 201855 (J Hudson), 201881 (R Randle) 201882 (N Rumble), 201883 (A Quinn), 201887 (K Lander), 201889 (W Cooper), 201890 (K Cooper), 201895 (A Cassidy), 201898 (R Pargeter), 201912 (J Dodd), 201919 (G Menzies), 201921 (E Crutchington), 201923 (D Rogers), 201924 (M Dance), 201952 (J Hann), 201996 (S Fordham), 202017 (J Reynolds), 202020 (J Rivers), 202022 (A Marns), 202023 (S. • If transport hub at Babraham does not proceed, Grange Farm will just put even more traffic on the already overcrowded A1307. • Need mixed-use pedestrian/cycle path to the proposed research centre at Duxford Air Museum. • Plan to create a community of this size that is less dependent on the car may be slightly naive. • Access to the local train stations at Audley End, Whittlesford and Chesterford would only reinforce those congestion issues along with the lack of parking at those locations. • Allow for more private car parking spaces. • Relies entirely on major new transport infrastructure that is not consented, does not have secure finance and is technically challenging. • In transport terms, the site is not sustainable. • Public transport is future-dependent and not clearly committed (i.e., CSET). • Commission detailed modelling of the transport impacts of this development to identify the full suite of transport interventions required to make the development acceptable in planning terms, and to test its viability. • Design supporting bus infrastructure and services to link this development to destinations along the A11 and A505, potentially as far as Royston.	Herbert), 202481 (P Brown), 202568 (K Deeming), 202583 (H Pimblett), 202600 (L Cameron), 202616 (I Smith), 202632 (J Doncaster), 202638 (C Yeomans), 202675 (N Fraser), 202675 (N Fraser), 202699 (K Russell), 202701 (K Russell), 202708 (D Golding), 202726 (A Victory), 202731 (J Barnes), 202737 (A&L Pepperell), 202792 (S McDonnell), 202876 (C Pippen), 202915 (A Batty), 203010 (J Wallace), 203141 (V Jury), 203188 (S Hughes), 203359 (B Garnish), 203362 (A Hoare), 203389 (G Brookman), 203407 (P Allum), 203417 (F Davis), 203459 (L Lambourne), 203512 (R Tovey), 203529 (O Barnes), 203582 (S Hatchell-Wilson), 203586 (H Thomas), 203636 (W Dott), 203648 (E Pimblett), 203652 (T Randle), 203677 (E Randle), 203680 (S Jarvis-Dott), 203734 (D Fraser), 203773 (A Russell), 203798 (C Alda), 203805 (A Butchart), 203807 (S Solomonides), 203842 (A Chan), 203911 (E

• Does not explicitly identify A505 as critical infrastructure, nor does it set out a clear, funded and deliverable strategy for mitigating impacts of proposed new settlement and other growth on this corridor. • Test the feasibility and viability of this site allocation without CSET, given that scheme is both unfunded and at risk of not securing the order required for its construction. • Does not explicitly require public rights of way or equestrian access to be considered. Existing rights of way, including byways and footpaths, should be safeguarded and embedded within the masterplan. • Transport and active travel infrastructure linking Grange Farm with surrounding communities must be designed as inclusive, multi-user routes accommodating pedestrians, cyclists and equestrians. • Severe cumulative impact on the already-failing A11 Fourwentways roundabout and A1307(34 accidents in 10 years, one fatality), creating unacceptable danger to schoolchildren, elderly, and cyclists. • Should ensure that there is a fast through route for buses that stops right at the centre of the development site to foster frequent bus services that serve both Haverhill and Grange Farm without slowing passengers down. • Centre of Grange Farm too far from CSET for pedestrians.	Lambourne), 203931 (A Ross), 203934 (L Donahue), 203961 (S Somerville), 204015 (J Fairs), 204111 (J Batchelor), 204147 (L Paine), 204156 (B Barkataki), 204181 (S Morgan), 204196 (A Cooke), 204395 (P Klein-Ensminger), 204617 (J Mannion), 204635 (M Starr), 204664 (S Haynes), 204773 (G Boselli), 204785 (R Foale), 204807 (P Munns), 204810 (E McKeown), 204879 (J Dowling), 204891 (D Newgreen), 204895 (J Clifford), 204921 (R Rix), 204931 (P Seddon), 204977 (P Sainsbury), 205016 (G Dalton),205018 (J McDonald), 205020 (S Lee), 205032 (A Spicer), 205142 (N Whittaker), 205147 (I Sainsbury), 205154 (R Froment), 205164 (T Stone), 205187 (S Goodhart), 205193 (V Silvey), 205218 (S Richards), 205227 (P Mc), 205271 (P Dsantos), 205387 (M Hardinge), 205387 (M Hardinge), 205425 (S McDonald), 205430 (E Davies), 205432 (N Marshman), 205457 (M

• Full modelling of traffic volumes, junction capacity, and realistic travel behaviour must be completed before site is allocated. • The current draft cannot show whether the A1307 and A11 can safely or efficiently support the development. • Potential for 'rat-running' through villages. • Ensure any transport infrastructure which is critical to accommodating sustainable growth in this location is secured and adequately planned for. • Allocates land at Grange Farm based on transport provisions (CSET bus□way and A11/A1307 crossing) that have no confirmed consent or funding, making the allocation unrealistic. • Reliance on a future A11 transport hub to manage increased demand lacks a tested design, clear access strategy, and evidence of capacity beyond current needs. • Impact on public rights of way. • Grange Farm not suitable to service nearby campuses. • The IDP does not clearly indicate how CSET busway is to be funded, but it is assumed that the entirety of that cost will fall on the Grange Farm allocation. • Relies entirely on major new transport infrastructure that is not consented, does not have secure finance and is technically challenging.	Fentiman), 205502 (M Victory), 205545 (G Minhas), 205547 (G Minhas), 205606 (S Goodhart) 205633 (M Furlow), 205634 (M Furlow), 205642 (L McNicholas), 205662 (R Berry), 205707 (A Wells), 205708 (A Wells), 205714 (A Wells), 205725 (F Goad), 205727 (F Goad), 205729 (W Bailey), 205736 (J Wingfield), 205738 (J Wingfield), 205747 (C Feenan), 205769 (J Sneddon), 205810 (R Perucchini), 205811 (R Perucchini), 205812 (R Perucchini), 205816 (E Scott), (205879)n C Randle), 205880 (C Randle), 205906 (A Hutchings), 205907 (A Hutchings), 205915 (M Rusted), 205941 (R Barker), 205948 (S Zmigrod), 205971 (R Randle), 205972 (R Randle), 206031 (J Dowling), 206032 (J Dowling), 206033 (J Dowling), 206149 (R Livermore), 206154 (R Livermore), 206248 (P Brown), 206203 (R Barnes), 206249 (P Brown), 206251 (P Brown), 206319 (G King), 206327 (C Cameron), 206328 (C Cameron),

• Success of Culina transport company means an increase articulated lorry movements on A1307 and this will only increase as they use Haverhill depot as a dock location between the ports and the Midlands/London area. • Assumes that transport impacts can be resolved through later-stage interventions and modal shift, rather than demonstrating that sufficient, deliverable capacity exists at the outset to accommodate development. • Lacks clarity on how traffic would realistically move through A11/A1307 corridor, how peak-hour volumes would be managed, or how congestion would be avoided during construction and early occupation. • Reconstruct A11/A1037 junction. • Widen carriageway, junction improvements, bus priority of A1307 to Cambridge. • Provide traffic calming through the Abingtons. • Increase bus frequency. • New railway station at or near site. • Traffic data used to support the allocation appears to include periods affected by Covid-19 travel suppression. Baseline conditions may not reflect current or future traffic levels. • Delivery relies heavily on the successful approval of the Transport and Work Act (TWA) application for the CSET proposals for which no public inquiry date is set and no extension to Grange Farm provided.	206598 (A Butchart), 206601 (S Solomonides), 206602 (S Solomonides), 206605 (S Solomonides), 206689 (R Williams), 206690 (R Williams), 206895 (I Sainsbury), 207006 (B Davies), 207066 (L Cookson), 207067 (L Cookson), 207138 (T Davenport), 207139 (T Davenport), 207140 (T Davenport), 207141 (T Davenport), 207142 (T Davenport), 207143 (T Davenport), 207144 (T Davenport), 207145 (T Davenport), 207146 (T Davenport), 207147 (T Davenport), 207148 (T Davenport), 207150 (M Huntsman), 207178 (S Bowen), 207226 (E Lane), 207236 (S Appleton), 207386 (W Dott), 207389 (R Haining), 207407 (S Haynes), 207504 (P Hayden-Smith), 207523 (R Charles), 207551 (B Garnish), 207555 (C Rodgers), 207558 (G Smith), 207561 (L Sainsbury), 207565 (S Fryer), 207568 (J Wallace), 207570 (P Gill), 207572 (M Howes), 207579 (J Weston), 207582 (G Brookman), 207586 (D Donohue),

• Little evidence that people walk/cycle from South Cambridge villages and Cambridge to existing Science Parks. • Planned CSET route currently stops short of Grange Farm, terminating to the west of the A11 and would necessitate a further extension of the busway and a new Transport Hub to the east of the A11 to serve the new settlement. • Reliance on bus-led public transport strategies alone rarely achieves the desired modal shifts required to make a new settlement of this scale sustainable. • Occupation should be restricted to align with completion of CSET and its proposed extension in order to offer a choice of transport modes on day one. • Growth at Grange Farm could bring significant and potentially adverse impacts but acknowledge the generation of further evidence. • Has proposed segregated public transport connection been fully costed, and has necessary land been secured? Connection is presented as a fundamental dependency for viability of Grange Farm site. If it cannot be delivered, would the site be withdrawn? • National Highways require the CSET connection over A11 to be grade separated and not rely on the A11 junction. • CCC agrees that Grange Farm can be delivered in transport terms with sufficient mitigation, it is only deliverable if CSET Phase 2 is built as well as the extension to	207592 (D Stephen), 207594 (V Valge-Archer), 207597 (R King), 207605 (V Jury), 207653 (A&C Soares), 207659 (P Lester), 207667 (K Brown), 207674 (T Collett), 207785 (P Williams), 207923 (H Sutton), 207969 (S Trueman), 207978 (G Brown), 208017 (J Logan), 208431 (N Brown), 208478 (Pimblett), 208481 (G Crowe), 208482 (S Phipps), 208541 (D Simmons), 208542 (K Auckland), 208547 (D Fraser), 208548 (D Fraser), 208549 (D Fraser), 208550 (D Fraser), 208551 (D Fraser), 208552 (D Fraser), 208553 (D Fraser), 203839 (T Solomonides), 208426 (N Brown), 208546 (D Fraser), 208573 (A Ross), 208583 (J Bowen), 208598 (M Appleton), 208608 (N Brown), 208665 (E Taylor), 208738 (F Orgee), 208750 (T Orgee), 208751 (T Ogree), 209044 (J Darrell), 209045 (J Darrell), 209050 209069 (Camcycle), (J Darrell), 209720 (A Spicer), 209725 (E Jones), 209733 (J Barnes), 209734 (J Barnes),

CSET with grade separation over the A11 with bus priority across a new junction on the A1307. • CCC note that it is important to note that the size and scale of this development is vital in order for this to be deemed a sustainable location. CCC believe that this site would benefit from a detailed transport strategy to refine the trip budget for the site and set out the full mitigation package required. • Only viable if proposal for a Cambridge to Haverhill railway is taken forward, otherwise it will become similar to the original flawed planning many years ago for Cambourne, now only being corrected by East West Rail. • Grange Farm appears likely to bring significant and potentially unacceptable adverse impacts on safe and efficient operation of A11 and SRN junction, based on transport evidence currently available. Acknowledged that testing of Draft Plan in transport evidence currently available, demonstrated development of this site is reliant on introduction of extension to Cambridge South East Transport Scheme over the A11. National Highways require this crossing to be grade separated and not rely on A11 junction as this would likely interfere with operation of the junction. • Pampisford Estates are very supportive of ambitions of CSET project, which would bring improved public transport connections very close to the site, with the Travel Hub to be located south west of Fourwentways roundabout. Full integration with CSET is supported, however, the policy sets out a “segregated connection”, supported by a preliminary study by Mott MacDonald as part of the Council’s	209735 (J Barnes), 209736 (J Barnes), 209737 (J Barnes), 210070 (V Cox), 210071 (V Cox), 210076 (V Cox), 210386 (M Cookson), 210404 (M Cookson), 210405 (M Cookson), 210406 (M Cookson), 210409 (M Cookson), 210421 (O Barnes), 410422 (O Barnes), 210426 (O Barnes), 210436 (R Wells), 210483 (E Lambourne), 210490 (C Gill), 210655 (S Zmigrod), 210657 (S Zmigrod), 210658 (S Zmigrod), 210677 (G Saunders), 210685 (G Saunders), 210700 (G Saunders), 210702 (G Saunders), 201703 (G Saunders), 210794 (D Marns), 210795 (D Marns), 210806 (A Marns), 210807 (A Marns), 210810 (A Marns), 210818 (C Newgreen), 210819 (C Newgreen), 210823 (C Paton), 210827 (R Barnes), 211018 (R Froment), 211028 (T & A Bradford & Jedrzejewski), 211648 (G King), 211649 (G King), 211650 (G King), 211697 (J Dowling), 211702 (J Dowling), 2116703(J Dowling), 211704 (J

evidence base. PE feel there is insufficient work undertaken to be certain over deliverability and until work has been undertaken, we think it is premature to conclude that a segregated connection is the right solution taking account of deliverability and viability. PE have commissioned KMC Transport Planning to prepare a transport strategy for the project, and a key focus will be on the options for achieving integration with CSET. • PE support principle of effective integration of new community with proposed Cambridge South East Transport busway. Integration with CSET is supported, having potential to provide frequent, high quality connections into CBC and city. Feel that insufficient work undertaken to date to be certain over deliverability. We think it is premature to conclude that only a segregated connection (i.e. bridge link) is the right solution taking account of deliverability and viability. Alternative systems and integrations may provide same benefits, and these should also be explored. • PE wish to suggest rewording as follows: "Ensure transport and junction modelling is be undertaken to assess and confirm all possible points of vehicular access into the site and the necessary road and junction enhancements required to satisfy the Highways Authority and National Highways." • Have commissioned work to explore potential for direct access/egress from the A11 in north west corner of site, utilising the existing slip road serving the Total Energies filling station and materials recycling facility. We feel that this has a	Dowling), 211705 (J Dowling), 211705 (J Dowling), 211713 (J Dowling), 211726 (P Seddon), 211729 (P Seddon), 211730 (P Seddon), **Other bodies:** 201391 (Babraham PC), 201556 (Stapleford PC), 201610 (Great Abington Parish Council), 201669 (Linton PC), 202029 (Weston Colville PC), 202039 (Weston Colville PC), 202040 (Weston Colville PC), 202333 (Granta Land Ltd), 202540 (Granta Land Ltd), 202656 (Granta Land Ltd), 202670 (Granta Land Ltd), 203060 (Cambridge Past, Present and Future), 203604 (British Horse Society), 204684 (East Cambridgeshire DC), 204948 (Robinson College), 205241 (Axis Land Partnerships Ltd), 206219 (Granta Land Ltd), 207383 (Cambridge Past, Present and Future), 207384 (Cambridge Past, Present

potentially important role to play, and KMC Transport Planning are assessing potential options to provide additional access / egress to the A11. There would be a number of potential benefits if this can be achieved, including separate access/egress for construction traffic, and potential separation of heavy traffic from other road users. We accept that these arrangements would need to be agreed with National Highways as highway authority for the SRN. • PE support principle of a trip budget and welcome opportunity to negotiate this with local planning authority. We feel strongly that it would be premature for policy to seek to fix trip budget, which should be product of detailed assessment of appropriate development mix and transport strategy, taking account of local highway capacity constraints and wider strategy to deliver public transport and active travel connections. • In line with development of a masterplan, PE support development of strategic and local transport mitigation plan, which would form basis of a Transport Assessment in due course. • PE support aspiration that walking, cycling, and public transport will be primary modes - however, greater recognition required to confirm that cars will continue to play a significant role. We would like to see amendments to policy to support integration with CSET without specifying how this is achieved until further work has been completed. • PE support the broad ambitions for a Travel Plan.	and Future), 207385 (Cambridge Past, Present and Future), 207741 (Whittlesford Parish Council), 207742 (Whittlesford Parish Council), 208038 (Railfuture East Anglia), 208116 (Sawston Parish Council), 208117 (Sawston Parish Council), 208156 (Great Abington Parish Council), 208158 (Great Abington Parish Council), 208217 (Pigeon Land & LIH), 208322 (PX Land Let), 208586 (Little Abington Parish Council), 208781 (Axis Land Partnerships Ltd), 208947 (CPRE Cambridgeshire and Peterborough), 209255 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 209698 (CEG Land Promotions Ltd), 209965 (Granta Land Ltd), 208167 (National Highways), 210515 / 210518 (Cambridgeshire County Council), 210519 (Cambridgeshire County Council), 210760 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210763 (Pampisford Estate

Impact on Abingtons and Hildersham • Facilities in Grange Farm could undermine the economic viability of local Abington facilities. • Crime rate will increase. • forcing people to consider moving to get away from it. • Loss of identity. • Coalescence with village.	201031 (R Smith), 201281 (C Wolverson), 201311 (M Donovan), 201330 (J Sharman), 201357 (K Battom), 201358 (R Parkin), 201360 (V Hefford), 201368 (J Lawrence), 201434 (G Moore), 201482 (A Cameron), 201467 (R Wells), 201494 (J Tharby), 201450 (C Feenan), 201518 (J Jackson), 201529 (M Cooper), 210539 (A Patterson Lee), 201584

• Noise, dust and heavy vehicle movement impacts during construction. • Unsettling for residents. • Abington has already absorbed Granta Park with zero benefit to residents. • Fails to protect the character and setting of Abington. • Does not provide clear benefits for current residents, leading to long-term uncertainty and potential negative impacts on traffic, infrastructure, and quality of life. • Is asynchronous with the village and extremely unsightly. • Residents will not interact with the village facilities. • Impact ion property values. • Will jeopardise house prices and cause emotional and financial harm to current residents. There is economic strain, threat to wellbeing and a deterioration in quality of life. • Should complement neighbouring villages rather than overpower and overshadow them. • Greater emphasis should be given to mitigating effect of any development on character of the historic Abingtons. • Bigger buffer zone north of the A1307 to protect Little Abington. • Proposed retail and postal facilities at Grange Farm could undermine existing village services.	(E Scott), 201635 (J Shaw), 201665 (K Hefford), 201690 (J Kelly), 201691 (C Randle), 201696 (S Tossi), 201747 (B Seddon), 201753 (L Dav), 201772 (H Howe), 201785 (G Farrant), 201788 (H Cornwell), 201802 (R Cornwell), 201803 (S Fryer), 201804 (R Zimmern), 201805 (J Dowling), 201821 (Y Arkwright), 201883 (A Quinn), 201892 (R Berry), 201898 (R Pargeter), 201919 (G Menzies), 201943 (J Dowling), 201996 (S Fordham), 202034 (D Reed), 202047 (M Tiplady), 202055 (P Snow), 202067 (D Milns), 202092 (R Harman), 202142 (M Turner), 202162 (L Crisp), 202175 (C Newgreen), 202296 (R Barnes), 202299 (R Barnes), 202337 (S James), 202359 (A-M Melloy), 202568 (K Deeming), 202571 (R Haining), 202608 (C Cameron), 202616 (I Smith), 202699 (K Russell), 202701 (K Russell), 202731 (J Barnes), 202737 (A&L Pepperell), 202915 (A Batty), 202992 (R

• Should include a specific policy safeguard that retail provision at Grange Farm is limited in scale and does not include a supermarket or competing postal facility, in order to protect existing village services. • Any retained allocation must include a clearly defined, policy-protected buffer providing genuine physical and visual separation between new development and the existing villages. • Public spaces in Little Abington and Great Abington would be negatively affected by increased noise, traffic, pollution and loss of rural views. • "Strategic Enhancement Area" too vague. Must explicitly define a minimum buffer width (e.g., 500m) between development edge and Abingtons to genuinely prevent coalescence and preserve village character. • The buffer area between the development and village needs to be widened along its southern edge. • Has been no assessment of crime impact. • Would undermine community cohesion. • It would create a contiguous development and entirely subsume, and therefore destroy, existing villages. • To achieve meaningful separation, plan should reflect historic settlement pattern of South Cambridgeshire. Sawston, Pampisford, Babraham, the Abingtons, Hildersham, Linton, and Great Chesterford have average separation of 3.3 km.	Gilmour), 203123 (J Searle), 203141 (V Jury), 203187 (M Jury), 203407 (P Allum), 203512 (R Tovey), 203516 (M Howes), 203529 (O Barnes), 203652 (T Randle), 203680 (S Jarvis-Dott), 203683 (D Simmons), 203803 (J Cutting), 203807 (S Solomonides), 203839 (T Solomonides), 203868 (M Broadhurst), 203911 (E Lambourne), 203934 (L Donahue), 204586 (R Elston-Green), 204635 (M Starr), 204682 (E Lane), 204783 (R Smith), 204807 (P Munns), 204810 (E McKeown), 204821 (Abington Stores and Post Office), 204871 (V Valge-Archer), 204879 (J Dowling), 204891 (D Newgreen), 205092 (M Whittaker), 205164 (T Stone), 205193 (V Siley), 205271 (P Dsantos), 205425 (S McDonald), 205482 (M Brattesani), 205487 (G Minhas), 205512 (S Somerville), 205635 (M Furlow), 205636 (M Furlow), 205661 (R Berry), 205728 (W Bailey), 205735 (J Wingfield), 205817 (E Scott), 206034 (J Dowling), 206151 (R Livermore), 206152 (R

Grange Farm site cannot meet this standard except by restricting development to the northernmost portion. • PE strongly support objective to avoid convergence of settlements and note that this has been a particularly strong point raised through initial community responses on project. Would suggest that policy wording could be sufficient to ensure settlements do not coalesce, without prejudging the appropriate way of achieving this. Committed to working with GCSP to devise appropriate design solutions to ensure that Little Abington and Great Abington (in particular) retain their own distinct identity. • Policy too vague on protections for existing residents at southern and southeastern boundary. • Policy limb should read “maintain the distinction between the Grange Farm development and neighbouring villages, in terms of character and physical separation.” Note also there are inconsistencies here with land being referred to as “Grange Farm” rather than “Land adjacent to A11/A1307”. Should be a consistent naming convention adopted for clarity.	Livermore), 206165 (C Newgreen), 206167 (C Newgreen), 206194 (R Barnes), 206200 R Barnes), 206250 (P Brown), 206318 (G King), 206324 (C Cameron), 206325 (C Cameron), 206596 (A Butchart), 207069 (L Cookson), 207181 (S Bowen), 207388 (W Dott), 207523 (R Charles), 207543 (R Allum), 207557 (G Smith), 207591 (D Stephen), 207598 (R King), 207599 (P Brunning), 207659 (P Lester), 207678 (T Collett), 207976 (G Brown), 208540 (D Simmons), 208547 (D Fraser), 208548 (D Fraser), 208549 (D Fraser), 208550 (D Fraser), 208551 (D Fraser), 208552 (D Fraser), 208602 (M Appleton), 208603 (M Appleton), 208629 (G Jones), 208664 (E Taylor), 208737 (F Orgee), 209729 (J Barnes), 210073 (V Cox), 210388 (M Cookson), 210398 (M Cookson), 210409 (M Cookson), 210415 (M Cookson), 210433 (P Mc), 210491 (C Gill), 210644 (S Zmigrod),

	210663 (J Snell), 210689 (G Saunders), 210821 (C Newgreen), 211021 (M Hardinge), **Other bodies:** 201608 (Great Abington Parish Council), 202029 (Weston Colville PC), 204948 (Robinson College), 208589 (Little Abington PC), 208590 (Little Abington PC), 209274 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 210731 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust),
Wider area: • Fails to consider the wider impacts on surrounding settlements. • Two planned developments (Policy S/GF: Land Adjacent to A11 and A1307 at Grange Farm and Policy S/CE Cambridge East) are expected to impact upon West Suffolk given its proximity and the functioning of the surrounding towns of Newmarket and Haverhill.	208540 (D Simmons), **Other bodies:** 204784 (West Suffolk Council),

• Will require collaborative working with West Suffolk and a full assessment through the preparation of the local plan evidence base. • Nature of proposed connections is not clear and whether they will link to the towns of Haverhill and Newmarket within West Suffolk. • West Suffolk Council would welcome opportunity to work collaboratively and co-operatively to understand the detail of these proposals.	
Design Matters • Object to high density. • Scale is overwhelming. • Will be a disconnected, poor place to live. • Speaks of "high quality and well-designed buildings" but is very short on details - including room sizes, which remain below European standards. • Will have to build dense ugly properties to facilitate the level of development suggested inc probable high rise. • More appropriate design criteria should be applied that respect the rural character of South Cambridgeshire. • Concerns about the proposed housing density of 50/55 per hectare, questioning the fairness compared to the allocation of 12 pitches per hectare for travellers.	200994 (M Logan), 201443 (T Randle), 201459 (T Stone), 201591 (L Menzies), 201651 (M Mannassi), 201696 (S Tossi), 201747 (B Seddon), 201803 (S Fryer), 202067 (D Milns), 202092 (R Harman), 202568 (K Deeming), 202632 (J Doncaster), 202696 (S Roberts), 202876 (C Pippen), 202915 (A Batty), 203141 (V Jury), 203512 (R Tovey), 203931 (A Ross), 204586 (R Elston-Green), 204635 (M Starr), 205487 (G Minhas), 205544 (G Minhas), 205743 (R Lee), 205744 (R Lee), 205752 (C Feenan), 205952 (S Zmigrod), 205953 (S Zmigrod), 205956 (S Zmigrod), 205957 (S Zmigrod), 205958 (S

• Need for housing designs that are appropriate for a village setting, rather than those suited for urban environments. • Make the houses eco-friendly and well insulated. • “green areas” provided by these developments are not used or maintained and they are just paying lip-service to your “holistic” views to keep within planning guidelines. • Ensure the height of the buildings does not overshadow in any way the local area and designs architecturally blend into the local rural landscape. • Infrastructure-intensive uses should be prioritised near the A11 corridor to minimise impacts on agricultural land and maintain a coherent settlement structure. • Strategic enhancement area will be too small to meet strategic green infrastructure needs on-site. Even if the development provided significant financial contributions for strategic green infrastructure, it is highly unlikely that providers would be able to acquire the land required in the right places, as land assembly for strategic green infrastructure on the edge of Cambridge will ultimately depend on the landowners getting at least part of their own development aspirations in return for providing the land for strategic green infrastructure. • Introduce binding and enforceable limits on building height, density and massing to protect skyline views, heritage assets and village setting.	Zmigrod), 206195 (R Barnes), 206195 (R Barnes), 206201 (R Barnes), 207959 (S Zmigrod), 207557 (G Smith), 205818 (E Scott), 205916 (M Rusted), 206166 (C Newgreen), 207580 (J Weston), 207677 (T Collett), 208014 (J Logan), 208570 (A Ross), 208597 (M Appleton),), 208629 (G Jones), 208749 (T Orgee), 209047 (J Darrell), 209723 (A Spicer), 209730 (J Barnes), 209742 (J Barnes), 209744 (J Barnes), 210399 (M Cookson), 210401 (M Cookson), 210402 (M Cookson), 210407 (M Cookson), 210417 (O Barnes), 210424 (O Barnes), 210645 (S Zmigrod), 210646 (S Zmigrod), 210647 (S Zmigrod), 210648 (S Zmigrod), 210651 (S Zmigrod), 210652 (S Zmigrod), 210653 (S Zmigrod), 210659 (S Zmigrod), 210682 (G Saunders), 210683 (G Saunders), 210684 (G Saunders), 210886 (G Saunders), 210687 (G Saunders), 210688 (G Saunders), 210692 (G Saunders), 210693 (G Saunders), 210694 (G

• Advance planting as a pre‑commencement condition • Must include explicit building height limits (e.g., maximum 2 storeys) to ensure development does not visually dominate skyline or Cam valley. Must be specific prohibition on vertical landmarks or industrial structures that would break horizon when viewed from Gog Magogs or Roman Road. • Add mandatory requirement for "Dark Skies" compliant lighting strategy to prevent light spill from this elevated site into the surrounding open countryside. • Lack of detail regarding the sustainability of homes, specifically the inclusion of solar panels and grey water systems. • Tall buildings, skyline impact and failure to impose binding height controls. Policy S/GF does not define what constitutes a tall building, does not prohibit tall or landmark buildings, and does not impose binding height limits across the site. • Site Allocations Topic Paper expects a density around of around 50-55 dwellings per hectare – however, when taking into account site also includes a town centre, warehouses, offices, schools, shops, open and park spaces, and other facilities and amenities, this density may be higher still. In contrast, customary density for even a suburban development of houses would be around 35 dwellings per hectare. • Inclusion of energy efficient homes is essential and should be a stipulation of any new build contract given.	Saunders), 210695 (G Saunders), 210696 (G Saunders), 210697 (G Saunders), 210698 (G Saunders), 210699 (G Saunders), 210704 (G Saunders), 210804 (A Marns), 211029 (T & A Bradford & Jedrzejewski), 211030 (T & A Bradford & Jedrzejewski), 211032 (T & A Bradford & Jedrzejewski), 211707 (J Dowling), 211711 (J Dowling), 211733 (P Seddon), **Other bodies:** 201607 (Great Abington Parish Council), 201669 (Linton PC), 209258, 209269, 209270, 209275 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust), 203001 (Bedfordshire, Cambridgeshire & Northamptonshire Wildlife Trust), 210723, 210725, 210726, 210732, 210733, 210734, 210735, 210736, 210737, 210738, 210740, 210741, 210742, 210743, 210744, 210745, 210746, 210747, 210748, 210749, 210750, 210751, 210752, 210753, 210754, 210755,

• Design ethos does not accord with character of South Cambridgeshire, which is principally small villages, that radiate from Cambridge. Proposal will create an urban environment, not sympathetic to the setting in its locality or the county context. • Create a continuous landscape buffer along the south‑eastern boundary to provide year‑round visual and acoustic separation, protected as a non‑built zone. • Ensure perpetual ownership and funded management of the buffer. • Design public‑space routes and lighting to minimise spill, glare and intrusion into existing dwellings. • Apply stepped‑down building heights and densities toward the boundary, with low‑rise, low‑intensity forms, frontages that face the buffer and privacy safeguards to prevent overlooking. • Any lighting near the boundary including for walking and cycling routes should be designed specifically to prevent glare and light spill into nearby homes and the countryside, using shielding and appropriate controls. • Descriptions provided regarding landscaping are a token gesture to appease. • Illustrations suggest four storey structures in close proximity create dense urban spaces, with architectural features not part of the South Cambridgeshire vernacular. Proposals are out of character in terms of local vernacular, scale, massing, architectural features and proportions synonymous of an ‘any place	210756, 210757, 210758, 210759, 210761, 210767, 210768, 210770, 210772, 210774, 210779 (Pampisford Estate Farms Limited and the Trustees of the James Binney Will Trust),

anywhere' developer lead approach leading to band, poor quality development and architecture. • Implement a movement strategy that prevents rat□running through Little and Great Abington. • High-impact, noise-generating and HGV-intensive uses should be located away from south-eastern boundary and should not be located at, within, or operate immediately adjacent to south-eastern boundary where allocation meets existing homes at Ley Rectory Farm Barns. • Single Masterplan implies a single phase, uniform development inconsistent with character of South Cambridgeshire villages, which evolved organically around historic centres such as river crossings and manor houses. Create small initial village core, then allow local developers, architects, and individual homeowners to build incrementally in response to demand. • Designs by John Simpson Architects are subjective and fail to safeguard local character. Illustrations suggest dense, four-storey development with architectural features alien to South Cambridgeshire. Comparable nearby towns such as Saffron Walden, Cambridge and Newmarket do not exhibit the proposed forms or styles. The approach is generic and developer-led, lacking local distinctiveness. • Large national housebuilders typically produce uniform, low quality designs that do not reflect local character. • Examine potential for community heating schemes.	

• Public routes and spaces along south-eastern boundary should be designed to respect privacy and minimise disturbance • Could be interpreted that the SF has already determine most appropriate design solutions and mitigation. PE have commissioned full multi-disciplinary team to explore these issues in detail, and to develop a robust masterplan framework for site, which identifies and respects site's ecological and heritage constraints/opportunities. • PE support desire for high quality design, and whilst we share the ambition for an exemplar approach, greater clarity is required on interpretation of what this means. We very much welcome the opportunity to develop a robust masterplan framework and to test the approach to a range of matters to reach common ground with GCSP on these points. • Request clarity on what is referred to by "the landscape within its rural setting". May be interpreted in different ways and therefore would welcome a discussion about what is intended here. • Should include clear spatial principle for south-eastern boundary where the allocation meets Ley Rectory Farm Barns to function as a low-intensity, quiet edge. • Masterplan and design code should be required to demonstrate, with appropriate assessment, that location and operation of non-residential uses and servicing activity will not create unacceptable noise, disturbance, vibration, odour or light	

impacts at existing homes at south-eastern boundary (Ley Rectory Farm Barns interface). • Policy requires “separation” but does not define, secure or prioritise it at south-eastern boundary where rural homes sit directly opposite the proposed allocation. Boundary alignment creates particularly tight interface with existing dwelling and garden, so any ambiguity around “separation” is especially problematic. • Incorporate defined south□eastern boundary buffer, a quiet□edge principle, a sensitive built□form transition, early delivery of screening, dark□sky lighting controls, construction controls and infrastructure/phasing triggers that halt later phases if key transport mitigations are delayed. • Masterplan and design code should be required to demonstrate, with appropriate assessment, that location and operation of non-residential uses and servicing activity will not create unacceptable noise, disturbance, vibration, odour or light impacts at existing homes at the south-eastern boundary (Ley Rectory Farm Barns interface). • Fully supportive of design led approach, and development of comprehensive site masterplan, and (later in the process) design codes, to ensure each development phase comes forward in accordance with overall masterplan vision. • Further work required to understand constraints, the development proposals and appropriate mitigation through set back, design/landscaping or management, in consultation with the relevant consultees.	

• PE support desire to develop high quality buildings that respond to surrounding context with appropriate massing, building heights and densities, as well as building form. Committed to design quality as set out in our vision for the project in our previous Local Plan submission. • PE support principle of town and neighbourhood centres; further work required to establish how many centres and what facilities can be supported by proposed 6,000 homes. Great care will be required to consider appropriate number of centres, their make up, scale and mix of uses, to ensure the objective of a vibrant, walkable new community is achieved. This may require decisions which weigh up the merits of fewer, larger “centres” vs a dispersed approach to amenity provision. This should be design led and not pre-judged by the policy. • PE consider that an average density of 50-55 dwellings per hectare is likely to be too dense in this location. We propose to test a number of scenarios as we begin to set a masterplan framework for project, and propose to test matters raised in the policy and believe at this point a slightly lower density is likely to prove more appropriate to the rural landscape setting. The policy should not need to define a target density until further work has been undertaken. • Further work required to understand constraints and opportunities, development proposals and appropriate mitigation through set back, design/landscaping or management. Consider this is likely to require a review of proposed boundaries of	

the Spatial Framework diagram both in respect of development area, and SEA ahead of the Regulation 19 consultation. • PE support, and are passionate, about need for high quality public realm. Our client's vision is that this development is different and something community is proud to call home. The layout and quality of the public realm will be critical to realising this ambition. • PE support provision of open space – more work needed to establish scale of provision as part of overall land use budget. This is being tested through our masterplan framework. • PE support effective integration of green and blue infrastructure. • PE support preservation and enhancement of significant ecological heritage and natural environment – suggest requirements will inform both extent of built development and scale, location and approach to delivering Strategic Enhancement Area. • PE support principle of maximising opportunities for ecological enhancement and building on special qualities of site. • PE support need to respond to designated historic and ecological sites – but note that further work is required to establish most appropriate design led approach to accommodating and respecting these important features as part of comprehensive approach to masterplanning.
